It has been suggested, but not till some time after the battle was fought, and not till the order came to be a matter of conversation, that General Rosecrans intended to direct General Wood to close to the left on General Reynolds' right, and that the staff officer failed to convey his intention. However this may be, General Wood had no means whatever of knowing it. The only means he had of arriving at a knowledge of General Rosecrans' intention was the order itself, and surely it would not bear any such construction. To put such a construction on the order would wrench and pervert the plain and simple language of the order out of its ordinary and plain tactical significations, and the truth is, it never for a moment entered General Wood's mind that any such intention, as is conveyed by this suggestion, was designed to govern his movements. It is believed that this is an ample answer, so far as General Wood is concerned, to the suggestion; if indeed any answer is required, for he had to do simply with instructions conveyed in him through orders—not with intentions never made known to him. But it may be worth while to consider what would have been the effect of such an order, if it had directed General Wood to close to the left on General Reynolds' right. It may be most truthfully asserted that such an order, since General Brannan's division (with its left resting on General Reynolds' right) was in line between General Wood and Reynolds, would simply have been absurd; because it would have been utterly impossible of execution, as must be plainly obvious to any one who considers the relative situation of the two divisions. This supposition, then, casts on General Rosecrans the onus of issuing an absurd order—one entirely impossible of execution. If it be intended to relieve him of this charge, that he supposed General Brannan's division was out of line, then, it must be confessed, he was criminally ignorant of the position of his troops and the status of the battle, for General Brannan's division was in the line of battle and one half of its front was engaged with the enemy.

The object of these remarks is simply to make apparent the utter untenableness of the suggestion as to what was the intention of General Rosecrans, as he directed the order to be sent to General Wood. It may be asserted with the utmost confidence and assurance that, on receiving the commanding General's order to close up on General Reynolds as fast as possible and support him, General Wood believed, with the most perfect certainty, that General Reynolds required support, and that the commanding General desired General Wood's division to be moved to General Reynolds' assistance in the most expeditious manner possible. Under this conviction General Wood proceeded at once to execute the order precisely, and in the only way that it was possible for it to be done.

FIFE.

THE RANK OF THE STAFF

To the Editor of the Army and Navy Journal:

SIR:—I beg leave to invite attention, through your columns, to several well-known defects in the organization of the staff of the army, and particularly to the anomalous position, with respect to rank, of the heads of the staff corps at department headquarters. In the graded promotions of the day, which has been forced, from time to time, by daily inconvenience, the department staffs have been entirely overlooked. They have been passed by, not for their existence, as such; and they are accordingly detailed, as necessity demands, from among the officers provided by law for army corps, divisions, or brigades, with the anomalous corps of additional aide-de-camp, and, exceptionally, but far too often, from the line. This produces much disturbance to the service by multiplying details and substitutions; and, what is nearly as bad, it works injustice, in unequal degree, to both officers and the public service.

The assistant-adjutant-general, assistant-quartermaster, and commissary of subsistence, of a *brigade*, are captains. The same assistant-general of a *division* is a major.

The assistant-adjutant-general, assistant-inspector-general, assistant-quartermaster, and commissary of subsistence, of an *army corps*, are lieutenant-colonels.

Surely, I but express the general opinion of the service in suggesting—

1. That the assistant-adjutant-general, assistant-inspector-general, chief quartermaster, and chief commissary of subsistence of every *department*, and of every separate *force or more army corps*, should be colonels, appointed by the President, by and with the consent of the Senate, from among the existing colonels of those departments of the regular line. There are but five such departments, viz: the Department of the Potomac, of the Cumberland, of the Ohio, of the Tennessee, and of the Gulf.

2. That the staff officers of army corps should be appointed by the President, by and with the advice and consent of the Senate, on all other officers are, instead of being merely assigned in orders or at present. There can be no good reason for this solitary exception to the rule, hitherto universal, that rank obtains only by commission.

3. That the assistant-adjutant-general, commissaries of divisions should be majors, and that there should be an assistant-inspector-general of each division with the same rank.

4. That the medical directors of army corps should have the assimilated rank of lieutenant-colonel, and the medical directors of departments, embracing two or more corps, that of colonels.

5. That chiefs of artillery and ordnance should be appointed for divisions, corps, and departments of two or more corps, having the rank, respectively, of major, lieutenant-colonel, and colonel.

6. That judge-advocates should be appointed as follows: For each division, a captain; for each army corps, a major; for each department of two or more corps, a lieutenant-colonel.

When a department, army corps, division, or brigade, is broken up, the above-named staff officers, assigned thereto, should be transferred to other organizations wherein vacancies may happen to exist; and, in the absence of such vacancies, they should be mustered out of service.

These suggestions, though apparently involving largely increased expense, in reality would immediately few additional appointments or promotions; for many of the changes here advised have been partially carried out spasmodically and by make-shifts, to the detriment of the service. But, I think we should recognize the deficiency demonstrated by experience, and correct these errors of organization by well-digested legislation, substituting system for expedients.

The present organization of the staff prevailing in the different departments, and dependent on the pleasure and caprice of their commanders, is as various as the colors of Joseph's coat.

I shall have a few words to say, presently, in regard to chiefs of staff, aides-de-camp, provost-marshals, and the uniform of the staff. OLD REGULATIONS.

GENERAL ROBERTS' NEW BULLET

The following description of a new bullet and bullet and bucketof cartridge for smooth-bore guns, invented by Brigadier-General B. S. Roberts, is sent to us by a correspondent:—

This new projectile, invented and perfected by General Roberts, has been tested in a series of experiments by order of the Ordnance Department, under direction of Major Kingsbury, of the Ordnance Corps. We are able to announce the complete success of this most important invention. It has met completely all the requirements long in our armies, of using, almost exclusively, the Minié ball for rifle ordnance.

The invention consists in such a construction of a bullet to be used in smooth-bored guns of all calibre, as to close all windage and to expand the bullet penal forward without tumbling, and to give flight to it of equal range with the flight of the Minié ball from rifled arms. It is used with a cylindrical bucket for smooth-bored arms, and is equally in all respects to the Minié ball when used in rifled guns. That it answers all the purposes of the conical Minié ball and rifled arms, and, *in other bits*, is equally destructive when single in smooth-bores, and with buckshot must be regarded as a most important addition, reflected in all the improvements in the science of projectiles made during the past ten years. When buckshot are used with General Roberts' bullet, the effect of the fire is almost as destructives are thrown two, three, and four hundred yards *effectively*, while the ball fired with these guns on its flat ricochet from 800 to 1,000 yards.

The precision of fire seems to equal that of the Minié ball from rifles. *Twenty-four* that were fired "cupped" cylinder covers bullet" have been constructed that closes all windage and dies point foremost its entire range, without tumbling. This invention, and, *we believe this*, equals the Minié ball, is a new and startling announcement; but the accomplishment is a fact which can be no longer gainsayed. The report of General Roberts' bullet is fabulous, amounts to the world officially. We may add that General Roberts is the inventor of the Minié ball, originally for rifled arms, so as to secure the rapid loading and firing of his ball and backshot cartridge from a breech-loading *smooth-bored musket*.

MILITARY STRENGTH OF THE NATION.

The following interesting statistics with reference to the natural increase of fighting men in the United States, are obtained from the Eighth Census, by the Census Bureau, from the forthcoming volume on population:

When a population has reached nearly its permanent condition, as in Europe and in the old States of America, onefifth of the whole population is still found to represent each the number of males between the ages of eighteen and forty-five. But the emigrating ages are nearly allied to the military ages; and in the new States and parts of the West the proportion of fighting men is accordingly greater than in the Atlantic States. Moreover, as the population moves westward, the proportion of white males from eighteen to forty-five to the white population is, in Maine, 19.5 per cent.; New York, 20.4; Pennsylvania, 20.1; Illinois, 25.8; California, 47.1; Virginia, 18.7; South Carolina, 19.9; Arkansas, 20.1; Texas, 21.9.

The total of white males between the ages of eighteen and forty-five in all the States (seceded included) and in the District of Columbia, according to returns appear, by the census tables of 1860, to be 5,624,905. During the year 1861 about 277,500 white males reached and passed the age of eighteen, leaving in the aggregate of the West the proportion of fighting men is accordingly greater than in the Atlantic States. Moreover, as the population moves westward, the proportion of white males from eighteen to forty-five to the white population is, in Maine, 19.5 per cent.; New York, 20.4; Pennsylvania, 20.1; Illinois, 25.8; California, 47.1; Virginia, 18.7; South Carolina, 19.9; Arkansas, 20.1; Texas, 21.9.

The total of white males between the ages of eighteen and forty-five in all the States (seceded included) and in the District of Columbia, according to returns appear, by the census tables of 1860, to be 5,624,905. During the year 1861 about 277,500 white males reached and passed the age of eighteen, leaving in the aggregate of the West the forty-five, leaving a difference of 146,900. This latter number, when diminished by natural deaths, and increased by the accessions from immigration will evidently express the total increase of the military population (whites) during 1861. About 90,000 is estimated as the clear increase of fighting population in 1862, which, as each of succeeding increases with augmented population in the aggregate, but in the older country less rapidly than in the newer States, since the war began is the extent that existed before. From these data it seems pretty clear that more persons are annually added to the number of those who are physically disabled by the war than the military forces are augmented by the natural increase of fighting population.

VARIATIONS OF THE COMPASS.—The *Revue Maritime et Coloniale* publishes a letter on the deviation to which the compass is subject in consequence of the action of iron in the wood in ships. One of the latest contrivances for diminishing this source of inconvenience is the copper centre-piece, which affords the means of taking the sun's position, when by the deviation may be corrected. It has sometimes been supposed that the electric condition of the atmosphere could influence the needle; but this has not been borne out by observation. Lightning alone exercises a decided influence on the needle, by which the north point of the needle becomes south and conversely. When a vessel is nearing land the needle is said to be affected; and certain rocks there are that exercise a decided magnetic influence on the compass—volcanic rocks especially; but this influence is not felt on board ships. But the action of the iron forming the ship's sides is far different; nothing—not even the interposition of a thick non-magnetic body—will stop its influence. Many ships have been built, a copper coating, of thick paint. But the real danger proceeds from another source. Once the ship herself, under the weight of events, may increase the deviation of the needle. Prof. experiments made on board an iron-built sailing vessel, provided with iron rigging, and lower yards of steel, and with two binnacle compasses on her poops, and a third placed between the mizen and mainmasts, the lower part of which was all of iron, the deviations of the needle were respectively 56 deg., 24 deg., and 13 deg. Without entering into further details on this matter, the writer of the article concludes with condemning the impudence of those who freight an iron vessel before they see her on the stocks. Meanwhile, in order to ascertain how her compass behaves. Moreover, a captain undertaking the command of an iron ship should be careful to observe how she behaves already here on board each a vessel on a long voyage, so that he may know how to deal with the deviations observable on board the vessel to be commanded.

MAJOR General French has been relieved from his command in the Army of the Potomac and placed under arrest.

LIEUTENANT-COLONEL Thomas, 5th Maryland Regiment, lately died at the Libby Prison.

ADMIRAL Shubrick's reduction to health progresses favorably. He is now permitted to receive the visits of a few friends.

GENERAL W. D. Whipple succeeds Major-General Reynolds as General Grant's chief of staff. General Reynolds proceeds to New Orleans.

BRIGADIER-GENERAL Ammen, lately in command of Camp Denniston, Ohio, has been placed under arrest at that place, upon charges not yet made public.

THE following officers of the Regular Army have been retired:—Major H. W. Wharton, 9th U. S. Infantry; Major Joseph H. Whittlesey, 5th U. S. Cavalry; Captain W. P. Reed, 2d U. S. Infantry.

THE following have been dismissed:—Major Charles J. Whitney, 4th U. S. Cavalry; Captain John W. Todd, Ordnance Department; Captain Geo. W. Hill, 13th Infantry; 1st Lieutenant Chas. Whiteaker, 19th Infantry.

THE time for enlisting recruits in the Regular Army, under the provisions of the act approved June 25, 1863, and G. O. No. 94 of October 16, 1863, current series from the War office, is extended to June 25, 1864, during which the extra bounty of $100 will be paid.

A MILITARY commission for the trial of persons engaged in the dealing in counterfeit and other treasonable paper is composed of Generals Doubleday and Slough and Colonels Dimmick, Price and Chapman, has been organized in Washington, and will continue in session from day to day. General Doubleday is president.

THE Dedication of the village for the contrabands, on Arlington Heights went off with much *éclat* on the 24 instant. Generals Heintzleman, Abercrombie and Slough, and a large number of citizens (ladies and gentlemen) were present. The exercises comprised singing by the colored children, and speeches by Hons. E. Culbtenden, Briggs and Lynch, &c., the superintendent of contrabands, and others. The village has accommodations for 56 families, allowing two rooms to each family. Besides these there are workshops, a chapel, and home for the indigent. The whole has been conducted under the supervision of Lieutenant-Colonel Greene, Chief Superintendent of the Department of Washington, upon whom the plan reflects great credit. The negroes are contented, well-clothed and fed, and it is expected that they will soon support themselves by the cultivation of the Arlington estate and other abandoned farms in the Department.

BRIGADIER-GENERAL Sherman, who lost one of his legs in action, and has, in consequence, been detained from the field for several months, will be ready to return to active duty, Though the limb was amputated above the knee, Mr. Selphe, of Messrs. Selphe & Son, of Boston, has succeeded in adapting to it one of his riding legs, made after the same pattern with that worn by the late Marquis of Anglesey. So invisible is the seat the artificial limb that General Sherman was able to use the limb on horseback even at his first attempt, which he made at a riding school in this city. The limb is provided with a patent vertical assistance, and at his house family, keeping full command of the animal and riding with rapidity and grace. To those who are aware of the difficulties to be overcome in adapting an artificial limb to a short stump, the success of Mr. Selphe will be a matter of surprise and gratification.

GENERAL HOSPITALS IN WASHINGTON AND VICINITY.

Under Direction of Surgeon R. O. Abbott, U. S. A., Medical Director Department of Washington.

NAME.	LOCATION.
Armory Square	4th St. W., bet. C A D, & W. Jefferson, U. S. A.

FOREIGN MILITARY AND NAVAL MATTERS.

A FIRE at Aldershott consumed a stable in which were kept the valuable horses belonging to the Military Train. Out of 88 horses, but 12 were saved.

THERE is great dissatisfaction among the medical officers of the English army and navy as well. It is said that "if matters do not mend the Minister of War will have to employ whom he can get, for properly-qualified men will not enter the service." The dissontent is about questions of precedence, quarters, &c.

REAR-ADMIRAL WARREN's time, as commander-in-chief on the west-coast of America, will expire on the 1st of April, and it is stated that he will probably be succeeded by Rear-Admiral the Hon. CHARLES G. E. ELLIOT, now in the *Shannon*, now fitting for commission at Sheerness, is to be the future flagship.

A SUBMARINE telegraph cable has been ordered for use in connection with the experiments which are to take place at Shoeburyness with the Armstrong guns. In the experiments, the conductors of the cable will be connected with the floating target, the other end will be in connection with the instrument of NAYRES for ascertaining the velocity of projectiles.

A MILITARY Female School for the education, at a reduced cost of the children of officers of the army, is about being instituted in England. The object of this institution is to bestow upon the orphan or other daughters of officers of the army and navy, at the lowest possible cost, a good, virtuous and religious education, in conformity with the principles and doctrines of the Church of England. It is proposed to commence with two or more classes of pupils, viz., one to pay a trifling sum, (say £12 per annum,) another without any payment. The general affairs of the school will be under the daughters of officers of competent means, whose payment, for a superior education, shall be slightly remunerative, so as to aid the primary object of the institution.

A DISCUSSION is going on in some of the English papers in regard to the propriety of assimilating the rules of naval officers more or less to those in use in the army, as that should be better understood by the latter and by civilians. A memorial, signed by 900 lieutenants was some time ago addressed to the Admiralty, praying that a rule more decisive of their position in the service be assigned them, more "nearly assimilating their corresponding rank in the army, and to the present title heretofore so indiscriminately used for that of mate." The rank of captain in the navy with that of captain in the army is generally confounded on shore, and the newspapers, in publishing lists of guests at royal *fêtes*, class together military and naval lieutenants. The case of the first state dinner of the Prince of Wales is referred to as one "in which naval captains took equal rank and precedence with the colonels at the royal banquet; they had to *chew the cud of humiliation* over the gulf of a dozen courses of ceremonies *swaddling* them with the military captains in every newspaper, an authority made use of by the public at large, and the military captains and their relatives, to prove that all captains and lieutenants of "Her Majesty's sea and land forces are equal in rank by their title." There is, however, a great difference in station to change, and the confusion is likely to continue.

THE PRESIDENT'S PROCLAMATION.

THE President's Message has been so extensively published that it is scarcely necessary to do more than to print it in the JOURNAL. The following proclamation is appended:

PROCLAMATION.

Whereas, in and by the Constitution of the United States, it is provided that the President shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment; and

Whereas, A Rebellion now exists whereby the loyal State Governments of several States have for a long time been subverted, and many persons have committed and are now guilty of treason against the United States, and

Whereas, While reference to said rebellion and treason, laws have been enacted by Congress declaring forfeitures and confiscation of property and liberation of slaves, all upon terms and conditions therein stated; and also declaring that the President was thereby authorized to use and employ the forces, naval and military, of the United States in such manner, and to such extent as he might deem necessary for the purpose of suppressing said rebellion; and

Whereas, Many persons have been engaged in said rebellion, who may have participated in the existing rebellion in any State, or part thereof, but who have not been guilty of any treason against the United States, and

Whereas, The congressional declaration for limited and conditional pardon accords with the well-established judicial exposition of the pardoning power, and

Whereas, With reference to the said rebellion the President of the United States has issued several proclamations with provisions in regard to the liberation of slaves, and

Whereas, It is now deemed by some persons heretofore engaged in the said rebellion to resume their allegiance to the United States, and to reinaugurate loyal State governments within their respective States:

Therefore I, Abraham Lincoln, President of the United States, do proclaim, declare and make known to all persons who have directly or by implication participated in the existing rebellion, except as hereinafter excepted, that a full pardon is hereby granted to them and each of them, with restoration of all rights of property, except as to slaves, and in property cases where the rights of third parties shall have intervened, and upon the condition that every such person shall take and subscribe an oath, and thereafterward keep and maintain said oath inviolate, and which oath shall be registered for permanent preservation, and shall be of the tenor and effect following, to wit:

I, ——, do solemnly swear in presence of Almighty God, that I will henceforth faithfully support, protect and defend the Constitution of the United States, and the Union of the States thereunder, and that I will in like manner, abide by and faithfully support all acts of Congress passed during the existing rebellion with reference to slaves, so long and so far as not repealed, modified, or held void by Congress or by decision of the Supreme Court, and that I will in like manner abide by and faithfully support all proclamations of the President made during the existing rebellion having reference to slaves, so long and so far as not modified or declared void by decision of the Supreme Court. So help me God.

The persons excepted from the benefits of the foregoing provisions are all who are or shall have been civil or diplomatic officers or agents of the so-called Confederate government; all who have left judicial stations under the United States; all who shall have resigned commissions in the army or navy of the United States, and all who left seats in the Congress of the United States to aid the rebellion; all who are or shall have been military or naval officers of the so-called Confederate government above the rank of colonel in the army, or lieutenant in the navy; all who left seats in the United States Congress to aid the rebellion.

All who resigned commissions in the Army or Navy of the United States, and afterward aided the rebellion, and all who have engaged in any way in treating colored persons or white persons in charge of them otherwise than lawfully as prisoners of war, and which persons have been in the United States service as soldiers, seamen or in any other capacity.

And I do further proclaim, declare, and make known, that whenever, in any of the States of Arkansas, Texas, Louisiana, Mississippi, Tennessee, Alabama, Georgia, Florida, South Carolina, and North Carolina, a number of persons, not less than one-tenth in number of the votes cast in such States, at the Presidential election of the year of our Lord one thousand eight hundred and sixty, each having taken the oath aforesaid, and not having been excluded, by reason thereof, from the privilege of voting, shall re-establish a State Government which shall be republican, and in nowise contravening said oath, such shall be recognized as the true Government of the State, and the State shall receive thereunder the benefit of the constitutional provision which declares that

"The United States shall guarantee to every State in this Union a Republican form of Government, and shall protect each of them against invasion, on application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic violence."

And for further proclaim, declare, and make known that any provision which may be adopted by such State Government in relation to the freed people of such State, which shall recognize and declare their permanent freedom, provide for their education, and which may yet be consistent, as a temporary arrangement with their present condition as a laboring, landless, and homeless class, will not objected to by the National Executive.

And it is accepted as not improper that, in constructing a loyal State Government in any State, the name of the State, the boundary, the subdivisions, the Constitution and the general code of laws as before the rebellion be maintained, subject only to the modifications made necessary by the conditions herein before stated, and such others, if any, not contravening said conditions, as may be deemed expedient by those framing the new State Government.

To avoid misconstruction of what I propose to say that this Proclamation was not issued on the spur of the occasion or hastily, but that full consideration was given by the Executive, and that it was submitted to the Cabinet and received the unanimous approval of the members thereof, each of whom has expressed his views in writing, and the documents containing the same are on file in the archives of the State Department, subject to my constitutional control. And I do further declare that the Executive will not retract or modify the same without further action by the Administration.

And I do further declare and proclaim that hereafter, as heretofore, the Executive will maintain the integrity of the Union, and all the States thereof, and will endeavor to repress all persons who attempt, countenance, encourage or assist the existing rebellion, or any future rebellion, by armed force, against the Constitution and the Union, and will recognize and maintain the freedom of such persons, and the right of such persons to the benefit of the constitutional provisions which have been violated by them. In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this eighth day of December, A. D., one thousand eight hundred and sixty-three, and of the Independence of the United States of America the eighty-eighth.

ABRAHAM LINCOLN.

By the President,
WILLIAM H. SEWARD, Secretary of State.

DEATHS

Reported to the Navy Department for the Week ending NOVEMBER 28, 1863.

WM. S. EMORY, landsman, pneumonia, Aug. 28, U. S. steamer *Sassacus*.

JNO. DAVIS, gunner, consumption, Nov. 17, Naval Hospital, New York.

Chas. S. MASON, 2d Asst. engineer, yellow fever, Nov. 15, U. S. steamer *Black Hawk*.

Frank MYERS, landsman, yellow fever, Nov. 16, U. S. steamer *Arago*.

Rudolph DANIEL MARKS, yellow fever, Nov. 6, Naval Hospital, Pensacola.

Chas. MCMASTERS, coal heaver, yellow fever, Oct. 23, U. S. steamer *Sybil*.

Jas. H. WILEY, surgeon's steward, yellow fever, Sept. 14, U. S. steamer *H. Bentz*.

Wm. H. CONNELL, Marine, typhoid fever, Oct. 31, U. S. steamer *Tuscumbia*.

Jas. BARRY, seaman, typhoid fever, Nov. 3, U. S. steamer *Vermont*.

Jas. H. GREEN, first cabin boy, spotted fever, Nov. 16, Naval Hospital, New York.

Solomon SHANK, coalwheel, epilepsy, May 27, U. S. steamer *Black Hawk*.

Jno. GIESKIEDT, landsman, cholera morbus, June 6, U. S. steamer *Black Hawk*.

Moses BROWN, contraband, contusion, June 7, U. S. steamer *Black Hawk*.

Thos. RONY, seaman, cholera morbus, June 30, U. S. steamer *Black Hawk*.

Adam SMOTHERS, contraband, pneumonia, Sept. 30, U. S. steamer *Black Hawk*.

Wm. PHILLIP, first cabin boy, drowned, Oct. 8, U. S. steamer *Vermont*.

Patrick ELLE, seaman, remittent fever, Oct. 20, U. S. steamer *Rodgers*.

Jno. G. WILLIAM, landsman, diptheria, Nov. 7, U. S. steamer *Eastport*.

Chauney BRADFORD, seaman, typhoid fever, Nov. 1, U. S. steamer *Eastport*.

Ed. E. DRUMARD, vol. lieut., gunshot wound, Nov. 14, U. S. steamer *Mound City*.

OFFICIAL.

DEPARTMENT OF STATE, WASHINGTON,
November 28, 1863.

Information has been received at the Department from Mr. Thomas Savage, the Vice Consul-General of the United States at Havana, of the promulgation of a proclamation of which the following is a translation:

PROCLAMATION.

Don Carlos de Vargas y Osorio, a Major-General of the Royal Armies, Governor and Commander of the Spanish portion of the Island of St. Domingo, and General-in-Chief of the Army thereof, &c., &c.

Some doubts having occurred in regard to the fulfilment and meaning of the proclamation issued on the second day of the fifth of October last past, and in order to avoid all irresolution and uncertainty, making use of the power vested in me as Captain-General and in Chief of the Army, I ordain and command:

ART. 1. The ports of the Bay of Ozama, the spanish part of the Island of St. Domingo comprises only the ports, roads, and inlets not included in the Bay of Neiba on the southern boundary line, those of St. Domingo, Samana, and Porto Plata, as well as the others that may be opened hereafter by Royal decree, shall be open according to circumstances hereof Spanish Consuls may issue the proper documents to the vessels which may enter the ports above mentioned.

ART. 2d. This proclamation will be published and circulated in due time for the general information of all concerned.

CARLOS DE VARGAS.

SANTO DOMINGO, November 7, 1863.

MAJOR S. C. Armstrong, 129th N. Y. Vols., 2d Brigade, 3d Division, 5th Army Corps, has lately been promoted to the Lieutenant-Colonelcy of the 4th R. I. Colored troops, and is now stationed at Benedict, Maryland.

THE President has accepted the resignations of the following officers: Lieutenant-Colonel Wm. H. Wood, 1st U. S. Artillery; Lieut.-Col. P. McDougall, A. A. G., U. S. Army; Capt. H. S. Weiser, 19th U. S. Infantry; First Lieut. Geo. E. Butler, 2d U. S. Infantry.

MILITARY HOSPITALS.

The following is a correct list of the United States General Hospitals; their location and capacity. The list is obtained from the official records on file in the Medical Department:—

DEPARTMENT OF WASHINGTON.

	No. Hospitals.	No. Beds.
Washington, D. C.	17	9,210
Alexandria, Va.	12	4,012
Virginia	1	1,000
Georgetown, D. C.	1	1,358
"	1	1,000
Total	33	12,580

DEPARTMENT OF VIRGINIA.

Virginia	3	2,183
Portsmouth, Va.	3	2,250
Total	6	2,183

UNITED STATES ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

The Army and Navy Journal is established to the interests of the service, and to be conducted in a manner free from all sectional or party bias or clamor. Although devoted specially to military and naval matters, it will not neglect any topics, and to the extent of the space at its disposal will endeavor to furnish its readers with a complete record of the week's events. It will be open to impartial military criticism by competent writers, but to the publication of anonymous communications within the scope of its observation, and to attacks upon the character of all officers of the service, in any way connected with military or naval affairs, or interference with the duties of the Bureau of Engineering, which now has no existence as an organization, the Army and Navy Journal will oppose an active influence in this connection, and the interests of the service will be its only guide in the position it may take on these matters.

A summary, in short, of whatever occurs in or pertains to the world of Letters in our direct line. No effort will be spared to make the JOURNAL complete in all its parts, and commendations on any subject within its province are at all times invited from those interested in the Army and Navy. It is the ambition of the Proprietor to make it not only a complete Military and Naval Journal, but at the same time a high-toned, reliable, lively journal, which will be read with interest by all classes of the public of whatever pursuits or political predilections.

The Army and Navy Journal will be published also in numbers issued in the United States impending any important military or naval movement, or any special correspondence, which, by its ability, entire freedom from all sectional and political prejudice, authentic, its official recognition and thorough dissemination in the service, shall render itself indispensable to the Army and Navy, and become, in the public and to the Army and Navy, and become, in the public and to the Army and Navy, and become, in the public and

ARMOR PLATES.

KIRK'S CHARLES THE BOLD.
Will be Published, December 15th,
HISTORY OF CHARLES THE BOLD,
DUKE OF BURGONDY.
BY
JOHN FOSTER KIRK.
Two vols. 8vo.
Mantle, uncut, on white paper.....$5 00 per vol.
Half Morocco, with Vellum Cloth Sides
and Gilt Top, on Thread Paper.....7 50 " "
Mr. John Foster Kirk, whose brilliant relations with the late Wm. H. Prescott are well known, has lost enough of Vols. I and II of his History of Charles the Bold, and the Publishers have the pleasure of announcing that this important contribution to our historical literature is now ready for publication.
The romantic epoch treated of by Mr. Kirk is full of great historical themes, and by his narrative an entire new field is thrown open to some of the most fascinating events in Charles' career. His position as the "Napoleon of the Middle Ages" is well known, and the influences it traced back of his ambitions and of its fall mingle the fabulous of the mystical Romance Period.
Says the Atlantic Monthly:
"We have no hesitation in assigning to Mr. Kirk's most fascinating narrative a place with the great achievements of genius in the department he has chosen to fill. He advanced among the historians who he welcomed the world over."
From Dr. H. Boston Mackaskie.)
"The author will take his stand at once among the great writers of his time and land."
Will be sent by mail on the receipt of the price, by the Publishers. J. B. LIPPINCOTT & CO.,
Philadelphia.

BALTIMORE AND OHIO RAILROAD.
On and after Monday, November 23d, 1863, daily trains will be run between Washington and New York, and Washington and Baltimore, as follows:
FOR PHILADELPHIA, NEW YORK AND BOSTON.
Leave Washington at 8 and 11:30 A. M., and 5 and 11:45 P. M., daily, except Sunday. On Sunday at 8:00 P. M. only.
FOR BALTIMORE.
Leave Washington at 6:45, 8, and 11:00 A. M., and 5:00, 8:00 and 11:45 P. M., daily, except Sunday. On Sunday at 8 A. M. and 8:00 and 9:00 P. M.
FOR PARTS OF THE WEST.
Leave Washington at 8:00 and 8 A. M., and 8:30 P. M., daily, except Sunday. On Sunday at 8:00 P. M. only.
COMMUTATION TRAIN.
Leave Washington daily, except Sunday, at 4:00 P. M. The first and fourth seats from Washington, and the rear seat, in this train from Baltimore, stop at all way points.
FOR WASHINGTON AND THE SOUTH.
Leave Washington at 9:00, 9:55, and 10:30 A. M., 2:15, 4:35 and 7:35 P. M. On Sunday at 9:00, and 9:55 A. M., and 7:35 P. M.
COMMUTATION TRAIN.
Leave Baltimore for Washington, daily, at 7:25 A. M.
FOR ANNAPOLIS.
Leave Washington at 8 A. M. and 3:30 P. M.
Leave Baltimore at 8:10 A. M. and 3:40 P. M.
For further information, tickets for sale, and baggage to be checked through to destination, apply to George S. Koontz, agent at Washington and Baltimore, Md.
JAMES T. EARLE, General Passenger Agent.
L. M. COLE, General Ticket Agent.

Grants of Highway Rights of Way.

The Care of the Wounded.

THE MILITARY SITUATION.

THE leading centre of immediate military interest and activity has been transferred from the grand theatres of war to the Virginia and East Tennessee Valley, where the fate of LONGSTREET'S column remains yet to be decided. That General has somewhat unexpectedly cried a halt and has faced about to deliver battle to his pursuers. The main body of the rebel army is at Rogersville—the terminus of a short branch of the Virginia and East Tennessee railroad, and about forty-five miles from Knoxville. At this point LONGSTREET has his headquarters, but the rebel cavalry remains at Morristown. Telegrams to the Richmond papers report that three brigades of VANCE, VAUGHAN and RANSOM have joined LONGSTREET'S command, and the utmost confidence is expressed in the ability of that General to hold his own. The rebels assume to find great comfort in the fact that LONGSTREET has placed Cumberland Gap in his front instead of in his rear. The sense in which the Gap is in his "front" is of course relative to his having faced about to oppose his pursuers; but it is undoubtedly true that the position he has now reached gives the security, which he had not some time ago, of not having his retreat cut off by a column moving through the Gap.

From Rutledge we have the intelligence that on the 14th inst., the forces of LONGSTREET turned upon and attacked our pursuing column of cavalry, under General SHACKELFORD. Line of battle was formed at Bean Station on the Cumberland Gap and Morristown road, and a fight ensued which continued until nightfall, when the rebels had succeeded in driving the Union force about half-a-mile. Colonels WOOLFORD, GRAHAM, FOSTER and others were engaged. The whole movement was made with a well-contrived plan to cut off and capture General SHACKELFORD and his command, and a heavy force of rebel cavalry moved down the left bank of the Holston River with the intention of crossing at Kelly's ford and getting in his rear. This portion of the programme was, however, checked by General FERRERO, who sent the brigade of General HUMPHREYS to hold the ford. A considerable fight was anticipated on the following day. In addition to the reports of this encounter, the public prints give rumors of encounters of other portions of the Union troops with the forces of LONGSTREET, and announce variously, disasters and successes to our arms; but they are entitled to little or no credence. General FOSTER has assumed command of the troops lately under General BURNSIDE, and the latter has left Knoxville for Cincinnati.

The stand made by LONGSTREET at Rogersville, will necessitate a modification of the plans of General GRANT for the pursuit of the rebel force. So long as the rebels continued their retreat, it was only possible to follow up with cavalry; but if LONGSTREET persists in making a stand, dispositions will have to be taken for his dislodgment, as it is in the last degree important that the rebels should not be allowed any foothold in East Tennessee.

The Army of the Potomac is understood to have definitely settled down in Winter quarters, and any changes of location that are being or that may be made, will be purely with reference to convenience of cantonment. The rumors of contemplated changes of commander have exploded into thin air. General MEADE has issued an order with reference to furloughs, instituting the system under the same restrictions and limitations as were adopted by General HOOKER last year. The death, on Wednesday, of Brigadier-General JOHN BUFORD, commanding Cavalry division and Chief of Cavalry under General MCCLELLAN, causes the profoundest grief in the Army, as it will among all who knew the high soldierly qualities of that gallant officer. He was made Major-General just previous to his death.

From the Peninsula we have the tidings of a successful expedition to Charles City Court House on the 16th ult. General WISTAR, with the approbation of General BUTLER, sent out a Cavalry force under Colonel WEST; who, after a sharp encounter with the rebels, carried their camp at Charles City Court House, captured the whole command, consisting of eight officers and eighty-two men, and destroyed their stores, ammunition, etc. Our loss was two killed and five wounded. The long and difficult march was performed amid a terrible storm, which, as General BUTLER remarks, "adds to the brilliancy of the "achievement."

From our forces before Charleston the only tidings of note is the deplorable disaster to the *Weehawken*, which on Sunday, 6th inst., went to the bottom with all on board. A heavy north-west wind prevailed at the time, and the Monitor *Weehawken*, lying at the entrance of Charleston harbor, went down at her anchorage, carrying with her to a horrible death beneath the waves four of her engineers and twenty-six of her crew. At ten o'clock of the day named she showed a signal of distress, which was seen and answered by the flagship, and boats were promptly dispatched to her assistance. Commander DUNCAN of the *Weehawken*, who happened to be on the flagship at the time, proceeded immediately with the hope of running the vessel on the beach. He had scarcely left the *Ironsides*, however, when the *Weehawken* was reported sinking. A moment after, she settled swiftly down by the head, careened slightly over to starboard, and disappeared beneath the waves. At the moment of going down some twenty or more of the crew sprang to the boats and succeeded in getting away, and as many more were rescued from the waves by the launches and tug-boats; but, from the appalling suddenness of the disaster, all who were below were carried down with the sinking.

The *Weehawken* went down in five fathoms of water, and Admiral DAHLGREN has already made arrangements with Mr. WHITNEY, who has been engaged in raising the *Keokuk*, to do the same for the *Weehawken*. Until she is brought up, it will be impossible to determine with certainty the cause of her sinking.

General GILMORE still keeps up his fire from Morris Island. Richmond dispatches report a heavy bombardment of Sumter on the 11th, without much additional damage being done. At nine o'clock of the same day, however, Fort Sumter took fire from some unknown cause, and the fire being communicated to the outer timber-work of the southwest angle, burned the wood-work, destroyed some ammunition, and resulted in the killing of ten and the wounding of thirty of the garrison. General GILMORE has also been giving the Charlestonians a further taste of Greek fire. On the 11th they report thirteen shells thrown into the city, on the 14th, four more, and on the 15th an additional complement of fourteen. Various buildings were struck, and the city is reported all but abandoned by everybody but soldiers.

The Union operations in Texas make very encouraging progress. Official dispatches from General WARREN announce that all the rebel works at Fort Caballo have been captured by our forces. The capture includes Fort Esperanza and ten heavy guns. Most of the garrison escaped, on account of a gale which prevented the gunboats from cutting off their communications. Fort Caballo and the captured works are situated on the point of a peninsula which separates Matagorda Bay from the Gulf. The possession of this point clears the entrance of the bay, and gives the Union army command of several important points.

In addition to these facts, reports of an unofficial nature reach us from Fort Smith by way of St. Louis, to the effect that the Union forces have possession of the entire Texas coast, including Saline Gulf, Galveston and Brownsville, and that a Union force was ascending Red River and marching on Alexandria, where the rebel General TAYLOR awaited their attack. These statements require confirmation. There seems, however, to be no doubt that a considerable, active, and very large passive Union element, shows itself in Texas; and it is stated that two regiments of loyal Texans are being formed.

From Western Tennessee we have the intelligence that the rebel cavalry Generals, LEE and FORREST, are concentrating in the vicinity of Holly Springs. General HURLBUT'S scouts report them from eight to ten thousand strong, and that seventeen regiments are at Rock Ford, fourteen miles from Holly Springs, while ten thousand more are at Canton, northeast of Vicksburgh. It remains to be seen how many of these are thousands "in hackram;" but there is no doubt that the rebels have been massing a formidable force in the vicinity, with the view of seizing points on the railroad (between Memphis and Corinth), and on the river.

The *Chesapeake* was captured on the 17th inst., by the *Ella and Annie* in Sambro harbor. All the crew but three had escaped. The *Ella and Annie* it may be remembered, was, only a few weeks ago captured in the attempt to run the blockade and has begun her loyal career by a very worthy *début*.

The statement that the rebel authorities refuse to receive any further supplies of food or clothing for our prisoners is now officially confirmed by letters from General MEREDITH to General HITCHCOCK, Chief of the Bureau of Exchange. The reason is the alleged "persistent vilification and abuse" by the Northern press and public, in regard to the manner in which the rebels have carried out their part of the programme. Hereafter, the rebel authorities say, Union prisoners will get precisely the same fare as the Confederate soldiers in the field.

It is a noticeable circumstance that of all the five ships sent in pursuit of the stolen steamer *Chesapeake*, the *Ella and Annie*, a vessel lately added to our Navy by capture, is the successful one.

NEWSDEALERS and others having copies of the ARMY AND NAVY JOURNAL, No. 4, will oblige us by returning these to our office, or to our general agent, SINCLAIR TOUSEY, Nassau street, New York. They will receive copies of the current number in exchange for them, or the cost, as they may prefer.

THE CAMPAIGN IN EAST TENNESSEE.

In a former article ("Georgia Campaign," page 88, Oct. 3) the universal principles of strategy were applied to the theatre of operations of the Armies of the West. To secure the left flank of the combined forces operating in that district, and to prevent any operations by the right flank between Chattanooga and the extreme salient of the Tennessee River at Warrenton, it was shown to be necessary to hold a salient point sufficiently east to control the Atlanta and Knoxville Railroad, and sufficiently south to cover the Tennessee River. The late brilliant operations of Major-General GRANT and the combined armies under him have secured a point which nearly complies with these conditions, and with it the possession of the disputed district, the military value of which we then pointed out. No operations of General BRAGG or his successor can neutralize the value of these achievements, unless the rebel army is strengthened so as to outnumber that of General GRANT, and to be able to defeat it in a fair field without strategetic advantages of manœuvre. It has but one line of operations, and that so situated with reference to the position of General GRANT'S forces that it cannot be left for the purposes of REINFORCEMENT without exposure.

The necessity of operating in two columns was shown to result from the exposure of the whole movement to a rout, like that of General BUELL in the summer of 1862, by a movement of the enemy through East Tennessee into Kentucky, and from the exposure of that flank to attack by the whole or a portion of the rebel armies of Virginia, according as the relative strength of the forces of the contending Federal LINE in temporarily abandoning Virginia for the recovery of Tennessee, or in manœuvring with diminished numbers against MEADE, and detaching only a portion of his forces. When LONGSTREET retires upon Virginia, his movements illustrate the necessity of the position held by General BURNside on both these grounds. It illustrates it, however, by probably one of the most specious and at the same time most incorrect movements that has as yet taken place upon the theatre of war.

The battle of Chickamauga was at least a drawn battle: it was fought for the possession of Chattanooga, and the solid advantages of it were therefore gained by us. The arrival of the reinforcements under General HOOKER and the success of his operations at Bridgeport—operations determined upon when Lookout Mountain was occupied, and executed as soon as the pontoons necessary to insure their success were constructed—gave the superiority to our armies, and rendered it perfectly certain that, on the defensive or on battle-grounds not previously prepared by the enemy, our Army was the superior. The arrival of General SHERMAN with his corps would have enabled our Army to resume the offensive with every prospect of success, even if LONGSTREET had remained with BRAGG. Some very impressive successes therefore have prompted the movement to secure East Tennessee.

The possession of East Tennessee is of importance to the rebels on military grounds, because of the supplies which it furnishes, and the means it affords of operating against General GRANT'S communications; and on political grounds, because the Union feeling known to exist in it, when organized and developed under the protecting ægis of our army, would not only secure its possession and gain a powerful political as well as military base for future operations, but would form, in its close proximity to the most Union portion of North Carolina, an element, the danger of which to the future of the Confederacy could hardly be exaggerated.

If these considerations justify operations for the recovery of East Tennessee, they condemn in the strongest manner the actual movement of LONGSTREET against BURNSIDE. It was quite inadequate to the accomplishment of any decisive result upon a field, the importance of which is as great to us as to them.

BRAGG might be certain that LONGSTREET'S movement would be known as soon as commenced. To commence it was, therefore, to invite an attack by GRANT'S combined forces against only a portion of his adversary's force, which he could only avoid by retreat. This inevitable result followed; and, from the disproportion between the contending forces, which enabled SHERMAN fully to occupy BRAGG'S attention, while his weakened centre was being forced, and his wholly unprotected left flank turned, the defeat was complete and most disastrous. The rebel authorities state—and many circumstances seem to confirm the statement—that, at the time of this action, Gen. BRAGG had communications with the rebel authorities of sending the defeat which he knew would inevitably result from an attack by GRANT,—that he was withdrawing himself upon Rome or Atlanta,—trusting to the lengthening of GRANT'S communications by 50 or 100 miles, and to the position of LONGSTREET upon his flank, to place him out of the reach of GRANT'S blows.

This move, if successful, must have had a result similar to BRAGG'S defeat; cut off LONGSTREET, and made him dependent upon LEE and the Eastern armies—from which he had come to reinforce BRAGG—for his supplies and line of retreat.

Looking, then, at LONGSTREET'S operations in this light, we find him, while besieging KNOXVILLE, 340 miles from Lynchburgh—his base of operations. The railroad having been destroyed by BURNSIDE between Bristol and Knoxville, a distance of 100 miles would have to be repaired. Supplies could be provided on the Atlanta and Knoxville Railroad, as far as Loudon, and the Army would then be dependent upon what it could carry, until its communications with Bristol were reëstablished. There would be no difficulty in this, as the rebel armies, owing to their scanty communicant, have always been more serviceable and less dependent for transportation upon their local resources than depôts than ours. ROSECRANS started for his recent campaigns with 25 days' provisions, and was, including the battle of Chickamauga, 23 days without communicating with his base. But, unless preparations had previously been made for it, it would be necessary, supporting LONGSTREET from Virginia, and unless the force at General LONGSTREET'S command were sufficient to cause General GRANT to evacuate Chattanooga before the expiration of the time for which his army was rationed on leaving Loudon, the permanent occupancy of East Tennessee was impossible.

General LONGSTREET commenced operations by capturing BURNSIDE'S outposts on the 9th and 15th of November, at points, 60 and 15 miles respectively, Northeast from Knoxville, or in the direction of Virginia. This, together with the reports of the presence of JOHN, JACKSON, and WILLIAMS, shows that the operation was to be combined with movements from Virginia. His own movements from the South began with the crossing of the Tennessee at Loudon on the 16th, and ended with the occupation, in four days, of the investment of Knoxville on the 23d, according to a telegram from BRAGG; who, on the same day, at noon, was attached by GRANT in a series of operations which resulted in the capture of Lookout Mountain on the 28th, Missionary Ridge on the 25th, and the retreat of Hardee between BRAGG and LONGSTREET for 15 miles at Cleveland on the 26th, the battle of Ringgold on the 27th, and the complete possession of the country from Ringgold to Cleveland on the 30th. On the 29th—three days after his Southern communications were cut and with his whole army being able to recover them—an assault was made by LONGSTREET, which was repulsed. On the 3d of December, General FOSTER, attempting to cross Clinch River, to intercept LONGSTREET'S retreat into Virginia, is repulsed; but succeeds in forcing a passage at Kingston, which Gap BURNSIDE is strongly reinforced. This day's delay, however, it is feared, will enable LONGSTREET to rejoin LEE.

In viewing these operations in their true light, it must be borne in mind that it was not at all necessary for BURNSIDE to remain at Knoxville. All the supplies were received from GRANT, and could be justified only from a knowledge on the part of that General, that the demonstration of General LONGSTREET was not made with a force sufficient to capture BURNSIDE before his own operations against BRAGG could be initiated, or before he could be reinforced by BURNSIDE. If the forces of BURNSIDE had been such that he could not even temporarily cope with LONGSTREET, his policy would have been either to fall back upon Cumberland Gap, hang upon LONGSTREET'S flank in his advance upon GRANT, and compel him to fight with his communications region in which he was operating, to prevent the fall force of the enemy being brought against him; or, to retire upon McMINNVILLE,—retarding LONGSTREET'S advance by all possible means.

If BURNSIDE had remained at Cumberland Gap, GRANT, after forcing back BRAGG, would have a small force to observe him and act upon LONGSTREET'S communications at KNOXVILLE. But, if LONGSTREET were in sufficient force to make BURNSIDE'S retreat upon McMINNVILLE the proper course, GRANT would then have had to concentrate all his forces at that spot,—fight LONGSTREET first and then BRAGG, if he had advanced,—taking care, however, never to retire far enough to permit LONGSTREET to manœuvre between him and BRAGG, or to reinforce that General.

If the views thus laid down be correct, it will be seen that the operations against KNOXVILLE for the recovery of East Tennessee can only be successful when executed with a force able to compete, without the assistance of any forces advancing by way of Atlanta, with all the forces at GRANT'S command,—that is, with the combined forces of FOSTER, BURNSIDE, SHERMAN, GRANGER, THOMAS, and HOOKER. It was claimed (in the article above quoted) for the position now held by our forces, that it would afford us the advantage of interior lines, so long held exclusively by the rebels; and the above analysis of recent operations shows, that this advantage would enable GRANT to manœuvre with success against a force advancing from Atlanta, and one from Lynchburgh, through KNOXVILLE, even though each of them was nearly equal to his own in strength.

One word of praise for the ability shown by General GRANT in these combinations. It has been demonstrated that BURNSIDE'S movements depended upon the strength of the enemy's forces in East Tennessee. To have retired his officer's forces upon McMINNVILLE, would in any case have been bad—according to the laws of military strategy would have been safe, and would generally have been commended by military critics. But, unless absolutely necessary, it would, by exposing the loyal East Tennessee to the tender mercies of the Confederates, have worked irreparable political harm. The appearance of weakness would have seriously injured the moral of our troops, and done much to neutralize the effect of the victories over BRAGG. On the other hand, to have retained BURNSIDE in Knoxville if the opposing force had been too great for him to withstand or even temporarily, would have been a military blunder of the gravest kind,—giving to the enemy many prisoners, much material, and the prestige of victory, while it would not have avoided the political results of a retreat. To know, in a case of this kind, exactly how much to risk—how much to sacrifice to save more—is the test of the greatest qualities of a general. To be successful, one must be bold,—but not be over-bold. Would that our generals at all times could hit the happy mean, as GRANT at Vicksburgh and Chattanooga.

SYSTEMS OF FORTIFICATION.

MONTALEMBERT'S AND CARNOT'S SYSTEMS.

IN a former paper we gave the distinctive features, without details, of VAUBAN'S system, also called "the French" or "bastioned system," referring at the close to that of MONTALEMBERT, which has been greatly followed by other Continental nations. The object of this article is to state the maximum of strength and fire, and rather to depend upon this, than upon flanking contrivances, in which, however, his plan is not entirely wanting.

MARIE RENE, Marquis de MONTALEMBERT, born in 1714, and therefore a contemporary of VAUBAN, has called the *système vénitien*, of war especially, was a French general; but earned his principal distinction in the Swedish army, where he was French commissioner during the "Seven Years' War." Seeing the strong towers constructed by the Swedish General GUSTAVUS ADOLPHUS, he conceived from their idea of a strong system of defence, in which the element should be casemated towers. He believed that, however these might be exposed to the enemy, they would present such a withering fire as to keep the besiegers at a comparatively harmless distance. MONTALEMBERT'S views were scouted by the French engineers of his time, ridiculed in *print* by CARNOT; but very generally received and applied by the German engineers, and now constitute an important element in the Russian, Prussian and Austrian systems of defence. ZASTROW, a distinguished German writer on permanent fortifications, declares that MONTALEMBERT worked an entire revolution in this art. Instead of constructing his fronts like VAUBAN on the "exterior sides" of polygons, the *traces* of MONTALEMBERT is upon *re-entering angles*, and he converts the sides, *en crémaillère*. These he flanks in casemated cogged-wheel towers, which, in turn, are flanked in casemated batteries three stories high, placed between the miner *counterfore* and the cavalier of the curtain. Without stopping to give these details, which indeed, the reader can only properly understand by consulting a trace of this system, we will simply point out the main features of it. Having thus arranged his re-entering *sides* of the polygon, at the *salients* he places the great feature of his plan, *detergent towers*, forty feet in diameter, the salients of the decagon or nine sided so as to form twelve salients, each of 60° on the faces of which project such other type towers as these. These towers are three stories high, but above the *first* story they are circular, and contain casemated batteries of heavy guns. Above the top or barbette tier, is a small observatory, which is loopholed for musketry. Each tower is provided with two or three magazines. The design of MONTALEMBERT'S towers is two-fold,—strength and *distant* sight, with a plunging fire; but the defects of the plan are made more manifest in the light of the modern improvements in artillery. The batteries that reduced Fort Pulaski, and Fort Sumter, and Fort Wagner, would have made short work with his towers into *pi*, and make his casemates soon not only incompetent to flank his re-entrings, but entirely indefensible themselves.

But, let it be observed, that as all these *traces* are for a horizontal site, it often happens that in fortifying irregular ground, and especially rocky positions, where the enemy must move with great labor and very slowly, portions of MONTALEMBERT'S system are still useful; while in harder defence, against an enemy that cannot have recourse to the sap, they are especially excellent.

OF CARNOT'S system a word must suffice. It unites *étreyet* with *sortie*; but the strength is especially obtained by placing in the bastions and demilune of the front attacked, 15-inch mortars, which rain a *vertical fire* upon the parallel and saps, by which he calculates that 20,000 men can be posted in ten days. This is the probable period between the establishment of the third parallel and the opening of the breach. In his treatise "De la défense des places,"

CANNOT says:—"The new mode of defence consists, then, "in this alternate game of *sorties* and *vertical fires*, in each "a manner that the enemy cannot check the latter, without "exposing himself to the former, nor take measures against "the first without being overwhelmed with the last."

In our next we shall touch upon the modern German system.

CORRESPONDENCE.

ACTING ASSISTANT-SURGEONS.

To the Editor of the Army and Navy Journal:

SIR:—A correspondent, on page 227, ARMY AND NAVY JOURNAL, that acting Assistant-Surgeons of the Navy are utterly and altogether ignorant in the matter of administrement and management.

The existing law which regulates promotion in the medical staff of the Navy directs that "no person shall receive "the appointment of Surgeon in the Navy of the United "States until he shall have served as an Assistant-Surgeon "at least two years on board a public vessel of the United "States at sea, and unless, also, he shall have been examined and approved by a Board of Surgeons, constituted as aforesaid." And further, that Assistant-Surgeons after two years' service "shall be entitled to examination by a "Board of Naval Surgeons, constituted as aforesaid," &c.

Although Assistant-Surgeons may be examined and promoted after two years' service at sea, they are not entitled, except to meet a demand for Surgeons, to be examined until after the expiration of five years' service. Then, if found qualified for promotion, they are styled passed Assistant-Surgeons, receive the pay of Surgeons, and rank as commissioned rank, but wait for promotion until there are vacancies in the grade of Surgeons.

No grade of Acting-Surgeons has been created, simply because no such grade of officers is required in the service up to the present time; the number of permanent Surgeons in the born Medical Staff is large enough, with the hard work, to occupy all the positions usually filled by Surgeons. There are comparatively few large ships in commission, and the vessels whose crews are from 80 to 120 men, are entitled to a single medical officer only.

There is no Acting-Assistant Surgeon who has been long enough in the service to entitle him, under the law, which is considered to be a wise one, to examination for promotion.

Until legal provision is made, the Department can only grant Acting-Assistant Surgeons an examination for advancement after they have served two years. Then, if found qualified, they would remain, like the permanent Assistant-Surgeons, passed Assistant until there is a vacancy in the grade of Acting-Surgeon.

Those who serve through the war are entitled to some state remuneration for the privations and the sacrifices they may have made, by leaving their private pursuits. R.

THE FORT SUMTER FLAG.

To the Editor of the Army and Navy Journal:

SIR:—Your Correspondent "C." tells us, in your issue of November 28th, that "when ANDERSON's flag was hoisted "at Fort Sumter, our Spartan severity determined to cut it "into pieces and divide it among the garrison, as a kind of "martyrdom"—and states that this was done, giving "one "of Anderson's stars" to his authority.

This is certainly an error, arising doubtless from a misunderstanding of the information given. Shreds were certainly cut from the flag, and distributed as mementoes; but they were *only* shreds and did not materially affect its size or condition. After being lowered at Sumter the flag was hoisted at Hilton Head, where steamer transferred ANDERSON and his command to the North, was displayed at the great demonstration in Union Square soon after ward, and is now safely deposited in New York.

And nearly every living member of the Sumter garrison is earnestly and justifiably proud of the flag, would like its influence can command, to hasten the day when that old flag may again shake its proud folds to the Southern breeze over the ruins of the Rebel Confederacy.

S.

FOLLY ISLAND, S. C., December 3d, 1863.

Another correspondent writes:

SIR:—The issue of November 28th, your correspondent "C." speaks of the "Fort Sumter flag," which is noted in the issue of December 5th by "H." If enough has not already been said about this flag, I would like to state that I have in my possession a piece of the flag—presented to me by the General himself—with the following endorsement: "I the undersigned, at the request contained "in Mr. ——'s note, of —— inst., General ANDERSON "takes pleasure in sending him a small piece of the 'FORT "Sumter flag.'

"NEWPORT, R. I., October 16, 1863."

Perhaps "C." could tell whether *this* is a portion of the flag, or no. Or, rice versa.

RECRUITER, N. Y., December 7, 1863.

PAY OF NAVY PAYMASTERS' CLERKS.

To the Editor of the Army and Navy Journal:

SIR:—Allow me to call your attention to the inadequate pay received by Paymasters' Clerks in the Naval Service. The present pay is as follows: To a Paymaster's Clerk on a frigate $600, and on any station, which commuted at 30 cents per day, amounts to $109. To a Paymaster's Clerk on a smaller vessel $480, and the rations, which is $328.

Out of this sum he is supposed to keep up a gentlemanly appearance, pay his mess bill and the various other bills which stare naval officers in the face. His duties are responsible and arduous, requiring no experienced hand to take charge of the accounts of a frigate or a large sloop of war. He ranks by courtesy as a Midshipman, but, in fact, has no real rank, being an officer on temporary service. There is no promotion for him whatever, and as far as one can see, though he is a very necessary appendage.

The Clerk of the flag-ship (which is having a complement of 800 (more or less) receives only $500 and can rotate, or in all, $600, while the Clerk on a vessel having 120 men would receive $400 and one ration, or $500. Is this just?

Paymasters' Stewards now receive $100 as a ration. The Hon. Secretary of the Navy raised their pay, while he overlooked the Clerks.

In the Army a Paymaster's Clerk receives $750 per annum, with three rations per day, commuted at 30 cents each, making in all $1,078. His duties are confined to the Pay Rolls. The Paymaster General of the Army has asked that their pay be increased, deeming it too small. I may venture to assert that a Paymaster's Clerk in the Navy has as arduous and responsible as that of the Clerk of an Army Paymaster. I think $1,000 per annum is too small for Paymaster's Clerks in the Army, is $500 or $600 too small for Clerks in the Navy?

I think the pay of Navy Paymasters' Clerks should be as follows:

CLERKS.—To Paymasters of flag ships, receiving ships, and navy yards, $1,000; to ships and store ship, $900; 2d rates, $800; 3d rates, $700; 4th rates, $600; together with one ration per day.

While the pay of all grades of officers in the navy has been raised, that of the Paymasters' Clerks remains the same. Is it not high time that their pay should be more adequate than the present; and as a member of that grade hope to see a bill granting it to us passed by Congress this Session. PAYMASTER'S CLERK, U. S. N.

NEW YORK, December 14th, 1863.

THE TARING OF CHARLESTON.

To the Editor of the Army and Navy Journal:

SIR:—The Secretary of War, in his able report of what has been done during the past year by that branch of the service of which he is one thing that has not been done. He says, speaking of the instructions of the President on the 7th of April, in language which is strictly applicable to your article of last week, that "no one can be charged with "*struction, the character of which was not understood*, it was "not deemed advisable to attempt a passage up to the city." The hopes of the Rebels in Charleston were at the highest degree at different times before and since the attack of the 7th of April, and they have been told that Charleston would going to be taken. Now that it is taken, the enchanting groundless expectations, would it not have been as well for Mr. LINCOLN to have informed the Rebels of them?

1. Is anything known *now* of the obstructions of Charleston?

2. If anything is known, is it known whether these obstructions can be removed or not?

3. Has any civil engineer of reputation and experience in the removal of obstructions from harbors been consulted as to the removal of those in Charleston harbor?

I ask these questions from a firm conviction that Charleston can be taken, if the military authorities determine to go about it in a proper way; that the taking of Charleston depends upon the removal of the obstructions; that the Navy cannot operate without the obstructions are removed; that to remove the obstructions, it must be accurately known what they are; and, finally, to ascertain what they are, they must be inspected under water. I believe, also, that there is no difficulty in so inspecting or in removing them; and that any civil engineer of moderate talent and of experience in subaqueous work would willingly contract to design a vessel adapted to the purpose, and to do the work, while from a complete inspection of the obstructions was being made, and the work of their destruction prosecuted. I believe, also, that there is no difficulty whatever in carrying such a work to a successful termination. The Navy cannot be blamed for not removing these obstructions. It is a job for engineers, and not for the Navy. The operations of warfare have never called upon them to study.

DIVING.

A FEW THOUGHTS ON THE MILITIA QUESTION

To the Editor of the Army and Navy Journal:

SIR:—It perhaps seems strange to many that after two years of campaigning in the field by the armies and forces of our several States should be in no better condition than they now are. It certainly will do no good to indulge in vain regrets over the many opportunities which have been unfairly evaded; yet the experience of the past should warn us not to neglect in the future the many advantages to the Union cause, and to be important and favorable results. Could fifty thousand militia-men have been placed in the field in camps at the time General MCCLELLAN landed on the Peninsula, General MCDOWELL could have been spared with his army from before Washington, and have joined with the Army before Richmond. Such a state of things would in all human probability have given to the operations of the whole capital for General MCCLELLAN's army at that time. Over a year has passed since that time, and we are seemingly no near such a result as then. We all know how much we needed such a force in September, 1862, and June, 1863, when Lee made his movements into Maryland and Pennsylvania. Had the militia been organized, Meade was called upon and came forward safely, it is true, at both of these times, but we all know that the troops that furnished behind for the emergency necessary to render them of the greatest service.

It is perhaps doubtful if a better state of things can be expected under the present militia system. It is a question well worth the attention of Congress, whether the uniformed militia should not be placed immediately under the control of the PRESIDENT and the WAR Department, the same as the volunteer force now in service. To relieve the War Department, the House of Repl. committee a Military Department, under the more immediate command of its Governor, who can be elected during the term of office with the power of a Major-General, by the PRESIDENT. The officers could be commissioned by the Governors of their respective States, as in the case of volunteers. Let Congress determine the number of militia to be raised—say 500,000—and let the number, whatever it may be, be proportioned among the different States. Let each military regiment be filled to the maximum number; and if this cannot be done by volunteering, let more be drafted into the different regiments of militia. Let each man joining such a regiment undergo a rigid medical examination, the same as though he were enlisting in a regiment serving in the field. Let all belonging to this force be exempt from all other service, making the militia of the country in reality an army of reserve.

I cannot support this plan. The act of Congress organizing such a militia force could arrange and prescribe the minor details. With such a force organized at the present time, a sufficient number would be unnecessary; 200,000 men could be put in the field in ten days for six months. When five months' term of service expires, another 200,000 could be ordered to the field to relieve and so on. In the meantime the Regular Army could be judiciously enlarged; the Navy increased. By recruiting without offering extravagant bounties, and the reserve militia force be ready for the field at a day's notice.

J. N. H.

THE HOTCHKISS PROJECTILES

To the Editor of the Army and Navy Journal:

SIR:—In your article on English Field Artillery, you speak of WILLIAM ARMSTRONG'S experiments of March and November 1855, and in your comments say, if for "field guns no advantage whatever is gained by loading at the breech," &c. Now, this system would not have been "adopted by practical soldiers, and the simple expanding "principles of SHRAPNEL and HOTCHKISS been known." The experiments of Sir WILLIAM ARMSTRONG, recorded in 1849, and in August, September and October, 1855, they were exgraunched with by the British Government at Shoeburyness with a 8-inch bronze gun, weighing 63 pounds, and projectiles weighing 11 pounds, sent over by HOTCHKISS. Metallic cartridges were likewise. The system then was not urged upon the English Government at the time, as Mr. ARMSTRONG wished first to have them adopted by the United States. This was done by the Board convened for this purpose at the Washington Arsenal, in June 1855, by Major BELL, Ordnance Officer.

WASHINGTON, December 12, 1863.

SUMMARY DISMISSAL OF OFFICERS.

The following remarks on this subject are taken from the London *News* and *Chronicle*, and we publish them as bearing upon similar cases in this country:—

It is only of recent years that the Crown has not hugely exercised the undoubted privilege of summary dismissal from the Army and Navy. There existed formerly an era when a wholesome exercise of this power saved society and the Army and Navy from much scandal, and from the great inconvenience and delay caused by bringing offenders case before Courts-Martial. We do not for an instant defend the system which then were chiefly circumstances exposed on mere political grounds, nor are we disposed to consider such an act as the removal of Sir ROBERT WILSON from the Army a wise one. But, in principle, the power is a most wholesome one, and one not existing his commission. It was in the Parliamentary debate on that occasion that Lord LONSDALE declared that Sir ROBERT WILSON had made a remarkable statement that in addressing the House he held in hand a letter from Lord WELLINGTON, in which he stated that twelve officers who in the ten years preceding 1821 had been summarily struck off the strength of the Army, instead of bringing them before a Court-Martial, or after a Court-Martial. It was not that the trials had been illegal, or that the sentence had not been according to the evidence and the best of the understanding of the Court; but in each case the case were such in which merely *legal* guilt could not be proved, but in which there were family circumstances exposed to light which were unbecoming in an officer and a gentleman.

In some instances we know the grounds of removal from the Army have been such as to call for the highest disapproval the harmony of the corps, or, in some way discreditable to him, damaged the repute of the Service. Very many examples could be given of instances in which naval officers acquitted being dismissed usually allowing the sale of their commissions. The exercise of this power was necessary to give discipline and good order in the service, and kept many an officer from getting into collision with his commanding officer and disturbing the harmony of the quarterdeck. The sneaking military lawyer, the mean-minded man who took every occasion of disputing authority and yet keeping within the strict letter of the articles of War, would be the sub to find himself without a commission. We seldom see the exercise of the unquestionable right of the Sovereign in dispense with the services of an officer, and most certainly there are cases of too frequent occurrence in which the privilege to be exercised. Cases have arisen in which both the PRESS and Parliament would be often appealed to by the *Insonvis*, but the Commander-in-Chief and the Secretary of State for War would be able, in the exercise of the state of strong grounds for the removal, that the country would be well satisfied. We hold perhaps a strong opinion on this subject. We hold that the removal of an officer is no more a question for the public than for inquiry why Mr. SMITH has discharged his servant, paying him all wages due.

THE COAST SURVEY.—The Secretary of the Navy, in his late Report, pays the following deserved compliment to the officers of the Coast Survey:

"It is due to the officers connected with the Coast Survey that the assistance which they have given to our squadrons should be acknowledged. The value of the information which they have furnished our blockading forces throughout the war cannot be over-estimated. Not only on the coast, but on the rivers and bays, they have rendered the most important efficiency and its intelligent action. Rear-Admiral FOSTER expresses his great obligation to a number of officers who have accompanied the Mississippi squadron, for the maps and sketches which were used by

him, and concealed by the army officers in guiding their operations. They were constantly employed in delineating the face of the country, gaining topographical and hydrographical knowledge, compiling maps, and sketching, when the maps were found to be erroneous. The squadron would have been sometimes embarrassed without them. War cannot be successfully carried on without good maps, and the general or admiral who has the best charts will have an advantage which will go far to insure success."

JEFFERSON DAVIS' MESSAGE.

THE Message of the rebel President is, as might be expected, dignified, well-written, and yet, to us, very absurd.

Ranging over the entire ground of the rebel relations at home and abroad, the portions of his Message of chief interest to us and our readers are those in which he considers the military condition and prospects of the rebellion.

He acknowledges the grave disasters of Vicksburgh and Port Hudson, and the retreat of the rebel army from Little Rock, giving us "the control of the important valley in which it is situated." But as an offset to this, he collates with it the guerrilla ("petit" "ism") warfare which they have substituted for it, and "the determined and successful defence of Charleston" too.

Of LEE'S operations, in the invasion of Pennsylvania, he has little to say, but that little informs us that we were disabled at Gettysburgh, and that triumphantly going homeward as he had doubtless originally intended, LEE had offered us battle a score of times and we would not accept the offer. As MR. DAVIS is not without skill as a public writer, he has not dwelt upon that campaign, but left his readers to draw their own conclusion.

Mourning over the surrender of Cumberland Gap; spending but little time upon the disasters in front of Chattanooga; by no means satisfied with the manner in which LONGSTREET took Knoxville; doubtful concerning the movements of BANKS; the rebel President ends the first part of the Message with a paragraphic declaration concerning the "experience of mankind," "fighting for liberty and independence," and "no doubt as to the result." Phrases which mean everything and—nothing.

The enormous expenditures of "His Excellency," when he speaks of the finances, are painful to read. We all know that Confederate money is worthless even in its own purlieus. THIS MR. DAVIS calls a "disordered state of the currency," to be corrected by taxation, and by making Confederate bills the representative, not gold, but of each man's property; thus making every man a little bank, and his property, be it much or little, is the capital, for which the Confederate money he spends is the paper issue. But instead of raising the value of Confederate money, this depreciates all property.

We come, in the close of the Message, to a few suggestions as to the efficiency of the rebel army. We have no space to give these in detail. While vaunting in one paragraph the excellence of the rebel army, he unwisely acknowledges in the next the great number "improperly absent," the alarming number of substitutions and exemptions, and the many who have sought to escape the dangers of war, by becoming wagoners, nurses, cooks, and functionaries in general, for whose work "negroes would be competent." By such substitutions as these, and by forcing into the service all who are above forty-five, and yet able to do specific duty as guards of bridges, &c., he hopes "for the ensuing campaign to put at defiance all "the efforts of the enemy."

"*Fas est ab hoste doceri*:" acting upon this principle, DR. DAVIS proposes to establish "an Invalid "Corps" like our own a good move, and one which will be popular in the rebel army. Whatever ranks may be depleted, the "invalids" will always be full.

Of MR. DAVIS' strictures upon the manner in which the exchange of prisoners has been conducted, we need say but little. The subject has been already discussed in these columns, and offers, to our judgment, one of the most difficult problems of the war. To the extent of cartels of exchange, we have acknowledged the rebels as a regular and licensed enemy, while in reality they are not. Taking advantage of this, they have laid more arrogant claims, and the subject, no longer one of literal construction, labors under the difficulty of complicated issues. We reply with indignation MR. DAVIS' aspersions on our honor, both in the exchange and treatment of prisoners, designed as a cloak for their own enormities; but we hope this Gordian knot will soon be cut by the victorious sword, and that negotiations will cease. We have had words enough—swords must settle it.

At the very mention of Greek Fire in Charleston, the rebel President puts on the mask of holy anger; but it is the veriest cant. We had an idea that GILLMORE washed off from Charleston, and that incendiary shells were among the ordinary means of reducing a place. The recollection is somehow forced upon us that the rebels tried to burn ANDERSON out of Fort Sumter, and succeeded; but ever since the days of "if not if said the farmer," it does make a difference, in individual judgment, when we find out which bull was gored to death.

But, like all practiced orators, MR. DAVIS keeps a good stock of eloquence for the peroration. The rhetoric is well enough; but there is not a particle of the "inexorable logic of events." Let us instruct him on this point. "The only terms of peace" are not subjugation, nor are "recognition," are no longer with MR. DAVIS, or the Rebellion he represents. The day for such terms and these men has now gone by forever. The old conditions have been strangled by the rebellion; all things have become new; phœnix like, the State governments will arise from the ashes of the slaughter, treasury, and the old names of States will stand for a new order of things everywhere. The men who excited this rebellion and waged this war have written their own death-warrant—their day is over: looking greedily after the shadow, they have lost the substance; and while their dreams are dissipated into thin mist, their realities have become a dream.

We may venture to doubt whether MR. JEFFERSON DAVIS will ever write another Annual Message.

TRAINING SHIPS.

EDUCATING BOYS FOR SEAMEN.

WE were enabled to spend some time on board one or two of the English Training Ships, mentioned in our last article, and had full opportunity of examining their arrangements and conversing with the officers who, without an exception, spoke of the system as by far the best that had ever been devised. The boys were working and reading as they were well qualified to judge of it, and we were moreover assured—and the testimony was the most potent of all—that officers of sea-going ships were always glad to get the young seamen from these schools.

On board one of the Training Ships, during our visit, the crew happened to be at dinner, but as soon as the meal was finished, without waiting for the expiration of the allotted time, the boys, numbering about 500, were piped up for inspection, when, according to the one of the officers, we passed slowly along the lines. The boys were dressed in the neat and becoming uniform of the English Navy, were clean and hearty-looking, with bright, cheerful faces and altogether in a very creditable condition. Here and there along the line stood gray officers—the instructors in all practical branches—who for physique, intelligence, and all man-like bearing, surpassed any men we have seen on this side of the Atlantic for many years.

On board of another of these ships some drills at the great gun were exhibited, a period of ten minutes being occupied by a seaman gunner, a true specimen of a man-of-war sailor, whose fine presence and manner of drilling proclaimed him a picked man from the *Excellent* gunnery ship.

On board of both ships the discipline was very strict, as it must be, if education was to follow. The hours devoted to instruction silence reigned throughout; all the movements about the ship were quiet and orderly; the means for keeping their clothes and their persons clean were excellent, and the safeguards against the vices and immorality inseparable from large bodies of undisciplined boys judicious and efficient.

The aggregate number of these boys may be roughly estimated at about 3,500. They are allowed to enter between 14 and 15 years of age, under certain conditions of moral and physical fitness, and for a period of ten years continuous and general service, counting from the age of 18. They must produce a certificate of birth and have the written consent of their parents, or, if dead, the nearest relative. A certificate of conduct is also required from the clergyman of their parish, or from the magistrate of the neighborhood. At 16 years of age they must be over 4 feet 10 inches high without shoes, and measure not less than 29 inches round the chest; must read and write fairly, be strong, healthy, well-grown, active, intelligent, and be able to pass a strict medical examination by the surgeons of the ship. On the other hand the boys are well cared for, are educated according to their condition of life, and have certain employment until they are 28 years of age. Brought up in this way they form an attachment for the service, they become petty officers, many get warrants, and all make good sailors.

How many poor families even in our blessed country would be glad to avail themselves of such an asylum for their sons, from the moral filth and degradation of its large cities! and after this war, or even now, it will be charity to have some such source of relief for the sons of the faithful brave.

But how is it that in our country, where education is so popular and where public schools are scattered broadcast over the land, the Navy should form an exception to the general rule? Where are all the philanthropists that they are doing? They have succeeded in ejecting the "cats" and the "grog-tub" from the Navy, and with them the "old school" of seamen: let them go on with their work and give us training ships and a "new school," that our ships' boys may be well instructed and thoroughly trained to their business, their moral tone elevated and their whole nature improved. Those who do not become officers will be all the better and much more useful, not only as sailors, but as members of a Christian community. Let then those who are interested in our seamen take this matter up; for, to improve the men, they must begin with the boys.

Some time about the year 1858, our Government tried what was then known as the "Naval Apprentice System." We only refer to that unhappy failure to protest against its want of success being brought up as an argument against the system we now advocate. Very fortunately, we were somewhat of that abortive experiment and are competent to hear witness to the ineffective manner in which it was tried. The whole scheme naturally fell into disrepute and was very fortunately abandoned; not, however, we regret to say, before some very fine boys had entered who had been inveigled into the sea of corruption which raged within the confines of some of our old receiving ships. To bring this doubtlessly well-intended but ill-digested plan into array against such Training Ships as are now common to the navies of England and France, would be simply pitching to these old blue laws of New England, which condemned in nocence and virtue to the stake, as a warning against the wholesome moral code of the present day.

We think there is scarcely a single naval officer of any experience in the service who would differ from us in these our views, and if they are admitted to be of practical utility, why should not the education of our ships' boys be inaugurated at once? Beginning on a small scale, let us say, to mature a judicious plan, and studying the systems adopted by other nations to which we have already had it in operation for years, such a scheme if of real value would soon develope itself, when the Government might launch those old line-of-battle ships, *Alleghenny*, *New Orleans*, and *Virginia*; and placing them at as many different naval stations, convert them into permanent Training Ships for which they are admirably adapted. They could not be put to better use.

It may be objected that a great difficulty would be experienced in retaining for the benefit of the Navy youths educated for it; but certain advantages must be offered to induce seamen to enter, so that the young seaman who serving his time, will find it more to his real interest to remain in the Navy than to seek employment in the mercantile marine, and for this purpose the quarter-deck must be open to him. Instances are by no means rare when one of old Jack's sons has filled creditably the quarter-deck too let for the naval school, rather than lose all hopes of becoming naval officers, have entered the training ships as boys. By superior intelligence and industry (for they would in all probability have passed through the *école polytechnique*) they have risen to commissioned rank, and in the examination, first thence to lieutenants, and maybe to admirals. One or two of such cases have actually happened; but every year sixteen or twelve promotions are made from the warrant officers to officers in the regular line. To be sure, the examination is severe, and the boy who would be required to undergo it, searching, so that none but those who are in all respects worthy get commissions. It must be remembered, moreover, that the successful ones are often young men of good families, who have gone through the polytechnique with credit and who have entered the service as "boys" or have "pipes," simply because there was no other means of ingress. He enters as a boy, but he has to pass the same examination as he who served his time on board the old *Hardie*, before he can get a commission. Others again are promoted to lieutenants for acts of extreme gallantry, &c., but these latter seldom get to be anything beyond that rank, and are mostly employed about dock-yards and stationary vessels.

But suppose, as would probably be the case, some of our young seamen did find their way into the mercantile service; they are but to be welcomed. They will make better officers of merchant vessels and better seamen, and if any large portion should find their way there, they will still form a reserve upon which to call in time of war.

It is no part of our present design to enlarge upon this subject, or to endeavor to answer the objections likely to be urged against it. We are content to throw out the ideas in the rough, knowing they need neither weighty arguments or fine writing to support them, but hoping most earnestly that those of influence who are interested in the Navy will

take the matter in hand, so that by this time next year we may have the education of our ships boys under full headway.

We will conclude this article with one more quotation from the work alluded to in our last: "It needs," the author says in defence of Training Ships, "no elaborate "disquisition to prove that a crew of seamen formed from the "children of the soil, who have been trained from their youth "up to regard the service of their country as the proper aim "of their exertions, and the uniform of that service an honor "and a decoration, must be inspired with a more ardent spirit "and grow into habits of more reliable discipline than a band "of men called together with no other object in common "than that of receiving their pay; and who, in risking their "lives, look less to defending their country than to the pitiful "question of prize money."

CHAPLAINS.

In a great war there are many interests not suggested by a superficial glance; and some of these, when examined, prove to be of vital importance. It would be a truism, at this period, to class among these the religious care of the soldiers in the field and in hospitals, as to its importance in itself. Such are the duties of chaplains: they are moral and religious teachers; they soothe the sick and wounded, pray with the dying, and hear the promises and consolations of our holy religion to man whose very occupation tends to lead their hearts away from such influences.

Men there are who doubt, and performing them with holy zeal, as if "in their great Taskmaster's eye," cannot be too highly prized, or too fully rewarded. They exhibit the sublimity of courage and self-denial.

Now, let us look at the practical application of these simple principles. A general officer, in conversation with us not long since, declared that the chaplains in his department were a set of time-serving rascals,—fonder of luxurious ease, more gossipy, not only of less use, but far more injurious to good order and good morals than any men in his command. Upon hearing this statement to another gentleman, who had seen a great deal of army chaplains, he expressed his amazement, declaring that those with whom he had come in contact were holy men, the magnitude of whose labors would, were he to name and publish, lay bare their piety, loving kindness, and Christ-like self-sacrifice. Upon this flat contradiction of authorities we fell "to meditation," and tried to reason out the causes of such extremely different results. Like the old tar in Marryat's novel, we soon found the matter by laying it to the credit of "human nature." It is no more nor less. God, holy men, with a single eye to God's glory and man's welfare, have left their comforts and human prospects, and gone to the field. They may be found, not chaumeous for pay or distinction, binding up bodies and souls on the battle-field, in the camp, and in the Prate's vicar, in hospital or camp, where death and disease are rife.

> "At their approach, complaint grew mild,
> And when their hand unbarred the shutter,
> The clumsy type of Love smiled
> The welcome which they could not utter."

But when the office of chaplain was created, and large numbers were wanted, many ministers, who had mistaken their profession, who were lazy, or keen after the loaves and fishes, jumped at the chance to better their fortunes. Many of our chaplains are men who could never command in civic life the position they now hold, or one-third the pay they draw from Uncle Sam. Nor only so; men who were newly clergy of easy accommodation—men of the self-sinecure of either hardly becoming so, or of putting on a white cravat—the symbol of "orders" they never had taken—and thus Christ's army in the field was not, in its *ensemble*, of His ordination or recognition. We know some such; and, while we would not have reproach upon the class, we do desire to see "judgment begin at the house of Israel."

We want men, such as those recommended by Marmont for the French service—*Frères Hospitaliers*, corresponding to Sisters of Charity. We want men in the field like the Monk that supported Marmont's head on the fatal field of Flodden,—

> "A pious man, whom duty brought
> To dubious verge of battle fought,
> To shrieve the dying, bless the dead."

Let us not be understood as degrading this class of officers. We shall always advocate for their proper rank and pay, and that respect which is due at once to their cloth and their personal holiness and diligence; but we would follow with unrelenting vigor the wolves in sheep's clothing who are bringing disgrace upon our cause and *their cause*,—that is the cause of Him who denounced the men that were "not" shepherds, but hirelings." The subject should receive a thorough Government investigation; a new system should be made, and all the incompetent pretenders weeded out.

As the law stands, no minor under seventeen years can be enlisted, except in *special* cases, and then special authority from the Adjutant-General, *as a musician*, and with the written consent of the person having a legal right to his time. If a lad represents himself as over eighteen and the recruiting officer can satisfy his mind to that effect ago, he should be absolutely rejected. But if the officer have a reasonable doubt as to his being eighteen years old, he should cause him however to the declaration as to his age, &c., which every recruit signs on the back of his enlistment.

PROTEST OF NAVAL SAILORS.

On Monday last about seventy-five sailors and a number of landsmen met at the Blue Anchor, in Cherry street, New York, for the purpose, as stated in their printed circular, "to unite the voice of American sailors on the subject of "course of the Secretary of the Navy relative to prize "money, stopping the grog, &c.; and to pass resolutions "for the guidance of our responsibly." After speeches by several old salts, who growled over the abolition of the grog ration, and bewailed the loss of their dirty prize money, and that prize brokers swindled them out of twenty-five per cent. of it when they did, the following resolutions were adopted:

Resolved, That all American seamen are invited to keep out of the Navy, until some way is found out to make a man get his own prize money when the lot is ready, and when he applies for it.

Resolved, That the Abolition of the Navy Grog was unjustifiable, and is very bad; that it was never attempted in any other navy in the world; that the Navy Grog was a thing by which we got, was not enough to intoxicate anybody, and that those who could do without grog were generally those who drank it at all.

Resolved, That we make short or long trips in merchant ships, as the case may answer it, until the Navy is governed in a way that will meet our views; and that we speak to every sailor we know, and request him to abide by these resolutions, and that a copy of the record of this meeting be published in the leading newspapers.

Resolved, That a committee of seven be appointed for the publication of the naval sailors now sojourning in New York; and that each man who is entitled to prize money receive a small part of his income to forward the said organization.

THE REBEL WAR DEPARTMENT.—The Richmond *Dispatch* speaks of the report of the Confederate Secretary of War as a long and highly important document, and gives a brief review of its contents, from which we learn the following:—

The report of the Secretary of War briefly refers to the operations of the army in its several departments and says that the conduct of the campaign in Pennsylvania deserves. It is difficult to resist the impression that its disasters were not inevitable. That a court of inquiry to investigate the whole campaign would be highly desirable, but, in consequence of the vicinity of the enemy requiring the presence of witnesses and officers with the army, it has not been practicable. It is expected soon to re-assemble.

A deficiency of resources in men and provisions, rather than a deficiency of spirit, caused the withdrawal of the army in Middle Tennessee.

The Secretary alludes to desertion, straggling, and absenteeism, and says he has ordered that the army be but little over one-half or two-thirds of the men whose names are on the muster-rolls. He recommends the repeal of the exemption of conscripts, and that all having substitutes be put back into the field, and that the system under which substitutes are received as conscripts can be regularly and constitutionally abrogated by the same power. He says that no compact was entered into between the Government and the substitutes, that a substitute, as has been alleged, but only a privilege which Government accorded. Instead of complaining of such abrogation, the person ought to feel grateful that his brothers have been allowed him. He recommends an abridgment of exemptions and the consolidation of details, making details accordingly to the wants of society at home.

The Secretary says that the three years' men, when their terms expire, cannot be allowed to depart, and should be retained, allowing them to choose the existing company, under its present organization, in the same arm of the service. He recommends the impressment of articles necessaries and regiments are reduced below a certain complement.

The Secretary pays a glowing tribute to the heroism, endurance, and undaunting devotion of the soldiers, and of the Government, and closes by calling on our citizens upon the altar of liberty; and closes by saying that our very reverses, showing a united and determined endurance of everything for liberty, should convince the enemy of the futility of his efforts to subdue us.

A GRAND CAVALRY STAMPEDE.—On Thursday night of last week about 5,000 horses stampeded from the cavalry camp at Groveton, near Washington. An attempt was made to stop them, but without success. The whole command, acting with Washington, but did not succeed. Some of them fell into the river and were drowned. There was busy work gathering them up. Many are missing. A portion of which will never be caught. A Washington paper says:—

"It appears that the horses were not all in camp, but had been grazing down in the marsh, and scented and were sent to this camp preparatory to again being sent to the front, and that among them was a number of mules that had been in the camp more than that evening. The enclosure was a rail fence about five feet high, and was regarded as a strong one; but the horses, when they got to rushing and kicking, every one of against it with such force as to throw it down. At the time—near eleven o'clock—the watchmen on guard on duty, but the horses having gone down the enclosure in two places, and bursting forth in such immense force they found it impossible to stop them. Indeed, the stampede was made in such a manner and with such violence that it was a foolhardy experiment for any number of men less than an army to attempt to stop them. They rushed pell-mell, as they were, in two masses, numbering over five thousand altogether—one taking the road towards the city, and the other down into the country."

The people living along the road as well as the cavalry patrol hearing the racket, were apprised of the affair some minutes before they saw the approaching host of horses, and attempted at first to check them, but ineffectually, and away they went, some as they became exhausted, taking to the fields and woods. The most exciting scene was at the navy yard bridge, where the guards attempted to stop them, and in a short time the bridge was filled with mules. Many were behind crowding on and not getting through, divided and jumped into the branch, where a number were drowned, others swimming the branch in safety. A large number attempting to swim the branch above the bridge, and some were also drowned. A number of citizens were soon out, and the boys went in and extricated many of the terrorstricken animals.

There are still about six hundred of the horses missing, over eleven hundred having been picked up in the city yesterday, a large number at Bladensburg, and a still larger number at Marlboro' and Port Tobacco, which it is thought will be sent to the depot to-day. Lieutenant Hale who has charge of the depot, informs us that he will be able in one hundred horses, when the scattered ones are all collected, and others are on the opinion that the loss will prove to be nearer one thousand.

THE NAVAL OBSERVATORY.—The report of Captain James M. Gilles, superintendent of the United States Naval Observatory, which accompanied the report of the Secretary of the Navy, contains some points of interest. It states that the value of a complete outfit of a vessel, with nautical instruments and charts, is \$1,000. During the year twenty vessels were thus supplied, and one hundred and two had partial supplements, at an average cost each of \$310. When the war commenced, the navy relied almost wholly upon foreign workshops for certain classes of instruments, and not less than four-fifths of the annual appropriations were sent abroad in payment for chronometers, sextants, spyglasses, &c. But the case is now wholly changed, and our own mechanics are able to make all classes of instruments of a better quality and at a less cost than the imported ones. The United States Coast Survey has published 10,780 charts during the year, and has been invaluable to the blockade service. The appropriation asked for instruments, books, and foreign charts for the next fiscal year, is \$101,047.

Captain Gilles has also published an account of his astronomical observations, and mentions incidentally that his two precisely regulated Mean Time clocks have performed unreduced. They are now, however, ready for the printer. The total appropriation asked for is \$135,282.

HOSPITAL CARS BETWEEN NEW YORK AND BOSTON.—We have lately examined the new hospital cars, built by the New York and New Haven R. R. Co. for the purpose of conveying sick and wounded soldiers between those two cities. Resembling in the outside the ordinary first-class car, the inside is fitted up with every convenience for the sick. Hanging by rubber bands, that the patients may rest undisturbed by the motion of the car. Twelve easy chairs and several reclining couches are provided, and there are also fitted up in the car a complete cooking apparatus, a large medicine chest and a wardrobe. Everything when we provided for the conveniences and comforts of an hospital, and it has been very successfully carried out. Two experienced hospital stewards and two nurses have been appointed by the Government to take charge of the patients, and every thing has been provided to secure their safe and easy passage over the road. The cars leave New York and New Haven before every evening, the number of sick and disabled passengers from the latter city depending on the day's arrivals of their names and complaints in kept by the stewards. These cars were manufactured in Springfield, Mass. for the New York and New Haven Railroad Company, and those for Boston and Worcester, the Western, and the Hartford and New Haven lines.

The following is a list of the officers and men lost by the sinking of the *Monitor*:

Officers—Third Assistant Engineers, H. W. Mouse, Augustus Mitchell, G. W. McGowan (acting), and Chas. Sparrow.

Men—Thomas Piper, James Scollen, John Buckley, John Kenigan, John Carpenter, Jos. Cronan, Chas. F. Davis, John Williams, Wm. Bell, Thomas Wilson, Wm. Williams, Christian Anderson, John Rutledge, Ralph Anderson, Edward Gayman, Edward Riddle, Richard Gibbons, Jas. Leonard, Jno. Jones Mes, Robert Ferguson, Thomas Donovan, W. G. Pike, Geo. Leighton, Henry Sumner, Thos. Slother, Thos. Danlen, Stephen C. Newman, and one name unknown.

A GENERAL ORDER, dated November 30th, from the War Department, authorizes commanders of geographical departments to grant leaves of absence in accordance with the General Regulations of the Army; but all officers, of whatsoever grade, are prohibited from visiting the city of Washington without the permission of the Secretary of War or Department. To serve as a check upon the abuse of this authority a report of all leaves granted is ordered to be made monthly to the Adjutant-General of the Army, stating the full length and dates, and the reasons for granting them. No application for extension of leave of absence will be granted by the War Department unless such extension is recommended by the officer granting the leave.

By order of the Secretary of War commanders of departments are authorized to grant furloughs to enlisted men in the general hospitals within the limits of their commands, when recommended by the medical directors or chief medical officer; the number allowed to be absent at one time to be limited to ten per cent. of the number of men present for duty, and to be graduated according to the distance of the applicant from his home, the good conduct of the recipient to be a prime rule of the medical officers in recommending the furloughs.

POST-OFFICE AT ARMY *Appomattox*, VA.—In pursuit of the captured steamer *Chesapeake*, arrived at Portland, Me., on the 13th inst.

The steamer *Scotia*, with Captain McGonigal, passed Angier on the 11th of October. She was at Bermuda on the 14th, where she arrived the 11th of October. She was at Bermuda on the 14th, where she arrived the 11th of October.

THE U. S. Marshal at New York on the 10th sent to the Navy Department \$102,611.41, proceeds of the prize steamer *Stettin*, captured by the vessel *Hiawatha* running the blockade. This amount belongs exclusively to the officers and crew of the U. S. *Hiawatha*.

A LETTER received in Boston, dated Matera, October 28, states that the rebel pirate *Alabama* came into that harbor a few days before, and then a look around the place, and immediately put to sea without communicating with the shore.

THE steamer *Scotia* put into Portland last week, Thursday, leaky, caused by the opening of her seams in the heavy gales. She was here from intentional suspicion was aroused from the fact that 23 of her men deserted on Thursday night. Most of the deserters were arrested.

CONGRESS.

SENATE.

On Monday, 7th, Mr. LANE, (Indiana,) gave notice of bills to repeal the $300 commutation clause of Enrollment Act, and to increase the pay of non-commissioned officers and privates of the army.

On Tuesday, the 8th, Mr. CLARK, by consent introduced a bill to grant a pension to JOHN L. BURNS, of Gettysburgh, Mr. BURNS is an octogenarian, but notwithstanding his age, he shouldered a musket and fought gallantly for his country in the battles of Gettysburgh. Mr. WILSON, of Massachusetts, submitted a resolution directing the Committee on Military Affairs as to the legislation necessary to facilitate the payment of arrears of pay and pensions due to deceased soldiers, Mr. DAVIS, of Kentucky, introduced a resolution declaring that the refusal of the rebel authorities to exchange negro soldiers and their white officers should not prevent the exchange of our other soldiers and officers in rebel prisons on just terms, such as will prevent suffering to our brave officers and men. It was agreed to.

On Wednesday, the 9th, Mr. FOSTER, (Connecticut,) presented the resolutions of the General Assembly of Connecticut, in favor of modification of the Enrollment Act, so that town organizations may have credit for the number of men raised on former calls for troops. Mr. LANE, of Kansas, gave notice of bills providing for the adjustment of the accounts of Kansas regiments, and making the claims and indemnifying the citizens of Lawrence, Kansas, for the destruction of property by QUANTRELL'S raid. Mr. POWELL, of Kentucky, gave notice of a bill to prevent Federal officers and soldiers interfering with elections in States. Mr. HALE, of New Hampshire, introduced a bill to grant a pension to the widow of the late Major-General Worth. A message was received from the House announcing the passage of the joint resolution of thanks to General GRANT and for bestowing a medal upon him, &c. Mr. LANE, of Kansas, moved as to immediate action thereon, but it being alleged that such hasty proceeding would afford a bad precedent, the resolution was ordered to lie on the table.

On Thursday, the 10th, Mr. GRIMES gave notice of a bill to encourage enlistments in the naval service of the United States, and to credit such enlistments on the military quotas of several States. The bill provides that—

Any mariner or able seaman who shall be drafted into the military service shall be credited to the district within which he resided when he was drafted or to the naval service as a seaman, for not less than the term of his enlistment in the military service, and if he shall be killed, or shall die from disease, and the district where he may have been drafted shall be entitled to credit for the number of men which would be entered to the credit of such district by reason of his enlistment in the military service, or who may be hereafter mustered into the military service, and who shall be discharged from the military service for not less than three years, under such regulations as the President may establish. No person shall be credited to any district as a volunteer having an appointment or acting appointment, and being actually in the service of the United States as an officer in the land or naval forces, appointment, and forming one of a ship's complement. All credits to the number of men to be furnished by any district under a draft shall be credited to the State, district or locality in which such credited man shall reside, and not to the organization in the Provost-Marshal-General of the United States may prescribe.

Mr. RAMSEY presented a petition from paymasters' clerks praying an increase of compensation to the amount of three dollars, and suggesting that in view of their duties, expenses, and risks, they are entitled to at least equal pay of similar clerks in the civil service.

On Monday, the 14th, Mr. WILSON introduced a resolution:

That the gratitude of the American people and the thanks of their representatives in Congress are due, and are hereby tendered to Major-General GRANT, and through him to the officers and soldiers of the Army of the Potomac for the skill, energy and endurance, which, in the judgment of this Congress and the people of the country, led to the advancing and successful array of the rebels led by General ROBERT E. LEE, and the capture of Gettysburgh, and the defeat and overwhelming disaster of the rebel army; and it shall and hereby is made the duty of the Secretary of War to cause to be struck a gold medal, with devices emblematic of the victories achieved by the Army of the Potomac, and to present the same to Major-General GRANT.

The resolution was read twice and referred to the Military Committee. Mr. WILSON also introduced a joint resolution that the thanks of Congress be hereby tendered to Major-General NATHANIEL P. BANKS, and the officers and soldiers under his command, for the skill, courage and endurance which accomplished the surrender of Port Hudson, and thus removed the last obstruction to the free navigation of the Mississippi River. It was referred to the Military Committee. Mr. WILSON also called up the joint resolution from the House, voting a gold medal and the thanks of Congress to General GRANT. It was referred to the Military Committee. Mr. WILSON presented a petition from the Massachusetts Legislature in favor of an increase of pay to the soldiers. Mr. WILSON introduced a bill to increase the bounties to volunteers, and it was referred to the Committee on Military affairs.

The bill provides for the payment to each beneficiary on the Secretary of War may determine, of a bounty of $100 for each year he may have been in the service of the United States for nine months and have been honorably discharged, or who may receive for three or more years or during the war, in the discretion of the Secretary of War, a bounty of $100 for each year he may have been in the service, and who shall not have received more than one year to serve, $400; to all other soldiers who have been honorably discharged after nine months and not exceeding $25, under such regulations as he may deem expedient; and the said bounties shall be in addition to the volunteer bounty of not more than $15 for the collection of any other consideration. That $30,000,000 be appropriated to pay the bounties provided for in this act, to be drawn and after the last day of January, 1864, the pay per month of non-commissioned officers and privates of the regular army and Volunteer forces in the service of the United States shall be as follows, viz.: Sergeants-Majors, Quartermasters-Sergeants, Commissary-Sergeants, Hospital Stewards, Ordnance Sergeants, Chief Musicians, Principal Musicians of Artillery and Infantry, $25; Sergeants of Artillery and Infantry, $20; Corporals of Artillery and Infantry, $17; Musicians of Artillery and Infantry, and Musicians of Engineers, Miners and Pioneers, $16. That all enlisted persons of Africandescent, who have been or may hereafter enter the military service of the United States, shall have the same uniform, clothing, arms, camp-outfit, camp equipage, rations, medical and hospital attendance, and pay of officers of the regular or volunteer forces of the United States of like arm of the service. That when the President shall call out the militia, or enlisted men, to suppress insurrection, the quota of each ward of a city, each town and county shall be apportioned according to the number of persons liable to do duty, and to render military service, taking into account, as far as practicable, the number of persons who have entered the military service. That Chaplains, when absent by reason of wounds or sickness shall be allowed full pay, without rations, and half pay with rations during absence on leave occasioned by other causes.

The Standing Committees appointed were the following:—

Foreign Relations—Sumner, Chairman; Fessenden, Hamlin, Davis, Harlan, Howard, Wilkinson.

Military Affairs and the Militia—Wilson, Chairman; Lane (Ind.), Howard, Nesmith, Harlan, Sprague, Carlile.

Naval Affairs—Hale, Chairman; Anthony, Wilkey, Ramsey, Harris, Dixon.

Finance—Foster, Chairman; Lane (Ind.), Pomeroy, Rowden, Van Winkle, Saulsbury, Powell.

On Tuesday, the 15th, Mr. WILSON presented memorials asking for an increase of pay for Paymasters' Clerks, Hospital Stewards, and Ordnance Sergeants in Boston. Mr. ANTHONY, of Rhode Island, submitted a resolution, which was referred to the Committee on Military Affairs: That the thanks of Congress be tendered to Major-General AMBROSE E. BURNSIDE, and, through him, to the officers and soldiers who have fought their country's battles, for their gallantry, good conduct and soldier-like endurance. On motion of HALE, a resolution was adopted: That the Committee on Naval Affairs be instructed to inquire into the propriety and expediency of providing by law that appointments in the naval service, commonly called acting appointments, be submitted to the Senate for confirmation in all cases, where similar appointments in the regular Navy are required to be submitted to the Senate. Mr. DAVIS, of Kentucky, called up his resolution on the exchange of prisoners, and proceeded to denounce the Administration, charging that the power to negotiate was being employed for party political purposes. Mr. HALE, of New Hampshire, administered a severe rebuke to the gentleman from Kentucky, and defended the President and Congress from the latter imputations. Mr. JOHNSON, of Maryland, and Mr. LANE, of Indiana, also spoke in reply to DAVIS.

Mr. HALE (N. H.) introduced a bill in amendment of the act to establish and organize the grade of line officers in the navy, which was referred to the Committee on Naval Affairs. Mr. WILSON (Mass.) reported back the joint resolution tendering the thanks of Congress to Major-General GRANT and the officers and soldiers under his command, with a recommendation for its passage. It was adopted. He also reported back with amendment the bill increasing the pay and bounties of soldiers, and the bill increasing the pay of the second section, by which the Secretary of War is authorized to pay a gratuity of $10 to any officer or soldier in the regular or volunteer volunteer not now in the service, and of $10, instead of $15, for any other volunteer. He also presented a memorial from the citizens of the North and South Massachusetts colored regiments, asking for the same pay and bounty as are allowed to other troops. It was referred to the Military Committee. Mr. WILSON (Mass.) presented a memorial from a clergyman of Delaware, asking exemption from the draft of the members of the negro police and patrols to the duties of his holy mission of peace, and good will to men ought to be exempt from military duty, while the rebellion continues to rage in the land. The prayer was made to fight until the war is over. The memorial was referred to the Military Committee.

THE HOUSE.

On Tuesday the 8th, Mr. WASHBURNE (Illinois) offered a resolution, declaring that the thanks of Congress be tendered GRANT and the officers and soldiers under him, and providing that the President order a medal to be made for General GRANT in the name of the people of the United States. It was passed unanimously without debate. Mr. ARNOLD gave notice of his intention to introduce a bill to prevent the trotting included in the President's Emancipation Proclamation; also to repeal so much of the Enrollment Act, as authorizes the purchase of a substitute. Mr. CLEMENT (Pa.) presented the Cox of Ohio, asked but failed to obtain leave to introduce a resolution requesting the President to take immediate steps for the exchange of prisoners.

On Wednesday the 9th, the resolution of Mr. COX, looking to an exchange of prisoners, with an amendment sustaining the Administration in the efforts it has recently made, was adopted.

On Thursday the 10th, Mr. FENTON gave notice of his intention to introduce a bill to facilitate the payment of bounties due on account of deceased soldiers.

On Monday the 14th, Mr. MCALLISTER, (Penn.) introduced a bill to establish a Bureau of Emancipation. It was referred to a Select Committee. A resolution was introduced by FERNANDO WOOD of New York, providing for the appointment of Commissioners to Richmond, with a view of procuring the exchange of prisoners on equitable principles. It was tabled by a vote of 98 to 59. The Reciprocity Treaty was then up. Mr. MORRILL'S substitution abrogating the treaty by giving notice of discontinuance was sent to the Committee on Commerce.

Mr. WADSWORTH, (Illinois) introduced a bill providing—

That the grade of Lieutenant-General is created in the army of the United States, and the President authorized, whenever he shall deem it proper, to appoint, by and with the advice and consent of the Senate, a Commander of the Army, to be selected during the war from the Major-Generals by seniority of rank. Major-Generals of the Regular Army and of Volunteers most distinguished by courage and military skill, and who have rendered the most important services to the country, may be authorized, to command the armies of the United States, and the President is authorized to be assigned to the pay, allowances and staff specified in the fifth section of the approved August twenty-five, eighteen hundred and sixty-three.

The bill was referred to the Committee on Military Affairs. Mr. ARNOLD (Ill.) introduced a bill to repeal so much of the Enrollment Act as provides for the discharge of persons drafted on payment of $300. Referred to the Committee on Military Affairs. On motion of Mr. VORHEES (Ind.) the Committee on Military Affairs was instructed to inquire into the expediency of increasing the pay of privates in the Army to $16 per month, and adding to the pay of commissioned and non-commissioned officers and musicians forty per cent. On motion of Mr. CRAVENS (Ind.) a resolution was adopted instructing the Committee on Military Affairs to inquire into the expediency of providing for the amount of loans of property taken or destroyed during the late rebellion in Missouri and Kansas.

Mr. COX (Ohio) offered a resolution, which, debate causing delay over, under the rule, that the Secretary of War be directed to communicate to this House the report made by Major-General GEORGE B. MCCLELLAN, concerning the organization and operations of the Army of the Potomac while he commanded, and of all Army operations while he was Commander-in-Chief. Mr. LOVEJOY (Ill.) offered a resolution instructing the Committee on Military Affairs to inquire into the expediency of placing in the army all who they may report all the regularly enlisted soldiers on a footing as to pay without distinction of color. Mr. COX (Ohio) moved to lay the resolution on the table, but the vote was not agreed to. The resolution was then passed.

Mr. STEVENS (Pa.) introduced a bill to fix the pay of colored officers, chaplains, and musicians. Referred to the Committee on Military Affairs.

The Standing Committees appointed were the following:—

Military Affairs—Schenck (Ohio), Farnsworth (Ill.), Ames (R.I.), Grinnell (Iowa), Upson (Ohio), Ely (N. Y.), Dawes (Mass.), Cobb (Wis.), Starkweather (Pa.), Webster (Md.), Kelley (Penn.), Kasson (N. Y.), Morrill (Me.), Thomas (Mass.), Moorhead (Pa.), Grinnell (N. Y.), Myers (Penn.), Kelly (Pa.), Pruyn (N. Y.), Brooks (N. Y.).

Naval Affairs—Blair (Mo.), Pike (Me.), Ancona (Penn.), Orth (Ind.), Hutchins (Ohio), Stuart (Mich.).

Foreign Affairs—H. Winter Davis (Md.), Goode (Mass.), Cox (Ohio), Ancona (Penn.), Ashley (Ohio), Long (O.), Dawson (Pa.), Hasbrouck (Iowa), Stuart (Mich.).

Commerce—Washburne, Littlejohn (N. Y.), Law (Ind.), Morris (Wis.), Herrick (N. Y.), Spaulding (Ohio), Elden (Ill.), Clay (Ky.), Harding (Ky.), Hutchins (Ohio).

Invalid Pensions—Whiting (W. Va.), Benjamin Wood (N. Y.), Hubbard (Iowa), Edgerton (Ind.), Wadsworth (Ill.), Miller (Pa.), Freeman (Ohio, N. Y.), Ross (Ill.), Dawson (Pa.).

On Tuesday, the 15th, the Speaker laid before the House a Message from the President, accompanied by a proclamation that Captain JOHN ROGERS, who captured the *Peterhoff*, had been appointed a Commodore. As a mark of good conduct, receive a vote of thanks from Congress, that gallantry being required by law in order that he may be advanced by merit. Mr. VALLANDIGHAM (Ohio) moved to lay the Cox of Ohio, calling for General MCCLELLAN'S report was adopted. On Wednesday, the 16th, Mr. SPAULDING (Ohio) introduced a bill, which was referred to the Committee on Military Affairs, explanatory of the Enrollment Act, so that the $300 clause shall not apply to persons drafted, but persons shall be construed to mean sailors as well as soldiers. A communication of Mr. KASSON (Iowa) it was resolved, that the Committee on Military Affairs be instructed to call for and report on the facts respecting the alleged inhumanity of discharge in their treatment of our dead and wounded soldiers at Gettysburgh, and that they report as speedily as possible, with such recommendations as they may deem proper. Mr. COBB (Wis.

On the 12th of November, 1861, he was appointed assistant adjutant-general, with the rank of major, and performed these duties in the city of Washington. He was next placed in command of the cavalry under Gen. Banks in the spring of 1862, and conducted a reconnaissance along the Rappahannock during June and July of that year. During the operations of Gen. Pope with the Army of Virginia, Gen. Heintzelman was placed in command of a cavalry brigade, with the rank of brigadier-general, dating from July 27, 1862. He held that command for some time after that action, he was chief of Cavalry under Gen. McClellan.

Gen. Heintzelman was then placed in command of Newport News, where he remained until the spring of 1863. He was relieved by Gen. Augur. After several weeks' illness he resumed his position with the Army of the Potomac, and during the battle of Fredericksburg, he was attached to the command of the division of cavalry, embracing the regular troops under Gen. Stoneman. His appointment as brigadier-general of volunteers was confirmed on the 9th of March, 1863.

During the latter part of April and beginning of May, 1863, he was ordered to the front in command of a cavalry expedition that went around Lee's rebel army, posted in front of Gen. Hooker's command, near the Rappahannock. On the 30th of April, 1863, Gen. Hyman commanded a division of cavalry—including the regulars—engaged in Pennington's expedition to Stevensburg and Kelly's ford, where the rebel cavalry forces were so roughly handled, and where the rebel Gen. W. F. H. Lee was wounded. He was afterwards engaged in the various cavalry operations around the vicinity of the Rue Ridge, during the rapid flank march of the Army of the Potomac to and across the river. He harassed the rebel army in its retreat from Gettysburg, and operated on their right flank during those contests. He also, after the rebels had retreated, harassed their rear guard and flank for the last retreat, and portions of his command were continually engaged in skirmishing until the rebels had got well into their fortifications.

During the recent operations of the Army of the Potomac, under Gen. Meade, Gen. Berdan's and the other cavalry forces were attached to the army, rendering efficient service in their respective capacities.

ARMY AND NAVY PERSONAL.

Captain J. G. C. Lee Assistant-Quartermaster, has been assigned to the Depot at Alexandria, Va., vice Captain Ferguson removed.

The 1st Maryland cavalry have subscribed and handed over to Surgeon Dodson $6000, for the relief of the sufferers of their gallant regiment.

Captains T. J. Carlisle and A. S. Nesmith, Assistant-Quartermasters, have been ordered to Chattanooga for duty with the Army of the Cumberland.

Captain Hurst, Assistant-Chief-Quartermaster, Department of Washington, has been relieved, and Captain J. M. Moore, Assistant-Quartermaster, appointed in his position.

A court-martial has been sitting on board the *Wabash* at the mouth of Captain Cilley, commander of the Monitor *Catskill*.

The President has nominated to the Senate Commander Porter, to be a Rear-Admiral, and First Engineer John H. Long, to be a Chief Engineer in the Navy.

Over 2,000 applications for appointments as officers in the Invalid Corps are now in the hands of the Provost-Marshal-General.

It is said that Major-General Palmer's resignation as commander of the Army of the Ohio was accepted, has been recalled, and he is again in command.

General Cox has left Cincinnati with his staff for Knoxville, and takes command of the Twenty-third Army Corps. The military district of Ohio no longer exists.

Upon the recommendation of Major-General Grant, Colonel A. C. Ducat, 1st Illinois artillery, commanding, has been appointed Brigadier-General to command colored troops.

Captain Thomas G. Whytal, Assistant-Quartermaster, has been ordered to report to Brigadier-General D. H. Rucker, Chief-Quartermaster of the Washington Depot, for duty at Alexandria.

Major J. H. McArthur, 3d U. S. Cavalry has been appointed Assistant-Commissary of Musters for the District of Wisconsin, vice Colonel Louis H. Marshal, appointed Commissary of Musters.

Major-General Schofield has arrived in Washington, having come from Knoxville at request of the President. The question of the command in Missouri is therefore opposed again.

Assistant-General Thomas has again broken down under his labors in organizing negro troops in the Southwest. He is dangerously ill, and will be brought home as soon as his condition will allow of his removal.

Lieutenant-Colonel Storer, of the 13th N. H. Reg't, a son of Admiral Storer, U. S. N., was killed at 424 street in New York, on Monday night by being crushed between a car of the Harlem and New Haven Railroad trains, when passing that point.

In compliance with Special Orders from the War Department, Surgeon Horace R. Wirtz, U. S. A., is relieved from duty in the Department of the South, as Medical Director, and Surgeon Ebenezer Swift, W. S. A., is announced as his successor.

Captain John C. Henshaw, Assistant-Adjutant-General of Volunteers, having reported for duty to Major-General Sillimore, is assigned to the headquarters in charge of the Judge-Advocate's Bureau.

General Orders from Major-General Pope, commanding the Department of the Northwest, constitute the District of Iowa to include the State of Iowa and the Territory of Dakotah, under the command of Brigadier-General Alfred Sully, with headquarters for the winter, at Davenport, Iowa.

Second Lieutenant E. B. Sturgeon, of the United States Marine Corps, has been tried by a naval general court-martial in session at New Orleans, for "absence without leave and drunkenness," and sentenced to be dismissed the service of the United States, to date from December 7. The proceedings have been approved.

Captain J. P. Kimball, Assistant Adjutant-General to Brigadier-General Parrott, has tendered his resignation in the army, and applied for its acceptance. Captain Phil. Schuyler, fourteenth United States Infantry, succeeds Captain Kimball.

Brigadier-General J. J. Abercrombie has been relieved from the command of Convalescent Camp, Va., by order of the President, and Major and Lieutenant-Colonel Samuel McKelvy re-assigned to that position. It is understood that General Abercrombie will receive a more important command soon.

An item appeared a few days since, stating that "Gen. Beauman, of the Army of the Cumberland, has been placed under arrest, and would be court-martialed at Cincinnati." This was an error. It should have read General *Brannan*. General Beauman is at his post in the Army of the Cumberland.

It is reported that Admiral Wilkes is very restive under the rebuke administered to him by the Secretary of the Navy, on the score of his preventing the capture of the *Alabama* by detaining the *Vanderbilt* in the West Indies. The Admiral is preparing a letter to the Secretary in vindication of his conduct.

A patriotic old lady recently sent three smoking caps as presents to officers in the Army. One was for General Banks, and the remaining two she desired to be presented to two Generals, one of whom must be a teetotaler and the other one never under the influence in the presidency. General Wilson, Chief of General Meade's Staff, took the Anti-Profanity Cap, and General Hunt the Temperance Cap.

The convalescent camp at Nashville, Tenn., has been placed under the charge of a general officer, himself and the commissary of subsistence at Nashville directed to open and supply a market for the sale of provisions, at which officers or any saucre from the saved nations thereof, to be expended for the benefit of the sick and wounded belonging to that army.

The proceedings of the Court of Inquiry convened at Chattanooga, to investigate the facts connected with the shooting of Colonel Mizner, by Major-General Negley, Virgin Infantry, by his commanding officer, Colonel H. S. Hayes, have been approved by General Thomas. The Court decided that Colonel Mizner was justified in shooting Flynn.

Colonel Harding, of the 12th Pennsylvania R. C., Colonel Shaw, of the 7th Indiana, Colonel Lee and several other officers, while out examining their picket lines beyond Bristoe Station, last week, were surprised by a squad of Stuart's cavalry. Colonel Harding drew and fired at the same time from their pistols, wounding Colonel Harding in the left forearm near the elbow, making amputation near the shoulder necessary. The rebels fled in our soldiers' uniform, and approached within pistol-shot before they were discovered by the officers. Our officers immediately drew their revolvers, and after a few shots dispersed them, returning to camp with the Colonel.

At a meeting of the Board convened at Cairo, Ill., by Par. A. Q. M., Captain Chas. N. Tompkins, A. Q. M., and Captain J. J. Dana, A. Q. M., have been ordered to prepare and submit for the consideration of the Quartermaster-General a set of rules and regulations for the organization of colored teamsters for the Quartermaster's Department, to be united in the Army of the Tennessee and elsewhere. The Board will recommend a suitable uniform, to be provided by the men at their own expense, and the form of pecuniary blank forms to be furnished for enlistment, muster, descriptive, and clothing rolls, as well as any other forms which it may deem necessary for the organization and working of the corps. The Board will also make any recommendation which the consideration of the subject shall suggest as calculated to perfect the organization referred to, or to insure its efficiency.

Among the letters advertised at the New York Post-office on the 1st inst. remained uncalled for, Major M. M. Bayles, Major John A. Bolles, A. D. C.; Paymaster Brown, Major Bruce, Captain Lynde Catlen, 15th Infantry; Dr. John W. Corlis, U. S. A.; Major Cram, Chief Engineer, at Lieutenant-Colonel Johnson, 5th N. Y. Cavalry; Major D. W. Briggs, 14th U. S. Infantry; Captain Gardner Symmes, Lieutenant Gardner Symmes, 18th U. S. Infantry; Captain M. M. Hawes, Surgeon H. S. Howitt, Lieutenant and Adjutant Hugh Hyndman, 7th Johnson; Captain R. Koonig, Colonel O. Kress, Jr.; Colonel Wm. R. Lowie, Captain R. R. Moffat, U. S. Artillery; Major Wm. Mongin, 4th U. S. Artillery; Lieutenant-Colonel Nicholls, 1st Regiment; Lieutenant Wm. M. Morrison, Quartermaster; Colonel Wm. H. Nobles, Captain A. Pfaff, Acting Quartermaster, Quartermaster Henry; Paymaster, U. S. A.; Francis M. D. Reynolds, Irish Brigade; Colonel Z. Rule, Captain Augustus Sharpe, 1st N. Y. Vols.; Major E. L. Shelly; Lloyd Stevens, Medical Cadet, U. S. A.; Lieutenant W. H. Vesey, 165th N. Y. Vols.; Robt. G. Williams, 1st Lieutenant, 1st N. Y. Engineers; N. Y. Vols.; Lieutenant Galey O. Wood, Co. H., 176th N. Y. Vols.; Colonel I. R. Webb, Major Geo. E. Wills, Major Edward Wallis, Q. M.; Major Peter J. White, Lieut. Col. Frank A. Work, Q. M.; Lieutenant Chas. Worrel, 3d N. Y. Vols.

ITEMS AND INCIDENTS.

The time for enlisting Veteran Volunteers has been extended to January 5th, 1864.

General M'Clellan's report has been transmitted to Congress, and is now in the hands of the printers. It will be published in a few weeks.

Major-General Butler, in obedience to orders of the President, has granted a respites to all persons in his department under sentence of death, until further orders.

A bronze equestrian statue, taken from the house of Douglas Gordon when our forces occupied Fredericksburgh, and which was cast in Richmond, been restored to Mrs. Thomas, a sister of that gentleman.

By order of Major-General Thomas, the execution of the order approving the sentence of the General Court Martial, dismissing from the service of the United States Captain Francis E. Mather, Co. B, 20th Regiment Indiana Volunteers, is suspended until further orders.

If he has been proposed in the Senate to print, in addition to the number now authorized by law, fifteen hundred copies of the report of the Secretary of the Navy, and appendix, for the use of the vessels of the Navy, and five hundred copies of the report prepar for the office of the Secretary of the Navy.

Lieutenant Lincoln addressed the following letter to General Halleck, Chief of Staff of Washington, Headquarters, Major-General Grant—Understanding that your lodgment in Chattanooga and Knoxville is now secure, I wish to tender you and your command my most hearty thanks for the brave and patriotic gratitude for the skill, courage, and perseverance you have all shown in the many great difficulties, have effected that important object. God bless you all!

A. Lincoln.

A correspondence has taken place between General Butler and Mr. Gubi, the Confederate Commissioner for the exchange of prisoners. It appears that smallpox has broken out among the Union prisoners at Belle Isle, and that General Butler has forwarded a quantity of vaccine matter, sufficient to vaccinate six thousand persons, which has been received and acknowledged by Mr Gubi, who says:—"Permit me, in response to the friendly tone of your letter, to express to you that it is my most anxious desire and will be my constant effort to do everything in my power to alleviate the miseries that spring out of the horrible war."

Work progresses but slowly in locating where to establish a national cannon foundry, one is being erected at the Navy Yard in Washington, which, when completed, will have cost between a million and a million and a half dollars. Cannon in the foundry, either of which can be used for the casting of a gun of twenty-inch calibre, capable of throwing a solid shot of one thousand pounds weight. Nearly two thousand men are at work, casting and rifling cannon, casting shot and shell, &c. The cost of machinery for the buildings estimated for next year are $79,000. The grand total expense of $250,000 asked for to conduct experiments in ordnance will be expended here.

Brigadier-General Patrick, Provost Marshal General of the Army of the Potomac, orders every sutler or sutler's clerk to confine himself to the duties of his office command, and to the headquarters of the corps, division, or brigade to which he has been designated. The officers orders must be accompanied by the written authority (invoice), which must state the number of officers ordering, and must be approved by a general order of the command. If bills are presented by sutlers' clerks, they must be provided with the written authority to act for the sutlers. Orders from corps, division, or brigade commanders must state the length of time having written authority to act as the agent of such headquarters.

In contrast to General Halleck's report, a moment for the whole service once in two months is the rate at which our cavalry horses are used up, by want of still and often culpable neglect of duty. Nearly a million dollars is needed for the coming year if the evil remains unchecked. The stock breeders declare that if this goes on it will permanently injure the breed of horses in the country. The forces of mature age are being taken up by the government so fast that young men are unable to supply the place, the result of which will ultimately be seen in the diminution of the average size of the breed.

The following is an extract from a letter written by General Meade, dated at Newark, New Jersey, just before the last movement of the Army of the Potomac:—"I am not sanguine of the great results so far in the public that something should be done. I am in receipt of many letters, some from persons in high positions, telling me I had better have my army in Washington, to protect it from Lee. What I do not suffer myself to be influenced by such communications, I am and have been most anxious to effect something; but an officer cannot be expected to undertake anything unless my judgment indicates a probability of accomplishing some object commensurate with the danger and risk he necessarily involved. I would rather a thousand times be relieved, charged with tardiness or incompetency, than have my name handed down to posterity as the author of the slaughter of brave men, or with having jeopardized the great cause by doing what I thought wrong."

On the 5th inst. Major-General Augur, commanding Department of Washington, and staff, visited the Russian Admiral and were received with the usual honors. The Admiral returned the visit on Saturday morning, when he had playing our national and other airs. All were then hospitably entertained in the officers' cabin, the Admiral giving the toast of "The President of the United States of America." General Augur in return toasting "The Admiral and the Russian Navy." On the 11th inst. the Russian Admiral and staff, with many officers of his fleet, accepted by General Augur and his staff, visited some of the principal fortifications in the vicinity of the capital of the Potomac. At Arlington they were entertained with a review of heavy artillery, under General De Russy, after which a collation lunch was served at Fort Albany Camp. The entire affair passed off with great gratification to the distinguished visitors.

Chattanooga papers of a recent date contain scores of advertisements announcing the removal of business firms from the lower to the upper portion of the city. The reason for this is stated to be that the rebels have given that the Mills House will shortly follow the example. The alleged reason assigned for this movement is that the most favorable position for shells in the South, is the great destruction of provisions of all kinds essential to conduct the establishments in a manner agreeable even to the unfastidious taste of the guests. The congregations of two churches publicly invite the congregation of a third to join it in religious worship, for the reason that the editors of the former are subject to danger from our shells. Nearly all the warehouses situated in the vicinity of the piers are destitute of goods and abandoned. The aged, women and children have, with few exceptions, fled the city, and but a small number either of civilians or soldiers are to be found in the streets. Such are the evidences we have of the effect of our shells.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of commotions among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to tactical and other matters.

Press practices in the military service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and newly forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the Journal.

The postage to subscribers, in twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

MR. W. B. BENFIELD, of Cincinnati, Ohio, having ceased his connection with the Journal as Agent, receipts from him will be no longer acknowledged by the proprietor.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, DECEMBER 19, 1863.

GENERAL HALLECK ON THE CONDUCT OF THE WAR.

GENERAL HALLECK'S Report of the military operations of the past year, published in full in a supplement to this journal, is the most elaborate, comprehensive, and, in many respects, important and valuable official document on the conduct of the war that has yet been made public. Though it contains many things that are not new, many things already known to the military mind and to civilians, yet there are in it also many things that are new, and as giving the stamp of official authority both to what was known and what was not known, its historical value as a *memoire pour servir* can scarcely be over-estimated.

We do not begin to the present paper to attempt any analysis of the multiform contents of this document; but, segregating a single point of preëminent importance, we purpose to draw from the report of the general-in-chief all the material afforded therein for its credition and illustration.

The point to which we refer is this:—*With whom rests the ultimate responsibility for the direction of our military affairs?* Or rather, primarily:—*Who has been exercising the supreme direction of military affairs; and how far is he to be credited with successes and held accountable for failures in the field?*

No subject, we may premise, has been surrounded with more mystery and obscurity than this. The public, eager to find a scapegoat on which to place the burden of every disaster, has, by turns and as caprice dictated, ascribed the responsibility of failures and the credit of successes to the PRESIDENT, to General HALLECK, the Secretary of War, and to the generals in the field. To no purpose has it been known that the PRESIDENT as, by his office, Commander-in-Chief of the land and naval forces of the United States, is *theoretically* the supreme head: that the General-in-Chief is merely an adviser, and the Secretary of War properly but the *Chef de l'Intendance de Varmée:* we say it is to little purpose that the theory of the military hierarchy has established the functions and responsibilities of our official authorities, when it has been more than suspected that *practically* there has been little or no unity of authority, and that each of the officials named has at times directed the military counsels. The report of General HALLECK confirms this suspicion. It shows that sometimes the supreme guidance of military operations has been exercised by the PRESIDENT, sometimes by General HALLECK, sometimes by Secretary STANTON, and sometimes by the general in the field.

The very first military operation entered into by General HALLECK in his Report, affords an example of how the PRESIDENT indicated for a commander of the Army of the Potomac a plan of campaign, which was approved by General HALLECK and Secretary STANTON—how this commander, instead of following this plan, proposed one of his own—how this plan of the commander was disapproved by General HALLECK, and "assented to" (not approved of) by the PRESIDENT; and how, finally, this commander, in the practical execution of the campaign, followed neither his own plan, which was assented to (not approved of) by the PRESIDENT and disapproved by General HALLECK, nor the PRESIDENT's plan, which was approved of by General HALLECK and Secretary STANTON, but a new plan of this commander's own devising, which was neither approved of nor assented to by anybody.

This extraordinary series of military transactions is that of General BURNSIDE in his conduct of the advance of the Army of the Potomac, after receiving it from the hands of General MCCLELLAN. At the time General BURNSIDE took command of the Army of the Potomac at Warrenton its late commander was moving on the interior line, for the purpose of giving battle to the rebel army wherever he should find it, this side of Richmond. On assuming command, General BURNSIDE proposed to give up this pursuit of LEE's army towards Richmond, and to move down the *north side* of the Rappahannock to Falmouth, and to establish a new base of supplies at Acquia Creek. "This proposed change of base," declares General HALLECK, "*was not approved by me.*" Finally, however, General BURNSIDE consented to so modify his plan as to cross his army by the fords of the upper Rappahannock, and then move by the south bank of that river, seizing the heights in the rear of Fredericksburgh. "On my return to Washington, on the 13th," writes General HALLECK, "I submitted to him [the PRESIDENT] this proposed change in the plan of campaign, "*and on its receiving his assent rather than approval,* I telegraphed on the 14th authority to General BURNSIDE to adopt it." General BURNSIDE did *not* adopt it, but moved the whole army by the north bank of the Rappahannock to Falmouth, and after a few weeks delivered battle to the enemy posted on the heights of Fredericksburgh. General HALLECK is explicit on the point that the PRESIDENT's plan of crossing the river was "*approved, nor was he ever authorized to adopt it.*" We are, therefore, to infer that the responsibility rests exclusively with General BURNSIDE.

The next campaign discussed by General HALLECK affords an example of military management of a different form. The plan of campaign in substance thus the preceding—the example of a series of operations whereof the General-in-Chief had no information while they were under discussion, and no supervision while they were in execution; but which were reported directly to the PRESIDENT, between whom and the general commanding they were in planned and executed. The operations referred to are those of General HOOKER, during the time he retained command of the Army of the Potomac. Of this period of the history of that hapless army, General HALLECK makes the following astounding declaration:—"*It is also proper to remark in this place that from the time he was placed in command of the Army of the Potomac till he reached Fairfax Station, on the 16th of June, a few days before he was relieved from the command,* General HOOKER *reported directly to the* PRESIDENT, *and received instructions directly from him. I received no official information of his plans or of their execution.*"

The series of operations that took place during this interval consists of the battle of Chancellorsville and the retrograde movement to oppose the advance of LEE into Maryland and Pennsylvania. That General HALLECK at least is in no manner responsible for the disaster at Chancellorsville should be clear enough from his explicit declaration. Who *is* to blame is not so evident.

We now come to the operations of General GRANT in the reduction of Vicksburgh, and though there is no portion of our military history, touching which it would be so interesting to know to what inspiring brain we are indebted for the conception of that splendid achievement, this is, unfortunately, just the point touching which the report of the General-in-Chief leaves us in the greatest doubt. "No more " brilliant exploit," says he justly remarks, "can be " found in military history." But the statement by General HALLECK on this subject is in the following terms:—"It has been alleged, and the allegation has "been widely circulated by the Press, that General "GRANT, in the conduct of his campaign, positively "disobeyed the instructions of his superiors. *It is "hardly necessary to remark that General* GRANT "*never disobeyed an order or instruction, but always "carried out to the best of his ability every wish or "suggestion made to him by the Government.*" Now, while fully appreciating the generosity of the General-in-Chief in his readiness to shield General GRANT from any imputation of this kind, we are constrained to say that having, as journalists, followed the whole course of the public press in regard to the career of that commander, we have no recollection of his ever having been charged with disobedience of orders. But while General GRANT is thus exculpated from the imputation of having disobeyed orders, it is not so clear what orders he *obeyed*. General HALLECK states that, with the view of opening the Mississippi River in connection with the movement of General BANKS, "General GRANT *was instructed* to drive the enemy "in the interior as far south as possible and destroy "their railroad communications; thus fall back to "Memphis and embark his available forces on transports, and, with the assistance of the fleet of Admiral PORTER, reduce *Vicksburgh*." Having failed in the plan as thus "instructed," he seems to have been left wholly to his own devices. Having tried the canal plan, and this also failing, "*he determined*," says General HALLECK, "*to move his army by land "down the west bank of the river, some seventy miles, "while transports for crossing should run under the cov-"ering batteries at Vicksburgh.*" We emphasize these words because they give form to the boldest military conception of the war—one of those audacities of genius which, like MACDONALD's crossing of the Sphagen, transcend all the rules of military art. And it is with unqualified admiration. What General HALLECK thought of it he does not inform us. How Secretary STANTON regarded it we know not. But how the PRESIDENT looked upon it we do know, as he has put his opinion of this move on record in a letter to General GRANT. "When you got below," wrote Mr. LINCOLN, "and took Port Gibson, Grand Gulf and "vicinity, I thought you should go down the river and "join BANKS; *and when you turned Northward east "of the Big Black, I thought it was a mistake.* I "now wish to make the personal acknowledgment that "*you were right and I was wrong.*" This is a frank confession, and does credit to the thorough intellectual honesty of the President. The General-in-Chief to the planning of this grand move, we think it is fair to infer from the silence of General HALLECK that the author of the conception is the same bold and cosmogetic mind that directed its execution.

Finally we come to the most obscure and involved of all the questions discussed in the report of General HALLECK: we mean the operations of General ROSECRANS. That General HALLECK ordered the advance of General ROSECRANS from Murfreesboro', and reiterated this order over and over again, during the spring months of the present year, is not a point which has ever been in dispute, and it is definitively settled by the explicit statement of the General-in-Chief himself. "I urged upon General ROSECRANS," says he, "to take advantage of this opportunity to carry "out his long projected movement." That General, however, did not at the time feel himself ready to advance, and when, at the end of June, he finally determined to begin the forward movement, "*he was permitted to select without restriction his own line of operations by which to reach the Chattanooga.*" This settles the point, therefore, that the flanking movements by which the army of BRAGG was forced from the two strongest fortified positions on the continent—that of Murfreesboro and Tullahoma—were ROSECRANS' own conception. It also appears that his subsequent movements, Chattanooga-ward were made wholly on his own responsibility—the only orders he had being to advance. Finally, in the midst of his delicate and complicated manœuvres in the most difficult mountain region for military operations, he received an order from Washington. As it relates to a point of marked importance, we shall cite General HALLECK's own language:—"Fearing," says he, "that "General ROSECRANS' army might be drawn too far "into the mountains of Georgia, where it could not "be supplied and might be attacked before reinforcements could reach it from Kentucky, I sent him on "the 11th the following telegram:"

HEADQUARTERS OF THE ARMY,
WASHINGTON, D. C., Sept. 11, 1863.

Gen. BURNSIDE telegraphs from Cumberland Gap that he holds all East Tennessee above Loudon, and also the gaps of the North Carolina Mountains. A cavalry force is moving toward Athens to connect with you. *After leaving the mountain passes on the west of Georgia, you will push on the railroad* to prevent return of BRAGG's army. It will be decided whether your army shall move further south into Georgia and Alabama.

It is reported here by deserters that a part of BRAGG's army is reinforcing LEE. It is important that the truth of this should be ascertained as early as possible.

H. W. HALLECK, General-in-Chief.

Major-Gen. ROSECRANS, Chattanooga.

This is, we think, a fair sample of the nature as well as the value of orders emanating from a headquarters a thousand miles away from the theatre of war. One can conceive the immense value to General ROSECRANS, of the information that, "after holding the mountain passes on the west of Dalton, *or some other point on the railroad*," it would be decided whether his army would be allowed to advance into Georgia, in the midst of complex manœuvres, and on the eve of a great battle which was to decide General ROSECRANS' ability to hold any "pass" or "point" whatever, and in which he had to meet an enemy not "posted" to suit "Old Brains," as General HALLECK tells him from Washington, but intact and strengthened by the strongest corps from the rebel army to Virginia.

As the result, therefore, of a review of the military operations of the past year, from the point of view from which these observations are made—we find that there has been no unity in the supreme control—that movements have sometimes been directed by the PRESIDENT, with or without the approval of his military counsellors, sometimes by one or the other of his military counsellors, without the approval of the PRESIDENT, and sometimes by their general in the field without the approval of any one. But while the report of General HALLECK leaves the question of military responsibility in great doubt in the case of operations which have been unsuccessful, it yet shows that every great success has been achieved by commanders who were allowed unembarrassed to carry out the plans they had themselves conceived. We are far from meaning to reflect discredit on the heads of military affairs when we say this, for it could not in the nature of things be otherwise. Military history is replete with proof that the practical conduct of a campaign must necessarily be left to the commander in the field. If he is unfit to be entrusted with this, he is unfit to be entrusted with the command at all. The functions of the central military head should be confined to the general ordering of military affairs—to the regulation of the policy of war, the indication of the military objective and the grand lines of operation, and such a distribution and marshalling of the forces as will best attain the end sought. If we read General HALLECK's report aright, the Washington authorities have never gone beyond these their legitimate functions, without entailing disaster on the country. But until we have fuller revelations touching this matter than the General-in-Chief has made, yet to make public, it will be next to impossible justly to distribute either praise or blame in any specific case.

A WORD ABOUT WEST POINT.

In former days ignorance and envy, in and out of Congress, attacked the Military Academy with such blind fury that they defeated their own purpose, and then came the Mexican war, where West Point shone so preeminently that the defamers were fain to hide their diminished heads, at least for a time. But detraction was only sleeping. As soon as the present war broke out, the detractors saw their chance again, and without a single valid argument on their side, began to throw their fallacious but envenomed darts at the Alma Mater of our educated soldiers. Thus it would seem that at the present time there is a strong party in the field, and the strife runs high. The opposing army themselves under their distinctive badges, and like the factious army of the Lower Empire, they make the Hippodrome ring with criminations and recriminations. We belong to no party, but to the cause of justice and right. As is usual in such cases, extremes are equally wrong; the middle way, which VIRGIL calls the safest, is also the justest. West Point never claimed to arrogate, like PROMETHEUS, to give genius, to give birth to great generals, to breathe a god-like power into any human nostrils. West Point, the school of the Nation, where reverence for the Government, love for the flag, confident hope for the perpetual Union of the States, were taught, never declared that she could conquer State errors, sectional prejudices, parental inculcations, and make men in some vague, uncast future, adhere to the country. If West Point is to suffer because a large number of her *élèves* have gone into the rebel ranks, should she not be glorified because a larger number have remained true to their colors? Those who claim such super-humanity for West Point, are very foolish, not friendly.

We shall not fall into the error of senseless praise. We have never contended that a man could not be a soldier without graduating at West Point. We know many who are; but the question is narrowed to this: Is not a thorough military education the best way to make generals? Look at genius in other arts: instruction, constant practice, made RAPHAEL, MOZART, CANOVA. Add to this, that the boys sent to West Point are usually those whose bent is the Army, and who have displayed indications of genius for the art: and will any sensible man deny that, *ceteris paribus*, the young man with this bent and four years training in the best military school in the world, is not better able to lead men to war, than he who, suddenly discovering that he has genius, must also find that he has no system, no knowledge of men and modes, and who must use his genius without a clear understanding of the rules by which men have fought in all the ages of modern warfare?

But it is ridiculous to dwell upon these points. The writer of an anonymous pamphlet before us calls the professors *pedagogues*. Time was when this was an honorable title. But let us see who they are to whom he applies what he means for a dishonoring epithet. MAHAN's "Field Fortification" has helped to build every entrenchment in this war, and thus, after instructing our young officers for a quarter of a century, the "schoolmaster was abroad" to some purpose. Look at the others. CHURCH's mathematical series are used, with great gratitude, in hundreds of schools and colleges, and in others. BARTLETT, DAVIES, a former professor at West Point, are in common use. AUGEL is the best French teacher in the country. KENDRICK, long a gallant officer of artillery, has chemistry oozing out at his fingers' ends. But why need we specify? If these men are *pedagogues*, the name must confer no less good repute, and all professors be ready to share it. It means *youth-trainer* and no men ever trained youth better.

That West Point is the best single school in the world, we have the concurrent opinions of English, French, and German officers. The French *system of schools* may be superior, but no one school in its equal. To concede this argues entire ignorance of the Academy.

We need not dwell upon the assertion that "while "the spirited boy, full of genius and daring, is ex-"pelled, dullness graduates." Experience has shown that a boy rarely finds himself obliged to leave West Point without great regret, and this is very seldom for conduct; and it is equally true that the mischievous boys are usually the idle; for Satan verifies the old hymn there as everywhere else.

But the truest answer at once to such attacks as these upon West Point is found in the battle records of this war. The proof is there on both sides are, almost to a man, graduates of West Point. We need not repeat their names: every one is familiar with them.

Loyalty, the best and highest of public virtues, is mistaken by many for ability. The two combined are essential in order to make generals and to win battles; and all other things being equal the educated officer is most likely to combine the two, and like GRANT, MEADE, ROSECRANS, THOMAS, GILLMORE, and a hundred others, to obtain the respect of their armies and the love of their countrymen, for their patriotism, made practical by their West Point training.

Far be it from us to ignore the noble deeds of men who never saw West Point; when it is to the point to praise them our pen shall be ever ready; great glory to all volunteers who have become veterans in the holy cause: but our present purpose is to parry an attack made in the dark, by a man in a mask, upon the noblest institution of its kind on the face of the earth.

We understand that the Navy Department, in accordance with the views expressed in the Secretary's Report, have plans and estimates for an armored vessel of great size and strength. The objection of expense will undoubtedly be urged against it, for the estimates foot up to five millions of dollars; and as far as can be ascertained it would require several years for its completion. There is also a doubt expressed as to the propriety of risking so much time and money upon what must, in the present state of naval architecture, be merely experimental. But the Secretary's view is the correct one—we need larger and more powerful vessels. The question is—What shall be their construction? We wish that the whole subject of armored vessels might be made a matter of investigation by a competent Board, the comparative merits of broadside and turreted vessels discussed in the light of our own experience as well as that of European powers, and the views of the Secretary carried out in the construction of a ship of greater power than any now in existence.

THE strange necessity of inquiries in regard to the steps necessary to be taken to appear before the Examining Board for Officers for the negro regiments. The proper person to apply to on the subject is Major-General SILAS CASEY, Washington. It is impossible for us to tell exactly what questions the Examiners will ask, or whether or no the particular persons who write to us are likely to pass the examinations successfully; but we have no doubt, that every one who deserves a commission will get it. We can satisfy applicants on one point—that the examination will be strictly impartial—that the Board, being composed of officers inclined to judge for themselves as to a candidate's fitness for a commission, are not likely to be influenced by any of the ordinary measures for securing favor at court. Merit is the only claim to favor which they allow.

THE disastrous fate of the Monitor *Weehawken* is an event that will hardly surprise those who are acquainted with the unseaworthy qualities of that class of vessels. Their forte is undoubtedly harbor defence, and quiet water their proper element. A storm like that in which the *Weehawken* went down never merely try their ability. It is doubtless true that every precaution may not have been taken to prevent the catastrophe, and that partial explanations for it may be found in some defect of the vessel; but the fact has been pretty clearly demonstrated that we must save these abominable iron batteries as much as possible from the fury of storms and seas, if we would wish to have them spared to continue the good service they have already done the country.

WITH the opening of the session of Congress we have thrown upon our hands a mass of matter in the shape of official reports, which exceeds the ordinary capacity of our columns, that we are compelled this week to add four pages to our sheet, to make room for the very important Report of the General-in-Chief, which we publish in full. We have still before us documents to which we should have occasion to refer hereafter; among them the important Report of the Secretary of the Treasury; which, though not strictly a military publication, has a most important bearing on the success of military operations.

Two of the leading political journals in this city, the New York *Times* and the *Herald*, are urging General GRANT for the presidency. The *Herald* says:—"We once thought that General MCCLELLAN "or General ROSECRANS would occupy this position; "but the distinguished talents of MCCLELLAN and "ROSECRANS developed too early in the war, and the "politicians had time to kill them off. The politicians "would kill off GRANT also, if they only had the time. "Fortunately, it is too late now. We defy the Wash-"ington clique to attempt it."

THE proceedings of this session of Congress are likely to be of great interest to military and naval affairs. Bills have been already introduced which indicate important changes. We are glad to observe a manifest desire to deal liberally with the two services and to perfect necessary measures for the increase of their stability and efficiency.

WHILE Congress is devoting its attention to improvements in the effectiveness of the Navy, we hope it will not fail to give due consideration to the subject of training ships for seamen and petty officers—a subject which this journal has discussed in several articles, and one whose importance will be readily appreciated by every practical Navy man.

THE losses of our armies during the year, in killed, missing and wounded were ninety-two thousand seven hundred and seventy men.

FOREIGN MILITARY AND NAVAL MATTERS.

It is said that with the opening of the next year Poland has announced her intention of attacking Russia on her own. She is busy organizing a fleet to be under the command of a certain Captain MAGNAN.

NOTABLE ameliorations have been introduced into the French military system. The prisoners have been given useful work to do, and thus at the same time their punishment is lightened by distraction and they are brought into wholesome activity.

MR. REID, Chief Constructor of the British Navy, in a lecture on "Ships of War," stated, with the utmost confidence, that the Admiralty was now building a corvette from which the swiftest iron vessel now afloat could not hope to escape, and which would be armed in a most effective manner.

CAPTAIN WILLIS, of London, has invented an arrangement for furling or reefing top or square sails from the decks. It can be adapted to the square sails of any ships, and does not require the sail to be in any way altered or divided, as is required in many of the existing reefing apparatus.

FRANCE has been divided into three "cavalry remount" divisions, and in each division are two companies charged with the organization of the different establishments. The appointment of a commission to Algeria charged with the purchase of horses has been productive of many useful results.

A REPORT finds currency in English papers to the effect that a regiment of English troops will be made in the army estimates of 1864, chiefly to be effected by not filling up ensuables arising from the discharges after first period of limited service, by purchase, and by desertions, and deaths.

The *Scrapon*, one of the French floating batteries, has been entirely destroyed at Rochefort by fire. She took about six hours burning, and when it was seen that there remained no possibility of saving her she was run out of the shroud and left to burn to death. There are no hopes of raising her; but it is thought her engines and a portion of her plating will be recovered.

The *Warrior*, which has been in the dock at Plymouth, has been undocked, and has received her crew, preparatory to joining the flag-ship of the Admiral commanding the Channel fleet for the summer campaign. Since the *Warrior* has been in dock her bottom has been again coated with the composition prepared by the chief constructor of the dockyard, and has also had an additional 100 of BROWN'S patent sheathing plates nut on her port side.

An English journal says:—"A sinister fate seems to preside over the birth of all big guns on this side of the Atlantic. Photographers and modelists state that to this time all guns well with the Armstrong 600-pounder, but they decline to commit themselves to anything more than a limited period of insurance. We are told that KRUPP's big gun has burst, while, on the other hand, we are told positively told that, up to this time, neither a DAHLGREN nor a PARROTT has come to grief."

The effective strength of the army of France, taken from the statement of the Minister of War, shows the following table of the numbers and stations of the troops:—In France, 325,315; Algeria, 68,000; Italy, 15,500; China—Cochin-China, 1,878; Mexico, 4,000; total, 456,986. The number of soldiers composing the reserve at this date (1st of January, 1863) amounted to 217,261, and thus the real effective of the French army for this year is shown to be 654,247 men.

The *Normandie*, a very formidable frigate, built at Le Seyne for the Turkish Government, has just been launched. She is clad with shot-proof iron plates 6 inches thick. Her masts, brought from California, are of wood, not of iron. She is armed with 40 guns—of the largest calibre between decks, and on the upper deck carries pieces *en barbette*. Her machines are modern 1,000 horse-power, but this power can be increased to 4,000 horse-power. The *Normandie* was only 16 months on the stocks.

The French Minister of War in his report to the Emperor says, as to experiments with rifled guns made to try the effects of different pieces of artillery on different kinds of targets—on masonry and plates. Trials of this sort are now going on at the Bois de Vincennes, and from the results obtained there, some decision will be arrived at with regard to the future means of attack and defence. The annual manœuvres for instruction of sea and land forces will then be decided on, but with the force of the new artillery and the best means of resisting it to be ascertained by trial, it will be useless to undertake works which might turn out to be of little or no utility.

In his lecture on "Ships of War," the Chief Constructor of the British Navy, observed that the Americans were the first to introduce armor-plated vessels, and in 1845, Mr. STEVENS constructed an iron-cased floating battery for their Government. The first principles of constructing such war vessels in Europe was not derived from America, but rather from the active mind of the French Emperor. He counseled that the *Warrior* and ships of her class were too long, and he firmly believed that the same rate of speed could be obtained from a much shorter vessel. He said she was no more iron ships for the Royal Navy would be laid down of over 400 feet in length as 600 feet. Whilst one of these long vessels had a large portion of each extremity exposed, a shorter vessel could have an armor-plated front end to end, would sail as many knots per hour and a great saving would be effected to the public. Mr. REED then discussed the question of the comparative merits of ships built entirely of iron or with a backing of timber, and expressed an opinion in favor of the latter class. He could not fully enter into the details of the improvements already effected, and now under consideration, with regard to the construction of iron ships, but one of the chief of these was the introduction of the "unsinkable principle," invented by Mr. JOHN PENDRAY. This system consisted in dividing the iron hull into numerous water-tight and fire-proof compartments, by means of the decks and bulkheads, and the integrity of these compartments by affording an entrance to them through the hatchways only.

The *Pendray*, a vessel built of steel, were recently launched in Liverpool. One was a sailing-ship named the *Pendray*, of 1,371 tons tonnage, built for the East India trade, and the other, a paddle steamer named the *Hope*, of 1,492 tons. Mr. REED, the Chief Constructor of the Royal Navy, was present. He said he should watch with great interest the career of the two ships which had just been launched. He remarked that merchant ships can be built to treat a principle more war-like ships could be, for they could be easily and repaired annually, while the latter are sent abroad for periods of three or four years. He perfectly agreed with what had been said of the immense value of steel for the construction of small ships, and stated that the government took great interest in the question of employing steel as a material for shipbuilding.

The French Minister of War has recently had before the EMPEROR a table on the administration of military justice for 1862. Out of an *effectif* of 458,125 men, 4,527 were sent to trial, and 4,087 were condemned and sentenced to various penalties, or the man out of every 113. The proportion is nearly the same as the year previous; year, but the condemnations to hard labor and public works have been more frequent than in 1861. The sentence of death was passed on 58 men, but out of this number only 14 suffered capital punishment, the others having been pardoned by the EMPEROR, who commuted the sentences. Only one desertion before the enemy took place, and there has been no instance of cowardice or cowardice in the presence of the enemy. Out of 1,000 men with soldiers. But one case of infidelity occurred in the administrative service, and but one man was *condemned for* seditious conduct. The Army Corps in the number of offenders is greater among the volunteers and substitutes than among the soldiers drawn in the conscription by the ordinary process.

The trial of Mr. LYNALL THOMAS' 9-in. muzzle-loading gun, carrying a 300-lb. shot, recently took place at Shoeburyness. The gun was somewhat unsatisfactory. Ten rounds were fired, and the result is that at 2 deg. elevation the difference in the range is 164 yards; at 4 deg., 196 yards; and at 10 deg., 457 yards—all large numbers compared with those obtained inexperiments with other rifled guns at similar elevations. The difference in the velocities is also large, being 142 ft. per second. It is right, however, to state that Mr. THOMAS ascribes these results to the excessive length of the shot, and the fushing of the ribs too abruptly when they joined the bottom of the gun, though *per contra* it is stated that the guns and shot have been manufactured under his own direction, and his objections therefore seem somewhat unfair. Mr. THOMAS also complains that the powder was not the usual kind, but it is stated that the difference of a few inches in the charges does not cause any material deviations in other rifled guns, and that this is a defect in Mr. THOMAS'.

The French Minister of Marine lays before the Chambers and the public a full account of the doings and state of the navy. "The year 1863," he says, "has also contained the commencement of the new fleet" sels for the fleet, in accordance with the credits voted aside for this purpose in 1857." The following is the table of the fleet:—

	New Vessels.	Vessels "mixtes."	Total.
Liners	13	23	36
Plated frigates	6		6
Frigates	18		24
Corvettes	10		10
Avisos	43		43
Total	90	27	119

Besides these vessels are several floating batteries for the defence of the different ports. The minister makes special allusion to the subject of the trials of the iron frigates, but he avoids giving any details of their performances. He merely says that they were satisfactory, that their speed is good, and that they are a great improvement on the wooden frigates.

AMONG the improvements lately made in the *Warrior*, is the introduction of "ozone gas" into the engine-room and seven alleys. Two small copper reservoirs, holding about a quart each, are provided to contain a supply of spirituous oil which flows by a pipe, after the manner of a caged bird's water fountain, into a small copper cup-lamp filled with cotton wool. Through this a stream of atmospheric air is blown by a pipe from a pump (the latter set in motion by a weight and pully), which, passing out by a discharge pipe at the opposite end of the tray, passes direct to the burners. There it gives out a beautiful white light, which consumes the oil. This apparatus "for the supply of a dozen burners," it is said, "is carried under the arm. It requires no gasometer, and its use entails no danger to the ship. It emits no smell when burning, nor does the vapor itself, when allowed to escape unburnt, cause the sickness of the burner. Its use entails no attention beyond the trimming up, once in 24 hours, of the small weight which sets the machinery of the air-pump in motion. Its cost is one-fourth that of the candles served out for use from the paymaster's stores of the ship."

PROVOST-MARSHAL-GENERAL'S REPORT.

The enrollment was begun about the 25th May, and proceeded rapidly in all the States except Missouri, Kentucky, West Virginia and Maryland. Delays occurred in each of those on account of the difficulty in selecting officers. Drafts were ordered as the quotas of districts were filled and quota assigned. The business was on the whole well done, with as few delays as could be expected. There was serious opposition to the enrollment in Wisconsin, which was promptly put down. The organized resistance in certain mining districts of Pennsylvania was overcome. Persons arrested have been transported over to the United States for punishment. There has been great difficulty in equalizing the credits given to several districts. The number each State had furnished was easily ascertainable, but in volunteering, men from one district had enlisted in another, and the whole business was encumbered by confusion. There were complaints, therefore, of unequal draft, for which the law published no remedy. In future, however, by help of the enrollment, the assignment of quotas may be more impartially made. The enrolled national forces, not now in the militia service, number 3,113,395 men; seven States not being included.

The draft was begun as soon, as possible, and in each district each of the number ascertained by the draft was called on. The calls of 1861 and 1862 had been upon population, and a sufficient per centage added to allow a given number. Therefore those States which furnished females than males were really charged with a greater contingent than in which there was an excess of males. This explains the apparent inequality between the States of the Eastern and some of the Western States. The main object was to equalize the burden between the States, so that those previously furnished and those to be furnished would make a given part of their available men, and not a given part of their population. And this object was successfully accomplished.

The examination of drafted men is still in progress. Up to October 1st 292,441 had been placed under the draft. Discounts as aliens and persons disqualified were included in the enrollment, but the proportion of men received from the draft was much less than it would have been expected if these clauses had been stricken from the rolls before the draft began. Commutation was also a large item in the list of diseases exempting from liability. It appears from tables prepared by the Medical Inspector that the ratio of rejection for disease was 29.6 per thousand in the United States, France, and Great Britain, for the periods stated, were as follows:—

	United States.	France.	Great Britain.
	18 From 30	30 From 39	30 18
Ratio rejected per 1,000	224.4	348.2	318 [illegible]

The draft was forcibly resisted in New York, Boston and Troy, and elsewhere, but in the last two places was successfully enforced. In New York, the mob was composed mainly of foreigners. The result of the riot made it impossible to resume the draft for more than a month.

It is recommended that the $300 clause be repealed, or modified to meet the objections urged against it by the Quaker religious creed. The commutation money under this clause amounted to $10,518,000. This amount has been duly deposited in the Treasury, and a special appropriation will be law to receive it. It constitutes a substitute fund, and is now used in the procurement of recruits by bounties.

The Provost-Marshal-General expected under the President's last call for volunteers. The payment of $300 bounty to new recruits, and $400 to veterans, is recommended. Between January 1st and November 1st, 1863, 91,149 veterans were received into the United States service, of whom 24,237 were enrolled men, and the rest volunteers. From May 1. and November 1. nearly 22,000 deserters and absentees have been arrested. The number of deserters in September and October was nearly one-half more than in May and June, owing to the greater probability of arrest and the punishments that have been inflicted.

The organization of the Invalid Corps was intended

1. To secure the military services for garrison, hospital, and general service duty of deserving officers and men who, from wounds received in action, or disease contracted in service, were unfit for further duty in the field, and who would otherwise be discharged from the service, but were able to be light duty; and to bring back for this purpose those who had been previously discharged on similar grounds, but who were unfit for active duty and not liable to draft.

2. To provide honorable and useful occupation and suitable compensation for a class of soldiers who have fought against the Nation no one can question.

The enrollment on the 1st November consisted of 491 commissioned officers and 17,762 enlisted men. This force is organized as infantry, composing 263 companies: 109 of these companies have been formed into 10 regiments; the remainder are not yet formed into regiments, but soon will be. Each regiment contains six companies of the 1st battalion, and four companies of the 2d battalion. The 1st battalion are armed with muskets, and perform garrison duty; the 2d battalion are armed with swords and pistols, and are on hospital duty as nurses, cooks, attendants, &c. It is designed, in having the regiment composed of companies of both 1st and 2d battalion, to enable each regiment to afford proper material at any point where it may be stationed for both garrison and hospital duty.

The corps is now in the full performance of the duties for which it was organized,—duties which would otherwise have to be performed by able-bodied soldiers. It is designed to keep the individuals of which it is composed are unfit for field service, and as fast as they are strengthened as it would have been by an acquisition of the same number of men fit for active duty. The officers have been selected on the recom-

mendation of the military superiors under whom they served in the field, and are assigned to duty without regard to the States from which they were appointed. Men are assigned to companies in a similar manner.

GENERAL THOMAS A. DAVIES.

As short as the war has been, its history has already shown the instance of blundering military officers unconscionably, if we go back for a few months in military history, for the double purpose of reviewing one of the earliest periods of the war, and of rendering justice to an officer who was the victim of the blunders of others, and who proved to be both judicious and meritorious. Most readers will remember the spiking of the guns at Harper's Ferry, the surrender of the Virginia troops at Norfolk, by order of General Scott. At that time he was consecutively by a portion of the press, and the most exaggerated reports were circulated of the value of property destroyed. In point of fact, the value of property destroyed was literally nothing, compared with what was represented. It was proved, in the military court of inquiry held at Chambersburg on January 6, and which ended on the 16th, that the loss, in comparison with the exaggerated rumors of the day. But there is another question, which, in connection with the military investigation of a General and the military history of a war, is very different, and of vastly more importance. Was such destruction of property apparently a military necessity? And how was it connected with the surrender of the troops? And what were the consequences? The answers to those questions will develop some important lessons in the conduct of military history, and show in part how the war has been conducted on our part, what were the causes of delay, and what were the plans of the enemy. In regard to General Davies, the question was, as it may be in almost the responsibility of the events at Island No. 10 and New Madrid; that it was fully investigated by a military commission, under ordered and that the accused was tried by a court of his peers, and "honorably acquitted. Let us now examine the circumstances of events at that time, and the critical condition of our northwestern line of defence. The Department of the West was then commanded by General Curtis, the Department of Tennessee and Mississippi by General Grant, and the ports on the Mississippi above Memphis by General Pope. The latter was then at Cairo, Ill., but in a few days after, viz., on the 10th, Fort Pillow, Denny and Donelson, Cairo, Paducah and Columbus were garrisoned by about 5,000 effective men, of which 1,500 were at Fort Donelson, and the remainder at the other posts, as before stated.

The week ending December 6th and 13th of that month General Grant, who had been moving on the line of the Central Mississippi Railroad, had established his headquarters at Holly Springs, Vicksburgh, was at Oxford, Miss., 110 miles from his depôt of supplies, at Holly Springs, and 40 miles from Grenada, where he expected to establish a magazine of provisions and stores at Holly Springs, &c. At the same time General Sherman was before Vicksburgh, a single small entrance, the *New Era*, being in the department of Columbus—the main division of Admiral Porter's fleet, with the exception of my own fleet on the army of General Grant, before which the coving had retired, and Admiral Porter, with the *Benton*, the *Pittsburgh* (Colonel Ellet's boat) and three tugs, and then to Collierville, 20 miles from Memphis, on the line of the Memphis and Charleston Railroad. It was from this position that the attention of the country had been drawn off to the second and last expedition of Grant's army which had been sent down the Mississippi, in search of him (the enemy has never been *without* the *near* acquaint of *our position*). This time it was going by water, via Memphis and Tennessee, where the entire country abounds with disloyal people, who are ever ready to communicate with the rebel army. The rebel commander knew of the small garrisons in the Mississippi ports, the number of which had been left for the purpose of protection, and the absence of the gunboats in the fleet below. They were in no condition to fight the gunboats, and the latter could run past them at will. Within the three or four days the country was astonished by the news of the complete surrender of the forces which Grant was captured, and on the 20th of December all communications of Grant's army with the North were cut off. Memphis was at once followed up by the reinforcement of Grant's army, and its new situation is thus described by Colonel Joseph Gerhardt, 6th New York Volunteers.

EXEMPT FROM DISMISSAL.

The following named officers, having been acquitted, and heretofore published, are exempt from being dismissed the service of the United States, pursuant to the 65th Article of War, and by their respective commands:

Captain B. B. Perkins, 12th United States Infantry.
First Lieutenant J. D. Parker, Aide-de-Camp to Major-General Hancock.

DISMISSALS.

During the week ending Friday, December 11, 1863.

Colonel E. Livingston Price, 18th New York Volunteers, to date December 11, 1863, by direction of orders, absences without leave, neglect of duty—all this while in command of the 18th Regiment in the field, and in the face of the enemy—and for fraudulent conduct, employing enlisted men for servants, and for conduct unbecoming an officer and a gentleman.

Colonel John Dils, 20th Kentucky Mounted Infantry, to date December 11, 1863, by direction of orders, absences, for selling government property and appropriating proceeds to his own use, using threatening language to and striking a subordinate officer, and conduct of a non-commissioned officer while the non-commissioned officer was in the discharge of his duty, and conduct unbecoming.

Lieutenant-Colonel H. L. Van Wagenen, 124th New York Volunteers, to date December 11, 1863, by direction of orders, absence without leave, neglect of duty—all this while his command was in transit from Washington to the front, and for conduct unbecoming a gentleman in a drinking saloon, furnishing them with liquor, and getting drunk with them.

Major William H. Mabry, 111th Illinois Volunteers, to date December 11, 1863, by direction of orders, absence without leave, neglect of duty, and fraudulent account against the Government.

Captain Alfred Ellis, 124th New York Volunteers, to date November 16, 1863, by direction without proper authority.

First Lieutenant Thomas Hamilton, 124th New York Volunteers, to date December 5, 1863, with loss of all pay and allowances, for drunkenness, disobedience of orders, conduct unbecoming an officer and a gentleman, and for absence without leave.

Captain John Kay, 17th Missouri Volunteers, to date December 15, 1863, with loss of all pay and allowances, for drunkenness, neglect of duty, conduct unbecoming an officer and a gentleman, and for absence without leave.

Captain Samuel D. Davis, 14th Connecticut Volunteers, to date December 15, 1863, by direction of orders, absence without leave, neglect of duty, and fraudulent account against the Government.

First Lieutenant T. F. Kennedy, 8th Pennsylvania Volunteer Infantry, to date December 9, 1863, by direction of orders, absence without leave, failing to report at the office for sick and wounded officers, when reported for it, 1863, and wearing citizens' clothes while under medical treatment, and for fraudulent conduct in the matter of his pay account.

First Lieutenant Henry Bates, 2d Ohio Volunteers, to date December 5, 1863, with loss of all pay and allowances, for absence without leave, neglect of duty, and fraudulent accounts against the Government.

Lieutenant H. W. Hines, 82d New York Volunteers, to date December 15, 1863, by direction of orders, absconding and other bad practices.

Second Lieutenant George W. Hilliary, 20th Pennsylvania Volunteers, to date November 16, 1863, for absence without leave.

Second Lieutenant G. W. Howard, Battery D, 2d Missouri Artillery, to date December 16, 1863, for desertion and his command whilst it was under marching orders.

DISMISSAL REVOKED.

Second Lieutenant Morris Pfaff, 4th Connecticut Volunteers, he having been previously discharged on account of malignancies.

SENTENCES OF COURT MARTIAL.

Lieutenant-Colonel Robert Johnson, 5th New York Cavalry, to be dismissed the service of the United States.

Second Lieutenant Hugh Nesbitt, 103d Pa. Vols, to be cashiered for absence without leave.

Second Lieutenant George W. Neumann, 8th Indiana Vols., to be dismissed the service of the United States for absence without leave.

Second Lieutenant T. M. Spencer, 2d U. S. Cavalry, to be dismissed for conduct unbecoming an officer and a gentleman.

Second Lieutenant Thomas Hall, 2d U. S. Cavalry, to be reprimanded in General Orders by the Commanding General, Army of the Tennessee.

Second Lieutenant Charles Hall, 2d U. S. Cavalry, to be reprimanded in General Orders by the Commanding General, Army of the Tennessee.

Second Lieutenant Charles Hall, 2d U. S. Cavalry, to be reprimanded in General Orders by the Commanding General, Army of the Tennessee.

Privates William H. Dodge, 24th N. Y. Vols.; John Tague, 4th Vermont; John Kelly, 1st Michigan Cavalry; William Gilchrist, 1st Iowa Regt. 1st Battalion 14th U. S. Infantry; John Gilbert, 1st U. S. Infantry; Thomas Hall, 1st U. S. Infantry; Henry Williams Hazlett, 19th Pa. Vols.; Winslow S. Allen, 20th Mass. Vols.; Edward Hall, 20th Massachusetts Vols.; William Gilchrist, 1st Maine Vols. Found guilty of desertion, and by order of General Meade will be shot to death on Friday, 18th inst., in presence of as much of the division to which the prisoners severally belong as can conveniently be assembled.

Lieutenant-Colonel John W. Stephens, 11th Mo. Cavalry, to be dismissed the service of the United States, for absence without leave, and having himself with contempt and disrespect towards his commanding officer, and conduct prejudicial to good order and military discipline and pay for one month.

Private William Hall, Co. G, 8th New York Heavy Artillery, to be disabled from service for conduct unbecoming an officer and a gentleman. Sentence approved by Major-General Augur.

MEDICAL DEPARTMENT.

DISCHARGED.

By direction of the President—Assistant Surgeon William Worcester, 15th Maine Volunteers, and W. H. Jewett, 3d Maine Volunteers, for the convenience of the service, December 15, 1863.

Medical Cadet Joseph R. Draper has been declined, to enable him to accept the position of Assistant Surgeon of the 14th Rhode Island Heavy Artillery (colored).

Hospital Steward Joseph D. S. A. for Honorable Discharge.

LEAVE OF ABSENCE EXTENDED.

The leave of absence granted Surgeon James T. Reeve, 21st Wisconsin Volunteers, has been extended 20 days.

Surgeon Charles Brodrick, 7th Ohio, ten days.

James M. Cuthbert, 1st Michigan, ten days.

Assistant Surgeon Charles Dunbar, 21st Michigan, ten days.

P. Curtis, 1st Wisconsin, ten days.

C. F. Woodward, 1st Wisconsin, ten days.

A. J. Lacy, 2d Ohio Volunteers, ten days.

Surgeon Henry Martin, 2d Ohio Volunteers, ten days.

The resignation "to delay reporting for duty with their regiments for the reasons stated" of Surgeon Henry Martin, 2d Ohio Volunteers, and Henry J. Dronin, 7th Ohio Volunteers, and Assistant Surgeon O. Nebe, 3d Indiana Cavalry, has been extended ten days.

RESIGNED.

Assistant Surgeon J. K. Bunch, U. S. Volunteers.

REVOKED.

So much of Special Orders, No. 318, November 21, 1863, of the War Department as assigned Assistant Surgeon Charles H. Head, 1st U. S. Volunteers, to duty at Camp Dennison, Ohio, has been revoked, and he has been ordered to report in person, without delay, to the Commanding General, Department of the Cumberland, for assignment to duty.

The leave granted by Special Orders, No. 318, from the War Department, for the examination of men at the Cumberland Camp, Va., for admission to the Invalid Corps, has been revoked.

ARMY GAZETTE.

CONGRATULATORY ORDER OF GENERAL BURNSIDE.

HEADQUARTERS ARMY OF THE OHIO,
KNOXVILLE, TENN., Dec. 6, 1863.

General Field Orders No. 9, } In the Field.

The brilliant events of the 25th inst., so successful to our arms, seem to present a favorable opportunity for the Commanding General to thank this army for their conduct on the battle-field, and to express to them the good services rendered by them in the important hearing it has had on the campaign in the West, and to urge upon them the acts of the great responsibility of General Grant, in which their forbearance and their fervency have in a high degree contributed.

In every fight which has occurred, the enemy has invariably by those near Knoxville, at Loudon, at Campbell's Station, and finally around the defences of this place, the enemy has been the aggressor, and in cold and in hunger, they have every where shown a spirit and a bearing which do honor to the soldiers of the country.

By holding in check a powerful body of the enemy, they have seriously embarrassed the operations of General Grant, and have been completely defeated by General Grant, and at the latest accounts was in full retreat for Dalton, Georgia, abandoning 40 guns, 7,000 stand of thousand prisoners, fifty-two pieces of artillery, and twelve stands of colors.

For this great and practical result, toward which the Army of the Ohio has contributed so much, the General Commanding tenders them his thanks, and with the fullest reliance on their patience and courage in the future, he calls upon them to meet cheerfully whatever may be the duty which the blessing of Almighty God, to a successful close of the campaign.

LEWIS RICHMOND, A. A. G.

NOTICE TO DELINQUENTS.

The following officers, on duty at the headquarters of the Army for the officers hereinafter specified, are hereby notified that unless their accounts are rendered to the United States Auditor within fifteen (15) days from December 14, 1863, they appear before Third Military Auditor Colonel Joseph Gerhardt, 6th New York Volunteers, and Ricketts, United States Volunteers, is prohibited, and make settlement of their accounts as required:

Absentees without proper Authority.

First Lieutenant Charles Hall, 2d New York Volunteers.
Surgeon Mitchell D. Benedict, 7th New York Volunteers.
First Lieutenant John T. Van Horne, company C, 5th Tennessee Cavalry.

Disobedience of orders, and reporting of Camp Chase, under the reputation for disobedience of General Orders, and Special Order No. 61, of 1862, from the War Department, visiting Washington without proper authority, and absence without leave, as reported on the rolls of his regiment.

Colonel Joseph Gerhardt, 6th New York Volunteers.

EXEMPT FROM DISMISSAL.

The following named officers, having been acquitted, and heretofore published, are exempt from being dismissed the service of the United States, pursuant to the 65th Article of War, and by their respective commands:

Captain B. B. Perkins, 12th United States Infantry.
First Lieutenant J. D. Parker, Aide-de-Camp to Major-General Hancock.

DISMISSALS.

During the week ending Friday, December 11, 1863.

Colonel E. Livingston Price, 18th New York Volunteers, to date December 11, 1863, by direction of orders, absences without leave, neglect of duty—all this while in command of the 18th Regiment in the field, and in the face of the enemy—and for fraudulent conduct, employing enlisted men for servants, and for conduct unbecoming an officer and a gentleman.

Colonel John Dils, 20th Kentucky Mounted Infantry, to date December 11, 1863, by direction of orders, absences, for selling government property and appropriating proceeds to his own use, using threatening language to and striking a subordinate officer, and conduct of a non-commissioned officer while the non-commissioned officer was in the discharge of his duty, and conduct unbecoming.

Lieutenant-Colonel H. L. Van Wagenen, 124th New York Volunteers, to date December 11, 1863, by direction of orders, absence without leave, neglect of duty—all this while his command was in transit from Washington to the front, and for conduct unbecoming a gentleman in a drinking saloon, furnishing them with liquor, and getting drunk with them.

Major William H. Mabry, 111th Illinois Volunteers, to date December 11, 1863, by direction of orders, absence without leave, neglect of duty, and fraudulent account against the Government.

Captain Alfred Ellis, 124th New York Volunteers, to date November 16, 1863, by direction without proper authority.

First Lieutenant Thomas Hamilton, 124th New York Volunteers, to date December 5, 1863, with loss of all pay and allowances, for drunkenness, disobedience of orders, conduct unbecoming an officer and a gentleman, and for absence without leave.

Captain John Kay, 17th Missouri Volunteers, to date December 15, 1863, with loss of all pay and allowances, for drunkenness, neglect of duty, conduct unbecoming an officer and a gentleman, and for absence without leave.

Captain Samuel D. Davis, 14th Connecticut Volunteers, to date December 15, 1863, by direction of orders, absence without leave, neglect of duty, and fraudulent account against the Government.

First Lieutenant T. F. Kennedy, 8th Pennsylvania Volunteer Infantry, to date December 9, 1863, by direction of orders, absence without leave, failing to report at the office for sick and wounded officers, when reported for it, 1863, and wearing citizens' clothes while under medical treatment, and for fraudulent conduct in the matter of his pay account.

First Lieutenant Henry Bates, 2d Ohio Volunteers, to date December 5, 1863, with loss of all pay and allowances, for absence without leave, neglect of duty, and fraudulent accounts against the Government.

Lieutenant H. W. Hines, 82d New York Volunteers, to date December 15, 1863, by direction of orders, absconding and other bad practices.

Second Lieutenant George W. Hilliary, 20th Pennsylvania Volunteers, to date November 16, 1863, for absence without leave.

Second Lieutenant G. W. Howard, Battery D, 2d Missouri Artillery, to date December 16, 1863, for desertion and his command whilst it was under marching orders.

DISMISSAL REVOKED.

Second Lieutenant Morris Pfaff, 4th Connecticut Volunteers, he having been previously discharged on account of malignancies.

SENTENCES OF COURT MARTIAL.

Lieutenant-Colonel Robert Johnson, 5th New York Cavalry, to be dismissed the service of the United States.

Second Lieutenant Hugh Nesbitt, 103d Pa. Vols, to be cashiered for absence without leave.

Second Lieutenant George W. Neumann, 8th Indiana Vols., to be dismissed the service of the United States for absence without leave.

Second Lieutenant T. M. Spencer, 2d U. S. Cavalry, to be dismissed for conduct unbecoming an officer and a gentleman.

Second Lieutenant Thomas Hall, 2d U. S. Cavalry, to be reprimanded in General Orders by the Commanding General, Army of the Tennessee.

Second Lieutenant Charles Hall, 2d U. S. Cavalry, to be reprimanded in General Orders by the Commanding General, Army of the Tennessee.

Second Lieutenant Charles Hall, 2d U. S. Cavalry, to be reprimanded in General Orders by the Commanding General, Army of the Tennessee.

Privates William H. Dodge, 24th N. Y. Vols.; John Tague, 4th Vermont; John Kelly, 1st Michigan Cavalry; William Gilchrist, 1st Iowa Regt. 1st Battalion 14th U. S. Infantry; John Gilbert, 1st U. S. Infantry; Thomas Hall, 1st U. S. Infantry; Henry Williams Hazlett, 19th Pa. Vols.; Winslow S. Allen, 20th Mass. Vols.; Edward Hall, 20th Massachusetts Vols.; William Gilchrist, 1st Maine Vols. Found guilty of desertion, and by order of General Meade will be shot to death on Friday, 18th inst., in presence of as much of the division to which the prisoners severally belong as can conveniently be assembled.

Lieutenant-Colonel John W. Stephens, 11th Mo. Cavalry, to be dismissed the service of the United States, for absence without leave, and having himself with contempt and disrespect towards his commanding officer, and conduct prejudicial to good order and military discipline and pay for one month.

Private William Hall, Co. G, 8th New York Heavy Artillery, to be disabled from service for conduct unbecoming an officer and a gentleman. Sentence approved by Major-General Augur.

On December 11, the steamer *Hartford* was put in commission, Lieutenant Palmer, commanding.

PHILADELPHIA NAVY YARD.

Everything proceeds a very brisk appearance at this yard. The business of industry is active every department, and work of all kinds is being pushed rapidly forward. The gun-boat *Tuscia*, building in the ship-house, is being rapidly approaching completion, and will be launched within a few days. The orders to prepare the gun-boat *Kansas* for an immediate voyage were countermanded last Saturday evening. The vessel has her armament on board, and will be ready for service in the month. The *Sampenon*, which arrived last Saturday evening, being towed to this city by the gun-boat *Keokuk*, lies in the stream at the yard, and is to be placed in dry dock early next week. She looks very badly. The *Kansas* left on Saturday in search of the steamer Chesapeake, instead of the *Kansas*. Several other war steamers are nearly ready for service. The steamer *Susquehanna* left on Saturday for the South Atlantic Blockading squadron.

WASHINGTON NAVY YARD.

The gunboat *Kansas*, from the blockading fleet off Charleston, which arrived at the Washington Navy Yard on the 12th inst., sailed from the Yard on Wednesday for her new station on the West Gulf Blockading Squadron.

The gunboat *Sassacus*, of the Potomac Flotilla, while on her way to this city had a narrow escape in a heavy fog, and her commander had rather a timid time. Two or three were dreaded. She is being rapidly repaired, and will be ready for service again in a few days.

Repairs on the gunboat *Mount Washington* have been completed, and she will sail on Thursday the 17th inst., for her station off the mouth of the Potomac.

The gunboat *Pontiac*, arrived on Tuesday from Philadelphia. On her trip from Philadelphia she proved herself to be one of our fastest gunboats. She will be ready for service again in a few days.

The gunboat *Anacosta*, of the Potomac Flotilla, arrived on Monday, and left for her station again on the same day.

The gunboat *Commodore Read*, from the Potomac Flotilla has been laid up, and most of her officers and crew transferred to other vessels. It has been decided that she is too small for the service.

Repairs upon the gunboats *Little Ella* and *Primrose* are progressing. The former will be provided with a new bathe deck. The latter is to have a new boiler.

The steam tender *Baltimore* is still on the ways. It has been found necessary to re-bottom her. The repairs will consume several weeks time.

Boston packets *Downey* and *J. S. Green*, with ordnance stores from New York, arrived, the former on Wednesday and the latter on Thursday.

Gunboat *Commodore Read*, from the Potomac Flotilla, arrived on Wednesday and received upon her station on Thursday.

There is an unusual number of Navy Yard men in graduate *Annette* and *Cardenal*, on picket in the Rappahannock river, on Sunday, were fired on by a rebel battery planted on the western shore. The vessels, after firing a few rounds, moved out of range.

For some time past the workmen at the Navy Yard have been agitating the question of an increase of wages as view of an increased expense of living, a committee waited upon the Commandant, and requested that the Yard having been in correspondence with Commodore Harwood and the Department as to reference to the subject. On Saturday last, owing to some misunderstanding, many of the employees were discharged by order of the Commodore, and, in consequence, a large number of the workmen suspect work and were about to leave the Yard, when Dr. John Parker, the commander of the Yard, issued a proclamation to them, and the majority of them returned. Some of the plumbers, however, got outside of the gate before the others, and held a meeting, at which a committee was appointed to wait on the Commandant, and after a short understanding was explained and the committee retired, the commodore promising to recommend an increase of wages.

In answer to the resolution of inquiry recommended by the Secretary of the Navy has directed the Commodore to appoint a board composed of a surgeon, chief officer, a master workman, a quartermaster, and a journeyman, to ascertain the rates of wages per week and hours of labor adopted by the War, Treasury, Interior and Post Office Departments, by the city of Washington and other navy yards, which information is reported to the Department, and the Commodore is to adopt the same rules as to pay and hours of labor as they shall ascertain to be generally in force. The Commodore has appointed the following board, Commander Stephen Decatur, of the *Ethan*; Mr. J. F. Peake, master painter; George Cunningham, quartermaster, mechanic's department; W. Hunter, carpenter; and they were promptly convened for their duties, and it is thought that in a few days they will make their report.

James Mitchell, Acting Assistant Engineer, and ordered to the *Atlanta*.

Samuel M. Towne, Acting Third Assistant Engineer and ordered to the *Augusta*.

Hermon Wentworth, Acting Third Assistant Engineer and ordered to the *Commodore Perry*.

Benjamin Lloyd and Wm. Bane, Acting Third Assistant Engineers, and ordered to report for duty to Commodore Cuter.

Edward H. Higgins, Acting Third Assistant Engineer and ordered to the *Aurora*.

George D. Allen, Assistant Surgeon, and ordered to the *Glen*.

Charles S. Foster, Acting Second Assistant Engineer and ordered to the *Atlanta*.

Samuel Bennett, Henry Fisher and Charles G. Davis, Acting Third Assistant Engineers and ordered to the *Harvest Moon*.

William A. Jones, Acting Third Assistant Engineer and ordered to the *Augusta*.

Wm. Ross, Acting Second Assistant Engineer and ordered to the *Howquah*.

D. P. Bigelow, Acting Assistant Surgeon, and ordered to the *Glen*.

Lewis J. De Mott, Acting Second Assistant Engineer and ordered to the *Neosho*.

David D. Fennell, Acting Third Assistant Engineer and ordered to the *Neosho*.

Charles C. Hodge, Acting Third Assistant Engineer and ordered to the *Harvest Moon*.

John Walker, Acting Master's Mate and ordered to the *Peosta*.

Edward B. Lowe, Acting Ensign and ordered to the *Baron*.

Stephen Mercer, Acting Third Assistant Engineer and ordered to the *Neosho*.

Thomas H. Arthur Acting Third Assistant Engineer and ordered to the *Brooklyn*.

The Secretary of War orders the Quartermaster-General of the Army to report to the Paymaster-General the name of every officer in his department who has received, or shall hereafter receive, public money or military supplies and fail to take up and account for the same, and render proper returns therefor; or who has hired and employed, or shall hereafter hire or employ, persons and articles in the public service and fail to make out such returns reports therefor, as required by the Army regulations; and the Paymaster-General upon the receipt of such notification will give directions to the officers of his corps to make no payments to the delinquent officers until such delinquents shall have rendered the prescribed reports and returns, of which the Paymaster-General shall be promptly advised by the Quartermaster-General. When officers give false certified accounts for purchases made or services rendered in the Quartermaster's Department, they must immediately send an abstract of them to the principal officer of the department in which they are serving, and to the Quartermaster-General at Washington. Any officer failing to forward these abstracts will have his pay stopped until he sends them.

ADVERTISEMENT.]

The Holidays are near at hand, and of course every one is expecting a present. We, as the most extensive manufacturers, if they are in want of anything in the Watch or Jewelry line, to send to A. B. Mayer & Co., 189 Broadway, New York. Their assortment is the largest, and they can put their own prices on their manner of doing business.—*Evening Mirror.*

MARRIED.

COMMONWEALTH OF MASSACHUSETTS.

HEAD-QUARTERS, BOSTON, November 27, 1863.

FURLOUGHS TO VETERANS RE-ENLISTING IN THE FIELD.

General Orders No. 34.

By General Order, No. 191, of the War Department of the United States, current series, issued June 25, 1863, as amended by General Order No. 360, of the same series, issued September 11, 1863, volunteers serving in three years' organizations, who may, after September 25, 1863, re-enlist for three years or the War, in the companies or regiments to which they already belong, and who shall, at the date of re-enlistment, less than one year to serve, will be designated Veteran Volunteers, and will be entitled to the bounty and premium of $402, mentioned in the said General Order No. 191, and paid in the manner therein provided for other troops re-entering the service. The new term will commence from date of re-enlistment. The manner of payment has been fully set forth in the Commonwealth of Massachusetts to the people of Massachusetts, dated November 18, 1863, and published in the Boston daily papers, to which reference is made for details and benefits, not stated in the same Proclamation.

By General Order No. 376, of the War Department, current series, issued November 21, 1863, it is ordered that all veterans re-enlisting, as re-enlisting, shall have a furlough of at least thirty days previous to the expiration of the original enlistment. Such furloughs will be accorded to the volunteers either by selecting all the men re-enlisting, who belong to a corps, or in their respective bodies, through the Governors of States, to the Provost Marshal General's Bureau for furloughs and re-organization, or by granting furloughs to the men individually. Medical certificates are ordered to make the following stipulations as the minimum grade of service volunteers in regiments re-enlisting as above: "To have a furlough of at least thirty days in their States, before commencing the new term."

Commanding Generals of Departments and Armies are authorized to grant the aforesaid furloughs, with in the limits of the number and conditions of service that mentioned. Order, as the demands of the service will permit, and subject to the regulations of the War Department.

In order to secure to the veterans re-enlisting in the service of the United States, furloughs will be furnished with transportation by the Quartermaster's Department to their homes.

When the three-fourths of a regiment or company, or the veterans of a regiment united may be furloughed as a body, for at least thirty days as aforesaid, to go home with their officers to the re-organize states and districts to re-organize companies and regiments under the regulation of their terms of service.

The above-mentioned provisions of the said General Order No. 376, of the War Department are hereby promulgated, for the information of Massachusetts soldiers in the field, in order to apply to many inquiries received at these Headquarters.

By order of His Excellency JOHN A. ANDREW, Governor and Commander-in-Chief.

WILLIAM SCHOULER, Adjutant-General.

HAMMACK'S RESTAURANT,

CORNER 10TH ST. AND PENNSYLVANIA AVE.,

WASHINGTON, D. C.

This is one of the most complete, first-class Restaurants this side of New York. To officers of the Army and Navy it offers peculiar inducements, as their meals can be furnished at all hours during the day or night, and at the shortest notice. My cooks are from French importation, and are themselves as being at the top of their profession; and my servants, who are all select, their neatness and promptness. My larder shall always defy competition. In supplying my stock of WINES and LIQUORS, it is but necessary to say that they were selected by one of the best judges of the country. I invite a call, and feel no doubt but I can please.

JOHN D. HAMMACK, Proprietor.

COMMONWEALTH OF MASSACHUSETTS.

HEAD-QUARTERS, BOSTON, November 21, 1863.

BOUNTIES TO MASSACHUSETTS SOLDIERS IN THE FIELD.

General Order No. 33.

I. The Act of the Legislature of Massachusetts, "To provide for the payment of Bounties to Volunteers, and for other purposes," approved December 24, 1863, is hereby promulgated to all the Massachusetts regiments, Batteries, and Independent Companies in the field, and the commanding officers thereof are requested to publish the contents thereof in their respective companies.

II. Every citizen of Massachusetts serving in the volunteer force of any other State, and not in the service of a member of any regiment, company or battery of Massachusetts Volunteers, who, under the authority of the President of the United States, re-enlists and is duly mustered into the military service of the United States for three years, or during the war, as part of the quota of Massachusetts, and who has been credited to the Precinct dated October nevertheless, in the year one thousand eight hundred and sixty-three, (1863,) shall be entitled to all the benefits given by that Act. And any party who shall become entitled to the benefits of the laws of the Commonwealth may recover the same, upon the production of the necessary certificates of the proper officers of the United States.

III. The Act also specifically called to the provisions of the Act of Congress, dated December 18, 1863, copies of which will be transmitted to all Massachusetts regiments and batteries in service.

IV. All such soldiers, thus re-enlisting, will receive the bounties offered by the State of Massachusetts, in addition to those offered by the United States; and in regard to the State bounty, they have the option of receiving the continued after discharge, or, in the event of death, to their nearest relatives, as is set forth more at length in the Governor's proclamation above mentioned.

V. The Colonels and Commanders respectively of Massachusetts organizations in the field, will return to the office of the Adjutant-General of Massachusetts accurate rolls of re-enlistment, on the blanks prescribed and furnished by the Adjutant-General, which will bring out the same in every particular, as prescribed, and without omitting any of the details, which will be necessary to the settlement of each soldier on the roll should be his own signature, and the roll when completed must be signed by the Commanding Officer of the regiment or battery.

VI. The muster-in rolls for re-enlistments, and the monthly pay for those who prefer to receive the bounty in monthly instalments, as authorized by the Act, will be payable at the Treasury of the Commonwealth of Massachusetts. The soldier must appear in person for the same, or the form prescribed and furnished by the Paymaster-General of Massachusetts, and which will be sent to the Colonel or Commander of each regiment, either against the name or the soldier, the signatures of the Colonel or such other must be witnessed by the Captain of the commanding officer of the regiment, or the Captain or commanding officer of the company or detached battalion or company as which they serve.

VII. The form of order is prescribed to be used by the soldier, at the time of his re-enlistment, to draw from the Treasury the whole or any part of the bounty it is also to be used whenever the soldier wishes to draw his pay, and will be sent to the Colonel commanding to draw for his monthly State pay, so long as he remains in the service, unless otherwise observed.

But if the soldier wishes to draw, as aforesaid, when absent from his regiment as detached recruiting officer, hospital, or on furlough, any order plainly written and clearly expressed, including his wishes, will be respected if the soldier's signature is duly authenticated by the signature of his commanding officer, commissioned or otherwise, or by some other known person believed to be trustworthy.

When the soldier has left the service, he, or his wife or heirs, may draw his balance in the same manner as if he had been a deputation and the Treasury was a bank.

VIII. Commissary Gen. has be appointed to pay moneys local bank, for collection at the State Treasury.

IX. Soldiers who receive notice from any of the Commissioners to call on any such Commissioner, and shall neglect to do so, or any part thereof, allotted on the receipt of the Commissioner, shall be reported by the Commissioner to the Colonel of their respective names and cities, if they desire it, in the same manner as the soldiers may wish for the existing system of allotments.

X. This order is susceptible of being amended hereafter, in any way that will render more certain or more convenient the payment of bounties or additional monthly pay to soldiers who re-enlist; it being the object of the Government to assist and encourage soldiers to re-enlist, by all such methods as shall promote certainty and facility of payment, and to secure to the soldier a return in relation to the disposition and use of their bounty and pay, so that he may know that his money is not subject to the risk of fraud upon the soldiery of the State.

By order of His Excellency JOHN A. ANDREW, Governor and Commander-in-Chief.

WILLIAM SCHOULER, Adjutant-General.

KIRK'S CHARLES THE BOLD.

Will be Published, December 15th,

HISTORY OF CHARLES THE BOLD,

DUKE OF BURGUNDY.

BY

JOHN FOSTER KIRK

IN

Two vols. 8vo.

Muslin, uncut, on white paper.....$3 00 per vol.

Half Morocco, with Vellum Cloth Sides

and Gilt Top, on Tinted Laid Paper.. 3 50 " "

Mr. John Foster Kirk, whose intimate relations with Wm. H. Prescott rendered him known, has just completed Vols. I and II of his History of Charles the Bold, and the Publishers have the pleasure of announcing that this important contribution to our historical literature will be issued on the 15th inst.

The preparation of this work by Mr. Kirk, full of grand historical pictures, and the search for an entire new light in them, on some of the most important events in Charles' career. His position as the Biographer of the Middle Ages," is fully founded, and his influence is traced both of his ambition and of his life upon the destinies of the principal European States.

[Copy the Atlantic Monthly.]

"We have no hesitation in assigning to Mr. Kirk's most fascinating narrative a place with the great achievements of series in the department he has chosen to fill. His advent among the historians will be welcomed the world over."

[From the St. Louis Bulletin.]

"The author will take his stand at once among the great writers of his land and time."

Will be sent by mail on the receipt of the price, by the Publishers. J. B. LIPPINCOTT & CO.,

Philadelphia.

UNITED STATES

ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

THE ARMY AND NAVY JOURNAL, established in the interests of the service, it will be conducted by no clique. Its independence will be absolute. Aiming to aid public policy in political ideas, its influence will be found entirely free from partisan bias. Its columns will be directed solely to the elevation of the public service and to the establishment of the right. It will not hesitate to criticise military criticism by competent authority, to censure the blunders of the ignorant, or to expose the schemes of the designing. Within the scope of its observations, and to a full discussion of all subjects connected with military or naval affairs, it will endeavor to be impartial, fair, and temperate in every way connected with military or naval affairs, a university in the science of war, a school of instruction in Engineering, which now has so intimate an association with Military Science, will receive the most prominent attention in this connection, and the interests of our Commercial Marine will be carefully looked after.

Abroad, among other matters the columns of the JOURNAL will contain a weekly review of

A summary, in short, of whatever occurs in all parts of the world of interest to our readers in this line. No effort will be spared to make the JOURNAL complete in all its parts, and commendation from any quarter will be in its province are at all times invited from those interested in the Army and Navy, and the duty of the Proprietor to the public will be found in a complete military and naval paper, but not in a partisan, or a party-ridden, or a party-pledged one.

The JOURNAL is established in obedience to a wish deemed, and which will be found to be, a wise one, to place in the hands of the officers and sailors of the country, and of those who are interested in the welfare of the country, and who would be benefited by the service, a paper which will be devoted to the support of the Constitution and the Union, and to the maintenance of the Government.

The Editorial Staff of the Military and Naval offices will be selected in the United States impartially devoted to the interests of the service, and to the support of the Constitution, which, by its ability, entire impartiality in the discussion of military and naval topics, by its official recognition and thorough circulation in the Army and Navy, will become a welcome visitor to the public and to the Army and Navy, and become a necessity in every circle, whether military or naval, or civil

THE MILITARY SITUATION.

WHEN we ventured to suggest three weeks ago that military operations had closed for the winter, the prediction was based rather on a consideration of the broader facts that lie beneath the surface than of those that meet the eye. Judging from the latter, it might have been hazardous to venture on the prophecy, for the opposing armies East and West still held menacing fronts; but there now hardly remains a doubt that, unless the desperate fortunes of the rebels shall tempt them into some overwhelming movement, our armies will be allowed the season of rest, recuperation and renovation they so much need.

THE temporary absence of General GRANT from his headquarters at Chattanooga is fresh evidence that there is no present prospect of great active operations in the West, though it is a natural inference from that commander's mental characteristics to surmise that his visit Northward is not without a purpose, having important bearing on the welfare of his army. As we have before said, we think he has before him three good months' work in making it the perfect instrument he will need for his great campaign of the coming Spring.

THE remnants of BRAGG's late army have since the removal of that officer been under the temporary command of General HARDEE; its dispositions from Dalton, Ga., under date of the 18th inst., announces that General JOE JOHNSTON has been appointed to the command of the rebel army of the Southwest and his immediate arrival at Dalton is looked for. WHEELER, commanding the cavalry corps, who was sent off with BRAGG in the expedition against KNOXVILLE, has succeeded in reaching Dalton. Deserters state that the rebel cavalry are now being re-organized and will be actively employed during the winter. An amusing proof of the starving state of the rebels for some crumbs of comfort was given a short time since in a dispatch to the Richmond papers, announcing "the evacuation of Chattanooga by General GRANT, and "his retreat upon Nashville, tearing up the railroad "behind him." "*We understand*," adds the journal, "*that General Hardee will* pursue!"

WHAT will be the future of General LONGSTREET's column still remains in obscurity. A dispatch from Cumberland Gap, under date of the 19th, states that LONGSTREET has returned to Bull Gap, adding: "it is "supposed for the present he will remain in Watauga "Valley, or with the view of moving into North Caro"lina;" but we do not imagine that there is the slightest probability of either of these contingencies. LONGSTREET will, beyond a doubt, make his way back into Virginia, if he can—his halt at Rodgersville being but for the purpose of gaining time and checking the Union advance. His campaign in the valley will form one of the most remarkable episodes of the war—and there is no particular of it more remarkable than the fact that he should have been able for now more than six weeks to subsist his army cut off from all base of supplies and without any available line of communication.

The encounter between General SHACKELFORD's force, and LONGSTREET's cavalry at Bean Station, of which we made mere mention in our last issue, commenced on the 14th inst., at 2 o'clock, and lasted until dark. General SHACKELFORD held the ground until that time, when he withdrew with a loss of 150 to 200 killed and wounded. The rebels acknowledge a loss of 800 in killed and wounded; but claim to have captured seventy wagon-loads of stores. Our forces were concentrating at Blair's Cross-Roads, when General SHACKELFORD, who has come on a visit North, left.

INTIMATIONS had been thrown out of a probable retrograde movement on the part of the Army of the Potomac; but thus far there have been no indications of it; nor is it believed that the enemy in his present condition is able to give us much annoyance. The rebel cavalry, owing to the impoverished condition of the horses, is not equal to the task of making any formidable raid on MEADE's line of communications. The last raid, that of Thursday week, shows how feeble these attempts have become as compared with STUART's former bold and formidable enterprises. On the night named a body of STUART's cavalry reported 1,000 strong, made a descent upon the guard stationed at Dumfries, three miles west of Fairfax Station, with the view of making a raid on the railroad.

Contrary to their expectations, the company on railroad duty guard there made a stubborn resistance and finally compelled the raiders to retire. They then attempted to burn the bridge over Pope Run, but took to a stampede before doing it other damage than was repaired in course of a couple of hours.

The probable number of re-enlistments into the Veteran corps from the Army of the Potomac is estimated at ten thousand—the delay in indicating the precise date of the thirty days' furlough having caused many to reconsider their first intentions, though General MEADE's late order sets the whole matter at rest.

The secessionists of Baltimore, who still have direct communication with the South, profess to have information that LEE's army is to winter at or near Hanover Court House. The troops already there have commenced the construction of winter quarters.

General AVERILL has been doing excellent work on the Virginia and East Tennessee Railroad—work which must have an important bearing on the future of LONGSTREET's column. Advancing to Salem, on the 16th inst., he divided his command and proceeded to effectually destroy the railroad over an extent of fifteen miles; five bridges, together with depôts, cars and immense quantities of stores were burnt. General AVERILL was obliged to swim his command and drag his artillery with ropes across Crog's Creeks even times in twenty-four hours. On his return, he found six separate commands under Generals EARLY, JONES, FITZ LEE, IMBODEN, JACKSON, ECHOLS, and MCCOUSTIN, arranged in a line extending from Staunton to NEWport, upon all the available roads, to prevent his return; but he speedily, by dispatch from General JONES to General EARLY, giving him the position, and that of JACKSON at Clifton Forge; and by nice strategy and admirable pluck and energy he succeeded in bringing his command safely back, after performing one of the most daring and successful raids of the war. General AVERILL's total loss is six men drowned, an officer and four men wounded, and four officers and ten men missing. He captured about two hundred prisoners and one hundred and fifty horses. General AVERILL closes his very interesting official report in these terms:—"My horses have sub"sisted entirely upon a very poor country, and the "officers and men have suffered cold, hunger and "fatigue with remarkable fortitude. My command "has marched, climbed, slid and swum three hundred "and fifty-five miles since the 8th inst."

THE situation at Charleston continues unchanged.

A painful impression was created in the public mind by the publication in the daily press, a few days ago, of a dispatch pretending to come from Burrows Monroe, and purporting to convey the substance of a telegram published in the Richmond papers of the 19th inst. to the effect that the *Ironsides* and four Monitors had got foul of the obstacles between Forts Sumter and Moultrie, and that the *Ironsides* and two of the Monitors would have to be abandoned. The story had, to a considerable degree, an air of authenticity about it; but the arrival of Richmond papers of dates several days beyond that of the pretended dispatch revealed the groundlessness of it, and the story has been completely exploded by the arrival, direct, of a packet from Charleston harbor. The only disaster that has happened to the iron fleet is the getting aground of the *Lehigh* while on picket duty near Fort Johnson. The rebel batteries opened on her, doing considerable damage, when the other iron-clads went to her assistance and succeeded in getting her off. The *Lehigh* was so badly damaged by the fire of the rebel batteries that she had to be towed to Port Royal for repairs. No one on board was injured. General GILLMORE was shelling Charleston daily from his two hundred pounders. Nothing further of importance had transpired.

GUERRILLA bands continue to swarm in the interior of West Tennessee, plundering, maltreating or conscripting all on whom they can lay hands. The Union commander at Memphis has been energetically engaged in mounting infantry for the purpose of destroying these rebel bands.

General WASHBURNE holds the coast of Texas from the Rio Grande to within a hundred miles of Galveston, and it is presumed that, as reinforcements have been sent the expedition, that place will be the next point of attack. General FRANKLIN is still at New Iberia with about four divisions.

ADVICES from Fort Smith, Arkansas, under date of the 20th, announce that an attack was made on the outposts of Fort Gibson by STEELE, with a force stated at sixteen hundred. He was repulsed and fell back, taking a part of his force across the Arkansas below Fort Gibson, moving Northeast. Information had been received that two-thirds of KIRBY SMITH's forces were preparing to attack Little Rock; while the balance, anticipating that McNEILL's forces would be drawn away to reinforce STEELE, would attempt to fall on Fort Smith.

A REPORT reached the North from Fortress Monroe a few days since to the effect that the U. S. gunboat *Daylight* had been blown up by a shell from Fort Fisher (Wilmington, N. C.); but a dispatch from Admiral LEE gives the assurance that there is no truth whatever in the rumor. The *Daylight* is at Beaufort, coaling.

THE Paris correspondent of the London *Spectator* says, in a recent letter, that "everybody in France appears to agree on one point—that an irretrievable disaster of the French troops (in Mexico) or a war with the United States would instantly sound the death-knell of the Second Empire."

THE VIRGINIA CAMPAIGNS.

THE POSITION.

"The cardinal maxim in any American war involving large tracts of country must be to take possession of the railroads"—*National Review, April, 1862.*

THE Eastern zone has been so frequently traversed and re-traversed by the contending armies, that it would appear that every principle of strategy as applied to the peculiar features of this limited sphere of operations must have been made evident, and that it were an unnecessary task to endeavor to elucidate them. The great expectations raised but to be disappointed by the recent movements of General MEADE, the comments which were made upon, and the remarks expected from them, show, however, that the true merits of the relative positions of the armies of Virginia are not yet understood. Such is the sensitiveness of the public pulse to the movements of these armies, that a full comprehension of the possible operations of either is necessary as a touchstone, by which to estimate the evolutions which take place, and to judge whether or not they are likely to result decisively.

The operations of the armies of Virginia have been confined to a triangle, having Harrisburgh near its salient, North Carolina for its base; bounded on one side by Chesapeake Bay and the Susquehanna, and on the other by the range of mountains called in Pennsylvania the Tuscarora Mountains, and in Virginia, successively, the Shenandoah Mountains, the Middle Mountains, and the Chilah Mountains. Parallel to this range and within the triangle, at an average distance of about 60 miles, is the range of the Blue Ridge and Alleghany Mountains. In the lower part of the valley between them runs the East Tennessee and Virginia Railroad, which forms the connecting link between the operations of the Eastern and Western armies. Through the middle part, the Shenandoah Valley) has been the line the great rebel invasions of the North, while in the narrow salient which lies between this ridge and the Susquehanna have been fought the great battles of Antietam and Gettysburgh, by which they have been in each instance hurled back from the free soil of the North.

From its salient this triangle measures 750 miles on its mountain side, 285 on its water side, and 450 miles along the state line of North Carolina. In lines parallel to this base, at 85 miles from the salient, are situated Baltimore, Harper's Ferry and Hancock; at 140 miles, Fredericksburgh and Culpepper; at 180 miles, Sexton's Junction and Gordonsville; at 200 miles, West Point and Richmond; at 220 miles, Petersburgh and Lynchburgh. These latter points are connected by a railway system, also forming a triangle, whose sides run nearly parallel to the first. Washington is at Washington. One branch passes through Warrenton at 40 miles, Culpepper at 60 miles, Gordonsville at 80 miles, and Lynchburgh at 150 miles from Washington, and thence crosses into the great valley, which it follows to Knoxville, Cleveland and Dalton; the second branches off at the river link of 40 miles at Acquia Creek, available to us but not to our enemies, continues by rail to Fredericksburgh at 50 miles, Sexton's Junction at 80 miles, Richmond at 100 miles, Petersburgh at 120 miles, and Weldon at 170 miles from Washington, where it intersects the State line at 100 miles from the southeast corner of the triangle. These diverging lines are connected by a railroad, 40 miles long, from Gordonsville to Sexton's Junction, and by lines of 90 miles from Richmond and Petersburgh to Lynchburgh. This district is intersected by the Potomac, the Rappahannock, the York —separating into the Mataponi and Pamunkey—and the James Rivers, all navigable nearly up to the east line of railroad from Washington to Weldon, and flowing through that portion of their course in a southeast direction and falling into the Chesapeake, in our possession.

When, in addition to the above features, the pine forests and clay roads of Virginia are taken into consideration, it is hardly possible to imagine a theatre of war more broken and varied than that upon which the rival armies of Northern Virginia and Potomac have since manœuvred and fought. Its peculiarities, however, are distinct and clearly defined, and it will not be difficult to establish the possible military combinations which can be made and the results which may be reasonably expected from them.

The great objective points are Washington and Richmond, the rival seats of Government. Their relative positions, resources for defence, and military and political value, are the main elements in determining the probable course of operations.

Washington, situated on the Potomac, is dependent for its supplies chiefly upon the Washington branch of the Baltimore and Ohio Railway. It is surrounded by no strong position; it is commanded and may be destroyed from the river, and from the Arlington Heights on the Virginia side. It is fortified by a series of well-armed works, connected by rifle-pits, on a circle of an average radius of 7 miles, at intervals of about a mile. To give efficient garrisons to all these works would require about 17,000 men; and it would be absolutely necessary to man the rifle-pits between them, as it would be impossible for independent works at such intervals, with garrisons of 600 men, to sustain vigorous assaults. Washington would therefore only be defensible in the event of a large army retreating within its lines for protection—an impossible contingency if attacked from the north of the Potomac, as it would be dependent for its supplies upon the railroad, which it would not be in a position to defend. The two invasions of Lee illustrate this. No attempt was made upon the position at Arlington Heights, upon the south side of the Potomac, for there the defending army could safely have fallen back upon the fortifications. A march northward threatening Baltimore, the Army of the Potomac was forced to give battle, for the defence of the capital, in open field, weakened in the fight which was to determine its fate by the absence of the troops shut up in its garrison. Forts at the above position do not afford so against cavalry raids.

Baltimore is situated with reference to the defence of the Susquehanna much as Arlington Heights are to the Potomac, and works at that point convert it into a fortified *tête-du-pont*, and are therefore of undoubted value. Baltimore is much better situated for the defence of the Susquehanna than Arlington for that of the Potomac; it is much more salient, and being near the head of the triangle, the rebel communications come nearer to it, and for both these reasons are more exposed.

Richmond, situated on the James River, is supplied from the West by the James River Canal, from the Southwest by the Richmond and Lynchburgh and the Richmond and Danville roads, and from the South by the Richmond, Petersburgh and Roanoke Railroad. It is covered on the north by the Chickahominy, a swampy and easily defended stream. It is accessible from the Potomac only by supplying itself from Acquia Creek by the Fredericksburgh Railroad; from the East, by an army obtaining supplies from the White House by the West Point Railroad; from the Southeast, at the north bank of the James, by Harrison's Landing, on the south bank, by the Petersburgh Railroad of Petersburgh, or having its base at Port Walthal, in the upper angle between the Appottomax and the James River, or from the West along the James River, by an army hauling its supplies from Beaver Dam Station, on the Virginia Central Railroad—communication could with difficulty be threatened by an army operating upon the line of the Orange and Alexandria Railroad; not at all until after the capture of Lynchburgh; and it would be impossible to operate on that line so far south without an army of observation on the north and northwest of Richmond, covering the country between Sexton's Junction and the Canal. A movement from the south side of the James River, is the only one which completely threatens the communications of Richmond. With the exception of the impracticable nature of the ground on the north and northeast, the same remarks apply to the system of fortifications of Washington apply to all that is known of the fortifications of Richmond.

POSSIBLE OPERATIONS.

Having carefully analyzed the theatre of war in Virginia, we are in a condition to examine the possible operations of the contending armies.

The Confederate army could operate upon Washington by the Orange and Alexandria Railroad. After the first battle of Bull Run, Washington was exposed by this route. Since the erection of the works for the defence it has not been so exposed; hence, after the series of defeats under Pope which culminated in the second battle of Bull Run, Lee merely threatened these works while he transferred his army to the north of the Potomac and to a line of operations extending up the Shenandoah Valley, and by the mountain passes. This line has very few facilities for transportation. That Lee has been able to operate upon it in two campaigns is due very considerably to the difference of the population of Pennsylvania, Maryland and Virginia, and hence of the quantities of subsistence obtainable from it is possible to procure in the country. War can be made to support war with the large armies used in modern warfare only when the population is very dense. In Massachusetts, for instance, the population is 127.6 to the square mile, and there are 73 animals to the square mile. Against an army of 150,000 men, which would have about 80,000 animals, is able by a proper use of its cavalry to draw subsistence from a district of 1,000 square miles. It will be seen that it is rather more numerous than the inhabitants. After the harvests are gathered, an agricultural district may be expected to have twelve months' provision for man and beast. An army of the above force subsisting in Massachusetts would, with the inhabitants, eat up the years' supply in five and a half months. The district of Pennsylvania inclosed within our triangle is of the same density as that between Baltimore and Washington is the same area. The district of Virginia, north of the Rappahannock and east of the Blue Ridge, and the valley divided north of Staunton, are each of about the same area. The density of the population to the square mile is respectively 60, 50, 36 and 30. Independent of the utter exhaustion of the Virginia district, at no time were they able to afford much more than one-half the subsistence which an army could obtain from the districts north of the Potomac. The year's supply, which in Massachusetts would last 51 months, would in Pennsylvania last 10 months, and in Maryland three months, while in Eastern Virginia it would be exhausted in eight weeks, even in the Shenandoah valley in seven.

Irrespective of these considerations, there is no doubt that the mobility of the rebel army of Northern Virginia is greater than that of the army of the Potomac. From this to the Gettysburgh campaign it is doubtful whether she were as well supplied with field artillery as our army; it is certain that her wagon train was more meagre and subsistence. In this respect the Army of the Potomac is much behind the Western armies. The Army of the Cumberland moved upon Chattanooga with 25 days' rations, the Army of the Potomac can only carry 11; its area of manœuvre is therefore limited to such extent.

The rebel advance is, by the works on Arlington Heights, practically limited to the line of operations by the Shenandoah valley. South of the Potomac their communications are covered by a mountain chain which renders attack difficult. They could hardly be operated upon with advantage north of Manassas Gap, and to do so at any point would, in the absence of exact information as to what number of troops could be collected to restore it, require a considerable force, for it must be distinctly borne in mind that to not open a line of communication with such a force as would by army dependent upon it, it is not enough to interrupt it a day, it must be held for such a time and by such a force that the supplies of the army become or are in danger of becoming exhausted. North of the Potomac it must be remembered that the rebels are dependent upon their supplies, the permanent base of operations of the Army of the Potomac is Baltimore and not Washington. The nearest line of operations, therefore, against the enemy's communications is that of the Baltimore and Ohio Railroad. Had the army fought at Gettysburgh with its back to this the battle of Gettysburgh was fought on a line north-east from Baltimore. Had the army of General MEADE marched from Westminster towards Hagerstown, instead of upon Gettysburgh, it would have been operating more in accordance with the principles of war. The victory would have been more decisive and the Harper's Ferry garrison would have been able to join it in time. In both campaigns the absence of this force in the decisive action was contrary to all correct principles. At Antietam, had it been withdrawn from Harper's Ferry to reinforce the army, a victory decisive of the campaign would have been gained. At Gettysburgh it could not have reached Gettysburgh in time, and we had it been there, this battle, not threatening in any way the communications of the enemy, could not have has made decisive except by a subsequent fight at the passes of the Blue Ridge or Warrenton Court, at which period the Harper Ferry garrison had joined the army.

The fortification of Harper's Ferry and the retaining there of from 8,000 to 12,000 men is one of the most incomprehensible mysteries of this war. It had been altered by all military men that a small garrison occupying no decisive strategical position, could have no possible influence upon the field of operations. It is difficult to imagine what light Harper's Ferry can be considered as a point of strategetical importance. One would have thought that the capture of the garrison under Colonels MILES and FORD would have demonstrated this point, but it is now supposed to be refortified, rearmed, and then destroyed and abandoned, and its garrison was uselessly marching over the country when the great battle of the campaign was being fought.

The line of the Shenandoah valley being the only one upon which the rebels can operate successfully, it is difficult for them to make their strategy other than combination. Why, previously to the fortifying of Washington, Arlington Heights were not occupied is one of the mysteries to be cleared up in the future. JACKSON'S operations against Pope on the valley were both brilliant and sound. As a reconnoissance, these operations, and as a means of threatening an invasion in this direction, of preventing reinforcements being sent to the Peninsula, it was perfect successful. A proper conception of the value of this point would have, however, to the communications of a BANKS and FREMONT at Strasburgh, and of McDOWELL at will if necessary, and would thus have prevented this movement. LEE, in his subsequent advances, merely followed a clearly marked route. The supposition that he ever intended an invasion of Pennsylvania before occupying Baltimore is absurd to be discussed. For permanent decisive results of any character the connection between the permanent base of operations must never be separated. Conquests to be valuable must be added to firmly acquired possessions. Such was the great fault of NAPOLEON'S Moscow campaign. An advance into Pennsylvania, with the Army of the Potomac and Baltimore in its rear; even the capture of Washington, if Richmond were sacrificed (for it would be sacrificed without the possession and control of Chesapeake bay and by which alone it could be converted into a permanent *point-de-depart*) would be like CHARLES XII.'s Pultow campaign, brilliant but fatal.

In another article we will discuss the lines of operations of the Army of the Potomac against Richmond.

CORRESPONDENCE.

WHICH FARES THE BETTER?

To the Editor of the Army and Navy Journal:

SIR:—I noticed in your issue of the 28th November a letter from an Army officer complaining of the advantages which the Navy has over the Army, in the distribution of prize money. With your permission, I will explain to him a few points which he appears to be totally ignorant of.

First—he remarks about the "fortunate neighbor" to, or rather applys to more than one-tenth of the Navy. A few vessels, which are fortunate enough to get a "roving commission" have captured some valuable prizes. The crews of those vessels have, of course, under the existing laws, made quite a sum, but let me assure our friend from the Army that these are very rare cases. For instance, take my case. Here we have served two years in the Gulf of Mexico without the enemy many times, under Admiral FARRAGUT, and always with honor to ourselves and the Nation, and yet at that time years I have received no more on the score of prize money. Meanwhile, men in other vessels, who have never been within half of an angry shot, count their prize money by thousands. Mine is not an isolated case; it is the case of two-thirds of the "three years men" in FARRAGUT'S squadron.

Second—The Army is furnished with clothing, while this is our great item of expense. *We* have to pay the highest price for the poorest articles. Before the war broke out, the cost of clothing has doubled, but our pay has not been increased one cent. At the breaking out of the war, Ireland was the principal source of the wool used in the thirty-five cent shirt; now it is new eighty, and everything else has risen in proportion.

Third—The Army is free from the baneful influence of salt provisions. The Army being on land can, of course, get all the fresh meat and vegetables they require, whereas while the poor "Jack Tar" will lie six or seven months on the blockade, and not see a piece of fresh beef, on an average, once in two months. The only relief afforded to the soldier is the fact that any able-bodied, well man can be a sailor, while the sailor has to learn his profession in the roughest school of all, a school in which before a man can be in the parlor grade is, no doubt, very pleasant; but "blowing your fingers on a topsail yard," of a cold, wet night, is altogether a different matter. Let the Army officer, spend a month on our coast in winter, and he will change his opinion with regard to the easy time our blockaders have.

And lastly, let me call his attention to yet another important fact. Almost every soldier can say proudly, "I am a citizen soldier;" he has no fear of being left to starve. While the wife of "poor Jack" has nothing but his half-pay to depend on, and very small indeed is that, for it is cut off from three to seven hundred dollars a month. Did our noble crew here of Jack Tars complain? Not a bit. Not once. At the time of the war in China fifty dollars were offered, but on signing accounts, on arrival on the station, what was his astonishment to find it deducted from his pay, as advanced wages!

Now, of course, it is nothing but right that soldiers should be paid for hardships, but I do think that it is shameful to see that their risk of life is at times greater than ours. It is highly proper that the Army should be encouraged, but I would advise the officer in question to try a month on our coast blockade before he overestimates its comforts.

MASTER-AT-ARMS.

FROM PORT ROYAL.

To the Editor of the Army and Navy Journal:

SIR:—We are in receipt of your—so, Army boys—welcome sheet. We gridiron people read it, and find no ungraciable you on the praise you get in this Army for furnishing us with so good a paper. I have perused your paper very carefully, and must say that the articles, so far as the department is concerned, are very accurate. One article I noticed particularly, a letter from the United States Military Academy at West Point. It is rumored at Port Royal that next year all appointments to West Point will be made from the Army. I hope this is the best thing the War Department has ever done. By toiling young and meritorious men, who are otherwise qualified from the Army, will be appointed, and they will know somethiug about war. When a young man has served a couple of years in the ranks, and then graduates at West Point for four years, you may be sure that he will stay in the service for some time. If a man wants to become an officer, a military education is worth a great deal to him, and he will be in the service long enough to see the advantage of a military education. An officer with this qualification is thought more of, is more respected, and has a number one for promotion. This department is getting along finely. The troops are in excellent health, and in fact they are spoiling for a fight. But we will have to wait patiently for reinforcements. He is certainly the right man in the right place, and knows how to "hunger" with his men. Hoping that you and your paper will prosper, I am yours,

A. D. C.
Port Royal, S. C.

DEPARTMENT OF MISSOURI.

To the Editor of the Army and Navy Journal:

SIR:—Since my last to you nothing stirring in the military circle has taken place. A few days since the river believes Government sent to bring the steamer *Vice Eagle*, on her way from New Orleans to this port. A cigar box filled with the main deck contained a small tin box filled with powder, and two pounds of turpentine, well packed in cotton. A fuse ran from the mouth of the powder can over the cotton, and outside of the cigar box. The only thing that saved the vessel was that the fire went out as it reached the box. Another plot was discovered not long since. A small six pound shell, loaded, was found in the hold of one of the steamboat *Memphis*. It was discovered just as the fuse was burning to ignite the charge.

Eleven prisoners escaped from the Gratiot street prison last night. They undermined the wall and dug through under a house about sixty feet into another cellar, and then made their way to the street. They skill at digging has suggested the idea that they have been one of the party who are to dig the "last ditch" for the rebel government.

The Gratiot street prison now holds some of the worst spies of the rebellion. They are well known in the West for their bravery and daring. A. C. GUMBS, of St. Louis, has visited nearly all the military prisons in and the Department of the Tennessee. He has been a prisoner six times. He escaped about a year since, and was captured in this city with a large rebel mail, was tried and sentenced to be shot, but before the day of execution arrived he again made his escape, again to be captured a few days since, at Memphis. He is now in confinement in this city. ROBERT LOUDON is a reticulous GRIMES. He has been many times arrested, but has managed to escape each time. Last winter he came to this city to take away a rebel mail; he escaped, but the mail was taken. It contained valuable information for the rebels. He was also tried by military commission. CLINE BURNSIDE, brother of the rebel General BURNSIDE, of PAICE'S army, and now a prisoner at Johnson's Island, was captured while on his way to or by North Missouri, to take a body of men to PAICE. He did his work in this department before, and got through safely with them. SAUL CLIFFORD was taken with a map of Kentucky on him showing the position of all our troops. He has been tried, and the papers have been sent to Washington for the action of the PRESIDENT. DR. WRIGHT was captured with a rebel mail, and he has been tried and the case sent to Washington. He is a rebel surgeon. Him have been banished beyond our lines.

General SCHOFIELD is to inspect the various offices of the department. He will find them all in good order. P.

ST. LOUIS, Dec. 16, 1863.

SOLDIERS AND SAILORS.

To the Editor of the Army and Navy Journal:

SIR:—In looking over a copy of the 28th November, I noticed an article from a soldier, complaining that the soldier fared worse in the matter of pay than the sailor. We have a soldier on board this vessel at $13 a month, amounting to $468. He also gets a bounty of three or four hundred dollars, and sometimes more; so that his pay for three years will not be much short of $900. A sailor's pay at $12 per month and $1.50 grog money, will give him at the end of three years $480. We get no bounty; and, unless we chance to belong to one of the monitors, never get an prize-money. If we did belong to one of these vessels, it is even then a chance if we ever get prize-money, as well as the soldier. Not more than one-half the vessels that comprise the Navy are entitled to prize-money by the present law, and yet all the vessels are subject to be commanded. It is an ugly fact, known to these in authority, that there are several vessels ready for sea, but detained for want of men. Vessels have also been sent to sea without their full battery, because men could not be had to man the guns. Now, if all the privateers that ever sailed from the South for the benefit of all vessels doing duty on the coast, enlistments would increase, and men would come in the Navy where they now go in the Army. Yours, etc., A SAILOR. The blockading vessels get the prize-money, while the vessels that are up the rivers and creeks do the fighting, get hard knocks, and no prize-money.

Soldiers get soft bread often;—such a thing is never served out in the Navy. Soldiers have a sum of money allowed them for clothing while in the Navy we have to pay exorbitant prices for everything. A soldier, by good conduct, has a good chance to promote himself, with handsome pay; if a sailor is promoted, his pay just covers necessary expenses, and no more. And yet, with these advantages the soldier is not content to go without full battery, and the prize-money for capturing cannon. Congress raised the pay of our officers and soldiers, but not the Navy.

BLUE JACKETS.

ORGANIZATION OF INFANTRY.

To the Editor of the Army and Navy Journal:

SIR:—Should or not think that our system of organization and drill is the same of modern times? The truth is, there is room for bettering it. In the first place, let us turn to organization, and then to drill. Take the infantry company. On a war footing, it ought to consist of 100 men (including six corporals), 4 sergeants and 2 buglers—the last armed with rifles, as well as the others—and three officers; in all 106 men.

Second—Let the company be "told" into two *sections*, and three *sub-sections*. I noticed above, that, let it be told into two sections only.

Third—Let the companies form a *bi-company*. This term I use because it shows the force of the body, and because it is wrong to use the term "division," it being now applied to two divisions of a corps. Let this be called

Fourth—Let three companies form a *half-battalion*.

Fifth—Let six companies form a *battalion*.

Sixth—Let the companies be numbered only from one to six.

Seventh—Let the bi-companies be formed from A to C, in order that too many names may not due be applied to parts.

Eighth—Let two *battalions* form a regiment.

These changes I base on the fact that it is better to have a few strong companies than a greater number of weak ones, as, in time of battle, the officers have the present great war plainly shows us. It is also necessary, for if a body of men can be directed by a small number of officers, by a portion of the whole, it is better. The reason, it is, of course, well to have them plain, so that *every one* may understand them. Next, to show why six companies are the best number for a battalion. In line, the battalion of about 600 men is, of course, more mobile than the stronger one. It can mass and deploy in less time, and in massing in order to meet cavalry its outer parts are less liable to be cut off. Then, in the din of active, the commands may be heard, as they cannot in a battalion of 1,000 men in four places, in column, the six-company battalion presents less depth to an artillery fire than the greater body; and, in the column by bi-companies, a shell may not kill more than that under fire, which, by throwing out the rear bi-company, to cover the advance of the body, becomes a mere double line. In this point of view, then, the six-company battalion is plainly better than that of two or four more companies—the latter is decidedly bad.

It may be feared that the battalion will dwindle down too soon; but that cannot happen if there are two battalions in a regiment, for if, by hard service, the two battalions fall below 250 men each, they should can be consolidated with the first until the two could be filled up, when they would, of course, again be reorganized. I may say here that 250 men should be the minimum limit of the battalion, twenty files to the company, and, as soon as the two in a regiment fall to that number, the second should be consolidated with the first. By this means the first battalion will never have less than 500 to 600 men. In this point of view, then, the organization of two-hundred regiments of six companies each, would also be an advantage.

EX-CITIZEN, Army of the Shenmac.

THE RANK OF THE STAFF—CHIEFS OF STAFF—AIDES-DE-CAMP.

To the Editor of the Army and Navy Journal:

SIR:—Since my previous communication in regard to the rank of the staff, the annual report of the General-in-Chief has been made public, wherein he recommends that the rank of the chiefs of engineers and ordnance of corps headquarters should be the same as that of lieutenant-colonel, because they have duties and responsibilities equal to those of the other heads of departments. In case of the latter, there is a very seldom indeed an engineer officer at corps headquarters, save when the corps constitutes an entire military department; and, with the ordnance, it is worse. It is true that the duties and responsibilities of the corps ordnance officers are quite light when compared with those of the authorized assistant-general, chief quartermaster, and chief commissary. But it would be generally conceded as just, that the chief engineer of a department, with two or more corps, be a colonel, and of a department of four or more corps a brigadier-general; and, if there is to be a chief of ordnance, distinct from and serving the purpose of, the chief of artillery, that the chief ordnance officer of a corps should be a major, of a department of two corps a lieutenant-colonel, and of a department of four corps a colonel.

The General-in-Chief further proposes, that the Inspector-General's department should be increased and known as the Adjutant-General's Department. This is evidently sound. My original suggestion looked to no further change of nomenclature than one of things than was needed to render it homogeneous and uniform. But, if General HALLECK's recommendation is carried out, the rank of the assistant inspectors-general should be one grade below that of the assistant adjutant-general of the same organizations—that is, for divisions, corps, departments of two, and departments of four corps, they should be, respectively, captains, majors, lieutenant-colonels, and colonels.

CHIEFS OF STAFF.

I am not Dame Partington, to attempt with my private mop to keep back the rising Atlantic; so I shall not ask the Government to pay me a sou to my idea. What have we gained by the creation of the office of chief of staff, as now established into our military economy. It may as well be recognized and provided for. Instead of a chief of staff, therefore, it ought to be enacted by law, that the commander of any department of two or more corps may detail a brigadier-general, and that the commander of a department of four or more corps may select a major-general as chief of the staff of each department; and that no such details shall be made except as herein authorized. The law should be framed so as to cut off the shamful custom, occasionally indulged in by commanders-in-chief, of having a general officer as chief of staff of a single army corps. I say shamful, because it is quite possible for a corps commander to perform his duties without such aid, and because good corps commanders do without it; and because the practice has never yet produced any good result, or indeed any other result than the creation of the office for the chief of staff, or the advancement in his person of a scape-goat for the shortcomings of his commander. Often, by subdividing responsibility beyond the limits of practical efficiency, this has worked incalculable evil.

AIDES-DE-CAMP.

The unlimited corps of "additional aides-de-camp" was a practical confession on the part of the Government, that, at the time that it was created, it needed to, we know not what staff was needed for what organizations. Unfortunately, the enormous abuses which attended the practical exercise of this unlimited power have not caused the law to be repealed; but not until after several hundred officers of all grades, from colonel to captain, had been crowded into the unwarranted expenditure. No duty, no consideration, no thought unsuitable for an "additional aide." It was hard to resist the claims of any deserving aid of many undeserving officers; and, in the corps which was organized in commotion, however exaggerated, worked no direct injury to the efficiency of the corps. It killed this brilliant scheme; but we have nothing in its place.

I suggest the following as a proper scale for the appointment and number of aides-de-camp:

For a *brigade*, two first or second lieutenants, selected by the brigade commander from the brigade, and remaining with it.

For a *division*, three first or second lieutenants, selected by the division commander from the division, and remaining with it.

For a *corps*, of two divisions of three brigades, one major and two captains, appointed by the President, to act with the advice and consent of the Senate, and accompanying the corps commander when he is assigned to another corps. An additional captain for each additional division of three brigades.

For a *department of two corps*, a Lieutenant-Colonel, a Major, and two Captains, similarly appointed.

For a *department of three corps*, same as for two, with an additional Major.

For a *department of four corps*, a Colonel, two Lieutenant-Colonels, and three Majors.

For each additional corps, after four, an additional Major.

When the corps or department aides are relieved from

duty with the corps or department for which they were appointed, they should either be assigned to others or mustered out of service.

It should be provided that all additional aides now doing duty in any of the staff departments or as Aides-de-Camp, should be transferred under the proposed reorganization before making any new appointments. This will very considerably reduce the number of new appointments and at the same time thin out the ranks of an anomalous organization.

The subject of Provost-Marshals deserves consideration in a separate communication. OLD REGULATIONS.

THE PAST, PRESENT AND FUTURE OF FORTIFICATION.

THERE is no subject of public interest upon which more talent, skill and high scientific attainment have been exercised than that of fortification. From VAUBAN and DE DAMPIERRE, surnamed POLIORCETES, from his skill in the art of attack, and of ANCHIMEDES, renowned equally for his science and his defence of Syracuse, to the present time, human ingenuity has exhausted its resources upon this important theme. There are but few clever pupils of the military school whose first inventive essays have not been the devising of a method of fortifying of their own; while the CORBORNES and VAUBANS of the great era of sieges, and engineers of the highest repute for science and experience of our own day, have each put forth their peculiar views of the best manner of attaining the desired end in some project of a fortified line.

It would be impracticable in this article to enumerate the productions of so many inventive minds. Those who are curious in the matter will find labor equal to looking over Mandar, the work of a French civil engineer, but a considerable merit, both in its information and the correctness of its views; and the more recent one of DE ZASTROW, on the history of permanent fortification, which brings it down to our own day. A perusal of these works will show the engineering student "how little there is new under the sun" in fortifications as in all other human contrivances; the latest invention, in many cases, being but the resurrection of some long-forgotten notion, put forth with modifications as something new. Like every other human device, fortification has followed the phases of man's civilization, and the improvement of his inventive faculties. It has been his chief reliance, at all periods of history, against the assaults of a foe superior in strength; and being thus a mode obstacle that the enemy has had to overcome, the evils to parties in war have been exercised, the one in devising new and more powerful means of attack; the other corresponding measures of defence. Thus the impregnable fortress of one period becomes, in its turn, a monument of weakness in another: and what withstood the assaults of scientific hosts for years, would, perhaps, yield in twenty-four hours to the means of attack of to-day. Unfortunately, human foresight is powerless to apply a remedy to such a condition of things; the pressing wants of to-day cannot be put off, in the hope that something may be found in the future. The evil of the day must use for her preservation such means as are at hand, though at the risk of seeing all its labor but in vain a few years later. VAUBAN, in presenting to LOUIS XIV. what is known to engineers as his third method, is said to have warned that monarch that in it he had exhausted the resources of his art; and MONTALEMBERT, though an officer of cavalry, but with far more self-confidence than VAUBAN, spent a fortune in publishing, and his days in controversy in defending, his projects of fortification, which he declared to be impregnable. Yet the *chef d'œuvre* of VAUBAN was more than once yielded after but a short siege; and forts Pulaski and Sumter have but too well proved the weakness of MONTALEMBERT'S main reliance—guns in casemates—when opposed to the heavy artillery of our own day.

Nevertheless, fortification is an art based upon well-settled principles, applicable to all times; its rules of practice alone varying as the art itself progresses. For the comprehension and just application of the former, the engineer must be peculiarly endowed by Nature; not only with superior mental powers, but with those faculties which go to form the engineer: for the exercise of the latter, good instruction with fair abilities will suffice. This is true in all the arts; that it is so in engineering we have only to point to those who have excelled. A TARTAGLIA stands out prominently in the first class; not so much for what he invented, for there is scarcely any one element in his measures for defence which had not been either suggested or applied before his time; not so much for his improvements in the attack, admirable as they are, and still holding the best in this present day; but for the consummate art he has shown in adapting the necessary means of fortification to every variable feature of locality which he was called upon to strengthen. This it is that constitutes the true engineer; and in this VAUBAN has had no superior, and he stands to this day as the authority to whom all appeal.

Systems and methods of fortification are taught in the schools; for technical information must be conveyed through some channel, and these, as they give the ideas of men of standing in the profession, are excellent exercises in training the young engineer; but they do not constitute the art of engineering;—they are merely a preparation for its practice; a necessary apprenticeship towards mastering its principles and details. Since the time of MONTALEMBERT and CARNOT, the engineers of Europe have been divided into two schools; the French, whose engineers for the most part from the out, set adhered to the methods of VAUBAN and his successor COHORNING, while they rejected the views put forth by MONTALEMBERT; the most of the engineers of Germany, on the other hand, have adopted the methods of MONTALEMBERT and CARNOT, and, under the name of the *polygonal system* of fortification, have constructed very extensive works of various points in Germany. The theory of the opinion in the schools has, as a matter of course, led to a great amount of controversial writing, which has settled nothing. The fact being that a system of fortification is either good or bad, according as it is understrikingly adapted to the site to be occupied, or otherwise; and to refer claims to the title of engineer who, from the great diversity of elements offered to his choice, can select and apply what is best suited to the case before him.

The more recent defences made by the Turks against the Russians, and by the latter in turn against the allied French and English, have given a great prominence to strong fieldworks as a defensive element to compel an enemy to the operations of a siege; and this view has been very much strengthened by the recent siege operations which we have carried on against the rebel works at Charleston, Vicksburgh and Morris Island. These facts are of peculiar importance to ourselves, for no war will probably find us in a prepared state for it, and, in such case, we shall be compelled to cover our large cities from the attempt of an enemy by strong field-works, as has been done at Washington. But we must not be misled as to the true value of this class of works, and suppose them of equal strength to permanent works. Marshal NEIL, in his narrative of the engineer operations at the siege of Sebastopol, appended but one line of his whole narrative: "Strong with the length of the siege of Sebastopol, some foreign officers have put forth the opinion that "revetted scraps of masonry are not of incontestable utility "in the defence of forts.

"Sebastopol was not intrenched camp defended by field-"works of a strong profile, owed its principal strength to an "armament which a grand naval arsenal alone can furnish, "and to a numerous army whose communications with its "region of supplies were at all times unobstructed.

"If it had been necessary to withstand for a long period, with "ing good revetted scarps, and if it had been necessary to "breach these in order to get within the place, and that "through the narrow defiles of these breaches defended in "their rear by an army ready to charge the heads of our col-"umns, Sebastopol would have been impregnable fortress." To this Marshal NEIL adds, that owing to the want of this safety against open assaults, procured alone by revetted scarps, the Russians were obliged to keep large forces at all points under arms day and night, where in exposed positions they suffered severely by the overwhelming convergent fire brought to bear upon them. The question between the properties of what are termed permanent works and of field-works is here placed upon its true basis. When NAPOLEON estimates that 60,000 men in a fortified fortress defend as much ground as 20,000 to get possession of it, he supposes the fortress to be secure from the passive strength of the works, and therefore requiring but a small force at any one point to guard it from surprise. There is nothing new in this capacity of earthen parapets to resist concentrated fire without fear of being

The custom is so general of quoting high authority for the support of one's opinions, that we will conform to the rule by transcribing a short passage from the life of the highest naval authority we know of. In the memoirs of the great and good Lord COLLINGWOOD we read: "The difficulties of manning the fleet had increased with the length of the war, and were particularly felt on the Mediterranean station, where there were few opportunities of recruiting its numbers from merchant vessels. Early after the mutiny at the Nore, he had been studious to discover some means of avoiding the too frequent recurrence to the system of impressment, and *had found the best boys from on a sixteen years of age, acquired rapidly the order, activity, and seaman-like spirit of their comrades.* In the climate of the Mediterranean they often, *in less than two years*, became expert topmen, while adults, who had been little habituated to the sea service, generally ineffective and discontented. He accordingly proposed to the Admiralty to raise yearly five thousand boys, and send a large proportion of them to his command, where he would have them taught and prepared in ships of the line, before they were sent into smaller vessels."

Many other authorities might be cited in proof of the great value of boys properly brought up, and the comparative uselessness of men enlisted as "landsmen." The latter are generally found to be more or less of a spoiled jointed, and entire little disposition to improve themselves.

It would be supererogatory in us to decide what should be the course of instruction for the boys in actual service, or how this instruction should be carried out. Far be from us the presumption, or folly, of any idea of Plan-ning our own remarks, we beg leave to drop the general discussion to take up a few of the particular points. We should like to see all ship's boys carried through the following general course with the most thorough instruction practicable: The use of the compass, lead and log; knotting and splicing; making mats; the use of the "palm and needle;" the names and uses of the different masts, yards, and sails; to steer; the duties peculiar to the different parts of the ship; pulling in boats; the names of the parts of a ship, as the keel, planking, and timbers; rigging of ratings, etc. This might be comprised in the course of seamanship, and be carried on during certain hours of the day, or certain days of the week, and should be combined with *frequent exercises afloat.* We have known boys to be set adrift repeatedly in sinking a sewn bells, up one side, over the mast-head, and down the other, and it is a good plan when they have nothing else to do. The gunnery instruction might consist of the names of the parts of a gun, carriage, and implements; the whole method of loading, firing, and sponging; the method of pointing, and of measuring a gun for a gale; securing a battery with a hawser; shifting carriage, truck, lock, etc., and the words of command for exercise.

In small arms, the manual, school of the company, besides instruction in howitzer exercise and use of the naval pistol.

In the naval cutlass exercise, the points and guards, attack and defence, the inspection exercise, and the words of command.

In making signals.

The foregoing course can be carried out on board of many of our ships, now afloat, and it only requires the fashion to be set somebody to anticipate the regulations which are sure, sooner or later, to enforce it.

In the above course, there are many points omitted, as it would be impossible, in this space, to note everything. We note, therefore, but two, which we think all-important: cleanliness, consisting of a clean person and neatness in dress, and great punctuality, both in returning from leave, and in matters pertaining to duty. Of the first the Service is deserving of special attention, for which purpose boys should be given frequent opportunity of bathing, and be *instructed to wash* their own clothing. We say nothing here of washing, and we are bound to confess to being so deeply imbued with the spirit of forgiving, that we would rather see a sailor quietly inserting a footspool of blue flannel into that pair of his garments which was all that WASHINGTON IRVING saw (as he tells us with his quaint humor) of the "GREAT UNKNOWN," so he got in his carriage, than to reading most of the books which fall into their hands: for the most popular books are those of a libidinous character, which, of all places, on board ship exercise their most baneful influence.

In conclusion, we trust that nothing we have said will be construed into a wish to disparage our seamen now in service. They have done well, and we cheerfully join in the meed of praise so justly awarded them—but it is the future we look to—*the future.*

JOHN F. COOK, for violation of his oath of allegiance and taking up arms against the United States, has been condemned by a Military Commission, consisting of Major-General Schofield, commanding the Department of Missouri, the President has commuted the sentence to imprisonment in the Alton Penitentiary during the War.

THE MONITORS.

THEIR CONDUCT, ENDURANCE, AND INVULNERABILITY.

We find among the documents accompanying the Report of the Secretary of the Navy the report of Admiral DUPONT, in relation to the first attack upon Fort Sumter. It includes the reports made to him by the commanders of the Monitors in that action, and is therefore valuable as giving the opinions of experienced officers in regard to the conduct of these vessels, and their statements of the injuries sustained in the assault.

In his first report, dated April 9th, 1863, Admiral DUPONT says:

Owing to the condition of the tide and unavoidable accident, I had been compelled to delay action until late in the afternoon, and toward evening, finding my vessels much scattered, I made the signal for close order, to withdraw the ships, intending to renew the attack this morning; but the weather, which had been unfavorable, and the unusual obscurity in the injuries to their vessels, when, without hesitation or consultation, they gave the most unanimous opinion that, if determined not to renew the attack, for in my judgment it would have converted a failure into a disaster, and I felt only and shall therefore cannot be taken by a purely naval attack, and the army could give me no cooperation. Had I persisted in entering the harbor I should have had twelve hundred men and thirty-two guns, but five of the eight ironclads were wholly or partially disabled after a brief engagement.

In a more detailed report, dated April 15th, the Admiral says:

The ship had been exposed to the severest fire of the enemy over forty (40) minutes, and yet in that brief period, as the department will perceive by the reports of the commanders, the impenetrable armor of the ironclads were wholly or partially disabled; disabled, too, for the obstruction of the turrets, which alone, I am most sure, prevented us from entering—I mean in their armament, or power of inflicting injury upon the enemy. Comparatively little, I am happy to say, has been able to fire three times during the short period he was exposed to the guns of the enemy, and the reports will show the means from each to prevent his vessel from sinking, which event occurred on the iron-clad Keokuk the next day. Her pumps, which had been in order and constantly manned, but turned being so jammed as effectually to prevent their working, and the shot-holes, many of them, so near the water line, and so numerous, and because nearly untenable in consequence of the shots and rents flying across the deck, that the vessel, in the forenoon of the fourth day after the attack, was unable to use it again during the action; and his turret also, was unable to use it again during the action; and his turret also, was unable to use it again during the action; and his turret also

ARMY AND NAVY PERSONAL.

BRIGADIER-General Orme has been transferred to Chicago, as commandant of the post.

THE cause of General Banks' return to New Orleans was an attack of fever. He was recovering from the disease at the last advices.

CAPTAIN J. Waldo Denny, 25th regiment Massachusetts Volunteers, is announced by Major-General Peck as Chief Provost-Marshal of the military district of North Carolina.

COLONEL John Mehringer, of the 91st Indiana, now at Camp Nelson, Ky., was recently presented with a sword and trappings by the non-commissioned officers, musicians and privates of his regiment.

THE body of Major Robert Morris, of the 6th Pennsylvania Cavalry, who died in Libby Prison in September, was lately received at Fortress Monroe by the last flag-of-truce boat, and sent to Philadelphia.

BRIGADIER-General Wallace, commanding the 1st division, 6th corps, Department of the Gulf, has come North. He is accompanied by Capt. Fred. E. Smith, Lieutenant Grangery, and Lieutenant Fitch, of his staff.

THE steamer *Arago*, which arrived at New York from Port Royal 18th inst., brought as passengers Brig.-General R. S. Foster and staff, Colonel Littlefield, A. B. Fay, Colonel Van Gilsa, Colonel Henry and Colonel Phisted.

OF 1,651 applicants for commissions in negro regiments, 500 have been recommended by the Board for appointment; viz; for Colonels, 5; Lieutenant-Colonels, 10; Majors, 25; Captains, 104; First Lieutenants, 153; Second Lieutenants, 203.

A BOARD, consisting of Surgeons James M. Green, J. M. Holtyand A. J. Henderson, convened at the Naval Asylum, at Philadelphia, on the 16th, to examine candidates for promotion and admission into the Medical Department of the Navy.

COLONEL Wyndham, of the 1st New Jersey Cavalry, is engaged in writing a history of the principal movements and achievements of our cavalry during the present war. Colonel writes in French and causes a translation to be made.

ADJUTANT-General Thomas arrived at Cairo on the 16th, on his way to Memphis. He was suffering from slight fever. He speaks hopefully of the ultimate success of his operations in organizing colored troops and other movements commenced in the Mississippi Valley.

WE did Brigadier-General JACOB AMMEN injustice in saying that he was under arrest. The General is not and never has been under arrest, and his command is not broken, as reported, but the District of Illinois. We were misled by a paragraph in a daily paper.

SERGEANT Pitchett, of the 21st Massachusetts, has been married to Miss Nellie Lorriner, of Worcester, Mass. Sergeant Plunkett is the gallant soldier who lost both arms at Fredericksburg while bearing the flag of his regiment to the front, after six men had been successively and immediately shot down under its folds. He was a hero.

CAPTAIN Hall, of the 2d Rhode Island Cavalry, A. A. A. G. of General Gregg's division, was drowned on Friday of last week while crossing a creek this side of the Rappahannock on his return from leading a scouting party. He attained a brave old age. Captain N. was formerly connected with Pennsylvania militia guard, where he distinguished himself on several occasions.

THE Western correspondents are very severe on General Hooker for attributing the rebel defence at Ringgold, Ga., to where just heavily. They say if he had followed Thomas' orders, the position could have been carried without loss by a flank movement, and we thought Hooker had thus captured Hardee's corps, instead of being obliged to fall back and give up the pursuit.

IN reply to the resolutions passed in honor of General Hooker, a promotion to the command of the Army of the Potomac by the Oregon Legislature, that officer wrote to the Governor of Oregon, under date of December 5th, as follows:—"It is inadmissable in me to refer to my official connection with the Army of the Potomac. That can only be learned from my report, when made, and from the then prescribed channels. I can only add that I relinquish its command from the highest considerations of the public good, and with unabated confidence of the patriotism and zeal of the army in my ability to guide and direct its fortunes."

MAJOR-General Thomas, in parting with his Chief of Staff, promulgated a General Order in which he says: "In taking leave of Major-General Reynolds, the Commanding-General desires to render him his thanks for the fidelity and ability which has characterized his discharge of the duties of Chief of Staff, as well as for the efficient and cool co-operation always rendered by him, and which was conspicuous together in the Fourteenth Army Corps; the letter as Corps, the former as Division Commander. He hopes that opportunity will be given General Reynolds to make his future career as less glorious than his past."

A BRILLIANT reunion took place on the evening of Tuesday, December 15th, at the residence of Mrs. Commodore Hull, in New Orleans. Among the distinguished persons present were:—Brig.-Gens. F. J. Herron, Charles P. Stone, W. H. Emory, W. P. Benton, Jas. W. McMillan, Richard Arnold, A. L. Lee, Jas. Bowen, H. W. Birge, G. F. Shepley, W. Dwight Andrews, and others; Colonels A. D. Bache, Richard, E. G. Beckwith, N. A. M. Dudley, T. W. Cahill, D. J. Cook, C. H. Kilborn, R. B. Brown, A. D. Sargent, J. S. Clark, and others; Lieutenant-Colonel W. C. Bartlett, Majors Seymour Lieber, D. C. Houston, H. O. Brigham, J. G. Wilson, and a number of others; Captains J. S. Crosby, J. W. McClure, Shankl Irving, Roe, Green, Hill, Moore, Hitchcock, Ballou, Mc Coy, and others; Surgeons Alexander, Bacon, Hemans, Keeler and Steinberg, &c. The Navy was represented by Commodore Bell, Captains Morris of the *Port Royal*, Marchand of the *Lackawanna*, Leroy of the *Oneida*, Sartori of the *Kennebec*, Wyman of the *Princess Royal*, Johnson of the *Katahdin*, Stanton of the *Pinola*, Pennock of the *Cayuga*, Mayo of the *Kenosha*, Murphy of the *Fearnot*, Jordan of the *Calhoun*, Cooke of the *Brooklyn*, Lieutenant *Tennessee*, Tibbetts of the *Arizona*, Lieutenants Sumner and Nokes of the *Tennessee*, and a number of others. Of foreign visitors there were Commander T. H. M. Martin, Lieutenant Blachet and Midshipmen J. Holmes of H. M. S. *Barracuta*, and Charles Fabre and Lieutenants Lefort, Huet, Marc, Allin, of the French man-of-war *Cassini*, besides the Consuls of the various nations.

ITEMS AND INCIDENTS.

GROUNDS for a United States cemetery at Chattanooga have been selected. A national monument is to be built.

GENERAL Butler has caused an order to be issued that all vessels arriving in New Orleans from the small-pox on board, will immediately land all such at the Small-pox Hospital, and report the fact at once to the Medical Director of the Department.

A DISPATCH from Chattanooga says that the report that three-fourths of the veteran regiments must re-enlist to get furloughs almost proves misleading in many cases; more than one-fourth being either in hospital or prisoners, and the men want to see their families this winter.

GENERAL McPherson, commanding at Vicksburgh, has issued orders changing Colonel B. G. Farrar's 2d Mississippi Artillery regiment, to regular against the guerrillas which infest the lower part of the river. The large steamer *Choctaw* has been placed at Colonel Farrar's disposal, and several pieces of artillery have been furnished.

AN effort is being made by members of the Governor's Council, and other gentlemen of Boston, to establish a home for the orphans of soldiers and sailors who have fallen in the battle. Many of these children are at present in the State Almshouses, thirty-eight being in Tewksbury alone. The children of those who have fallen in battle, or while fighting for their country, should not be treated as paupers. Governor Andrew is warmly in favor of the project.

A NOTHER plot for the seizure of a vessel and cargo by rebel emissaries has been discovered, this time on board a vessel about to leave Philadelphia. The guards were sent to ship as seamen and seize her after she left port. There was a quantity of ordnance on board, and the vessel was about to take on a large cargo of cotton. The plot was revealed and a revenue cutter laid alongside of her.

THE costume of the New Jersey cavalry regiment, now being recruited by Colonel Wyndham, is stated to be drawn in its ranks men who have a taste for colors. The pantaloons are of sky blue, with a lemur stripe for privates, red on orange coat on either side of the breast, and the commissioned officers. The jacket is of dark blue, with three rows of burnished buttons on the breast, and a profusion of yellow cord on the breast, back and sleeves. The officers wear gold cord. The uniform is that of the Austrian Hussars.

THERE is a proposition before Congress to construct a military road through the Cascade mountains, in Oregon, and down the Willamette valley. It is supposed to locate at the commencement at Eugene city, to run by way of the middle fork of the Willamette river and through the most feasible pass of the Cascade mountains to the Columbia river, and the southern or eastern boundary of the sea. To aid in its construction Mr. Nesmith of Oregon, introduced into the Senate, on Friday, a bill providing for a grant of a profusion of public lands for each mile of the road. He also introduced another bill with the same object in view, to make a military wagon road from the Dalles of the Columbia river to a point on Snake river, near the mouth of the Dayhee.

ONE of the most interesting sights in Washington is to be found in the Smithsonian Museum, in H street, near New Jersey avenue. It contains over a thousand anatomical specimens illustrating the structure and physiology of every species of weapon. In cases ranged around the room you have the bone specimen mounted, exhibiting fractures of the foot, ankle, knee, thigh, hip, shoulder, and every part of the body. There are also medical specimens in alcohol illustrating wounds of the fleshy part of the body. The museum was organized by the Surgeon General's office, and contains the largest and best collection in the world. It is under the immediate charge of Dr. W. A. Hewston, the curator, who attends to the anatomical specimens, assisted by Dr. R. S. D. Walsh. Dr. Woodward, of the regular army, attends to the medical specimens. The collection, which are of the first order, are mainly work by Dr. Sharkirt.

IN the rebel Congress, Mr. Sparrow of Louisiana reported a bill to reinvest with the right to exemption, and offered a report providing that—All white male residents of the Confederate States between sixteen and fifty-five shall be in the military service. Persons between eighteen and thirty-five, or twenty-forty-five and fifty-five to belong to the reserve corps; those between eighteen and forty-five to the army in the field. That no person shall be exempt from the operations of the law by reason of having been heretofore discharged from the army when no disability now exists, nor those who were furnished substitutes. The report also specifically provided that those who have paid into the public treasury the amount specified by the law for the purchase of exemption shall be repaid a fair proportion of the amount so paid by them, under rules to be prescribed by the Secretary of War. All laws granting exemption from military service shall be repealed, and that hereafter none be exempt but those who shall be held to be unfit for military service under rules to be prescribed by the Secretary of War. Ministers of religion, superintendents of asylums of deaf, dumb and blind, and of the insane; one editor of each newspaper and the employees in newspaper establishments, physicians and apothecaries.

THE LATE MAJOR-GENERAL BUFORD.

REV. Dr. Goalby, in an address at the funeral of the late Major-General Buford, thus referred to the history and character of that gallant officer:

"General Buford was connected with an excellent and well-known family in Kentucky. His early training and associations were peculiarly favorable to the formation of his early mental and moral development was gratifying to his parents, and bright with the promise of future usefulness and distinction. He graduated at the West Point Military Academy in 1848, standing well in his class and in the estimation of all who knew him. He entered upon the duties of military life with zeal and ardor, and soon mastered the various trusts which, at different places, were committed to him, with marked intelligence and fidelity. He grew steadily and surely into the confidence and love of all with whom he was officially connected as superiors, inferiors and equals. He impressed them as a man of sterling principle and worth, and they found it easy to admire and trust and love him. When the present unhappy civil war broke out and many around him on the coast were false to the rebellion, he was found true to the country and to the flag under which he had been born and educated, and proceeded to Kansas to do his duty in the service of his country. Promptly and heartily did he devote himself to the defence of the Government in the day of its darkness and peril. Where duty called him there he was called, and there he was and there he suffered, if necessary, acting those around and above him. He was faithful and true to his country and to his God. He merited promotion, and he received it. He took one grade at honor and responsibility to another, the administration of his country knowing well that to him he served. He was modest, yet brave; retiring, yet efficient, but vigilant; unostentatious, but prompt and persevering. Self-sacrifice was one of his leading traits, and with almost parental solicitude, yet never shrinking from action, he drew around him, when the time and place for such action had come. His skill and courage were put to stern and decisive tests on many hard-fought fields, and they were ever equal to the emergency; they never failed or faded him. No wonder that those whom he counselled and led were devoted to him; no wonder they are saddened by his unexpected death. Last night he vested his head in his couch as usual, and mourn and weep as they look on his faded features, and see him carried to his rest. The country has lost one of its best officers and I feel for one of its bravest defenders has fallen; one of its choicest military officers is being carried to the grave. His last address was but brief—the fruit, it may be, of protracted toil and exposure. He met it calmly, quietly, and without a murmur. His last words were but the utterance of a consecrated and bleeding cause of the Republic, but with remedies failed, and it was evident that his end was near. He calmly bowed to the behest of death, and ceased to die. The Government honored him to the last. On the day of his death, and but a little while before his departure, he commissioned him Major-General, and sent to his family hands—a distinction well earned and well bestowed; of his noble services he has left a bright example to his kindred, and a boon to his family. He lived long enough to know that the Government he had defended appreciated his services, and that the Chief Magistrate commissioned him, ere he lay laid it aside, and his heart still throbbing with the warm pulse of patriotism, beat on for a few brief moments, and then grew cold and still.

SALE OF ENGLISH VESSELS TO THE REBELS

A SHORT time since the British Admiralty sold four steamers, and the rebel agents were, of course, the buyers. It was given out that they were intended for the China trade. One of them, however, the steam-sloop *Victor*, a six or eight gun vessel, 850 tons burden, with engines of 350 horse power, has escaped from Sharpness, and appeared at Kelso as the *Southerner*. The precise manner of her departure from England to be prevented came "in an hour too late;" and when the consuls of the United States authorities received instructions to allow her to leave wherever she pleased.

IT is stated that Cuba contains the following respecting the *Doppelkraemer*:—

"This steamer was to be roasted from midnight, and to be sunk in the sea on board fifteen miles distant, who has been residing here for more than two months, and whose arrival we have already announced. Three days had elapsed on board a fishing boat, which they had hired from a country seat to Bodegue, as they told the master, in order to cover their property from the rain. When they had got on their way outside the port, however, they ordered him to put them on board a vessel from which rockets were being fired, which was the *Doppelkraemer*. The master, on hearing the alarm, called for assistance from some other boats near him, and with their help he put into port, and handed his passengers, who were immediately arrested. The steamer, the *Doppelkraemer* has been purchased for the Confederate Government. She is a screw vessel, now undergoing repairs at Sheerness. She left that port with a crew of only four or five hands.

It is reported that part of her crew have arrived by steamer from Calais. The latter were accompanied by one writer as very fast, and had been used as a dispatch boat. The *Victor* says, however, that though her engines were rated at 350 horse power, when she was driven in their construction her rate of steaming was never very high, and was the principal reason for the Admiralty directing her to be sold.

In addition to the *Victor* the war steamers *Phoenix*, *Gedge* and *Alabama* are fitted out for the rebels. The latter is a twenty-six gun screw frigate of 1,474 tons. Her name, also that of the *Victor*, appears in the list of the British Navy published in the Navy List.

The suggestion of a correspondent of a London paper that "it is the duty of the British Navy to provide hospitals to be given by all purchasers of vessels from the Government" must that such vessels shall be broken up, or that they "shall be bona fide used as ships of commerce, under penalties of treble the value of the ships bought," would seem worthy the consideration of a neutral government. We trust that measures will be taken to prevent the fitting out of other vessels from the example of the *Victor*, and that some time the order will come "an hour too late."

A private letter from Hull, dated November 27, published in the *Daily News*, says:—"There was a prize vessel left away from here some days back. She was an unusually

"cram," with masts fitted to lower on the deck, and telescope in funnel. She was launched without fuss, and came up Chesapeake the next day.

Two cabs full of Southern boiled-shirted gentlemen drove down and went on board, and she was off like a shot. Every one was taken by surprise."

DISASTER TO THE NANSEMOND.

The United States gunboat *Nansemond*, Lieutenant R. H. Lamson commanding, arrived at Baltimore on the 16th in a badly disabled and crippled condition, having encountered a most terrific gale off Hatteras. The gale first left Hampton Roads on the 10th inst., where she had been lying some two weeks previous for repairs. She ran down off Fortress Monroe, and encountered the gale. On the Saturday morning she left Hampton Roads, bound for the blockading fleet off Wilmington, N. C., there to resume blockading duty. Saturday night, when off Hatteras, the wind sprang up from the southeast, and during the night increased into a perfect hurricane. The *Nansemond* did not come, in hope of weathering the Cape in safety. About o'clock on Sunday morning she was struck by a mammoth sea, about three points on the starboard bow, and swept the field like her galley and bulkheads of the engine and firerooms, staving in her boiler hatch and lifting up her pilothouse and boiler-deck some. The men who slept in the engineers were washed from their hammocks, and together with ordinary utensils, such as *debris* and *detritus* of the bulkheads, were swept aft, where they were rescued, some stunned and bruised, but no one seriously injured.

Some of great violence for a few moments thereafter; the water was rushing into the fire-room and down into the fire-chain, and the fires were in danger of being put out. But her officers and crew, with the true spirit of a man-o'-war's men were brought into requisition, and used as a barrier to the rushing waters. As it was attempted to secure the hatches, and it was found to obey the helm, and for a few moments remained a motionless and inanimate mass.

This was a most critical moment. The ship was not water-logged, but it must have assuredly swamped her, but one of the officers and men sprang forward and bent her jib in response to which she did severe service in keeping her head to the gale. Her three pumps being in constant use in order to keep her afloat. When morning dawned it only served to reveal the scene of the night and disperse the shades of darkness. The seas were running mountains high, and the little *Nansemond* was fluttering and struggling to keep herself afloat like a duck. She slipped under enormous sea just forward of her starboard beam, carrying away her bulkheads on that side. The water rushed in and washed the beds, mattresses and blankets were again brought into play, and the same means resorted to as before. But she now labored so heavily in the sea as to threw the water in her hold over overboard, together with nearly all of her shot and shell. This appeared to put new life into her, and again she rose, superior to the fury of the elements. The accompanying illustration by the *Nansemond* stamped on.

At length the gale began to abate a little, and hope was to soon. About 10 P. M., soundings indicating that land could not be far off, her anchor was let go in seven fathoms of water. Another night of watchfulness and anxiety ensued. When morning broke a thick fog surrounded all objects. About 9 A. M., a sail having been reported by the lookout, the engine was signalled to, and soon after the steam fired as a signal of distress, but elicited no response. At 10 A. M. the fog began to clear away when, to the unexpressible delight of all on board, land was discovered on her starboard bow, and proved to be Smith Island. The vessel was immediately headed for Old Point Comfort, where she arrived at 1 P. M.

The *Nansemond* has been ordered to Baltimore for repairs, and will be thoroughly overhauled and refitted again for service.

WORKING STEAM EXPANSIVELY—WHAT IT MEANS.

In the report of the argument in the SICKLES cut-off case, recently decided at Washington, we find the following explanation of what is meant by "the expansive power of steam," or "working steam expansively," which is the principal subject at issue in this long-contested case. We reproduce it for the benefit of our unprofessional readers:

Suppose a little cylinder one inch in diameter and of indefinite length, and a piston fitting in it steam tight, but without friction. Suppose a certain weight of water, and that to be poured into the bottom of that cylinder, and the piston to be then let down upon it. Suppose the piston to be the end of that piston there is a platform placed carrying a ten weight of bricks. Now we have the machine ready for the experiment which is to illustrate the principle of working steam from the conversion of water into steam. Now hold a lamp under that cylinder till it evaporates that cubic inch of water into steam; it will then lift the piston and the one foot high. These are convenient units to remember. A cubic inch of water turned into steam will lift a ten weight a foot high—no more, no less. That is not precisely accurate, but it is so within a few pounds, and it is near enough for all practical purposes. Now, if the piston be lifted one foot high it goes no further, and a valve must be opened in the bottom of the cylinder to permit another operation, by letting out the steam which has done its work. That machine is simply a full-stroke or non-expansive engine, making one stroke; and for each stroke made by such an engine all the possible power to be got in that cylinder full of water—a cubic inch—is lifted a foot high for every cubic inch of water converted—and that is simply 10 lbs. lifted 1 foot high. That is matter. It is the God-given quantity of water and heat. We cannot alter it. All we can do is to obey it. That is all you can get out of a steam engine without a cut-off. But let us go a little further with our experiment. In place of opening the exhaust valve when the piston is lifted a foot high, take one brick off the platform. The load now is not quite so heavy as it was before, and the elastic steam compressed by that ten weight will expand a little under the diminished load, and will raise the bricks a little further. It gives you not a little more power. Then knock another brick off, and keep knocking them off one by one till you have the platform still carrying up those bricks which are left, until, when you have knocked them all off except the last fifteen pounds or bricks, they will be about another one hundred and seven hundred inches high; and if you still further diminish that fifteen pounds, by knocking other bricks off, the steam will keep lifting the remainder higher and higher, and we do not know how high it will lift some weight.

Now you will observe, gentlemen, that all the power which has come out of that steam after I began to break the bricks off is a power which is, so to speak, a clear profit, since it cost me but one of those cubic inches which had already raised the ten weight a foot high, and which was unable to raise it any higher unless by this diminution of resistance. LAMB'S "New Steam Engine" is a case of steam—and measured its value remarkably well; and he also invented the best form of cut-off for carrying out this principle which I have ever seen, and which he called the "Lamb" cut-off, notwithstanding the hundreds of forms of cut-offs which have been invented and published since. I have seen a new in use on the Cornish engines, and whenever in England to-day they wish to give an example of the great efficacy of steam the Cornish engine is cited. I have myself been curiously upon this cut-off for its value—it cited as the most striking illustration.

But you would wish to know how this principle of diminishing the load or resistance, as in the case of the bricks knocked off the platform, can be applied to machinery in practical use, and I will explain that. It is done by the aid of the momentum of the matter which the engine is moving—it may be a heavy fly-wheel, as in the case of the Corliss engines, all of which, when once set in motion, will not suddenly stop, even though all power were suddenly suspended from driving the engine. Or it may be the load continues to go on under the diminished pressure of the expanded steam. Thus you see that when the steam is cut off from the cylinder which is driving the piston, the piston will go with diminished force, but still with some force; and, as the pistons continue to go, the steam expands to a point which it drives gives out again to useful effects whatever pressure is thus spent upon it; just as your watch will run all day although the spring which drives it grows weaker and weaker at each instant as it is relaxed.

The gain which can be obtained from this expansion is measured by the amount of the cut-off, that is, or, in other words, how short you cut off the cylinder, and the amount of saving of fuel or increased power due to the increased ratio of expansion. The different points of cut-off, has been ascertained with mathematical precision by Mr. MARIOTTE, and the law is known by which governs this rate is called the "MARIOTTE LAW." I will give you a few figures settled by that law. As I have said, a cubic inch of water converted into steam by combustion will lift a ten weight a foot high, or whatever is equivalent to that. If that cubic inch, after having done that work, is expanded into three cubic inches, it will lift a ten weight and another ten a foot high without calling on the furnace for any more fuel. If it is expanded into five cubic inches it will lift a ten and a twelve a foot high in addition to its original lift of a ton; and ten expansions will do three times and a third as much work as no expansion, using the same amount of fire and steam.

GENERAL BURNSIDE AT CINCINNATI.

MAJOR-GENERAL BURNSIDE has arrived in New York on his way to Washington, where he has been ordered to report. Last week, Friday evening, at Cincinnati, he was serenaded, and responded as follows:

MY FRIENDS:—I can only thank you for the very kind manner in which you have received me. I am not gifted with the power of speaking to an audience like this. But, gentlemen, though I am not here to make a speech as I truly feel in respect to the great events that are transpiring, I allow me to assure you that no one can feel more thankful than I do for the kind manner you have received your devotion to the great cause in which we are struggling. I am thankful for your kind estimation of the value of my services, and can only say that I will endeavor to do my duty, and shall endeavor to do so still better in any future position to which I may be called. I sincerely hope that peace may soon be restored to our beloved country; but as long as these troubles continue and I can be of service, I am ready to fill in my power. [Applause.] I have tried to do my best; and what I have done in East Tennessee has been due to the full cooperation of the subordinate officers and men under my command. The officer or a man has for a single moment intimated that in his opinion I was making mistakes or erring in my movements; and not one of all my men has ever failed to obey my orders and execute obedience to orders in all things. But notwithstanding this happy union of effort on the part of the officers in command, I feel that the chief praise of our success is due to the subordinate officers and men in the ranks. Thousands of them have fallen victims to the fevers of the swamps in the land. Many of them have no relations in this country—foreigners—who will never hear of them again. And they have left their homes and their graves sanctified by genuine patriotism. I owe all my success to this patriotism in the ranks, as also do all other Generals who have been successful. The proper commendation which is due me chiefly to be credited to the subordinate officers and devoted fighting men in the ranks, who endure all, and dare all, with little other object in view than the defence of our common country. I have never been more conscious of this fact than during my present visit to your city. [Applause.] I return you my thanks for the music in the ranks. [Applause.]

Allow me, then, again to return you my thanks for the compliment you have paid me, and to be withdraw, expressing the ardent hope that our country will soon be at peace with herself, and continue prosperity in the enjoyment of peace within and with the external world. [Great applause.]

THE LOSS OF THE WEEHAWKEN.

We have further particulars in regard to the loss of the *Weehawken*. It is thought that of the whole number lost the majority were drowned in the turret and immediately below it, vainly and desperately seeking to force their way through the small narrow openings by which the turret is entered. One of the last who got out and was saved spoke shudderingly of the terrible scene—of men battling with each other, and struggling with the agony of desperation to secure an opening. The water poured into the room until it drowned out life and hope together. Those who succeeded in getting out had to sustain themselves for some time in the midst of a heavy sea, and several were drowned before help reached them, while others were rescued just in time to save life. As the vessel plunged she threw an immense volume of steam and smoke rushed out of her smoke-stack.

The following order, issued by Admiral DAHLGREN, indicates the cause of the disaster:

FLAG-STEAMER PHILADELPHIA,
OFF MORRIS ISLAND, S. C., Dec. 7, 1863.

The deplorable accident which occurred to the *Weehawken* yesterday points impressively to the necessity of the most exact and unceasing care in all that requires the efficiency and safety of the monitors.

The hatches should always be secured in good time; the scuppers and ports should remain the closing of all or any of for that may accumulate; the pumps in full working order; the barrow-plate for closing against the entrance of water; the depth of water in the hold, forward and abaft, carefully ascertained and reported to the commander frequently, together with any other precautions that may occur to him.

Respectfully, JOHN A. DAHLGREN,
Rear-Admiral Commanding
South Atlantic Blockading Squadron.

The *Weehawken*, at the time, had a full supply of ammunition on board. Her buoyancy was therefore tested to its maximum, and it required but a small additional weight to destroy her trim and render all the powerful machinery of no avail for pumping. The *Weehawken* has since been thoroughly repaired, had a new gun placed in her turret, and was in perfect fighting condition. She had been one of the most successful of our monitors, and her late commander, "fighting Joan Rodgers," she led in Admiral DUPONT'S attack on Sumter on the 7th of April. At Warsaw Sound she added to her laurels by the capture of the rebel iron-clad *Atlanta*. Her latest achievement was the explosion of the rebel torpedo boat *David* under the guns of Fort Cummings' Point. The *Weehawken* lies in about twenty feet water, the top of her pilot-house appearing at low tide. Some of her officers and men remained by her for hours after the overhang, and attended to the rapidity with which she sank to a heavy leak there. This point, however, can only be settled by a thorough investigation.

BUREAU OF YARDS AND DOCKS.

Among the papers accompanying the Report of the Secretary of the Navy is the Report of the Chief of the Bureau of Yards and Docks. The appropriations made by the last Congress for a floating dock, for the purchase of a location of Leavey's Island, the construction of a hospital on that island, and for the navy-yards at Chicago, Erie, Philadelphia, at Portsmouth, N. H., for reasons satisfactory to the Department have not yet been expended. The purchase of wharf property adjoining the Navy Yard at Boston has been consummated, and the property is now in possession of the Government.

The important subject of establishing a Navy Yard for the construction and repair of iron vessels, and for preserving them when laid up in ordinary, has attracted the attention of the Bureau, which, after duly considering the matter, and knowing the anxiety of the Department to speedily provide such accommodations for the service, has come to the conclusion that the Delaware River affords the most convenient and safe haven for such an establishment; and that of the plans proposed for the location of the proposed Navy Yard, the reception of League Island as a gift, and the purchase of property between Gray's Ferry and Mantua Creek, is the preferable one. It appears that between Chester and Marcus Hook, for more than a mile, there is nearly a straight shore, with a good hard ground level. From Marcus Hook along this shore the land rises from four to six feet, and these present a surface extending back about half a mile, rising slightly from the shore, and requiring somewhat say grading to put it in condition for building purposes. The land is of such character, and in such condition, that buildings might be constructed on it as soon as the plans were prepared and the materials procured, and when erected could be brought into immediate use. The law requiring contracts to be advertised and awarded to the lowest bidder is most embarrassing to the Bureau. A strict compliance with the letter of the law is frequently impracticable, as by nothing of the perplexities caused by the many delinquent bidders, and the litigation, cost, and delay attending such failures to comply with contracts. It is the opinion of the Chief that it will be greatly to the advantage of the public service if the Bureau be authorized to employ, with the sanction of the Department, either by advertisement or by calling on responsible parties, known in the communities where they reside, such persons as the Department shall in its discretion determine), and then to hold the Bureau responsible for their acts. The repeal of that portion of the laws which prescribes the mode of the form of which all public spending is therefore recommended. Attention is called to the subject of purchases by Navy Agents, in which the Bureau has a part for the Navy. It frequently occurs that particular firms or parties, whether dealing in the articles required or not, obtain from these supplies without perhaps soliciting them for the general competition amongst dealers in the merchandize required. He therefore suggested that Navy Agents should be compelled to purchase in Navy Yards or Depots, where supplies are received and inspected and where they should be paid for, and to act more under the immediate directions of commanders of vessels than they are now subjected to, or else that the agencies be abolished, and a commissioned officer appointed to perform the duties of Navy Agent upon his duty pay.

The *Imperial Russ* of St. Petersburgh has a remarkable article, demanding whether it is really an advantage for Russia to retain the kingdom of Poland, which can only be held by the constant exertion of force. The article comes to the conclusion that Russia would obtain both happiness and liberty of action by giving up Poland altogether, when this can be done honorably and without the appearance of compulsion, *and that every enlightened Russian who is worthy of his country would hail with joy the attainment of such a result.*

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers of the two services, correspondence and general communications of a character calculated to be useful to the service from the name of the writer should, in all cases, accompany the communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to inquiries in general interest addressed to him.

From gentlemen in the medical service we should be glad to receive communications on military hygiene, practical surgery, and reports of notably operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermasters' Vouchers, or other funds, which would be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications published in the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, NEW YORK.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET

NEW YORK, SATURDAY, DECEMBER 26, 1863.

U. S. ARMY AND NAVY JOURNAL.

WINTER WORK

THE fact that there is now every reason to expect a full in grand military operations for the winter months adds to the question as to the feasibility of a series of operations in the outlying dominions of the war, which shall fill up the season that otherwise promises to be one of complete quiescence. Now, of all military work that can possibly be done during the winter, coast expeditions are certainly the most practicable. The great ocean highway, while the roads *of terra firma*, does not spoil by "winter or rough "weather," but affords an always open, always accessible line of communications with the base of operations. It so happens also that there are several points along the coast occupation of which is very desirable, and if either is not already not on the map as Gregg or Sedgwick military and naval forces, they could be very usefully employed in gaining a foothold at these points.

The points on the Southern seaboard aimed at in the proposed expeditions should, of course, be such as will, by the adequate material advantages their possession would give to, repay the cost and labor of this class of combined military and naval enterprise which are always both expensive and toilsome. The mere occupancy of a certain amount of barren coast—no *ignis fatuus* which, at the opening of the war, led the whole country astray—is not only in itself *not* desirable, but the fact that the tenure of the points gained demands a fighting force more needed elsewhere makes it false military policy. The seaboard objectives aimed at should be such as will either materially further our own operations, or materially embarrass those of the enemy.

It is astonishing, in running the eye down the map of the Southern coast, representing an extent of almost two thousand miles, to observe how few such points there are in this enormous stretch of seaboard. Of course the ports whose possession it is of importance to the rebels to retain (and consequently of importance to us to prevent their retaining), are such as furnish great facilities for blockade running. But, in order that these points should be made the entrepôts for contraband commerce, it is a necessary condition precedent that they be at the terminus of railroads either forming part of or connecting with the great system of lines of distribution.

We find the whole stretch of the Virginia seaboard and of the double coast of North Carolina, down to and including Beaufort, already in the possession of the Union arms. Beaufort, it will be observed, answers the double condition pointed as necessary to make a good port of entry for contraband trade: First, it gives easy access to blockade runners; secondly, it is the terminus of the Atlantic and Carolina railroad, connecting it with the Grand Trunk coast line, thus enabling all goods landed there to be sent to Richmond, or any other great centre of distribution. While in the hands of the rebels, therefore, it was, beyond doubt, a great advantage to them.

Continuing southward from Beaufort, we find that there is no point on the Carolina coast touched by a railroad (the main line running from fifty to eighty miles from the seaboard), until we reach Wilmington. This port, again, perfectly fills both conditions: it is extremely difficult to blockade effectively, impossible to blockade perfectly; and it is tapped by two great lines which lead to the two chief military centres—the one line running into Virginia, the other into Tennessee. The rebels still retain possession of this point; and it is extremely important to them that they should continue to do so, for it is now the chief channel through which they obtain contraband supplies. It is, consequently, extremely important that we should acquire this point. And what is noteworthy is, that not only by it of course, but by it should remain possessors of Wilmington as making the blockade perfect, but because holding the relations it does to the railroad system of the South, its occupation to us would plant a Union force on one of the main lines of rebel communications between the theatre of war in the East and the theatre of war in the West. The capture of the capture of Wilmington is one which we cannot profitably discuss, having no reliable data as to the elements that enter into it. We may say, however, that the rebels, appreciating the value of this point, have long labored to make it as secure as possible. Its situation on the banks of the Cape Fear River, twenty-five miles from its embouchure, puts that distance between it and naval assault; and if, as is fairly to be presumed, they have placed batteries on the banks and obstructions in the stream, it might be an affair of iron-clads; though it can hardly prove a tougher nut than New Orleans; and were the grand old sailor who, with his "iron "hearted fleet" passed the fiery gauntlet of the Mississippi batteries, sent to the work, we think he would be apt to put it through.

Prolonging our excursus down the Southern seaboard, we find that after leaving Wilmington there is no point which it is desirable for either us or the rebels to hold until we reach Charleston. We are already working at that. But if our armies are really to lie idle for the winter, why not send General GILLMORE a force adequate to work with effect? If the iron-clads can render no assistance—a conclusion to which the country seems fatally prone—why not give GILLMORE men enough to take it by land? With a reinforcement of twenty thousand men drawn from the Army of the Potomac, a subtraction which can easily be spared, if that army is merely to be assigned the *rôle* of covering Washington, we trust that engineer to run a sap into Charleston. It may indeed be said, and we have said it ourselves, that having achieved a perfect blockade, the rebels have gained the crowning substantial benefit to be hoped for. This is true; but it must be remembered that this is only secured at the costly price of detailing the whole iron fleet for this purpose, thus keeping it from all other duty. Were the harbor and its defences once in our possession—or even nothing about the city itself—our iron-clads would be instantly relieved for other service.

And among the other services to which they could be put would be the capture of Mobile, which is the next point on the coast that it is really desirable we should secure. There is, in fact, no point more important than this. In addition to the fact that it is the terminus of a great railroad line, it also commands the entrance to a great water highway, which leads up to the very heart of the Southwest—its head waters almost touching the Tennessee. In view of what will probably be the line of operations of General GRANT when he starts out on his spring campaign, the possession of this great water line of communications, leading from a base on the Gulf up through the very heart of Alabama, is of the most commanding importance. And, to dismiss the matter with a single stroke, we think we can say that if, after this, we have any men to spare, General BANKS can find good use for them in Texas.

It will not, we trust, be understood that by these remarks we mean to advocate any such impolitic dislocation and division of our force as would be required to give practical effect to the enterprises we have foreshadowed. We intend no more than to show that if we have any forces that *can* be spared they would be turned to good account in accomplishing any of the purposes indicated. The grand crushing blows to the rebellion are to be struck, not on the coast, but on the great interior theatres of war. Those blows, too, will be struck by grand armies, grandly disciplined, furnished, and led. And as we have repeatedly said, we think our commanders are quite as much so as they can do for the winter months in making their armies the fit instruments for this work. While, therefore, we express the conviction that it would be mistaken policy to interfere with the reorganization and rehabilitation of our two great armies, thus imperilling the success of the spring campaign, for the sake of achieving certain seaboard successes, which though valuable, would, after all, be but subordinate,—yet if there are troops to spare for winter work, as we think there are, Wilmington, Charleston and Mobile are excellent places on which to let them try their mettle.

AN AMBULANCE SYSTEM.

THE necessity of a thoroughly-organized ambulance corps has been urged upon the Government for some time past, by an earnest and respectable body of gentlemen. They have caused petitions to Congress on the subject to be extensively circulated, and have, of course, obtained for them a large number of signatures; for anything that seems to promise greater comfort to the soldier, and greater alleviation for his sufferings from wounds and disease, readily touches the hearts of the people. The originators of this movement may have failed to properly appreciate the difficulties in the way of the reform that appealed so strongly to their sensibilities, and they may have neglected to suggest any feasible plan of improvement; but this does not affect the results and the urgency of the necessity for such reform. It is a necessity evident enough to military men. The very success of the admirably-perfected ambulance provisions of Dr. LIEBERMAN for the Army of the Potomac, and of Dr. PERIN at Newbern, but adds force to the plea for a system which shall extend its benefits to the whole Army.

Though the effort has hitherto failed, and principally through the opposition of the Chairman of the Senate Military Committee, who undoubtedly acted under the advice of the Medical Department of the Army, the attention of Congress has again been directed to the subject, and Mr. Wilson has at last prescribed an ambulance bill, carefully prepared under the advice of practical and experienced officers. The system which has been in successful operation in the Army of the Potomac, is the basis of the one laid down in the bill. The supervision of the conveyances, medicine wagons, &c., is vested in the Medical Director or Chief Medical Officer of each Army corps. One Captain, one First Lieutenant for each division; one Second Lieutenant for each brigade; one Sergeant for each regiment; three privates for each ambulance, and one private for each medicine wagon detached by each corps commander, constitute the personnel of the system. The officers and non-commissioned officers of which are to be mounted. Three two-horse ambulances are granted to each regiment of infantry; two to each regiment of cavalry; one to each battery of artillery; two to the headquarters of each Army corps; and two army wagons to each division. The Surgeon-in-Chief of the division is required to detail two medical officers and two hospital stewards to accompany the ambulances when on the march. The use of ambulances is prohibited for any purpose except the conveyance of the sick and wounded, and for medical supplies only in urgent cases. No persons other than those connected with the ambulance corps are allowed to remove the sick and wounded.

These are the main features of a system which commends itself, by reason of its simplicity and adaptation, to the necessities of the Army.

The model of the modern ambulance system is that established by Baron LARREY for the armies of the FIRST NAPOLEON—a system pronounced by that General to be one of the happiest conceptions of that martial era, and one which speedily demonstrated its advantages in a material diminution of the number of death from wounds in the French army. Baron LARREY's system, it will be remembered, involved a thorough military organization of the ambulance corps, which was enabled to perform its duties and maintain its distinctive character, without interfering with the movements of the army. The corps in the first place, under the command of the chief surgeon or medical director of the army was formed into divisions, each division complete and separate in itself, but capable of being combined into a grand *corps d'armée*, or subdivided into brigades and regiments, according as the necessity of the case required. It is hardly necessary for us in this article to go into any minute description of the system. It is enough to say that its main features have been introduced into every European army, and that it has been found to work well.

We may here warn the friends of this movement not to expect too much of *any* ambulance system. The sufferings of the wounded of the French army at Solferino, where a complete ambulance corps was employed, and where the difficulties of making proper provision were slight compared with that encountered in most battles in this war, were exceedingly great. The vivid accounts newspaper correspondents gave of the horrors of the field and hospital at the time, must be fresh to every mind.

Civilians who find their way to the battlefield—which, as a rule, a correct taste would suggest them to avoid unless they have a duty there—have their hearts pained by the sight of the sufferings of the victims of shot, and shell, and bullet, and their sympathies being aroused, they are likely to be unreliable critics of the provisions which are made for the care of the wounded. Those who are more familiar with the difficulties to be overcome are more lenient of the surgeons, and less disposed to spread charges of cruelty and neglect. Battles, with their concomitants, are ugly things at best; all that skill, and method and humanity can do, is to alleviate their horrors to some slight degree. A great advance has been made since the time of CRAVEN, who knew nothing of hospitals and whose sick and wounded were almost wholly neglected, and undoubtably there are yet further steps of progress to be taken; but battles must continue to be terrible, and the hearts of lookers-on to be pained beyond expression, until that good time shall come, when the nations "shall learn war no more."

THE BUREAU OF STEAM ENGINEERING.

A CASE recently brought to a close in the United States Supreme Court at Washington, has attracted more than ordinary attention, from the relations it has assumed to the question as to the honesty and efficiency of the direction of the important Bureau of Steam Engineering in our Navy Department. The object of the suit was to secure to the owners of the patent for the Sickles cut-off their royalty on the saving, which, it is alleged, is made by the use of this cut-off in place of the old-fashioned cam-board cut-off. Among the experts called to testify in the case was Mr. B. F. Isherwood, Chief of the Bureau of Steam Engineering, who, in opposition to the claim for a saving of thirty-four per cent. in fuel by the use of the Sickles in lieu of the cam-board cut-off, asserted that not more than eighteen per cent. of fuel could by any possibility be saved by the use of any cut-off; that the claim for a difference between the use of one cut-off over another was simply absurd.

This opinion, stoutly maintained throughout a severe cross-examination, coming as it did from the highest official authority on the subject in this country, compelled the lawyer and engineer, EDWARD N. DICKERSON, Esq., who conducted the case for the plaintiff, in the interest of his client to bend all of his efforts to discrediting the professional knowledge and ability of Mr. ISHERWOOD. In this he so far succeeded as to secure a verdict in his favor for the full saving claimed. In his argument before the Court, Mr. DICKERSON indulged in the severest criticism on Mr. ISHERWOOD as an engineer. Some of them we shall scout to be based upon the evidence, so far as we can judge without having it before us; but they evidently derive much of their force from that fierce denunciation and bair-splitting logic which legal gentlemen are apt to mistake for sound reasoning. Though it would be in the highest degree unjust to form an opinion of the merits of the charges against Mr. ISHERWOOD from the *ex parte* statements of a lawyer pleading for his client, the circumstances under which they were made and the weight that seems to have been given to them by the Judges of the Supreme Court, will not permit them to be passed by without notice.

Mr. ISHERWOOD is accused of having had no practical education for the position he holds, having been originally appointed a First Assistant Engineer in the Navy, not on the ground of previous professional experience, but as a reward for services rendered by him as a newspaper correspondent. And, if we are to believe Mr. DICKERSON, he has achieved his present position by the merest professional jugglery.

It is charged, moreover, that Mr. ISHERWOOD has been guilty of that worst species of dishonesty—that professional dishonesty which, for the sake of petty profit, will ignore established principles of science, and by juggling and trickery seek to establish falsehood in place of truth. He is charged with recommending such patents and designs for boilers, condensers, &c., as will be most profitable to himself pecuniarily; and that he will introduce into the Navy almost any invention if the patentee will pay him his price, without regard to its adaptibility for the required purpose. If this be true, if it is his pocket and not his professional judgment that insists so strongly upon putting SEWELL'S condenser and MARTIN'S boiler into every naval vessel, it would seem to matter but little whether he has a practical education or not. The engineer whose opinions are governed by his pecuniary interests, will fail, whatever may be the amount his professional judgment and the degree of his practical ability and experience.

Such charges as these against Mr. ISHERWOOD ought not to remain uncontroverted if false; and if only partially true they demand investigation. If the building of the immense New Navy we have now in progress be intrusted to incompetent hands, we are in danger of finding ourselves with a Navy which has cost the country hundreds of millions, but which is powerful only on paper, containing a large per centage of feeble ships constantly undergoing repairs, rendering no service, and entailing heavy expense on the Treasury.

THE publication of General MEADE'S order defining the terms upon which furloughs to reënlisting veterans are to be granted will end the Army of the Potomac to begin promptly the work of reorganization. The order is well considered, and just in its provisions, and should be satisfactory to the Army. The time covered by the proposed furlough—thirty-five days—is not as extended as the men desired; but, considering the brief period after the campaign and spring, when the whole work of reënlistment should be completed, we dare say it is quite as long as could prudently be given. When three-fourths of the men of a regiment or company reënlist, such portion of the regiment or company will be allowed to go home in a body, and to take with it its arms and equipments. We are glad to observe that the phrase "three-fourths of a regiment or company" is distinctly made in the only sense in which it is compatible with justice to the soldier: it means three-fourths of the men belonging to it, and who are within the limits of the Army, and not to include those absent or prisoners of war, in the hospitals, etc. In the army of General GRANT the terms of the order for reënlistment include all these within the "three-fourths," and the consequence is the greatest dissatisfaction, and an almost complete cessation of reënlistments. We understand that in the Army of the Potomac ten thousand men have already signified their desire to reënlist on the basis of General MEADE'S order.

WE trust Congress will take the earliest possible opportunity to give the needed legislative sanction to the proposition made by the Secretary of the Navy, in his last annual report, concerning Lighter Signals at sea. The question, if we remember rightly, was brought before Congress last session, but went over for want of time. The rules and regulations for the prevention of collisions at sea, prepared by the Governments of Great Britain and France, have been adopted by the leading maritime powers, and the adoption of the code by the United States Navy is a wise and practical uniform and systematic. In regard to our naval marine, the Department has instructed our officers to conform to the proposed uniform system; but these instructions are mere departmental regulations: to acquire the force of international maritime law they need the sanction of legislation. The system should also be extended to our mercantile marine. We can say that the proposal meets the hearty approval of every intelligent American ship-owner and ship-master.

THE Navy Department has obtained possession of a large amount of the private correspondence of Mr. LAMAR, recently a rebel agent in England for the purchasing of steamers, negotiating Confederate cotton bonds, etc. It was found on board the prize steamer *Cora*, recently captured off Wilmington. Among the facts disclosed in this correspondence are these: That arrangements were making to purchase the prize steamers *R. E. Lee* and *Margaret and Jessie*, with the intention of again employing them in running the blockade; that the Wilmington blockade is disastrous to rebel hopes; that FRANK. B. CAMPBELL, of Bermuda, under date of Dec. 2, asserting that "the only boats that came in from Wilmington this week "were the *Flora* and *Gibraltar*." J. N. MAFFITT, formerly of the U. S. Navy, in a letter of the 19th of October, says: "*the news from the blockade runners is decidedly bad—six of the best boats have recently been caught, among them the Advance and Emgenie.*" "*Nothing has entered Wilmington for one month.*" Another letter from France communicates the intelligence that the EMPEROR will wink at and assist the running of goods into the Confederacy through Matamoras, but wishes to be saved from exposure! It is very delightful, once in a while, to get hold of such unrestrained expressions as those contained in this correspondence of rebel agents. There is a candor and truth about it that is truly refreshing.

A BOARD of Naval officers has been ordered by the Secretary of the Navy, to assemble in New York, under the direction of Rear-Admiral F. H. GREGORY, General Superintendent of Iron-Clads, Vessels, &c., to examine and report upon a new method for destroying iron-clads and other vessels-of-war and submarine obstructions, and for harbor attack and defence, submitted by Lieutenant-Colonel W. W. WOOD, now attached to the Charlestown Yard. The following officers compose the Board: Captain JOHN L. WORDEN, Captain TUNIS A. M. CRAVEN, Captain EDWARD T. NICHOLS, Chief Engineer JOHN FARON, Chief Engineer ELDRIDGE LAWTON, JOHN SOUTHWICK, Assistant Superintendent building gunboats.

A RICHMOND paper says that authentic information having been received that Acting Masters JOHN Y. BELL and EDWARD BAUDER, together with fifteen men, all belonging to the Confederate States Navy, are now in close confinement, in irons, at Fort Monroe, to be tried as pirates, Judge OULD has notified Gen. MEREDITH that Lieutenant-Commander EDWARD P. WILLIAMS and Ensign BENJAMIN H. PORTER, and fifteen seamen, now prisoners in the hands of the Confederates, will be held as hostages for the treatment and irons, and will be held as hostages for the proper treatment of their men.

THE matter of the exchange of prisoners has been put into the hands of General BUTLER, and there is reason to hope that by thus relieving the subject of the personal difficulties which had so unfortunately arisen between the old Commissioners of Exchange, our brave fellows will before long be returned from their trying captivity.

AN Army officer writing to us privately says:—

"Your Admission received on his death but the promotion "long ago earned. This seems to me a mockery to which "some of our best men have been subjected. WHIPPLE, STONE and KIRBY had been promoted on the Department "knowing they were about to die, and here it is again "repeated in the dying moments of *the last* cavalry officer "in our Army. I have heard that BUFORD was very much "gratified when told that the PRESIDENT was '*in earnest*.' "BUFORD, BAYARD and DAVIS will lie together at West "Point, where a monument to their memory is to be erected "by the officers of the Cavalry corps."

COMMODORE GERSHOM J. VAN BRUNT died at Dedham, Mass., on Thursday, the 17th, aged 81 years. Commodore VAN BRUNT was a native and citizen of New Jersey. He entered the service Nov. 3, 1818, and his name has thus been borne on the rolls 45 years. He received his commission of Commodore, July 16, 1862, but saw only a single month's active service in that rank, his entire expiring in August of that year. This last sea duty was in command of the *Minnesota*, which sailed from Boston in the early stages of the rebellion, and took an important part in the reduction of the Hatteras forts and in the severe and trying blockade off the North Carolina coast. Commodore VAN BRUNT was subsequently entrusted by the Government with the supervision and equipment of General BANKS' New Orleans expedition, and at the time of his death was acting under the orders of the War Department as Inspector of Transports in the New England District. He was engaged in duty at sea about fifteen years, in the aggregate; in shore duty, fifteen years, and was unemployed for fifteen years. He was highly respected in the Navy as an intelligent and zealous officer, and as an accomplished gentleman.

IT is at length positively stated that General ROSECRANS has been appointed to the command of the Military Department of Missouri, in the place of Major-General SCHOFIELD, who will be assigned to another Department. The names of a number of Major-Generals were sent into the Senate on Wednesday for confirmation. General SCHOFIELD'S nomination was the only one which was taken up, but objection was made to its immediate consideration.

FOREIGN MILITARY AND NAVAL MATTERS.

It is said that the two steam rams built at Glasgow for the rebels have been purchased by the Russian Government for one million thalers.

M. Bourgeois, an able French writer on naval matters, has just published a work exposing the ballistics of Lieut. Maury's navigation charts.

It is confidently expected that a Royal Naval College will very shortly be reared on some salubrious portion of the coast of England.

The British crown lawyers have pronounced the condemnation of the British bark, *Springbok*, by the New York District Court illegal and vexatious, and Lord Lyons is to remonstrate.

The Russian authorities are erecting a mill at Cologne, near St. Petersburgh, and propose to have a second mill erected, that they may be able to grind about 10,000 to 12,000 tons of armor-plates per year.

By the death of Admiral Sir James Hanway Plumridge, K.C.B., which took place on the 20th ult., Captain the Hon. Frederick Bailli has been promoted to the rank of rear-admiral on the active list in the British navy.

The first of the four rifled guns, weighing 70 tons each, manufactured by Captain Blakely, for the Russian government, was lately tested at the Royal Ordnance butt at Woolwich. The proof charge consisted of 9lbs. of powder and a cylinder weighing 600 lbs., which was fired two rounds, according to the proof regulations. The result was satisfactory.

It is announced that the Swiss Colonel, Foglibani, who has for some time in the United States studying the organization and operation of the Federal army, has given to his Government such a report as will induce a change in the organization of the Swiss army. Col. Foglibani is now at Paris, and is about to publish their his report.

The Paris correspondent of the *London Herald* says that France is busily but very actively preparing for war. Tents, horses, ambulances, shoes, uniforms, and in short all the requirements for campaigning, are being prepared on a formidable scale. The correspondent speaks of a general impression in France that there will be war in the Spring, though it is not agreed with what Power.

The *Achilles*, 30, iron-cased iron screw steam-ship, is nearly ready to be launched at Chatham. The last of the plates with which she is covered has been successfully fixed in its place, and the work now advanced throughout in armor-plates from stem to stern, the number of plates being 338, and their aggregate weight upwards of 1,200 tons. The side is clothed in plates from 4½ inches on the broadsides to 3 inches at the stern.

There appears to be no reason to doubt the report of Gen. Comonfort's death. While in a private carriage, attended by several officers and an escort, he was attacked by a portion of Marin's forces, and Gen. Comonfort's body was found with a bullet wound through the heart, two bullets through the breast, and the head disfigured by sabre cuts. In the death of Comonfort, the Juarez government loses an ardent and able supporter.

The French Ministerial papers record with pleasure the fact that the dinner to Admiral Renaud at New York was a great success; that the French Government refused to grant the privilege of raising recruits for President Juarez; and finally, and better than all they say, that the highly intelligent Mr. President Lincoln, notwithstanding the pressure at Washington of the representative of Juarez, has accorded cocquateur to Consuls appointed by the actual Regency of Mexico.

The Lords of the Admiralty have entered into a contract with Messrs. Brown & Co., of Sheffield, for the supply by that firm of upwards of 1,000 tons of armor-plating for the iron-cased frigate *Lord Warden*, at Pembroke. The thickness of the plates which the *Lord Warden* will be covered will be 5½ in. in thickness for her lower broadside tiers, and the remainder 4½ inches; the *Lord Clyde* and *Sterling* in this respect from the other armor-plated frigates, in having her armor-plates of the same thickness on the stern and stern as on her broadside.

In a recent series of thirty-five days by the British iron-clad frigate *Warrior*, the maximum power of engines exerted was 3186 horse power; and the minimum 73.5. "The most striking feature," says an English journal, "in these trials is the fact that the 'working power of the monstrous engines of the *Warrior* to 73 indicated collective horse-power, the engines are the true naming of revolutions of the ship going 2 3-4 knots. This is probably the greatest least yet accomplished with marine engines of large power. Exertion in this instance can scarcely be said to have existed at all."

We have recently alluded to the use of ozone gas as a measure of lighting the engine-room of the *Warrior*. This gas is about 28 times heavier than the atmosphere, and it therefore becomes necessary to carry it to the burner by means of a current of air. This is obtained by a double inlets-rubber bellows or blower, worked by a weight and geared wheels, which carries a current equal to 12.23 cubic feet per hour, or 148 cubic feet in twelve hours, absorbing 267,469 cubic inches of ozone—equal to 1,102 gallons for fifteen lights for twelve hours—each light being equal to that of three composite candles, at eight to the pound. The cost of lighting the engine-room and screw alley with fifteen of the ozone lights for twelve hours is 4s. 5d., against 17s. 4d. for 33 oil and candle lamps, the ozone gas giving 11 per cent more light.

Captain Alexander Bowers, of the Royal Navy Reserve, has performed an exploit as important, if not as interesting, as the discovery of the source of the Nile. He has taken a 1,000-ton ship into the heart of China, seventy miles up a river, through the great tea *entrepôt*, 1,400 miles, by map measure, from Shanghai. He found a great city and flourishing trade, with about 100 foreigners settled upon lands granted by the Chinese government, more hongs building, and every sign of great commercial prosperity. A club-house and a church existed. The anchorage opposite the town is fairly safe, the risk of voyage is not excessive, and there seems little doubt that Hankow will henceforth be in direct communication with London. This is really a great result from the capture of Pekin, the valley of the Yang-tse being as productive as that of the Nile.

The British Admiralty is urged by military papers to call for a special report of the performance of the Armstrong guns when exposed to the enemy's fire at Kagoshima, Japan. "Before any such assignment of 'ports of casualties,' it is said, "and so many actual 'failures, that anything short of a full and detailed account from the officers in charge of each captain or 'commanding officer of the ships present, will fail to 'satisfy the country. If rifled breech-loaders cannot 'be depended upon to sustain the honor of England's flag, it is essential that they be immediately changed 'for more powerful and safer artillery. These Armstrongians, and their friends, have made light of the 'navy, will do very well for our fortresses; and thither, 'if the statements of officers serving in the vessels at Japan prove correct, the Americans have at once transferred. The Americans have eschewed breech-'loaders as too complicated for warfare, and our own experience certainly tends to corroborate the opinion 'of their views; and with the knowledge which the 'Admiralty should already possess of the Armstrongs 'blowing up, and otherwise proving to be most fatal 'them inexcusable if muzzle-loading guns, rifled on 'some simple principle (the simpler the better), be 'not at once taken on board ship."

The Russian Government have ordered a large number of guns of different calibre from Krupp—fifty of 9in. bore, with a larger number of 5in. and 6in., and a large supply of steel shells to suit. They have also ordered smaller guns from some of Prussian firm. In Russia (the Ural Works) they are producing about twenty guns per month (up to 6in. bore), 1lbs. of cast steel per month, at his large works in Finland, and in his smaller works in Petersburgh, is also producing smaller guns rapidly; and that gentleman, associated with Messrs. Obuchoff and Kondrapatzoff, have a very extensive factory, close to Petersburgh, nearly ready for producing solid guns of the very largest calibre. Mr. Obuchoff's son, Kosnoff's system. This factory Mr. Povrelloff hopes to start in November. There will be sufficient crucible furnaces in it to enable him to cast a block of 150 tons; and the hammer power intended to be used for reducing these masses to shape is a 35-ton one, ordered from Newman & Hunt's firm, who, from accidents in castings, &c., will not be delivered till the Spring of 1864. The Government, therefore, are giving M. Povrelloff every assistance in getting their establishment at Colpino, to enable him to produce, by January 1st next, a 25-ton hammer, on Nasmyth's plan, which, with the 35-ton hammer mentioned, will enable them to make 9in. guns rapidly. The works are on a very large scale, and calculated, in a year or so, to produce ten large guns per week.

The Russian Government is devoting much expense to the works at Cronstadt. The old forts are being put in a better state of defence, and at many points the masonry is to be covered up by earthworks. On the main island there is employed a large force. The works are being thrown up, some of which are nearly finished. From the sea they will be scarcely visible, and they are of the most formidable kind. Some are detached, being connected by parallels one with another, will be able to hold guns to take in reverse any ships which may get past the batteries, and look out for the forts. Some of these earthworks, more exposed than others, are to be covered with 7½-inch plates, placed on the top and sides, and protected over that top, so as to form a cover from vertical fire, and at the same time obviate the necessity of having bolts or any other fastenings to retain the plates in position. The embrasures will be closed immediately the gun is fired by a slide of 11-inch iron, or by a drop door. The guns are to be placed in other earthworks. These works are to be 9-inch rifled cast steel, carrying a 300-lb. rifled shot, or a 250-lb. shell, 22 inches long. For the protection of the numerous gunpowder supplies of earth and fascines are placed at different points, all carried thence from St. Petersburgh at enormous labor and expense. To provide further against the possibility of a fleet passing up the back of Cronstadt by the south channel, about 300 lighters, laden with stones, have been sunk, so that now in no part is there more than four feet of water. In case vessels should succeed in passing these, they will meet 300 infernal machines which are to be placed in the channel, each of which will contain 70lb. of powder, and exploded by a slight touch from a vessel passing over. Another means of defence is also in course of preparation—a submarine boat of colossal dimensions, in the construction of which about 200 tons of iron and steel are to be used. It is rapidly progressing towards completion. Great secrecy is being observed about this boat, but it is known that it is to have engines worked by compressed air, to have a diving bell, with provision for attaching large cylinders charged with powder to the bottom of vessels to be fired by electricity. The Emperor has not only approved the plans, but some months since signed a decree appropriating about £250,000, or 2,500,000 silver roubles, for the number. By the 1st of June, 1864, the Marine Department confidently expects to have at Cronstadt 16 ironclad vessels.

ISHERWOOD'S ENGINEERING RESEARCHES.

The London *Engineer* has an editorial article on the work of Chief Engineer Isherwood, U.S.N., entitled "Experimental Researches in Steam Engineering." It says:—

Mr. Isherwood has experimented upon certain water tube boilers in several of the American frigates, and with results which, on the whole, appear to be very equal to the theoretical conditions of combustion and evaporation—leaving no room for further improvement. This fact, if it be a fact, was arrived at by placing the steam drum of the boilers in free communication with the atmosphere, and by boiling away water at the rate of the production of 30 lbs. of steam per hour. We will give a description of one of the boilers of the steamship *Wyandotte*, as a sample of the whole. It is 9 ft. 6 in. long, 10 ft. 3 in. wide, and 13 ft. 5 in. high. It had three furnaces, each having a grate 2 ft. 6 in. wide, and 7 ft. long, the whole depth of the furnace being 9 ft., with a fire brick bridge 2 ft. 6 in. from the front end, and 27 in. at the back. The heat from each furnace was led back through a space of 9 in. wide and 2 ft. 6 in. high, in which were placed 311 tubes, each 2 in. in diameter outside, the making 933 tubes in the boiler. The boiler had two steam drums, each 2 ft. 6 in. in diameter, of heating surface exclusive of tubes, and 1,303 square feet of external surface in the latter. The whole calorimeter or steam area through the tubes for drawing off the steam was the total steam room is 226 cubic feet; the water room, up to one foot above top tube tube, 456 cubic feet; the proportion of steaming to grate surface is as 37.3 to 1, and the proportion of grate to calorimeter as 5.362 to 1. The grate bars were 1 in. wide and 2 in. deep, and 1 in. apart, and were hollow them. The fire doors were double, the outer one having ten 1-in. air holes, and the inner plate eighty-three such holes. The combustion was carefully conducted for seventy-two consecutive hours. The fire was maintained by the natural draught of the chimney. The steam escaped from the boiler by a 6-in. pipe 15 ft. high, and 6 in. in. All, seven experiments, of seventy-two hours each, were made, from fourteen to twenty tons of coal having been taken on board the ship, in addition to that which was consumed in first raising the water to the boiling point. With anthracite coal, as the fires were cleaned, the ash pits were opened, and while burning at the rate of 8 1-9 lbs. only of coal per square foot of grate per hour, the rate of evaporation was from 12.6 lbs. to 13.5 lbs. of water per lb. of coal, and 212 deg. for each pound of "combustible," as he calls it, contained in the coal. The combustible excludes the earthy matter of the coal, and consists of carbon, hydrogen, oxygen, &c. When the air-holes in the doors were closed the rate of evaporation was reduced to 11.8 lbs. of water per pound of coal. The maximum rate of combustion was 11¼ lbs. only of coal per square foot of grate per hour, and with this last when the air-holes were open, 11.68 lbs. of water were evaporated from 212 deg. by 1 lb. of coal. In burning "semi-bituminous coal" the rate of evaporation was not so high, and 1 lb. of combustible, or coke, was the result of those who insist that the heating value of gaseous coal is greater than that of purely carbonaceous fuel, that, not only was the evaporative power of a pound of semi-bituminous coal less than with anthracite, but even the evaporation per pound of combustible matter of the semi-bituminous coal was less than for one pound of the combustible of the latter. Thus, with anthracite, the evaporation of water from 212 deg. per pound of combustible ranged from 12.6 to 13.5 lbs., while with semi-bituminous coal the range was from 11.93 lbs. to 13.865 lbs., while each pound of the actual combustible matter in the "semi-bituminous" coal gave 14.46 lbs. to 14.468 lbs. or 11.917 lbs. of water evaporated from 212. The evaporation was only slightly greater with the air-holes in the fire doors opened. All this leads to the conclusion that whether the temperature of the products of combustion in the uptake was 350 deg., with the air-holes closed, or evaporation the temperature of the escaping gases was 385 deg., in one experiment of seventy-two hours a split bridge at the back of the grate, and an arrangement of air-passages through the ash pits and ashes employed, but the rate of evaporation was found to be 7½ per cent. less than when the bridge and deflector had been used.

Mr. Isherwood taking the heating value of one pound of pure carbon as 15,000 units of heat, equal to the evaporation of 16 5633 lbs. of water from 212 deg., only nineteenths of his "combustible" is, as he finds, pure carbon, and he therefore concludes that the heating value of this of coal are burned per square foot of grate per hour.

This distinction between coal, "combustible" and carbon, will be followed very boldly, and in other case we do not see that Mr. Isherwood's long and costly experiments (more than 1,000 tons of coal spent to have been consumed in them) have proved anything not known before. His rates of evaporation were about what could have been predicted, but he has done well to put them on his calculator, as he has manifestly given unusual attention to the subject of marine boilers.

He prefers the water tube boiler to all others. It admits

more heating surface in a given space, and thus a higher rate of evaporation may be gained. The water tube boiler, we may observe, is largely used in all vessels of the navy of the United States Navy, but the American steamboat owners do not appear to like it. At all events, guided by their own convictions of what is to their interest, they do not employ water tubes.

Mr. Isherwood finds, as was to have been expected, that the economical evaporative power of boilers falls off as the rate of combustion is increased from 4 lbs. to 20 lbs per square foot of fire surface per hour. With 4 lbs. of coal per square foot of grate per hour, not less than 35 square feet of vertical water tube surface, nor less than 45 square feet of surface where horizontal fire tubes are employed, should, Mr. Isherwood concludes, be adopted to obtain the best result. The calculations of close passages between these would, he says, be 4-31 that of the grate. It must not be less than 1-9th, nor more than 1-7th. Mr. Isherwood observes also that "the economical duty of the tube boiler is more sensibly affected by the calorimeter than the vertical water tube boiler, and requires a much nicer adjustment of it. It is more affected by differences in the ratio of the heating to the grate surface, using the same rate of combustion."

COMMODORE WILKES TO THE SECRETARY OF THE NAVY.

WASHINGTON, December 11, 1863.

Hon. Gideon Welles, Secretary of the Navy.

Sir: To my great surprise, in your official report to the President, I find that before Congress you have been complained before the country as the cause of the non-capture of the rebel privateers, by the detention of the *Vanderbilt* in the West Indies. I am injured in my character as an officer. Justice to myself and family demand that I should not keep silence under the imputation so undeservedly cast upon me.

I shall, therefore, repel the charge in a few words; but I keep this subject open to myself to be used in a better like, to enter into details, and show why the piratical rovers were not captured in the West Indies; but my correspondence with the naval department enters into the whole of the Department, to send me the necessary force in fast and effective vessels, contains my full justification. The failure to capture these pirates in the West Indies is to be attributed solely to the want of that force. The blame, therefore, does not rest with me, but with others. Upon my return to July last, I reported immediately to you, as ordered, and requested to know why I was relieved. You replied, "Policy," and you gave me to understand, in answer to that it was through the action of the British Government and the influences that had been brought to bear on you. This induced me to call on the Secretary of State, and learned me that my whole course of conduct had met with the approval of the State Department, and neither diplomacy nor policy had required me to do what I had done to gain approval have I ever received, either verbally or in writing, from the Department, since the departure of the *Vanderbilt*.

My surprise was, therefore, great when I learned it through public report. You will undoubtedly recollect that upon my return to the New York navy yard, after the *Alabama* to you a plan for protecting our treasure ships and commerce in the West Indies; anticipating, as I then did, that many of you would be employed in the same service, and this would be obviated by a flying squadron, to be composed of not less than twelve fast steamers. It was not until nine months after (September, 1863) that I was ordered to adopt it, and placed me in command. I received orders on the 7th of that month to proceed to the West Indies and join the Jones River flotilla, which had been under steam for months, and were inefficient in many respects; with these, after a few days, and with few exceptions, I was ordered to. Two other vessels, then in the West Indies, were also to join, and a promise, also, that as soon as others more effective could be got ready they would be sent to me, among which the *Vanderbilt* was designated. The activity of this small squadron of inefficient vessels (anything but a flying squadron), through the mismanagement of some and to others and crews, is well known, resulting, as it did, in the entire blocking up of Nassau harbor, and the vessels lying in check of blockade-runners, about which the English press made so great an outcry. Instead of the *Vanderbilt* joining me immediately, I anticipated, from the many successful cruises after the *Alabama* in the North Atlantic during the last of which the *Alabama* was already in the West Indies, the *Vanderbilt* did not arrive in the West Indies for five months, and was then sent to act independently of me without my command. When I met her, Commander Baldwin informed me, as admiral, commanding-in-chief of the West Indies squadron, his orders, according to the usage of the service, and that he was not to be called for the best interest of the Government and objects to be attained, to take her as my flag-ship, to enable me to perform the duties assigned me; yet I found the *Vanderbilt*, having entirely broken down, and the *Juanita*, which was to have replaced her, not heard from. If the *Vanderbilt's* orders had been placed directly in the court of Admiralty and I had detained her, I might have been to blame; whereas I was not, and put your orders, which read "When you are perfectly satisfied that the *Florida* is not in the Gulf or West Indies for some other locality, you will proceed along the coast of Brazil," &c. It was not therefore not my detention of the *Vanderbilt*, but your own orders that were carried out, for the certainty of the *Alabama's* departure was not known to St. Thomas until the last of May or the first of June.

As soon, however, as the necessary repairs could be completed, and coal taken in, the *Vanderbilt* was put in commission, June 13, with instructions from me to carry out the orders from yourself, with some suggestions I deemed might be useful. It is believed that the movements of the *Alabama* were known in St. Thomas before they could have been anticipated in Washington. No vessel could have been more active in the search for the marauders than the *Vanderbilt* was whilst my flag was flying on her. When I took her under my command she was in process of making the circuit that you had pointed out, and Commander Baldwin was of opinion that she would be obliged to return to New York within twenty or twenty-five days for repairs; but I thought otherwise, and that her repairs might be effected in ten days at Key West, whither I went. The repairs were partially made, and I was enabled to leave her fully equipped and repaired afterward at St. Thomas; and I made a large addition to her officers, crew, and marines, from my squadron, without which she could not have been efficient to perform the cruise. All these facts are shown by the record of the vessel, and were stated in my dispatches to you. The *Vanderbilt* was not detained a day beyond the limit you had prescribed.

I am well satisfied that had you looked into the merits of the case you would have awarded credit to me instead of censure. Instead of the *Florida* and *Alabama* being met by naval laws and usages to retain the *Vanderbilt*, if in my judgment I considered it my duty, and I took the responsibility, I am sure that the Department, in the absence of emergency, as her commander might think fit, would have disorganized my squadron, and created discontent among the officers and men, and that the concentration and joint action of a fleet so essential to the successful attaining of the desired object. This is evidence of what the squadron under my command accomplished as contained in my weekly dispatches now on his in the department, and I therefore respectfully request that the whole correspondence during my cruise in the West Indies, may be laid before Congress for my full justification, and to show others the true cause of failure (want of force and efficiency) why the *Alabama* and *Florida* were not captured in that sea.

I am, very respectfully, your obedient servant,

CHARLES WILKES.

WATCHING REBEL PRIVATEERS.

The Boston *Advertiser* is permitted to publish the following private letter, written to a gentleman of that city:—

U. S. Steamer Kearsarge,
Bilbao, France, Dec. 2, 1863.

Sir:—Knowing that you are interested in all that appertaining to the two pirates which we have now on this side of the water, I embrace the liberty of addressing this to you so that our people at home may know exactly how we are situated; for I do not think we have a shadow of a chance for a capture unless we are favored at this port on the 17th of September and found the *Florida* in dock repairing, all her crew having left her for England. She is still here making her repairs, and the Spanish Government are giving her every assistance, so that now they are converting her into a perfect man-of-war. She is now almost ready for service, but a half all done. Her captain left this place for ten or twelve days for Paris. It is impossible to say when she will be ready for sea, but before we received a telegram from Lisbon saying that the *Georgia* was spoken off that place steering to the N. E. On the 31st, we got off Lisbon in a gale of wind, but were too late as she arrived at Cherbourg on the 30th, at which place she is also repairing, and we do not know when she will leave. We have been off this port ever since, but can take care of these two vessels? We have been now two months at sea, and all alone, watching the *Florida*; the nearest vessel we have to us is the town of Cadiz, 1,000 miles from this port. There are three outlets from this port (Bilbao), and we have to watch them as rebels that we have to blockade are about 30 miles wide, and the twenty-four hour has put in force. Now how can the government expect us to watch these three escapes, when there are twenty vessels blockading Wilmington and yet vessels run in and out? We ought to have at least three vessels to watch this port: then I do not think the *Florida* would ever attempt to go out, for we would be sure to have her on her return, and then she would have been demanded by proper men who would attend to and do their duty. As regards the *Georgia* there is no vessel watching her, and there ought to be at least two vessels to watch her, so as to can only get ships enough to look after the *Florida* and *Georgia*, we shall have but one pirate to prey upon our commerce; and as for the *Alabama*, I do not think we can, and without regard to expenses to the Government. Should they both escape before any vessels arrive to assist us, then look out for terror and panic in our country; for they will never give us another such chance of capturing them as this at present. I hope that these lines may make it known as far as you think prudent, and do not let the blame rest on us.

The *Florida's* battery consists of two 140 lbs 9-inch pivot rifled guns; six 80 lb. 6-inch brond-side rifled guns. She throws more metal than we do, but still will not come out and give us a fair fight.

CASUALTIES IN THE NAVY.

During the year ending December 16, 1863, there were 43 deaths of officers on the active list of the Navy Department, including:—

1 Admiral—Andrew H. Foote, June 26th, 1863.

2 Commodores—John W. Kelly, February 6, 1863, and Henry W. Morris, August 14, 1863.

1 Captain—James S. Wilson, March 10th, 1863.

5 Commanders—William B. Renshaw, January 31, 1863; Jonathan M. Wainwright, January 1st, 1863; Maxwell Woodhull, September 20th, 1863; Daniel Todd, July 12th, 1863; George W. Rodgers, August 19th, 1863.

7 Lieutenant Commanders—Edward Lea, January 1st, 1863; William Swan, January 3d, 1863; Thomas McK. Buchanan, January 16th, 1863; J. Boyd Cummings, March 16th, 1863; Wilson Brown, April 2d, 1863; Joseph F. Green, Jr., March 18th, 1863, and John R. Hart, June 11th, 1863.

1 Assistant Surgeon—Charles W. Zimmerman, January 1st, 1863, and John P. Hall, September 8th, 1862.

4 Assistant Surgeons—Jacob M. Gotwold, February 23, 1863; Edward A. Pierce, May 23d, 1863; David W. Bullantyne, September 10th, 1863, and Harry L. Plyington, September 25th, 1863.

2 Assistant Paymasters—Frederick R. Curtis, April 17th, 1863, and Joseph T. Lisle, September 25th, 1863.

1 Chaplain—Matthew R. Talbot, April 21, 1863.

1 Professor—Joseph S. Hubbard, August 16, 1863.

2 Chief Engineers—George Gideon, June 16, 1863; Robert W. Kelly, December 1st, 1863.

4 Midshipmen—Foxhall P. Smith, January 19th, 1863; Richard H. Dana, April 24, 1863; Wm. K. Butler, April 6, 1863; Frederick B. Griswold, April 9, 1863.

1 First Assistant Engineer—John Alexander, January 26th, 1863.

1 Second Assistant Engineer—Frederick Bull, jr., August 9th, 1863.

5 Third Assistant Engineers—Robinson W. Hands, December 10, 1862; Samuel A. Lewis, December 10, 1862; Patrick H. Barry, August 1, 1863; James McGregor, September 23, 1863; Wm. F. Law, September 24, 1863.

1 Acting Second Assistant Engineer—Jas. Hogg; Richard F. Dunn, February 1st, 1863; Wm. Arnold, March 21st, 1863; John G. Bills, May 16th, 1863.

There have been 33 resignations, including 6 Assistant Surgeons, 1 Assistant Paymaster, 1 Professor of Mathematics, 13 Midshipmen, 2 Second Assistant Engineers, and 7 Third Assistant Engineers. Two Gunners, two Carpenters, and one Sailmaker have also resigned.

There have been 32 deaths by sea of 64, including 1 Commander, 2 Lieutenants, 1 Surgeon, 1 Paymaster, 1 Chief Engineer, 56 Midshipmen, 2 Boatswains, 2 Gunners, 2 Third Assistant Engineers, 1 First Lieutenant Marine Corps.

VESSELS LOST DURING THE YEAR.

The following 32 vessels were lost in the United States naval service during the year ending December 31, 1863:

Steamers.—*Harriet*ore, 2, April 7, grounded in Amite river, La., and burnt; *Berea de Kalb*, 13, July, in Yazoo river, by torpedo; *Conestoga*, 5 guns, 1,247 tons, 2d, Sept., sunk by torpedoes in Yazoo river; *Columbia*, 6, January 14, grounded on Stump Point shoals; *Southfield*, 6, Sept. 8, captured at Sabine Pass; *Diana*, 2, March 28, captured in Berwick's Bay; *Gibb*, 8, Sept. 7, by fire at Cairo; *Harriet Lane*, 4, 1,074 tons, 2d, November 7, by fire at Galveston; *Hatteras*, 11, sunk off Galveston by *Alabama*; *Indianola*, iron-clad, 4, Feb. 24, captured in the Mississippi; *Iosco Smith*, 9, Jan. 30, captured in Berwick's Bay; *Kensington*, 2, captured and sunk to Berwick's Bay; *Kenosh*, iron-clad, 2, April 7, sunk in Yazoo river; *Kittatinny*, *Medora*, 3, Sept. 8, sunk off Frying Fan Shoals; *Monitor*, 2, Dec. 31, 1862, foundered on Cape Hatteras; *Mississippi*, 12, March 14, grounded and burnt in the Mississippi; *Morning Light*, 3, Aug. 20, captured on Rappahannock; *Satellite*, 2, dec.; *Sachem*, 6, Sept. 8, captured at Sabine Pass; *Sumter*, 6, June 24, sunk by fire at Gibraltar; *Underwriter*, 2, captured at Sabine Pass; *Westfield*, 8, Jan. 11, grounded, abandoned, and blown up in Galveston Bay. In all, 21 steamers.

Sailing vessels.—*Arthur*, 2, captured at Sabine Pass; *Isaly*, 1, May 3, sunk in Yazoo river.

Schooners.—*Caleb Grant*, March 25, sunk by Vicksburgh batteries; *Queen of the West*, Feb. 14, captured in Red river.

Barges.—*Morning Light*, 3, Jan. 21, captured at Sabine Pass; *Shepherd Knapp*, 6, May 18, wrecked in entering harbor of Cape Hayten.

Tugs.—*Bazley*, 1, May 27, West coast of Florida, during a gale.

Boats.—*Bainbridge*, 7, Aug. 21, captured off Cape Hatteras.

Schooner.—*Bracketsbrough*, 1, May 27, West coast of Florida, during a gale.

Launches.—*Cyrene*, 2, April 27, by fire at Pensacola; *Velocity*, 1, Jan. 21, captured off Sabine Pass.

The total tonnage of the vessels lost was 15,985, and they carried 141 guns.

WORKMEN have been engaged for some time past, under the direction of Colonel McCallum, Superintendent of Military Railroads, in collecting all the old iron scattered along the line of the Orange and Alexandria Railroad, between the Rappahannock River. The lot comprises remnants of the wrecks of locomotives, railroad cars, boat and twisted rails, which have been for days together destroyed and twisted up in the various rebel raids which have taken place on the line of the road within the past two years. These fragments, of which there are many thousands, spread almost ready for sales, are being gathered up and taken to Alexandria, where they will be sold shortly after the coming month. The lot will amount to upwards of two thousand tons, and comprises some nine or ten damaged locomotives.

A Monument to Robert Fulton.—The executive committee of the Fulton Monument Association will shortly issue a circular inviting the cooperation of the public to assist that association in the erection of a monument over Mr. Fulton, now resting in Trinity churchyard. The design for this monument has been prepared by Mr. Thomas Crawford, sculptor, and is as follows: A structure of Portland stone, resting on massive arches of a severe architecture, and supported on piers, with appropriate figures typifying the American rivers and lakes, and above these, figures representing the four quarters of the globe, is crowned, at the height of forty feet, by a colossal statue of Fulton, in a sitting posture, holding in his hand the model of a steamboat, which he is supposed to have just completed, and is presenting to the nation as the result.

The Gettysburgh National Cemetery.—The commissioners appointed by the Governors of the different States, who have soldiers buried in the Soldiers' National Cemetery at Gettysburgh, Pa., met at Harrisburgh, on the 17th inst., and adopted a plan for finishing the cemetery. The estimated expense of completing the cemetery, including a monument, is $75,000, or $63,500, which the different States are requested to contribute in the ratio of their representation in Congress. The agent is to be kept in repair by annual appropriations by the States. A committee was appointed to procure designs for a monument.

Captain James A. Ekin, Assistant-Quartermaster, United States Army, Indianapolis, Indiana, has been ordered to report in person for duty at the Quartermaster-General's Office with the least possible delay. Captain J. L. Trumbull, or any other officer of the Quartermaster's Department at hand, is ordered to relieve Captain Ekin.

Captain J. McC. Bell, Assistant-Adjutant-General of Volunteers, has been relieved and ordered to Assistant-Adjutant-General at the headquarters of Major-General Pope.

CONGRESS.

SENATE.

On Thursday, the 17th, the following resolution, submitted by Mr. WADE, was adopted:—

Resolved, That the Secretary of the Navy be directed to communicate to the Senate all official reports and dispatches and papers in the Navy Department relating to actions in which any of the officers or crews of the vessels engaged, and especially the report of Capt. Worden of the attack on the *Merrimac* and *Monitor*, and the report of Capt. John Rodgers of the attack on Fort Darling, together with the dispatches of Admiral Goldsborough transmitting them. The report of Captain Worden and Captain Rogers of the two attacks on Fort Darling on the James River he will also send to the Senate, if any Executive communication there to the War Department. The reports of Rear-Admiral Dupont and Captains Du Pont, Rodgers, Drayton, on the defences of Charleston harbor, together with the reports of Capt. Drayton, and Lieut.-Commanders Rodgers, of the Action, Capt. Downes of the *Nahant*, Capt. John Rodgers, of the Weehawken, Capt. Worden of the *Montauk*, Commander Stevens, of the *Patapsco*, Lieut. Commander G. W. Rodgers, of the *Catskill*, Commander Farragut, of the *Nantucket*, and Commander Nicholson, of the *Passaic*, touching their several vessels during that attack; also the condition of parts of any monitors and of any ocean steamers, during the engagement of the armed vessels engaged in it, and also the reports of Admiral Goldsborough and Admiral Lee, and other actions, made from time to time to the Navy Department, and any official communications connected with the said action, or respecting repairs, made to the vessels of the fleet in consequence of obstructions made by these officers or any other by Engineers Lovering, Robie, or Williamson, and also the report of Capt. John Rodgers, of the action between the *Weehawken* and the *Atlanta*, together with the dispatch of Rear Admiral Dupont transmitting the same, and all other official correspondence with any of these officers with the Navy Department relative to the same action, and also the report of the official reports of the sinking of the *Weehawken* inside the bar of Charleston, and the official report of the refloating of the same, and any one has not been in the service two years and honorably discharged. It extends to any one who may attach to the Army or Navy during the enrollment and the draft, but abolishes the exemption of felons, and exempts none where relatives are wholly dependent on him for support, except such persons as are supported by their labor.

Mr. DIXON (Conn.) offered an amendment exempting clergymen from the draft. Mr. HENDRICKS (Ind.) also introduced an amendment proposing two classes of enrolled persons, as in the existing law, but the second class not being liable to be called until the first is exhausted.

The Vice-President on Monday, the 21st, laid before the Senate a communication from the Secretary of War, in response to a resolution of the Senate of February 20th, 1865, transmitting the proceedings of the Court-Martial in the case of Commander Thomas H. Stevens. It was referred to the Committee on Naval Affairs. Various petitions were presented by Mr. DIXON (Conn.) against the re-establishment of the Enrollment Act, so that clergymen may be regarded as non-combatants. (N. Y.) A joint resolution was presented by Mr. HARRIS (N. Y.) directing that the Secretary of War for the names of all officers and men who have deserted from the Regular Army or resigned, between the first of December, 1863, and December, 1865, and requesting a similar resolution relative to the Navy was offered by Mr. PIERCE (Vt.). Mr. HARRIS (N. Y.) thinks that, if the ground bounty and pay for volunteers was taken up—the amendment allowing soldiers to enlist in other branches of the service during the said unexpired term—it would be adopted, and a proposed amendment moved by Mr. GRIMES was rejected.

On Tuesday, the 22d, the joint resolution of the House appropriating twenty millions of dollars for bounties was taken up, and on motion of Mr. HENDRICKS the following amend was adopted providing that no part of this sum be paid to any enlisted man after January 5th; also a further amendment to the effect that no bounty shall be paid after date except such as is not provided for by existing law. Mr. WILSON offered an additional section, to the effect that the moneys now appropriated for the payment of bounties by the Treasury of the United States, to be drawn out on requisitions as other moneys, be appropriated to the payment of bounties and procurement of substitutes. This amendment was adopted, and the resolution then passed without a dissenting voice. Another amendment by Mr. HENDRICKS, and introduced by Mr. HENDRICKS and Mr. DIXON were rejected.

On Wednesday, the 23d, petitions were presented from Protestant Episcopal bishops of various States, asking that their consecration to episcopacies be made in reference to bearing arms. Mr. WILSON submitted a bill to establish a uniform system of substitutes in the Army. Mr. WILSON offered a resolution calling upon the Secretary of War and Secretary of War whether slaves in various States have been enrolled under the act, and if not, why such enrollment has not been made. Mr. TRUMBULL introduced a bill calling for names of generals without commands was passed.

HOUSE.

On Thursday, the 17th, Mr. DAWES (Mass.) from the Committee on Naval Affairs, reported a joint resolution, which was passed, tendering the thanks of Congress to Captain Percy Scott and the officers and crew of the steamer *Metamora* of his duty. Mr. COX (Ohio) ineffectually sought to introduce an amendment of thanks to Admiral DAVID D. PORTER, for his conduct in the operations on the waters of the Mississippi. On motion of Mr. WILSON (Iowa) the Committee on Invalid Pensions were instructed to inquire what legislation is necessary to secure to the widows and legal representatives of persons who have died, or may hereafter die, from wounds or disabilities received in the line of their duties, the same pensions as are allowed to others. Mr. SHANK (Ky.) introduced a series of resolutions, declaring it to be our duty to protect the loyal citizens of the South that found a rebel in arms against the Government. These resolutions were passed by a decisive majority.

On Monday, the 21st, Mr. ASHLEY (Ohio) introduced a bill, which was referred to the Committee on Military Affairs, to create a Bureau of Military Justice. Mr. MILLER (Pa.) offered a resolution requesting the PRESIDENT to instruct those having charge of the exchange of prisoners to propose to the rebel authorities to exchange white man for white man, leaving other questions to be disposed of hereafter. A substitute for this resolution, offered by Mr. WENTWORTH, declaring that the House approve of the measures taken by the Administration for the exchange of prisoners now held by the enemy in Southern prisons, and that the same course be pursued for a fair and just exchange of all now remaining in the hands of the enemy, was adopted by a decisive vote. The bill appropriating $20,000,000 for the payment of bounties, advance pay, and premiums for enlistments under the call of July 18th, 1864, and for the United States, was taken up and passed, after the rejection of various amendments.

On Tuesday, the 22d, a bill was passed to pay the officers and men called out for home defence in the Western or Missouri Department. The appropriation purposes over $700,000. The Military Academy Appropriation Bill was also passed. A resolution was adopted, instructing the Committee on Military Affairs to take immediate inquiry into the expediency of amending the Enrollment law so as to compel the Provost-Marshals to have examinations for physical infirmity, etc., at the county towns. The House concurred in the Senate's amendments to the Bounty Bill.

On Wednesday, the 23d, General MCCLELLAN's report was transmitted by the Secretary of War, and a resolution ordering the same to be printed, and that 5,000 copies be delivered to the Committee on Printing. A bill was reported from the Committee on Military Affairs creating a bureau of military justice, also a bill repealing a part of the Enrollment act.

RE-ENLISTMENT OF VETERANS.

A special order from Major-General MEADE authorizes corps and other independent commanders to grant individual furloughs for thirty days to veterans, to expire after the end of period of a soldier's absence from his company and regiment —to such men of their respective commands as may have re-enlisted, or have not yet done so, on the certificate from headquarters, dated Dec. 17, 1865, signifying their intention to do so, and to the chiefs of the several departments, under the provisions of General Orders Nos. 191, 305, and 370, from the War Department.

When three-fourths of the men of a regiment or company re-enlist, such portion of the regiment or company will be allowed to go home in a body, and take with it its arms and equipments. Three-fourths of a veteran regiment will be understood to mean three-fourths of the men belonging to it, and not to those who have been left sick in the Potomac, and not to include those absent as prisoners of war, in the general hospitals, &c. When there are men in a veteran regiment who have not taken the initial steps for re-enlistment (all men who have joined the Army since July 1, 1863, excepted), and are yet willing to re-enlist, they will be allowed to do so, and will be mustered together in case it goes in a body; and those only will be left behind who are within the limits and yet refuse to re-enlist, and the information who have recently joined. The men willing to re-enlist will, of course, not be discharged and remanded into the service with the old regiment, but in lieu thereof will be mustered out by their regimental officers, and filed with the muster-rolls of the company to which they belong.

Every furlough granted under this order will have an endorsement showing that that the holder, as a veteran volunteer, is entitled to transportation to his home and return, as provided for by paragraph 4 of General Orders, No. 376, from the War Department.

The increase in the service will not admit of the granting of furloughs at present to a larger number of men than are embraced in this order; but the men not here included, who may be entitled to re-enlist anywhere, will be granted a similar furlough on the return to duty of the men now furloughed.

FROM EUROPE.—Latest European advices—to the 13th—contain the report that Admiral POPOFF has arrived in progress a squadron of the Pacific, with the view of stopping the supply of arms from California for Juarez. Marshal Forey had resigned the command of the French forces. Several important victories by the Poles over the Russian troops are confirmed. Arrests of Russians are to be as numerous as ever, and the system of deportation progresses without abatement. Russia is reported to be making great armaments. Sir Karl and Sir Morton Peto have had much excited over the prize fight between Heenan and King, which took place on December 10, at Tunbridge. King in the twenty-five minutes fought was utterly beaten. In one minutes King's victory was received in England with great confidence.

From India the dates are to the 29th of November. Lord Elgin died on the 20th of November. There had been hard fighting on the Umbeyla Pass. The Sepoys had once again British rule and attacked the British troops under General Chamberlain with great determination; but they were repulsed and had not entered the stockade. Two English officers were killed and five wounded, including General Chamberlain and Colonel Hope. One hundred and twenty-eight Sepoys and native troops were killed and wounded. General Chamberlain was in a strong fortified position, with five thousand troops, and was confident of success. Telegraphs that he is confident of final success, and does not require reinforcements. Chamberlain had resigned the command on account of ill health.

The Russian Admiral Litvoski and chief officers of the fleet visited the Army of the Potomac last week, arriving at headquarters about 3 p. m. A review of the 6th Corps was immediately ordered, and before 5 the troops were in line. The correspondence of this move, and the brilliant military appearance of our men, impressed the distinguished visitors with the remarkable efficiency of our volunteer system. After the review General Sedgwick handsomely entertained the Admiral and staff at his headquarters.

NAVY YARDS.

BROOKLYN NAVY YARD.

The *Courier* entered December 19. The *Sabine* sailed December 20 for the Chesapeake. The *Galatea* and *Newbern* will sails bout the beginning of next week. The *Wyandra*, which was lying at the foot of Hudson street for repairs, has been moved to the foot of Washington street. The *Gettysburgh* (formerly the *Margaret and Jessie*), which arrived at the port December 4, now lies at Jersey City for repairs. The bark Azores, of Cape Town (Cape of Good Hope), formerly the *American* bark *Lucy Jameson*, of New London, arrived at this port on Wednesday evening, in charge of Acting Master C. H. Baker. She was captured by the *Vanderbilt* on October 29th, at Angra Pequina, West Coast of Africa, about 600 miles north of the Cape of Good Hope. The *Azores* is about 250 tons burden. She has on board part of the cargo of the bark *Conrad*, which was captured by the *Alabama*, and converted into the *Tuscaloosa*. The cargo is principally wool. The steamship *Connecticut* arrived on the 23d, from a short cruise in search of the *Chesapeake*.

BOSTON NAVY YARD.

The U. S. steamer *Cornubia*, Capt. Brock, arrived on Tuesday from Hayana. The U. S. steamer *Aroostook* arrived in company for the same, but was obliged to put back in consequence of her fires becoming clogged by using soft coal.

The steamer *Ida* and *Acme*, the recently purchased prizes, Acting Volunteer Lieutenant commanding J. P. Nickels, has arrived at this Yard. She left the Yard in pursuit of the regatteel steamer *Acme*, on the 10th inst., and proceeded immediately to Eastport, where she arrived on the day following.

The steamer *Gila* has been docked, received their pay on the 15th inst., have subscribed the sum of $705 for the purpose of paying the wages of those workmen who, they think, were unjustly discharged from the employment of the navy by the late commandant of the Yard, as promotors of the recent strike movement.

PHILADELPHIA NAVY YARD.

The U. S. supply steamer *Bermuda*, Lieutenant Smith commanding, arrived at this port on the 21st inst., from the Western Gulf Squadron, via Fortress Monroe 16th inst. Also, U. S. gunboat *James Adger*, Furness, from Fortress Monroe, 19th inst. She came for repairs, and brought five passengers and eighteen prisoners.

The iron-clad steamer *Sangamon*, which arrived from Washington on the 16th inst., has been placed upon the dry dock for repairs.

The U. S. steamer *Tacony*, attached to the rebel ram *Atlanta*. Has received her armament in a few days and will sail for parts unknown.

The iron-clad steamer *Canonicus* arrived at Fortress Monroe on the 11th inst., in pursuit of the *Chesapeake*, has arrived at the Yard. She has lost her foremast.

VARIOUS NAVAL MATTERS.

The rebel steamer *Gibraltar*—formerly the *Sumter*—has arrived at Liverpool. She was sold to the Confederate States Government by Admiral Semmes.

Several models have been published in England in which the designers state that, while the Union war steamer *Kearsarge* was lying at Kingstown, they were permitted to examine the lines and draft of the ship. The men were subsequently re-landed at Cork.

The Rio Janeiro papers state that the government of Rio Janeiro has at an interest which it was made to launch the iron-clad *Sangara*, at Wilmington, Delaware, and that the work was going on endeavoring to get the ship on the stocks, but without success.

The schooner *G. O. Eigelow*, which was recently captured on the coast of North Carolina, has been sold at auction for the benefit of the captors. Her tonnage was 150 tons. The steamer *Gibraltar* is to be rebuilt at Rondout, by Isaac Newton, and will be converted into a first-class iron-clad *Ex-Sumter*. The contractor will soon prepare a place for the reception of the vessel, which is to be ready in April next.

The launching of the ocean iron-clad *Dictator*, built by C. H. Reed, at the New York Navy Yard, is expected to take place on the 30th of December, instead of the 26th. Since the attempts to launch her last month the work has been pushed with a greater determination and the vessel prepared at the bulkhead.

The total amount of pay-roll for the month of November at the Charlestown Yard is $131,725.75—a great decrease from the previous month, and a decrease of $5,000 on the corresponding month of last year, nearly $40,000. The pay-roll for December will be very large, as the Yard will be crowded with vessels undergoing repairs.

A Gibraltar letter of the 27th ult, received by a well-known merchant here from the Mediterranean, says that the supposed privateer steamer of the States of Gleitzer proves to be a French war steamer attached to the squadron, and not the French iron-clad fleet which was ordered off Cape St. Vincent.

The United States Marshal sold at Washington on this week the prize steamer *Reliance*, captured by the *Vanderbilt* in the Gulf of Mexico. She was sold for $2,150, and the *Chisholm* for $7,125; 600 casks were sold for $1,200, and 1,000 casks, and 200 casks of pork for $1,000. A number of barrels of beef brought $50 per barrel. A chronometer sold for $50.

The work of moving the boilers of iron-clad steamer *Agamemnon* from the vicinity of the dock to the Navy Yard was completed on the 21st on the railway above the dock in progressing favorably. Four of the boilers were placed on the railway, and the fifth was being moved across the Yard on a track laid for the purpose, and in a day or two more will be on the railway. The work is being done by contractors by means of temporary sheers.

The commissioners of the U. S. steam frigate *Colorado* reports the return of the schooner *Alert* or *Wanona*, by the gunboat *Kanawha*, on the 9th inst., with all aboard safe and well. The *Alert* was found on the coast, was aboard at the time of her capture. She had a valuable cargo on board, consisting of 600 barrels of turpentine, 150 barrels of rosin, 15 barrels of tar, 2 boxes tobacco, 20 coastes tobacco and 1,000 staves. On the passage the passengers were treated with kindness.

There is no newspaper story of doubtful authenticity, that is not in due progression of the world's history, sure to be realized in the end of time.—So desirous of catching in the Navy, and it is understood that the Secretary of the Navy will not be surprised if Admiral Porter will go to sea. General Marston is reported to have said that he could, if very short notice, put to sea with a fleet of 50 vessels, from the port of Point Lookout, of which he is in charge. We imagine it will be a long time before we shall see so formidable an armament from such a quarter.

The *Virginian* arrives to the 12th inst. that the rebel pirate *Alabama* was to visit Madras. The suspected rebel steamer *Peregrine* has been seized at Bombay. The steamer *Georgiana* has arrived at the Pembroke Dock Magistrates on the 16th of October, on a cruise from Aarhuus, Denmark. Her destination was notified at Port Louis, Island of Orylon. The *Florida* and *Georgia* were both being supplied at Port Royal and Charleston with coal. The *Florida* was expected to be put to sea in a few days. The *Resplendent* was being rapidly completed at Calais. The federal steamer *Kearsarge* was docked at Plymouth Sound on the 16th.

A letter in the *Times*, dated Hong Kong, October 1, says: "The *Wyoming* one of the vessels of our navy brought down from Kanagawa, and is in dock here to land them, sending the said consul and suite across the bay to Kowloon, a distance of six miles. The *Wyoming* then went through the harbor, awaiting the return of her boat, but which, I hear, was not suffered by a peremptory order from the Governor of Hong Kong, who read the Queen's Proclamation, and forbade her to anchor." The *Wyoming* has in fact not the flotilla which was given at Queenstown to Gen-

Semmes, of the *Alabama*, when the whole term rushed to the wharves and crowded his vessel to give him a hearty welcome.

Special Fellows has taken the General order in relation to the discharge of prize duties by the Masters and mates of the squadron, one of the provisions of which show a thoughtfulness for the men and officers engaged in this perilous and exposed duty which is highly commendable. Accommodations have been provided for the reserve on board one of the ships of the squadron, the men are to be supplied with specific articles of clothing, and allowed to remain on the boats when the officers will not be entrusted to the enemy by doing so. The general command of the vessels will be vested in such duty has been assigned to Commodore Rowan, of the *Dandelion*.

ARMY GAZETTE.

DISMISSAL

During the week ending Saturday, December 19, 1863.

Major William Van Wagenen, 104th New York Volunteers, to date May 1, 1863, for absence without proper authority, and neglect in making a false statement under oath.

Surgeon P. A. Jones, 1st Pennsylvania Volunteers, to date November 23, 1863, for absence without proper authority.

Captain John F. Lloyd, 13th Missouri Volunteers, to date December 7, 1863, for scandalous conduct while drunk in a public bar-room, and creating disturbance, and for unnecessarily published December 8, 1863, as Captain John Keys, 13th Missouri Volunteers.

Captain William H. Bell, 104th Pennsylvania Volunteers, to date December 7th, 1863, for absence without proper authority, misstatement in the muster-out roll of the company, and conduct prejudicial to the good order and military discipline of the command.

Captain Samuel Wagner, 104th Pennsylvania Volunteers, to date December 21, 1863, for conduct unbecoming an officer and gentleman, breach of arrest, and disobedience of orders.

Captain R. McConnell, 104th New York Volunteers, to date November 23, 1863, for absence without proper authority.

Captain R. B. Wood, 7th Ohio Volunteers, to date November 23, 1863, for failing to report the facts in the case of Private Wm. Bell, Co. B, on expiration of leave of absence.

Captain Robert Hall, 104th United States Infantry, Assistant Commissary of Musters, to date December 11, 1863, with loss of all pay and allowances, for absence without proper authority, and for other grave faults, as a fee for mustering the said officer into the service of the United States.

Captain Daniel Rankin, 13th Pennsylvania Volunteers, to date November 30, 1863, for absence without proper authority.

Assistant Surgeon J. C. Ferguson, 7th Ohio Volunteers, to date November 23, 1863, for absence without proper authority, and neglect to report, &c., on expiration of leave of absence.

Assistant Surgeon Charles Hall, 104th New York Volunteers, to date November 30, 1863, for absence without proper authority.

First Lieut. J. H. Hall, Company K, 104th New York Volunteers, to date December 8, 1863, for violation of the 9th Article of War.

Second Lieut. Samuel Bell, 104th New York Volunteers, to date November 23, 1863, for absence without proper authority; promoted to First Lieutenant November 30, 1863, without proper authority.

Second Lieutenant Frank T. Compagnee, 67th New York Volunteers, to date November 30, 1863, for absence without proper authority.

DROPPED.

By direction of the President, the name of Second Lieutenant Alonzo Cavell, of Rockville, Potomac Home Brigade, Maryland Volunteers, has been dropped from the rolls of the regiment, to date April 6, 1863, for desertion.

RESIGNED TO COMMISSION.

Captain John P. Sessions, 90th Wisconsin Volunteers, heretofore tendered, in order that he may accept the same rank in the 43d regiment of his county, which proposition was not been filed by the Governor of that State.

DISHONORABLY DISCHARGED,

Major John T. Ames, 104th Missouri Volunteers, to date December 19, 1863, having tendered his resignation on sentence's restitution with under charges for conduct unbecoming an officer and gentleman.

NOTICE TO DELINQUENTS.

The following named officers, having been reported at the headquarters of the Army for absence from their regiments without leave, and for that they will stand dismissed from the service of the United States unless within three months from this date they shall report for duty before the Military Commission, in session in Washington, of which Brigadier-General Thomas M. Vincent, Assistant Adjutant-General, is president, and make satisfactory defence to the charges against them:

Second Lieutenant Edward Jessup of Pennsylvania.

First Lieutenant E. L. Bishop, Quartermaster 109th New York Volunteers.

Captain Milton C. Dove, Company K, 1st Maryland Cavalry.

Second Lieut. William H. White, Company O, 20th Pennsylvania Volunteers.

Second Lieut. George W. Hilbury, Company F, 20th Pennsylvania Volunteers.

In the city of Washington, D. C., without authority, and failing to report at Headquarters Military District of Washington, as arrest, as ordered:

First Lieutenant H. T. Loe, Company A, 4th New York Artillery.

Provident conduct, in receiving pay twice for the same time from different Paymasters.

First Lieutenant and Adjutant James W. Stanley, 6th New York Cavalry.

EXEMPT FROM DISMISSAL.

The following named officers, charged with offences, and heretofore published, are exempt from dismissal, in consequence of the length of time, satisfactory defence having been made in their respective cases:

Captain T. H. Cadwallader, Assistant Quartermaster United States Infantry.

Captain G. B. Cadwallader, Assistant Quartermaster of Volunteers.

TO BE RECOMMENDED FOR DISMISSAL.

The following named officers, having been reported at the headquarters of the Army for the offence hereinafter specified, is hereby notified that he will be recommended for dismissal from the service of the United States unless within fifteen (15) days from Dec. 21st, 1863, he appear before the Military Commission, in session in Washington, of which Brigadier-General Thomas M. Vincent, United States Volunteers, is President, and make satisfactory defence to the charges against him:—

Failing to report at Annapolis, Md., as ordered:

Captain William S. Conard, Commissary Subsistence of Volunteers.

SENTENCES OF COURT MARTIAL.

Private Jacob Keyser, 1st R. I. Mounted Rifles, to be confined at hard labor for life, for desertion.

Private William A. Boyle, Troop B, 1st N. Y. Mounted Rifles, to be hung by the neck at Fort Lincolnton Doorway, Acting Provost-Marshal's Office, Washington, D. C., on the 15th of January.

Private William H. Blake, 5th Ohio Vols., to be hung for the murder of Artificer Charles Hoffman, Co. A, 5th Ohio Vols., at Camp Dennison, Ohio.

Lieutenant Edward Bliss, Co. E, 11th Conn. Vols., to be publicly reprimanded, in general orders, for drunkenness.

Sentences in the foregoing cases have been approved by Major-General Butler, and will be carried into execution.

Private Herman Meier, Troop A, 1st N. Y. Mounted Rifles, sentenced to be shot for desertion, has been pardoned on a large service in the army, and his wounds received therein. General Butler has accepted his sentence to confinement at hard labor for one year, with loss of all pay and allowances.

General Lieutenant John Riley, 14th Illinois Cavalry, to be dismissed the service, for engaging in selling liquors and keeping a disorderly house, and other misconduct, while in the uniform of an officer. Sentence approved by the Secretary of War.

Lieutenant Colonel Wm. H. Ball, 5th Ohio Vols., to be dismissed the service, for conduct prejudicial to good order and military discipline and conduct unbecoming.

Captain James S. Cook, Co. A, 5th Pa. Vols., to be dismissed the service for absence without leave, and conduct prejudicial to good order and military discipline. Sentence in both cases approved by Major-General Gilmore.

Bergin, Robert Sumner, Thomas Steffens, Thomas Daniels, stephen C. Newman.

MEDICAL DEPARTMENT

RELIEVED.

Surgeon John Stegman, 6th U. S. Colored troops, has been relieved from duty in the Department of the Cumberland, and ordered to report to the Surgeon-General at Washington, D. C., for duty.

Medical Cadet John Cassell, U. S. A., has been relieved from duty in the Army of the Cumberland, and ordered to report to personal orders from the Surgeon-General at Washington, D. C.

Surgeon-in-Chief, Department of the Ohio, has been relieved from duty in the Army of the Cumberland, and ordered to report to personal orders from the Surgeon-General at Washington, D. C.

The following Hospital Stewards, U. S. Army, have been relieved from duty, to date from the 1st of January, 1864, and ordered to discharge, on expiration of New Mexico, Joseph C. Medical Director, Department of New Mexico, Joseph C. Ryan, and Julius A. Hoffman, Medical Director, Department of the Ohio; Charles H. Thomas is to do duty in the Department of Washington; Charles H. Thomas and C. A. Wentworth to duty in the Army of the Cumberland; Theodore Jenna; Charles Enfield and S. S. Boyle, now on duty in the Middle Department.

LEAVE OF ABSENCE EXTENDED.

The leave of absence granted Surgeon William Forrester, 4th Kentucky Cavalry, W. F. McNeely, 5th Penn., W. M. Rountree, 122d Ohio, and A. Watson, 11th Mass., R. W. Bell, 1st Battery Cavalry, Assistant Surgeons S. M. Howland, 24th Ohio, D. S. Cook, 24th Illinois, E. Hall, 1st Michigan Vols., have been extended ten days.

The permission to de'ay reporting for duty with their regiments granted Assistant Surgeons J. J. Sheldon, 44th Ohio and H. Griswold, 9th Michigan Vols., has been extended ten days.

The permission to delay reporting for duty to their regiments granted Surgeons Wm. Lamson, 2d Maine, Ed. Jenkins, 2d Maine, Ist Wisconsin, I. Marcus Rice, 25th Mass. Vols., Assistant Surgeons A. H. Leslie, 1st N. Y. Mounted Rifles, Wm. Hall, 1st Michigan, C. D. Norris, 21st Penn., W. A. Carmichael, 24 Ohio, D. D. Benedict, 7th Ohio, and Wm. Hall, 1st Michigan Vols., Medical Cadets Hallidiana Vole, and Gustavus Bigot have been extended respectively ten, twelve, and fifteen days.

REVOKED.

So much of special order from the War Department as dismissed Surgeon James C. Fisher, U. S. Vols., has been revoked, and he has been reinstated in his former position, with pay from date of dismissal.

DISCHARGED.

Sergeant James Miggey, Co. F, 116th N. Y., Privates John W. Smith, 32d U. S. Colored Troops, Wm. Hamilton, 1st Battery, Ed. Masters, 7th Illinois Vols., Leslie Dille, 15th Indiana Light Artillery, and Wm. Hall, 1st Michigan Cavalry, have been discharged the service, with view to their enlistment as Hospital Stewards in the U. S. Army.

Surgeon William H. Gominger, for physical disability.

RESIGNED.

Surgeon P. A. Quinan, 109th Pa. Vols., for absence without leave.

Surgeon S. F. Elliott, U. S. Vols.

HOSPITAL NAMES.

The new General Hospital recently established at the Presidio of San Francisco is to be named "Jonathan Letterman General Hospital," in honor of Surgeon-General Letterman, U. S. A.

The General Hospital at Point Lookout, Md., has been named the "Barnes General Hospital," in honor of the Medical Inspector-General, and now Acting Surgeon-General. By order of General Wright, commanding Department of the Pacific.

A DISTURBANCE occurred among the negro soldiers at Fort Jackson, Louisiana, on the 9th. The negroes had taken offence at one of the officers in command and swore vengeance. In trying to get hold of him some of the negroes displayed more opposition than they anticipated, and fired some shots at random and into the air. Not a person, however, was injured, and the affair was soon quelled by cool heads. The officers easily quieted the men, and they have not since made any demonstrations.

The funeral of Major-General John Buford took place in Washington on the 16th instant, from Mr. De Gurie's church, to which the religious services were held. The escort comprised a regiment of the Invalid Corps, four guns of Battery B, 1st U. S. Artillery, and a detachment of "Scott's 900" Cavalry, all under General Stoneman. Major-Generals Heintzelman, Augur, Casey, Hancock, Doubleday, Schofield, Wright, and Gibbon acted as pall-bearers. The remains were escorted to the depôt, and thence conveyed to West Point, N. Y., for burial.

THE sentences of Privates Alfred Yates and George W. Casey, found guilty of being rebel spies and condemned to be hung have been upon the recommendation of the General commanding the Department of Missouri, been commuted by the President to imprisonment at Alton, Ill., Penitentiary during the war.

JAMES M. Patrick and Dennis Carroll, citizens of Cooper county, Missouri, have been condemned to be "shot to death," for joining a band of rebel marauders and assisting in the destruction of property of peaceable and loyal citizens of that State. The President approves the sentence.

On Saturday last the President and Mrs. Lincoln gave a reception to the Russian Admiral and officers. Among the distinguished persons present were Chief Justice Hallock, Schofield, Hancock and Sickles, Brigadier-Generals Meade, Casey, Barnard, and General Hatten, and Major Cope. *The reception was the most brilliant of the present régime.*

UNITED STATES
ARMY AND NAVY JOURNAL,

A Weekly Newspaper, devoted to the interests of the Army and Navy, and to the dissemination of correct Military Information.

The Army and Navy Journal is established in the interests of no party; it will be conducted by no clique. Its independence will be absolute. Avoiding all personal and political bias, its columns will be directed solely to the investigation of sound military ideas, and to the elevation of the military service in all its departments. Its pages will be devoted to no one man's success, but to the success of measures to secure the soldiers' interests by proper meeting outside the scope of its observation, as a full and reliable record of the actions of officers of the army in any way connected with military or naval affairs, or interested in the same. The Military Department of Engineering, which now has so intimate an association with the military service, will receive separate attention in this connection, and the interests of our Commercial Marine will find a ready and appropriate place. Among other matters the columns of the Journal will be devoted to work to be done.

A summary, in short, of whatever occurs in all parts of the world of value to our Army and Navy. No effort will be spared to make the Journal complete in all its departments, and competent to take rank with the previous are at all times invited from those interested in the Art of War. It will be the aim of the Proprietor to make it not only a complete Military and Naval Gazette, but at the same time a High-toned, reliable, lively journal, which will be read with interest by the friends of the soldiers and interested with the public services and by the great body of the intelligent people.

The proprietors of the Army and Navy Journal have the honor to announce that the Journal has been permanently established in the city of New York, and will hereafter be published at No. 20 Spruce street, in that city.

The Journal has been favorably received by the public and by the Army and Navy, and become a necessity to every officer who desires to keep well-informed. The Journal is established in obedience to such a demand, and it will be the constant effort of the printer to make a paper which our soldiers and sailors will be proud to call their own, and which, and which shall be successful in completeness and ability by any of its class in the country. The success of the Journal will have been made with some of the most competent writers on Military and Naval affairs in the country, and for such clerical and departmental assistance as will give to the Journal a rank second to no publication of changes, orders, &c.

From the very favorable opinions of approval the Army and Navy Journal has awakened in the Army we select the following:

From Major-General George G. Meade.

Headquarters Army of the Potomac, September 15th, 1863.

W. C. Church, Esq., 102 Broadway, N. Y.:

Dear Sir, I have received several numbers of the Army and Navy Journal, and have much pleasure in expressing my evidence they bear of the principle of conducting a first class journal. It affords me sincere pleasure to add my contribution to its maintenance, and therefore forward my subscription for a year.

Very respectfully, your obedient servant

Geo. G. Meade, Major-General Commanding.

From Brig. Gen. R. Ingalls, *Quartermaster of Sumpsbrunch*

"It would seem that the country requires such a paper as the Army and Navy Journal, and I hope it may receive very true talent, military and literary, to make it a success. A work of the kind—one that shall be a standard—has been needed. My best wishes to you in all your efforts in the enterprise."

From Major-General W. H. French, *Commanding 3d Army Corps.*

"To say that the Army and Navy Journal is commences rose with what should be a representative of our present great military struggle, is what I believe to be true."

From Major-General O. H. Tompkins, *Commanding 14th Army Corps.*

"I will afford me much pleasure to recommend the Army and Navy Journal to officers in the service of the Army, and I have also much pleasure in expressing my confidence that its destiny is to rank high."

From Major-General James S. Negley, *Second Division 4t Army Corps.*

"You possess my patronage and official interest in your enterprise. Whatever contributes to the efficiency and success of the Army has my friendly support."

From Prof. H. Coppee, University of Pennsylvania.

"A good paper of that kind has been needed. Every former effort within my knowledge has been a failure, but yours promises to be a success. Unlimited money, many correct intelligence and ethical information—its excellent service in the cause of the Government, and its high literary character will secure it a wide support. The plan is admirable; and your military experience will give your Journal, in sympathy with soldiers, a tone and a value service."

Of the numerous notices of the newspaper press, we have room only for the following:

The Army and Navy Journal is an honor to itself and to the country. It is conducted with ability, presented to us upon the appearance of several of our best military and naval officers, who spoke from their knowledge of the character and standing of those who are to edit the book. It should be taken by every army officer in the field, and every officer who has a friend in the army. Military history and war news should be desired. The Journal promises advancement

HEADQUARTERS TWENTY-FIRST REGIMENT U. S. COLORED TROOPS,

No. 63 Bond street, New York,
December 16, 1863.

I. The Twenty-first Regiment United States Colored Troops will be raised under the authorization granted to the undersigned by the Secretary of War and Governor Union.

II. It is the recruiting of colored men authorized to be raised in the State of New York. By order of the Secretary of War, all recruits hereafter enlisted or credited in this State, or who may hereafter be so, are ordered to be assigned to this Regiment. Morales are, by the same authority, directed to muster in recruits to this Regiment, and to forward them to rendezvous at Riker's Island, New York Harbor.

III. The officers enlisted in this Regiment will be selected from the soldiers of the State, and from such men only belonging, in the same manner as other volunteers.

IV. The headquarters of the regiment have been, for the present, established at No. 63 Bond street, in the room east of Broadway, where all applications upon matters connected with the Regiment will be made.

All communications should be addressed to Mr. VINCENT COLYER, Chief Clerk of the Commissioned Superintendent of Recruiting.

V. Persons desirous of assisting to recruit, with a view to obtaining positions in the regiment as line officers, should make application at the above office, and in case of vacancy of standing. For proper persons, permission will be given. Blank forms of enlistment at Washington will be obtained. All officers that can be appointed, will be appointed from persons in this or who are now in the service as non-commissioned officers, and who have seen service actively in the field.

VI. Proper persons, both white and colored, will be assigned throughout the State as recruiting agents, and all persons to whom this commission may confer qualities in the regiments. Applications for such agencies should be made to the office, and for examples by correspondence showing the standing and influence of the applicants, and the number of men he thinks he can raise.

VII. The following expenses will be paid by the Committee:

First. The necessary expenses of transporting recruits by the straight route, from the place of enlistment to the nearest Provost-Marshal or Musical Officer. For which purpose, the Paymaster of the Government rate of two cents per mile by railroad, and three cents per mile by steamer. No expense will be paid as will be rejected in fee accepted by him, provided the Board of Examiners shall decide that the cause of rejection was not such that the recruiting officer could reasonably have discovered.

Second. The recruiting officer will be paid for the expenses transported, the place from and to which, the distance and the mode of conveyance, and the number of men in each division or of rejection. In the case of rejected men, in addition, the reasons for rejection will be stated.

Third. So long as the United States does not pay the premium or fifteen dollars per man for recruits for this regiment, the Committee will pay to recruiting agents, for each recruit acceptable recruit, on the production of evidence of muster, the sum of

Fourth. In addition to the above allowances to be made for advertising, printing, and other expenses.

VIII. Recruiting will not cease after the present forty-five dollars, and also the local bounty paid to other regiments of the place of enlistment. They will not receive any United States bounty. They pay will be at the rate of thirty dollars per month.

IX. That Congress will at once increase the pay of all soldiers, and that the pay of the men in this regiment will be the same in all respects, and a bill for that purpose has already passed the House of Representatives and will doubtless pass the Senate.

In the future, all recruiting officers and agents will be the same as if the Congress had already passed the law.

X. Recruiting officers and agents authorized by this Committee will be strictly required to see that the several provisions for this are heeds the entire.

XI. The Committee will endeavor in every manner to procure recruits for this regiment, and to secure to them proper treatment after they are received by the State.

By order of
JAMES A. ROOSEVELT,
GERARD B. LAMBERT,
A. VAN RENSSELAER,
SHERMAN B. BACON,
Military C. Cuyler.

SALE OF REAL ESTATE IN THE

TOWN OF BEAUFORT, SOUTH CAROLINA.
Under the Special Instructions of the President of the United States, issued of the date of September 11th, 1863, in pursuance of the Act entitled "An Act for the Collection of Direct Taxes and Internal Duties in States within the United States, and for other purposes," approved June 7, 1862, and Supplementary thereto, and approved March 3rd, 1863, we, Hamilton D. Smith, William Sturgis Bigelow, and Edward Atkinson, of Boston, Massachusetts, appointed for this purpose by the South Carolina, do hereby declare and make known that a public sale will be held at the Exchange in the aforesaid town, in the town of Beaufort, State of South Carolina, on the 2d day of February, A. D. 1864, at 10 o'clock, A. M., of said day, for the disposal of the several lots, tracts of lots, and buildings constituting the town of Beaufort aforesaid, together with the following exceptions: Block No. 1, Block No. 2, Block One Hundred and Thirty-seven (137) inclusive, Block Number One Hundred and Forty-one (141), Block Number One Hundred and Forty-two (142), Block Number One Hundred and Forty-three (143), and Block Number One Hundred and Forty-four (144), and all of said Consolidation.

The following blocks, lots, and parts of lots are excepted and reserved from said sale, to wit: Lot B in Block 1; Block 2 and 16; Lot A in Block 21, Lots 24 and 25; Lot B in Block 35; Lot A in Block 54; Lot 1 in Block 55; Lot 1 in Block 56; Lot 1 in Block 57; Lot 1 in Block 58; Lots 1 and 2 in Block 59; Lot A in Block 60; Lot B in Block 76; Lots 3 and D in Block 85; Lot B in Block 87; Lots 1 and 2 in Block 88; Lot 1 in Block 89; Lot 2 in Block 90; Lot D in Block 93; Lots A and D in Block 97; Lots A and B in Block 99; Lots A, B, C, D in Block 100; Lot A in Block 77, Blocks 78, 79, and 80; Lot A in Block 81 and Lot 12, 13, 14 and 15; and said plot; said, also, all lots, parts of lots, blocks, and buildings now owned, and continued to be used, applied to the cases of said sale, as military and naval hospitals, and the public purposes of the Quartermaster's Commissary, and Ordnance Departments, of the United States Government.

Said sale shall not be kept open longer than thirty days from the commencement of the same.

The Commissioners reserve a single bid on each of the several lots, tracts of lots, and buildings to be by their authority, of such sum as they may deem sufficient for the interests of the United States thereof. And any of the said lots, parts of lots, and blocks which shall not be sold to or entered by the appointed value will be withdrawn from sale.

Given at the Exchange in Beaufort, South Carolina, this second day of November, 1863.

H. D. SMITH,
W. S. BIGELOW,
EDWARD ATKINSON,
C. S. Direct Tax Commissioners for the District of South Carolina.

324 and 344 Broadway,
Manufacturers of Saddlery and Military Equipments, have opened a Retail Department in connection with their Wholesale establishment, and offer a large and well-selected assortment of
MILITARY SADDLES, BRIDLES, MARTIN GALES, SPURS, BITS, BELTS, HAVER-SACKS, ARMY BLANKETS, &c.

BURNS & WILSON,
MILITARY BOOT MAKERS,
340 Pennsylvania-ave.,
WASHINGTON, D. C.

Officers of the Army and Navy, visiting Washington, are requested to call and see us. We have always our well-selected stock of Cavalry and other boots.

THE LADIES' FAVORITE
LOVED ONES AT HOME.

We will deliver free of freight charge, at any Express Office east of St. Joseph, Mo., any of our beautiful Albums of the size of 9 by 12 inches, or more, that may be ordered by members of the Army or Navy of the United States or presents to friends at home. We manufacture elegant styles at all prices, $2 upward.
E. & H. T. ANTHONY,
Manufacturers and Importers,
501 Broadway, N. Y.

ARTIFICIAL LIMBS. By E. D. HUDSON, M. D., New York, Astor Place House, Broadway. Artificial Limbs of every description furnished without charge, by order of Surgeon-General Hammond, U. S. A., and Surgeon Wilson, U. S. N.

MILITARY GOODS.
W. J. SYMS & BROTHERS,
300 Broadway, New York,
Importers and Manufacturers of
PRESENTATION SWORDS, SASHES,
BELTS, EPAULETTES, GUNS, PISTOLS, AND
MILITARY GOODS.

Every article in the military line, wholesale and retail.

UNITED STATES 5-20 BONDS.
United States 7-30 Treasury Notes,
United States Certificates of Indebtedness,
Gold, Silver, Uncurrent Money, bought on all parts of Europe and Northern Cities.
BUDGETT & CO.,
Bankers and Brokers,
We are authorized to furnish 5-20 bonds at par.
Subscriptions to the 7-30 Gold Loan will be received exclusively on commission.
BUDGETT & CO., Bankers,
522 Pennsylvania Avenue, Washington.

FRICK'S UNITED STATES
MILITARY AND NAVAL AGENCY.
Commissioner for all the States.
Established in 1846.
Bounty, Pay, Pension and Prize Money Office.
JOHN H. FRICK,
Office, No. 223 Dock St., op. Exchange,
PHILADELPHIA, PA.
Pension, Bounty, Pay, Prize Money, Claims, For Soldiers, Seamen, Marines, Widows, Orphans, Sisters, Widows, and others, promptly collected.
Advice rendered gratis.

UNION MILITARY BRASS WORK
247 and 249 West Fifth st.,
CINCINNATI, O.
A. M. WOOD & CO., Proprietors.
15 varieties of Brass, Steel and Gold Plated Spurs. The largest and cheapest establishment of the kind in the United States on a large scale. Manufacturers also, Mexican, California and Texan Spurs, Sword Belts, Sword Knots, Sabre Straps, Bits, Rosettes, Hearts, Hatter Bits, Stirrups, Silver Strips, Tree Mountings for Infantry and Cavalry Equipments, &c., &c., &c.

JOHN F. ELLIS,
50 Pennsylvania Avenue, between 9th and 10th-sts.,
WASHINGTON CITY, D. C.
Dealer in
PIANOS, MELODEONS, MUSIC, STRINGS
GUITARS, VIOLINS, BANJOS,
DRUMS, FIFE, INSTRUCTION BOOKS, SHEET MUSIC.
Sole agent for Chickering & Sons' Pianos, etc.
Sole depot for Chickering & Sons' Pianos, etc.
Smith's Melodeons.
Orders from the Army and Navy specially solicited and promptly attended to. Circulars, &c., sent by mail.

SWORD MANUFACTORY.
GEORGE W. SIMONS & BRO., SANFORD STREET HALL, Sansom street, above Sixth, PHILADELPHIA.—Manufacturers of Fine Swords of every description, and dealers in every variety of Military Goods, Belts, Sashes, Epaulettes, Buttons, Gold Lace, Gilt and Blue Officers' Swords, Infantry and cavalry Sword Belts, Sashes, &c., all our own manufacture. Also, Gilt and Silver Uniforms in Sacred Shades. Blades from Solingen, Germany, Gilt and Silver Blades, &c., all the best Steel Sword Blades.—Colliers', Emerson's and Silvers'. Army Navy Officers' Uniforms supplied by Express.

PALMERS & BACHELDERS,
WHOLESALE AND RETAIL DEALERS
IN
SWORDS, REVOLVERS, EMBROIDERIES, DIAMONDS,
WATCHES, JEWELRY SILVER WARE,
PALMERS & BACHELDERS,
102 Washington-st., Boston.

MILITARY DEPOT.
DENT & RUSH,
Cor. COURT and TREMONT streets,
Boston,
Manufacturers, Importers and Dealers in every description of MILITARY GOODS, consisting of Caps, Hats, Swords, Sashes, Belts, Epaulettes, Gilt Lace, Aiguillettes, Shoulder-straps and Cap Ornaments, and every variety of Gold, Silver and Line Officers' Goods.
Officers of the Army and Navy, visiting Boston, are respectfully invited to call and examine our stock.

W. PAYNE, Printer of the ARMY AND NAVY JOURNAL, is prepared to execute every description of BOOK AND JOB PRINTING, at the shortest notice. Office, 37 Park Row, Room 49, Fifth story.

UNITED STATES
Army and Navy Journal,
A WEEKLY NEWSPAPER,
DEVOTED TO THE INTERESTS OF THE
ARMY AND NAVY,
AND TO THE
DISSEMINATION OF ECONOMIC AND DOMESTIC INFORMATION.

TERMS.—$5 per annum in advance; $3 for six months. Advertisements of a character suitable for the columns of the JOURNAL will be inserted, in a limited number, at twenty cents per agate line for each insertion; the number of insertions are requested to make their favors as definite as possible.

All letters should be addressed to "The UNITED STATES ARMY AND NAVY JOURNAL, New York." Remittances may be made in United States currency, Quartermaster, Paymaster or other Army drafts should be made payable to the order of the publisher.

The Editor of this JOURNAL will always be glad to receive from officers in the new service, correspondence and communications relating to any subject connected to its columns. It is necessary that the name of the writer should be given with communications, not for publication, but as a guarantee of good faith.

THE MILITARY SITUATION.

THE great work of reorganization of our military forces has been fairly begun, and it promises to absorb all the energies of our commanders for the winter—leaving as little field work to chronicle. The reënlisting regiments from the Army of the Potomac begin to come home on their thirty-five days' furlough, and handsome receptions are being prepared for the returned veterans. In this regard, the Potomac Army seems to be in advance of our other armies; but we trust that in the case of the others no time will be lost in inaugurating the work of reorganization as speedily as possible. It is the problem of the hour.

In the camps of Virginia all is quiet and mudbound. Even the guerrillas have ceased from troubling, and MOSEBY is at rest. The town of Culpepper and its vicinity is now occupied by a strong force of our infantry and batteries attached.

An expedition to co-operate with General AVERILL, consisting of two regiments of infantry, four hundred cavalry and a battery of six guns—a force numbering one thousand four hundred in all—under the command of Colonel GEORGE D. WELLS, of the 34th Massachusetts infantry, returned on Tuesday to Harper's Ferry without the loss of a man. After penetrating to Harrisonburg, where AVERILL had finished his work, and after WELLS had accomplished his diversion strictly according to orders, he found himself confronted by seven thousand to ten thousand of LEE's forces, with General ROSSER's brigade and part of STUART's Cavalry in his rear at Front Royal. By clever strategy and forced marches he escaped the former and avoided the latter forces, and reached his post with his men and munitions unharmed. A hundred rebel prisoners were safely brought off.

A correspondent of the Richmond *Enquirer* reports that the loss of the Confederate government by the expedition of General AVERILL was heavy, consisting of a large quantity of bacon which had just been packed and, a heavy amount of corn, &c., in the fitting-house, with some flour, a considerable amount of leather that had been accumulated for the use of government workshops, with harness and other manufactured articles, some clothing, with pretty much all the wagons and teams belonging to the Quartermaster's Department at this place.

THE question of the real condition of the productive forces of the Southern States is one whose importance is only equalled by the obscurity that has hung around it; the census of coarse giving no data that can be relied on since the great revolution in all branches of Southern industry. In respect to the resources of Virginia, we have lately seen an official exhibit, which gives the following figures:—In the counties now within the rebel military lines there were

In February, 1860—Horses.....	207,886
In February, 1863—Horses.....	181,864
Loss in three years.....	26,022
1860—Cattle.....	561,667
1863—Cattle.....	496,851
Loss in three years.....	64,748
1861—Sheep.....	469,912
1863—Sheep.....	541,304
Gain in two years.....	71,402
1861—Hogs.....	923,708
1863—Hogs.....	770,602
Loss in two years.....	153,256

So that in February, 1863, there were in the counties now within the rebel lines 181,864 horses, 496,821 cattle, 541,304 sheep, and 770,502 hogs. These are the returns of officers of the revenue made last February; and if we deduct from these the consumption from February, 1863, to February, 1864, we may, without error, safely assert that on next February there will be 100,000 horses, 400,000 cattle, 500,000 hogs or pork, and as sheep have increased nearly fifteen per cent, we will put them down at 550,000.

On this head the Richmond *Enquirer* remarks as follows:—"The population of Virginia within our "lines, and which must be fed, together with the "army now in Virginia, will not amount to over 1,250,-"000. It is easy to show that in Virginia alone there "are ample provisions for the people and army. The "people must take the matter in their own hands and "send forward their supplies. We are unwilling to "believe that the patriotism of our people is on the "decline, or that they are not so willing now, at the "end of 1863, as they were at the beginning of 1861, to "sacrifice all if necessary to the cause. They are not "as able, but they are as willing to do their whole "duty."

THE situation in the West continues unchanged. The rehabilitation of the communications and transportation is still the foremost question with our commanders at Chattanooga. Private advices inform us that there is a prospect of the great bridge over the Tennessee being completed immediately, and this will relieve a large number of mechanics to work on the bridges near Chattanooga, which are still in a very backward state. General GRANT is still absent from the front.

THE rebel papers definitely state that the Confederate army of the Southwest has gone into Winter quarters. Headquarters are at Dalton, where the main body of the rebel army yet remains, with their cavalry videttes advanced as far as Tunnel Hill. Meanwhile we have had a slight evidence of activity in a cavalry raid, Major-General THOMAS telegraphing that, on the 28th the rebel General WHEELER, with a strong force of cavalry, captured a supply train bound for Knoxville, near Charleston, Tenn., on the south bank of the Hiawassee. Col. LONG, commanding the Second Division of cavalry, taking the very small force in camp, but 150 men, immediately pursued WHEELER, cut off a portion of his column, charged it, captured over 120 prisoners, and compelled the main column to seek safety in precipitate flight—all with the loss of but one man wounded on our side.

THE latest advices from LONGSTREET's column come up to the 23d of December, at which time it was still around Rutledge and Morristown. The Richmond *Enquirer* acknowledges that LONGSTREET "was unable "to follow up his advantage *in consequence of the large "number of bare-footed men in his command.*" This, together with the fact that the mountains are now covered with snow, that AVERILL's brilliant raid has severed railroad communications, and that LONGSTREET is deprived of all subsistance save the scanty supplies he gleans from the country, makes the prospect for his column a very gloomy one. It is difficult to see how it can escape almost utter destruction.

THE situation of Charleston Harbor and on Morris Island continues absolutely unchanged, and every one has settled down to the expectation of a couple of months of inactivity. In the meantime, it is comforting to know that General GILLMORE's position is impregnable, and that Admiral DAHLGREN has sufficient iron-clad force to hold the harbor up to Fort Sumter.

THE record of the expenditure of shot, shell, and powder by the Monitor *Patapsco*, during less than a year that she has been in service, exhibits the following interesting results:

Up to November 14, the *Patapsco* expended, for her 200-pound rifle, 44 tons, 640 pounds shot; or, altogether, 109,120 pounds. Expenditure of powder for rifle gun, 5 tons, 1,530 pounds, or 14,970 pounds.

Expenditure for 15-inch gun, 7 tons, 1,430 pounds, or 17,130 pounds of shot. Expenditure of powder, 5 tons, 895 pounds, or 12,095 pounds. In the amount of powder expended is included the bursting charges of the shells.

The total of this expenditure amounts to 52 tons of shot and 12 tons of powder—a pretty large amount, it must be admitted, to be fired from one vessel, carrying only two guns. The expenditure in other Monitors has been nearly or quite as large as that of the *Patapsco*. The latter has been in 38 engagements, and has been struck over 400 times.

THE Choctaw chief MCCURTAIN, with other rebel-Indian leaders, came into the Union lines at Fort Smith, Ark., last week, and surrendered themselves to General MCNEIL. They have abandoned the rebel alliance, and profess a desire to avail themselves of the PRESIDENT's amnesty proclamation. It is expected that their example will have a powerful influence over the rebel tribes.

THE Texas expedition progresses favorably. At last advices General WASHBURNE, with a considerable body of troops, had started for Indianola and Lavaca.

FIFTY of FORREST's guerrillas, a Colonel, Major and Chaplain, were captured by General DODGE's mounted infantry, near Pulaski, Tenn., on the 25th, three of them in chains, charged with the murder of Federal soldiers last summer. The skulls of the murdered men, placed as ornaments on the mantlepiece, were found in their room.

MANY persons were inclined at the time to regard the story of the plot for the release of the rebel prisoners on Johnson's Island as sensational; but the late Report of the rebel Navy shows how real the danger was. Mr. MALLORY says:—

"During the months of July and August I sent twenty-seven commissioned officers and forty trustworthy petty officers to the British Provinces, with orders to organize an expedition and cooperate with army officers in an attempt to release the Confederate prisoners confined on Johnson's Island in Lake Erie. From time to time I learned that the arrangements made were such as to insure the most complete success. A large amount of money had been expended, and just as our gallant naval officers were about to set sail on this expedition, the English authorities gave information to the enemy, and thus prevented the execution of one of the best planned enterprizes of the present war."

THE VIRGINIA CAMPAIGNS.

TO TAKE RICHMOND.

IN advancing against Richmond the Army of the Potomac has a great many possible lines of operation, owing to the possession of the whole seaboard. In a former article it was pointed out that the Orange and Alexandria railroad was not available as an aggressive line against Richmond. It is, however, the essential defensive line for Washington and the North. Warrenton and the north bank of the Rappahannock is a good position. The communications are short, only fifty miles, and cannot be turned. If acted upon by way of Fredericksburgh, the enemy exposes himself in a difficult country to be thrown into the river; if by our right, the enemy's communications *are much more exceedingly thrown upon Mattaponi and Chester Gaps at Front Royal, or even through Manassas and Chester Gaps at Front Royal, or even through Manassas and Chester Gaps at Front Royal, or even through Manassas

CORRESPONDENCE.

GENERAL ROBERTS' NEW PROJECTILES.

To the Editor of the Army and Navy Journal:

SIR:—Notices have recently appeared in numerous newspaper columns, intended to describe newly-patented projectiles of my invention, for rifled cannon, a breech-loading musket, and a cupped cylindric-spherical bullet for smoothbore arms of all calibres, adapted for use both with and without buckshot. These accounts so imperfectly describe the principles that give merit to these improvements, that I no longer feel justified in withholding myself and to unaccustomed advantages over other similar inventions in current use in our armies and in the armies of Europe.

THE 20-INCH GUN.

My solid shot for rifled cannon is made of *two parts*: the main piece being cast iron, and the other of soft composition of lead and antimony, forming a jacket that covers the entire cylindrical part of the shot. The jacket is cast separately, and fitted together by tongues and grooves. A shoulder is turned around the cast-iron piece, at the point where the conical taper commences, and its depth is proportioned to the short diameter of the shot. From the bottom of this shoulder the iron casting is made slightly tapered for rear, so that the *jacket* is driven up on it by the gas. The hold of the soft composition at this shoulder compresses it up into the grooves of the gun, so as to form a gas-check. The rear end, or the base of the jacket, is hollowed out in such manner as to favor the gas within the projectile, so as to expand the base bullet takes the shallow grooves of rifled small arms. Hollow spaces are cast into the shoulder of the iron casting, forward, filled with the fusible composition, which is expelled by the leaden jacket, when forced up on the spindle.

This jacket is so formed to fit the spindle that its strength is very much relied upon, and is made of such size and strength and thickness that avoids stripping. The tongues are constructed on the jacket, and commence on the inner surface at that half way. They are made to run in a direction from the muzzle the spindle to the shoulder, reinforcing this weaker part. The tongues are made to fit the grooves of the gun, in the centre of gravity forward, and to give uniformity of strength to the hold the jacket takes its entire length.

The tongues of the jacket are so laid as to take hold under jaws in the grooves in the cast-iron portion, so as effectually to overcome the tendency of the jacket to fly off or slip. When this is done, the jacket is thrown entirely off as the dirt differs but little from other elongated projectiles for rifled cannon. It has a shorter long diameter, and notwithstanding the density and weight of the soft jacket below the shoulder, it is lighter than the Hotchkiss, Schenkl or Parrott. The form of the jacket is conical forward. The leaden jacket is the spindle of iron, that the two pieces fly together as though cast into one solid piece. In fact, plunging into soft, tough and tenacious earth, the leaden jacket, even when edges of rock cut out large strips of the lead.

The substantial advantages of this solid shot over any other is as, 1st, to its form.

1st. A more perfect shock of all windage.

2d. A more perfect hold of the jacket below the shoulder, saving with greater certainty any scaling.

3d. Greater precision of fire, effected by the hold of the grooves the entire length of the jacket, and below the shoulder, avoiding the wobbling motion of other shot, that only take the grooves at the end or in the centre. This shot leaves the gun with its axis in the line of the centre of the bore and of the gun, and rotates round its own axis without the slightest variation or other irregularity causing drift or deviation from the plane of fire.

4th. No portion of this shot, except the soft jacket, comes in contact with the bore and grooves of the gun or its chase, and it passes them little or not at all worn.

5th. It can be used in guns of the softest composition, and while the cost and economy of this shot is made very great a consideration of great magnitude in the economy of the manufacture of rifled guns.

6th. It will enable our Government, at the cost of reiforcing all our soft metal guns with malleable iron and grooving by them, to convert its numerous smooth-bore into rifles, and thus bring into effective service numerous guns that are lying useless in our arsenals.

7th. This shot differs in its usages as far as projectiles can be made to fly, as it closes all windage, compresses the gases with all the force the strength of the piece will admit, and hides the entire force of the explosion.

8th. It can be manufactured at less cost than any other elongated projectile in use in our army, or, as I believe, in European armies.

THE ROBERTS PERCUSSION SHELL.

My shell is so constructed as to gain all the advantages over others, specified in my said shot, so far as range, precision and economy are concerned, in the use of two metals, and the composition of the solid shot, fitted in like manner to each other, the cast-iron piece is truncated at the conical end and cast hollow. It is loaded and fitted to the other shells are, depending on their use for field or siege purposes. The fuse-hole is drilled out into the truncated end of the cone, so shaped as to conform to the curvature of the end of the projectile. A nipple for a strong copper cap is turned at the point of this cast-iron piece, ended or other nipples are, for the passage of the flame of the cap to the fuse-hole of the shell. The nipple is capped by the bumper after the shell is inserted, and the fuse-hole filled. The base of the nipple a deep seam is cut, so that the base of the cap fits down tightly on it, thus preventing any flame from reaching the fulminate of the cap, or forcing the cap from the nipple by the first expansion of gas through the grooves. The cap is pressed down so as to cause the bumper to be the nicrosenum of the shell, and the vent through the nipple, after the shell is charged, is closed by wax, to exclude moisture from the fulminate.

Such is one of the prime advantages of this shell, its safety. It is never exposed until the gunner passes it into the piece, and then when capped, is pressed into the bore before the rammer of the muzzle by his hand. A hollow-headed rammer is then applied, which cannot come in contact with the shell is rammed home with perfect safety. It is thus handled with all the safety of a solid shot, and is liable to none of the accidents that prove so fatal with the time fuse shells, or other percussion hollow projectiles.

The gunner of the right carries the caps in a cap-pouch, and is instructed never to cap the shell until it is passed into the bore of the gun; and the gunner of the left never to apply the rammer until the shell is passed into the piece, *before* the plane of the muzzle.

Small soft pins, headed to be drawn out easily with the fingers, passed into the vent. Are to secure this shell, whether in ammunition wagons or in magazines, from the danger of explosion by the bursting of enemy's shells or burning of issues.

This shell is peculiarly adapted to the destruction of ironclads, and fortifications of masonry. The armor of iron-clads, loosened by the shock and weight of the shot, is by its explosion in the instant of penetration or impact, thrown laterally from the line of firing, offering the greatest possible damage that can be done by weight of shock and the separation of gases. In like manner the granite or brick forming the scarps and faces of fortifications, struck by the shock and weight of the impact of this shell, are thrown down by the forces of the gas exploding at the instant of striking.

It is difficult to conceive how a shell can be built of such strength as to resist the shock of a 300 pound shell, and confine powder enough to be effective for the most powerful fulminates, spending their expanding might in throwing off whatever may be loosened by the shock and weight of the penetrating projectile. For an unprepared combination of bomb-proofs or case-mated works of sufficient strength to resist the repeated shocks of shells that explode in this manner, will require a thickness, from the weight of velocity, weight and rotary force, by the co-working force of expanding fulminates.

This shell, like all others that depend upon hitting point first for precision, is liable at high angles of elevation to proceed in their flight with their points more or less downward surfaces and fly off or imbed itself, without striking the cap or exploding. But it is believed that it cannot so strike or penetrate the earth sufficiently to bury the cap, or even pass through wooden works or buildings, without receiving a blow on the cap that would cause the explosion and its immediate instant.

The great study of the Pyrotechnist has been directed to the attainment of such a shell, such measure as to answer safety in loading and handling, economy, precision, etc., economy of explosion and destructiveness. I have reason to believe that I have better more toward this accomplishment than any other inventor.

ROBERTS' NEW "BULLET," AND "BULLET AND BUCK-SHOT CARTRIDGE."

No officer of any considerable experience in the field has failed to see the necessity of a bullet that will load and buckshot cartridge than that of the old smooth-bored musket, whose destructive range at the maximum is 80 and 100 yards. It is known as a matter of fact that the rifle is not suited to the use of buck-shot. It is also known that their weight is such as to compromise the projectile applied to them, they will not fly beyond *three* and *four* hundred yards, at the maximum. Used with the spherical ball in the smooth-bored musket, it is also known that in consequence of windage much of the force of the gas is lost on the buck-shot.

These facts have led me to the study of a "bullet" for smooth-bored arms, that should close windage effectually, and so compress the gases as to impart the maximum of projectile force to buck-shot behind such a ball. Experimented I have been making the past four months, conclusively prove that I have overcome the difficulties named.

My bullet is of lead, and is made up of a cylinder fitting the bore of the gun, with one spheroidal end. The base of the cylinder is hollowed out to the form of gravity greatly quite forward of the centre of the long diameter, toward the spheroidal end. The cupped part of the bullet is expanded by the gas of the charge, so as to fill the grooves perfectly, and offer such resistance to forcing the bullet forward, as to impart to it a projectile power equal to that required to force forward the expanding bullet in rifled arms. In the Minié way I get a range of my "bullet" used in smooth-bores, equal to the range of the rifled musket. It flies point foremost with more certainty than the Minié ball, that is only held up by its rotary motion; because its centre of gravity is placed forward of the long diameter, that it keeps up and flies point foremost without the aid of rotation, and the law of physics that keeps its flight point foremost is as much so as that of the rifled musket ball; it is the law of revolution that keeps the heaviest end of the cylinder foremost.

The theory of this bullet has long been known to military men in Europe, who have made a speciality of the study of balls and bullets but it has never been applied to projectile to the inner surface of the piece, so as to secure flight without tumbling. After five years of diligent pursuit of my own theories, I have built a bullet, now assert, without the chance of contradiction, my complete success.

I have so formed the cup of this bullet as to secure conveniently three buck-shot, and one buck-shot the maximum projectile power of the gas takes effect. Experiments with this bullet and cartridge, the velocity of the bullet is such that it passes off the buck-shot, and that at that distance their penetration averages two one-inch pine plank, taking effect in a thick. Many range with destructive force from three to four hundred yards—as long a distance, it is believed, as buck-shot can be made to fly, in consequence of the weight of the shot and the loss of the projectile force of the gas, and however it may be applied. The bullet, however, bears up, and ranges destructively about one thousand yards.

My experience with fire-arms the past thirty years of my life, has been considerable, and I am convinced by it that the precision of this bullet exceeds that of any of the elongated conical bullets in use in rifled arms. It has a better bearing in the musket, on account of its cylindrical shape, and takes no wobbling or other erratic flight, quite common with many elongated conical projectiles from rifled arms, that depend upon their elongation to affect their gyroscopic hold in the grooves. It is not changed in its exact position point foremost in flying fifteen, twenty or twelve one-inch seasoned pine planks—a fact more than a hundred times demonstrated by experiment with uniform results, that proves conclusively *its fixed law of flight, keeny point foremost.*

These experiments have all been made with an old smoothbored Prussian musket, 68-100 calibre, with which as little was accomplished as was possible; as it is notably the most inferior smooth-bore arm in use in any army.

My object has been to perfect this bullet for use in a newly-projected breech-loading musket of my own invention, which is so chambered as to give yet greater range to the bullet, by the stronger compression of the gases in driving it forward. From this "breech-loader" my "bullet and buckshot cartridge" can be fired with precision five or six times per minute. In my judgment nothing has been yet brought into use in any army so wonderful as the gun and this cartridge can be made.

R. S. ROBERTS, Brigadier-General Volunteers.

DAVENPORT, IOWA, December 22, 1863.

OUR INFANTRY SERVICE.

To the Editor of the Army and Navy Journal:

SIR:—There is probably no one arm of the service which has accomplished more during this rebellion than the infantry arm. The engineers, the cavalry and artillery have either been reorganized, or have advanced their claims for improved organization, we hear of no radical changes in the infantry. It certainly is not because they are not needed.

Experience has found many defects of system, as well in the small details as in the general support of food and dress, and when an occasional hint has been dropped from time to time, while the faint hope that it would be caught up and embraced in some practical accumulation of the Military Committee, no plan of improvement, either in system or detail, has been fairly submitted.

As the battalion is the unit of force in active service in the field, it is proper that this body should be so formed and so handled as to be the most available for the conquest of an enemy, while it should be sufficiently large to be self-reliant in fighting, and capable of offering serious resistance.

Whatever may be the necessities of the case we have demanded either aggressive movements or serious resistance, the latter through the company formation, as limited by law, has been invariably incorrect; this fact sufficiently warranted the conclusion that the basis of infantry formation is radically wrong. Battalions of ten companies were limited to forty-two privates, *except* in certain localities where it was probable they might have active service; thus, in the "Organization of the Army" we find the regiment of infantry rated 3,200 privates, which, if you deduct the "sick" and "extra duty" generally about one-third, you have the fighting force.

The Act of June 17, 1850, Sec. 3, authorizes an increase of regiments serving on the Western frontier, and at remote and distant stations, and so in some cases elsewhere it is presumed that this number would be allowed. But the fact that the number of limited should be reduced to but if the company organization had been perfected by law and not by chance, can be seen only through a gloomy retrospect of the past, and the fact that the crowning energy of our principal military posts was for want of properly-organized garrisons.

As in the olden days of the Cohort and the Legion, so in these more enlightened hours of military science, a company of one hundred should be 100 men, neither less nor With this number, he would feel a pride of position, an independence of character and a self-reliance, which he cannot feel with the corporal's guard of 30 men, left by the accidents of service. When detached for duty with his company he would be assured of the importance of his trust, and he would feel the value of his command. He would drill the company with pleasure, and keep it perfect with all its appointments. The battalion military exhibition stimulated down when he finds, perhaps after he has passed over his command reduced to twenty or thirty men, most of whom are absent from his immediate control in obedience to daily details.

This would not be the case with a proper organization. Let us suppose we have

One Captain	1
One First Lieutenant	1
One Second Lieutenant	1
Six Sergeants (One First)	6
Five Sergeants (One First)	5
Eight Corporals	8
Two Musicians	2
Forty-five Privates	45
Total Enlisted	69
Total Commissioned	4
Aggregate	73

and we have a company which is at once self-reliant and effective.

Now let us add together eight of these companies, and we have a battalion sufficiently large to be well-drilled, and large enough to be capable of offering serious resistance. Let us presume in each battalion we have

One Major	1
One Battalion Adjutant (First Lieutenant)	1
One Battalion Quartermaster (First Lieutenant)	1
One Battalion Commissary	1
One Battalion Commissary's Sergeant	1
One Drum Major	1
Eight Captains, Companies	8
Eight First Lieutenants	8
Eight Second Lieutenants	8
Eight Brevet Second Lieutenants	8
Forty Sergeants, First Sergeants	40
Sixty-four Corporals	64
Sixteen Musicians	16
Six Hundred and Eighty Privates	680
Total Enlisted	593
Total Commissioned	35
Aggregate	628

Now, in this one battalion, according to this plan, we have twice as many soldiers for duty, and at less expense, for the amount of material, than we have in a regiment of ten company's of forty-two privates each: because we have but one field officer, and eight fewer commissioned officers.

Such a battalion should be regarded as the unit of force and drill; two of these battalions should constitute the command of a brigade, and three would compose the regiment, which would be under the colonel's command. The basis of the organization of the new nine regiments is

upon this battalion principle, but the company organization is weak and defective. With such a reform in the status of the companies, the U. S. Infantry would be inferior to none in the world.

A word in regard to the uniforms. The hat is abominable—unfit for service, and unmilitary in style. Give us either a dress cap or a forage cap, but don't put the feather in a slouch hat. The cost is not the proper cut for foot troops—the tail prevents the expert handling of the piece—the color is too black, and catches the dust. The uniform of the Invalid Corps, with an appropriate hat and shoulder trimmings, is the best for the soldier, on foot or mounted. It is cheaper, neater, and has a more soldierly air. In garrison, in time of peace, or when not actually in the field, the white belts, both waist and shoulder, would appear well on the infantry soldiers with the invalid uniform.

COSMOPOLITAN.

Fort S., N. Y. Harbor.

THE VOLUNTEER AND REGULAR NAVY.

To the Editor of the Army and Navy Journal:

SIR:—Newspaper discussions between individuals are rarely productive of results, and are therefore to be avoided; but my attention has been attracted to the remark of "Impartiality" (in your issue of December 5th), and to his reply to the article signed "Justice," which appeared in your third number—the subject having reference to Regular and Volunteer line officers of the Navy.

As your correspondent is naturally of an inquiring turn of mind, he would like to propound a few questions to "Impartiality," prefacing them by stating that, in his opinion, the article referred to was not intended by "Justice" to cast reflections on the Navy Volunteers, which he considers doing its best, but was simply an earnest protest against giving to the commissioned officers in the Volunteer over the meritorious and competent Regular.

Does it not seem a little inconsistent when "Impartiality" alludes to certain line commands, which are "positions of sacrifice" almost in the same breath: this too in face of the statistics of our commerce for the last year?

If it is the case, by any candid man, who knows the service as it stands to-day, that fully one-half of the Volunteer line officers in the Navy are, at this moment, receiving from the Government far greater compensation in a pecuniary point of view *and in position*, than they ever had previous to their entry into the Naval service?

The chances for distinction *have not* been given unjustly to the Regular over the Volunteer. Rather the contrary. The younger officers of the Regular Navy have had very much service they may have performed under flag, find it difficult to obtain commands; while those of Acting Masters and Ensigns of not one-half their merit have, through accidental influence, obtained such preferment. "Impartiality" goes to the Navy Yard—the Regular appointed to a vessel.

The record of promotions at the Navy Department alluded to by "Impartiality" is exactly what "Justice" complained of, and has no unfair advantage in the Volunteer over the Regular. The latter are denied promotion for performing the duty or service which brings promotion to the Volunteer, for instance—

An Acting Master commanding a naval vessel, or an Acting Ensign serving in one, gains an "honorable mention" or performs some gallant act under fire: he is immediately advanced a grade and gazetted for gallant and meritorious service. This is as it should be. Where is the single Regular officer (save the very few mentioned by "Justice") been promoted to higher rank since the war broke out? And yet look at the record of those who have been thus favored, by the reports of the Hon. Secretary of the Navy. Again, how many of the blockade-runners captured or destroyed by the *South Carolina*, *Santiago de Cuba*, *De Soto*, and others, all commanded by officers of the Regular Navy? Have any of them either been promoted? Not one!

"Impartiality" alludes in triumph to the records of the Navy Department. There is, however, one *little* item in that record which does not mention, and that is between the 1st August, 1861, and 1st January, 1863. Two hundred and seven regular officers were dismissed from the U. S. Navy for drunkenness, desertion, incompetency, incompetence, and flagrant offences, and many more assigned to avoid dismissal. It was probably to this fact that "Berth Deck" alluded to in his savage growl published in your issue of the 28th. "Jack" knows the difference between the "sheep" and the "goats," and the former regimen of our large seaports. As "Impartiality" alludes to *that record* at the Department, why not publish the whole of it?

It is absurd for "Impartiality" to draw comparisons having the pretension of fairness, expressed or implied, as the best answer to that is that the junior officers of the Volunteer Navy prefer to be commanded by Regular officers. These statistical records will undoubtedly show that the war broke out there have been several cases of mutiny on board of vessels commanded by Volunteer officers, and one Volunteer officer has been sent to the State prison.

As to competency to handle a "man-of-war," (your correspondent has not been a merchant's man all his life, like Waterman or Black Ball system) we will leave that to be determined by the sailor *men* of the Navy; and the old tradeshe about our seamanship in merchant service has been, since this war brought the two bodies in contact with each other, to use a cant phrase, "pretty well played out."

The best plan is the Regular Navy for the Regular, who, like "Impartiality," have made "pecuniary sacrifices" in the service who have sacrificed their own homes—holes of our men-of-war, and who have by their personal dust as petty officers worked their way aft and won their shoulder straps. Those who have commanded the basest-holes of our men-of-war, and who have by their personal dust as petty officers worked their way aft and won their shoulder straps. Those who have commanded the basest-"Shovels" in the American Navy, and the service is very proud of them.

Your correspondent does not desire to see the incompetent Regular officer, of which there are some, stand in the way of the competent Volunteer. But if there are officers in the Volunteer Navy entitled to promotion, there is a law of Congress, approved July 17th, 1862, which will give them that promotion.

Finally, I think that if "Impartiality's" question contained in his seventh paragraph be fairly answered, that the answer will be in favor of the man who devotes his whole life and energies from boyhood to his beloved flag and country—who knows no greater glory than to live and die in his country's service—who is not, as "Impartiality" would covertly sneer, mistaken "at great expense, since *so many* can repay the country for the services rendered by the officers of the "old Navy"—who has no "pecuniary sacrifices" to make, and, if he had, would look on the good taste and cause not to prate of them—who has upheld through long years of adversity and in every quarter of the globe the renown and invincibility of the American Navy—who at this moment is battling heart and soul to preserve the star-spangled banner from glorious ruin.

In conclusion, let one who has seen a good deal of the Volunteer Navy since this war broke out, and who is neither blind to its merits nor its faults, give "Impartiality" a "paternity," *who is a Volunteer*, a piece of advice. Take a blue pill and purge, and then go home and rest at Florida. If he has anything in him, his Admiral or Commander will assuredly find it out and reward him accordingly.

RECORD.

OFF CHARLESTON, S. C., Dec. 18th, 1863.

CHAPLAINS.

To the Editor of the Army and Navy Journal:

SIR:—I noticed in the last number of your paper an article by a chaplain, which sets forth with great vividness and accuracy the trials of his co-laborers. Your correspondent makes one statement, however, a chaplain is not, as he asserts, "a commissioned officer." Though "mustered into service," he has another commission, now current—nothing but the appointment of the commanding officer, upon the recommendation of the company commanders and field officers. The unpleasant position in the service is that of the soldier, (though the sutler is not mustered in), and it seems to me that the degradation of Christian ministers in the army is the very worst evil item in the bad treatment the chaplains receive, and in fact the beginning of all their woes. Adding an anomalous position they receive anomalous treatment.

This Congress, I trust, will do what is right in the premises.

E. D. M.

ASCENT OF THE YANG-TSE RIVER.

To the Editor of the Army and Navy Journal:

SIR:—I noticed in the last number of your paper an account of the ascent of the Yang-Tse River, by Captain Bowers, R. N., who carried a ship of 1000 tons burden as far as Hankow.

In May, 1861, the U. S. East India Squadron, Commodore Stringham commanding, ascended the Yang-Tse. The *Hartford* (flagship) was a sloop two hundred miles above Nankin, and there remained. The Commodore transferred his flag to the *Preble*, which vessel he ascended with that vessel and the *Dacotah* (1000 tons burden) to Hankow. The *Dacotah* remained at this city nine days, while Commodore Stringham, in the *Saginaw*, ascended the river two hundred miles further.

LT. U. S. N.

SERVICE ON LAND AND ON THE SEA.

To the Editor of the Army and Navy Journal:

SIR:—In your issue of the 28th of November you published a letter from me against prize-money in the Navy and Army, and in favor of a uniform system of pay; and of December 26th appear to differ from me on that point, still I think I shall be able to show that the views then expressed by me are not without foundation. I shall endeavor to divide my objections into four heads, which I will consider in their order. My first objection is, that but one-tenth of the Navy are entitled to prize-money in distribution,—during his own case and that of two-thirds of those in FARRAGUT's squadron, at least, it was a positive injustice to those who serve under the same flag, but on different elements, and are, in many cases, subjected to the same dangers, should, without delay, be abandoned as a failure.

In his "secondly," "Master at Arms" leaves the subject of the prize-money, and proceeds to show that the officers and crew of the Navy in that the Army is furnished with clothing, while the Navy is not; and that the price of clothing is raised very much. Now, Mr. Editor, this is not so, affects the point in question very little; for, by his own showing, *two-thirds* of the officers and crew of FARRAGUT's squadron at least, as none ever finds its way there. Any clothing, however, has not in its advanced prices been behind the Army. The Army has a contracting digger with a plow. The third objection offered is, that the Army is free from the baneful influence of sub-provisions, while the Navy is not. The first article of "Master at Arms'" bill of fare on land, can of course get all the fresh provision they want, either from sutler-traders; and as thinks the editor, who, with the rest of us, has had an opportunity of testing the truth of the proposition. Our troops at Harrison's Landing, and elsewhere, have suffered for those of us in the Army have experienced enough of storms on land to know what it means. If it is hard to go aloft on a cold windy night, how much harder for the military beat on picket, where no fire can cheer, and no sound or friendly sight enliven; but where the death-dealing bullet of the guerrilla may at any time lay the sentry to rest? Moreover, when the sentry's tour of duty is over, to what warm bunk does he retire? And, after a sleepless night of watching, how far may not his weary limbs be forced to drag him before the next day. In considering his last point, there is no need for my explanation, as he has done it for me; the aid of their States may keep away starvation from the soldier's door; but certainly, it is far from right that the families of sailors should be placed on a different footing from those of our soldiers.

Still, according to his own proving, nine-tenths of the Navy are now without the aid supposed to be derived from prize-money, now so unequally distributed. How much better to make the money thus gained a "fund for the benefit of all vessels doing duty on the coast," on another of your correspondents suggests? Let me request your correspondent "Justice" to look at page 1168 of Vol. I. of "Navy Register," and to take a glance at page 198 of your edition of November 21st, 1863. There he will find a sufficient refutation of his arguments. There the names of those who cried, in each of which a lieutenant, ranking with an Army captain, received $38,039 for one, $7,791 for the second, and $6,730 for the third,—the lowest of which is more than twice the amount of the pay received by an infantry captain for three years by over $1,000. The second cruise was more successful, for $10,000 a piece. In the case of one of these prizes, had "Master at Arms" been fortunate enough to have been on the capturing vessel, his share would have been the round sum of $25,452. What honest captain in our Army could, even with the strictest economy, have saved such an amount as that since the rebellion has been in progress? Let me assure the officers of the Navy, that the rigors of a summer or even winter campaign on land would be borne heavy by me with the most Christian fortitude, had I been a sharer in any of the prizes above named; and this not only for myself, but the officers I might have thereby borne to myself and family.

WASHINGTON, Dec. 28th. AN OFFICER.

THE MANUAL FOR THE SWORD.

To the Editor of the Army and Navy Journal:

SIR:—In the mass of military works published since the commencement of the war the writer has been unable to find a satisfactory manual for the infantry sword. Will not some one of your many correspondents furnish information for the use of the same? The manual for the sword in General SCOTT's tactics says: "The sword has four instructions how to "draw," "carry," "salute," "parade rest," and "return sword." LINE OFFICER.

WASHINGTON, D. C., Dec. 15, 1863.

MASTER'S MATE.

To the Editor of the Army and Navy Journal:

SIR:—Those who know anything about the shore treat of the U. S. Navy are aware that every day generally devolving upon an Acting Ensign is required of Masters Mates in the Navy, although the rank of the latter's salary is not one-half of the former's. An Ensign is supposed to be a watch officer, and a Master's Mate being a subordinate to the Ensign, the Masters Mate is out of his exacted watch duty. Ensigns command divisions of guns the same do Master's Mates. In fine, all duties devolving on one are required of the other. Therefore a Master's Mate virtually being Ensigns, permit me to enquire why they should not in a pecuniary sense be *Ensigns?* Their salary expenses in boarding and washing are not any the less. Indulgence to which they are exposed is not one particle less. Their promotion will be the same. Why should they not be the same? Will not some one who can, do something for the Master's Mates of the Mississippi Squadron? Will not the Hon. Secretary of the Western Navy do not seek pecuniary advantages?

MASTER'S MATE.

TRIAL TRIP OF THE RE D'ITALIA.

THE Italian iron-clad frigate *Re d'Italia* has made an effort at Genoa to test her speed on shore as her trial trip in Fortress Monroe, with a pleasure party of invited guests on board. She left New York harbor on Sunday morning last, and when off Sandy Hook ran ashore on a spot of rocky shoals, rushing along at thirty revolutions of the screw, and with only five hoilers supplying steam. Subsequently, in order to make the most favorable speed, she was put under a full head of steam, making forty-two revolutions of the screw and *going a little over eleven knots an hour.* At this rate she would be doing about 13 knots engine got out of order, owing, as was ascertained after a night spent in the examination of the machinery, to the fracture of a small piece of coppersmith in the steam-pipe, had been forced by the pressure of the steam into the cylinder, breaking one of the valves, and the consequent failure of the steam to work the bolts out of the piston follower, which, in their turn, came near breaking out the cylinder head. The cause being found out, the machinery was put in order, and the vessel left for New York. While on her way here, owing to some misunderstanding of her steering, the vessel went ashore in a fog a place called Wardell's Beach, about two miles and a half from Long Branch, shortly after midnight on Monday. In the afternoon of the night, communication was established with the shore by means of Surf Boat No. 3, which put out in answer to signal guns. A deputation was sent to New York to make arrangements for getting assistance, and pilot writers and the Navy Yard, all of whom responded promptly. But all attempts to pull off the ship with the tugs or by her consent were in vain, and on the night of the 22nd Tuesday evening by getting out all the heavy anchors on board, and using a capstan, all which both officers and crew worked with a will, assisted by a gale sent down by the Wrecking Society. About again, she steamed up to the city, where she now lies, waiting permission from the Navy Department to put her on the dry-dock for repairs. It is thought she has sustained little damage.

The Navy Yard authorities think that the *Re d'Italia* will have another trial trip, as this will hardly be considered satisfactory test of her powers. Such experience as she has with her, would be invaluable to the Navy Yard authorities at sea, making, as above stated, eleven knots, being completely under the control of her engines, and moving as heavy sea nearly as easily as an ordinary wooden vessel.

The design for the monument to Robert Fulton has lately been on exhibition in this city: parentheses are Mr. H. J. Brown, the sculptor, and Mr. R. M. Hunt, an architect of this and genius. The credit of the design has been given in some papers to Mr. Brown exclusively, and it is by his desire that we make this correction.

SYSTEMS OF FORTIFICATION.

THE GERMAN SYSTEM.

It is more for general convenience of reference, than indicative of a just classification, that the phrase *Germans system* has been used: for, as compared with the other systems we have mentioned, it has so far less marked identity, and is rather *negatively* a system, as opposed to the French *treés*, than positively so, in having a common *trait* of its own. It is rather the great practical *bodygood of available works*. So, while we have in VAUBAN an original idea, *the bastioned front* and *all detatchers*, upon which to base not only the name, but all future investigations, we are obliged to study all the odd constructions among German fortifications, and, by a not very satisfactory induction, approximate a general law, which we call the German system. While we have numerous writers on the systems of VAUBAN, CORMONTAIGNE, MONTALEMBERT, and CARNOT, we believe there is but one who has undertaken to digest the German system into a written work.—General BRENN, of the Russian Engineers, is the author to whom this is entitled "On the origin and nature of the new fortifications of Germany."

The system consists essentially of intrenched camps for large armies, with flanking towers and large intervals, independent detachable works, and sunken. The towers and independent works, as a general thing, follow the plans of MONTALEMBERT, which we have already said were suggested at least by the towers of the Swedish General CAMARARME.

It is claimed that simplicity is the basis of the system that in the defence of a place a value proportional to its cost. Where there are extended fronts, as in MONTALEMBERT'S polygonal redoubtings, the defence is rendered the best possible by central flanking casemates. Another point, esteemed of great importance, is that the work should be protected from enfilading and ricochet fires.

Instead of the merely embrasured, or even single-casemated, artillery defence of the French system, it is intended that the artillery of the place should be superior to that of the attack, *of its own*, and *of the besieged*, (i. e. the artillery of the siege, but near its close, or rather when the enemy is near the work. This is effected by the two, three, or more tiers of casemated batteries, which concentrate a point-blank and plunging fire upon the approaches. That it is required that the enemy should dispute every foot of the ground, and that he should be made not over fresh, but several independent works, each of which is supposed to be able to resist the siege, and all of which flank and support each other.

The objections to these important works are manifest. They require, in a siege, entirely separate garrisons. Bodies of men are required to hold that the grand idea of heavy masses is lost. Each separate commander must judge for himself as to the propriety of holding out or surrendering, of sorties, etc., and thus the single responsibility of one mind, the unity of action, is lost.

In the German system, in the most general manner, of the principal systems of fortification, we have done no more than invite attention and study to this important subject. It is only by the careful examination of the details, that the advantages and disadvantages of the various plans become evident. To address ourselves to any elementary system is not only wrong, but, when this is done through national prejudice, it is puerile and absurd. The Frenchman rejects what is German because of its name; for having, under his great Emperor, stalked proudly through Germany a dozen of times, he can scarcely think that anything can produce it therefore he clings tenaciously to his hastions, and will have none of the strong towers and casemated caponniers. The German returns the scorn with interest, and discards even the manifold good things in the bastioned front, because they are French bastions. Neither of the European world profit from which to choose, should be above such petty tenacities of prejudice; and combine in our works the reciprocal defences of VAUBAN, the strength of MONTALEMBERT, the vertical fire and sorties of CARNOT, and whatever of benefit we may derive from a careful study of the German fortresses. Let this be the American system.

OUR GENERALS AND SOLDIERS.

The London *Times* of December 14th, in a general article on the American War, complains that the conduct of it is the more military history, and asserts that it might almost be written beforehand. Months of preparation and inaction are succeeded by a fiercely-contested and sanguinary battle, ending in one or line of extraordinary length, and ending at last with the result, but that of no great victory in which no either side is never improved, nor the advantage followed up, "except in the exaggerations of the telegrams." This indecisiveness, which in reality does not exist to the extent stated in the *Times*, is attributed by that paper purely to the assumed fact that this is a "war conducted on an enormous scale, without trained generals or disciplined soldiers. "Prodigious hosts of volunteers take the field under the "command of men who but a few months before were mere "civilians," etc.

The taunt that our generals are untrained and our soldiers undisciplined, has been so often repeated in the *Times* and other European journals, that it becomes interesting to inquire into the grounds on which their opinion is based. And first, what constitutes a trained general? It is, of course, military education, and actual experience in the field. In either of these respects have the Generals of England, France, or any other European country, advantages which are not enjoyed by American Generals? Nearly every general who has achieved military success in the service of the United States, has received all of his thorough training of West Point, whose educational system is not surpassed by that of any institution of the kind in Europe. Nor have they been trained in the school of theory alone. Most of them have had a personal part of war on the frontier and in Mexico. In point of fact, our generals have seen more field service than the majority of European generals. The English have engaged in but two important wars since the downfall of NAPOLEON, and one of these was a campaign against the Russian barbarians, the other a protracted siege, in which the want of skilful generalship was painfully conspicuous. France has had an excellent school for soldiers in Algeria, and it was a graduate of that school that carried away the honors before Sebastopol; but neither in the Crimean war or in the short campaign which resulted in the expulsion of the Austrians from Lombardy, was there any approach to those feats of generalship which rendered the Napoleonic wars so illustrious in history. The battle of Magenta is called a French and Italian victory but had not the day been the third instead of the part of a French struggle, the morning after the battle, that the Austrians were withdrawing from the field, the world would have beheld the singular spectacle of two armies running away from each other, each under the impression that it had been defeated. Such are the facts in the case, and such, and so much by good generalship on the part of the French, as by excerably bad generalship on the part of the Austrians.

But if our generals have no reason to shrink from a comparison with those of the great military powers of Europe, how is it with those who command, (or rather did,) our host of undisciplined volunteers? So far from being undisciplined, the majority of our troops now in the field would be classed as veterans in any army in Europe. Probably no other nation in the world contains as many men who have been under fire, as ours; and the same remark will serve on the march and in the field as the United States. The flings of the London *Times* are but another cropping out of that wilful ignorance on American topics, which has characterized that journal from the time when it transported Fortress Monroe "to the mouth of the Gulf of Mexico," to its latest criticism on our military affairs.

THE LAUNCH OF THE DICTATOR.

A third and successful attempt was made last Saturday to launch the turreted iron-clad *Dictator* from the yard of Mr. H. Delamater, foot of West 13th street, Dutch street, in this city. The huge vessel slipped off from the ways at 3 minutes past 2 o'clock in the afternoon, without the arrival of many of those interested to observe the proceeding. Once she was in the water, a large crowd assembled on the adjacent piers and satisfied their curiosity by a sight of the vessel.

The keel of the *Dictator* was laid one year ago last September, and she has been built in the most careful manner under the watchful supervision of Government officials. The dimensions of the hull of the vessel are as follows:—Extreme length, 312 feet; 34 feet; the aft overhang being 31 feet, and forward overhang 13; it leaves 260 feet of immersed bottom; draught forward, 15 feet, and depth 221 feet. She lies low in the water, like the original *Monitor*, but essential changes have been introduced in her construction, which will render her undoubtedly much her skin in of wood, 3 feet 6 inches in thickness. Her armor is 11 inches thick; first there are solid beams five by three feet, then comes the armor of the ship. This armor extends four feet below the water line, six feet from the deck. The remainder of the hull is covered by one-inch plates. The weight of the armor is about 525 tons—the burden of a pretty large-sized steamer. The one turret will be of an improved construction, special care being taken to avoid the accidents which have proved so fatal on the earlier Monitors. Its armor is to be 15 inches in thickness. The machinery for turning the turret has been improved, and the new bar which was added to the turrets of the last batch of iron-clads since the disabling of the *Passaic* will be adopted on an improved principle. The bar is 10 inches thick and fastened on with bolts. The gear of the turret is different from that of the *Passaic*, and will much better. The turret complete will weigh 500 tons, or thereabout. The ram is 22 feet of solid oak and iron, and extends from the top of the armor of the ship. The decks are perfectly clear of all incumbrances except the turret. The armor of the deck consists of 2 inches of iron, laid on in two plates of one inch each, and is flat, like the sides. The main deck—that on which the crew and officers are to live—is a very commodious one, being as high as the ordinary gundeck of a large frigate in fact, the ship is ventilated by three immense blowers, two for the use of the vessel generally, and one for the express purpose of ventilating the engine-room. These blowers are of immense size, about 72 by 48 inches. An air trunk, supplying a blower eight feet in diameter, is within about 35 feet of the stern. The air to supply the other blowers is drawn from the top of the turret and distributed through the ship. The machinery of the *Dictator* is of a very powerful character than that of any man-of-war built in the country or in Europe. The cylinders will not be the largest in diameter, but the longest, and are bolted into two massive wrought-iron beams, 10 feet deep and some 24 inches or more in width. They are both in line, athwart ships, and have single crank and expansion valves, the latter working over the former. A peculiar feature of the machinery is the absence of guides, crossheads and other cumbrous parts. The piston, 4-feet stroke, has a trunk attached to it. The boilers are immense, six in number, and have 56 furnaces and an aggregate grate surface of 1,100 feet; allowing 12 pounds of coal per square foot of grate surface the fires will require at the least 170 tons of coal per day of 24 hours steaming at full speed. The engines will be capable of 1,500 horse power, and will weigh 420 tons altogether without water; so that when they are completed they will weigh over 700 tons. The propeller is a right-handed screw, 24 feet in diameter, with 24 feet pitch, and weighs 39,000 pounds. There is no out-board framing for the shaft. What piston speed will be obtained from the engines remains to be seen. The propeller is a well, and cannot be struck by any projectile, as a shot would be lost in the water before it could reach or strike it. The engines are calculated to be something in the neighborhood of 5,000-horse power.

The launch of the bottom, which is so unfortunate a feature of iron-clads generally, is to be prevented by the use of "ship ties." The Government has responsible parties for furnishing the same, and their purity can be relied on. Commodore JOHN ROGERS will command the *Dictator*.

FROM THE SOUTH.

A RILL is before the rebel Congress, and likely to pass, retaining all now in the rebel service in service till the end of the war, without regard to their terms of enlistment. That Governor of Arkansas, Governor Rector, a great slave among the rebels is evident from the Richmond papers. They expressed fears that he would reach Danville and release the native gunners there, and some thought that he might go completely around Richmond and come out in North Carolina. There is significance in the fact that the conference between Rector and Gen. Price from Richmond to Columbia, S. C.,—on account of scarcity of provisions and difficulties of transportation at Richmond, the rebel papers say. Eason's foundry at Charleston, has been destroyed by fire. It is reasonable to suppose that its destruction was occasioned by the explosion of several GILLMORE shells. The court of inquiry called in Richmond to investigate the circumstances attending the capture of the city of New Orleans and the forts below, has only to report that WEITZEL, under the command of Major General MANSFIELD LOVELL, has made a report in which that General is not only exonerated from all blame, but commended for great energy and extraordinary capacity in his position. Capt. ALEXANDER, the commander of the Richmond Fire Department, has been relieved of his command and placed under arrest, preliminary to being tried by court-martial, on charges of having extorted large sums of money from persons employed under him in that institution, promising to use his influence for their benefit, and in some cases of permitting the prisoners to go at large upon payment of large amounts of money. He is also charged with trading largely in greenbacks. The Richmond *Dispatch* trusts that Congress will not fail promptly to pass the bill which was introduced to reduce the salaries of every officer who permits himself to be surprised. The fund for a statue to Governor WISE has reached \$2,000, the cost of it coming from the soldiers who served under him. The Richmond *Examiner* of the 19th of Dec., says: "We are in fact defenceless to-day. The Confederate army is only fit for wrapping paroles. Confederate swords are as harmless as if they were made of lead. Confederate notes are treated as if they were no more valuable than candle lighters." General LEE returned on Dec. 21st, to his headquarters on the Rapidan. The Legislature of Alabama has by resolution voted that the beautiful carpets that covered the floors of the Senate Chamber and the Hall of Representatives, all offices and committee rooms be relegated to the unfinished Capitol at Montgomery, shall be cut up and given to soldiers of their army for blankets. A special correspondent of the London *Times* writing from Richmond says that the Confederals are now inveting the ports of Secessia with a cordon of vessels sufficient for the first time in history months to make access to the confederate coast really dangerous and difficult. The *Times* correspondent at the headquarters of the confederate government says that the feeling in the War is approaching which will test more than ever the stubbornness and tenacity of the South. He pays a high tribute to the magnificent self-sacrifice and devotion displayed so contrasted with the luke-warmness of the Southern masses. The same correspondent says it is safer to go into action than to take a back seat in the Confederacy. He was two days and two nights in getting from Chickamauga to Richmond, a distance of 500 miles. General LEE has returned to the military service, during the months of September and October, from the States of Alabama and Mississippi, twenty-six thousand conscripts for the infantry and cavalry.

On the 28th of November Major-General Peck had the satisfaction of announcing the surprise of White's camp, and the capture of some sixty rebels, one hundred stand of arms, and many stores, by a small force under Captains Graham and West. Now he publishes another brilliant affair in the vicinity of Kinston, by Lieut. Bulkley of the 58th Pennsylvania Volunteers, who, with one hundred infantry, marched forty miles in twenty hours, and captured one Colonel, one Captain, and thirty-three men, thirty horses and saddles, four mules, and much valuable property, without the loss of a man. Lieut. Bulkley and his guide he will present for promotion, as well as such others as shall do likewise.

THE Supervisory Committee for the enlistment of colored troops (of which Thomas Webster is President and Cadwalader Biddle, Secretary), has established a military school for gratuitous instruction of such persons as propose to seek commands in colored regiments. The school is to be conducted by Col. H. Thorpert, late Colonel 12th Regiment Pa. Reserves.

THE POTSDAM GUARD OF WILLIAM I.

"PLAYING at soldiers," a disease from which many princes suffered during the last century, had taken the strange turn with Frederick William I., King of Prussia, that he insisted on having, not only the most, but the tallest soldiers. Owing to his exertions, one of the great curiosities of his capital was the Potsdam Guard,—a collection of giants such as the world had never seen before or since. As recruits of such a size were naturally scarce, the King not only sent out recruiting officers to look them up, but had special agents in foreign parts, with orders to enlist tall fellows for the guard. No expense was spared in the matter when the proper means and representations were not despised. Mr. Carlyle has collected a great many anecdotes on this head, to which "Fraser's Magazine" and "Blackwood" have added another curious assortment, not generally known, from the copious archives of the Saxon Court, which Count von Weiss has recently published under the title of *Aus Vier Jahrhunderten*.

How the King took advantage of every opportunity to increase his collection of giants, is proved by the events of 1735. When the last battle of Stanislaus Leczynski for the Polish crown ended with the fall of Dantzic, the Prussians followed him to Königsberg, and saw that there was no better way of securing Frederick William's favor than to promise to procure him tall recruits. A number of young Poles consequently signed agreements, by which each one of them bound himself to present the King with a tall gunsmith. The Bishop of Wilna did this too, and pledged himself not to quit the Prussian States till he had fulfilled his obligations. He was unable to do so, however, as the King, who wished to return to Poland after the treaty of Vienna, he attempted flight, but was stopped at Königsberg. Maximovitch, who was entrusted to bring the Bishop to reason, had to do so for the following reasons:—"I would readily attempt to bring him over as a convert, but unfortunately I tried to dethrone the King of Prussia, or attempt his life; "but to interfere for a person who had promised tall men "would be considered by the King as the most dreadful consequences without the slightest hope of success."

Although, as we have seen, Frederick William was treated to excite the saving powers of his subjects, his vigilance, he used to extol his own sanctity at slighter cost, and personal virtues. If he saw in the streets a well-built and good-looking citizen or peasant, he attempted to enlist him; and if he did not find a readiness to obey, "H. M. fastened "him to a post there, which is a punishment for which he "hauled him off thus to the main-guard." A respectable position was no protection against such force.

The grossest perversion did not escape the recruiters, and they anticipated the rising one. The officers hunted down all boys who promised to be tall; sent non-commissioned officers to the houses of parents suspected of such a list; gave them a pass; and made them wear a red gravat. Although a parent might be willing to spare a tall son for some of the boys, the parents liked them the less, because they had to pay a heavy sum to buy them off. Thus no less than 2000 thalers were demanded for the redemption of the late son's discharge. Excesses and collisions of various descriptions were the result. A cobbler, whose son came home drunk with the new uniform, and refused to be given him, drove him back with his strap, saying that the captain might find him in his room. He was put on support-soldiers; whereupon the officer was induced to take the prisoner back. A peasant behaved much more tragically; for he fled with a knife in the head of a recruiting officer who took his son, and fled. The matter was hushed up, and an order was issued that the recruiters should refrain from entering houses, and remain content with the tall men found in the streets.

The King's passion for "long fellows" was played on not only by officers, who wished to obtain promotion in that way, but also by others; for it was notorious that the promotion of tall servants to Corporals and Sergeants in the service his surest even to the most unjust propositions. How far this went is proved by Maximovitch. A rich man, living at Königsberg, had relations in Poland, and married or quarrelled; the result was, he resolved to leave his fortune away from them. They consequently applied to the King, and promised him a number of tall men for the Potsdam Guard, if he would imprison the rich cousin for life in Spandau. The proposal was accepted; the unfortunate cousin was induced to move to Cleves, where he was arrested, and he had been some weeks in the fortress, when the King's death probably liberated him. The Bishop of Wilna had much to his Prussian cousins. The King of Denmark had the greatest difficulty in procuring the extradition of a runaway criminal, and had murdered a gigantic groom before he was positively compelled to exchange twelve tall recruits for him.

It need not surprise us to find that soldiers who had been enlisted against their will showed no devotion to their colors, or that desertions were frequent in spite of all precautions, escapes were made now and then. One of the handsomest fellows in the front rank of the Potsdam Guard, a Bohemian by birth, had gained the heart of a wealthy widow in Potsdam; but permission to marry was refused him, and the lovers fled to Leipzig. They took their measures cautiously; they left the city before daybreak in a carriage drawn by swift horses, and had relays in readiness as far as the Saxon frontier. Nevertheless, they missed till eight o'clock, P. M. The King was in the Tobacco College, when a sergeant arrived to make the report privily to him; and the eye-witness, who reported the scene to Maximovitch, declared "that he never saw a more marked terror than this "communication caused His Majesty." The King turned pale, heaved a deep sigh, and in his gruff tone, without saying a word, he left the room: a few minutes after, he sent for an officer, to whom he gave secret orders, and remained profoundly silent the whole evening. The guests assembled in the Tobacco racked their brains in vain about the heavy misfortune which must have befallen the King and the monarchy. Two detachments of hussars were sent after the deserter,—one along the road to Saxony, the other towards Magdeburg; and the strictest investigation was made, in order, at least, to discover who had helped the couple to escape. But all was in vain. They were never seen again in Prussia.

A tall Englishman, who had been led to enlist by the misrepresentations of an officer of high rank, took personal satisfaction. The fugleman met his tempter, whom he had not seen since in the Saloon-yard of Potsdam, just as he was going to the King. Regardless of subordination, he challenged the gentleman; and, as the latter would not listen to his complaints, the fugleman gave him such a thrashing that he was compelled to keep his bed for a week. The King was reluctant to give greater publicity to the affair by punishing the culprit, and ordered it to be kept a profound secret.

In another letter we read of a regular plot on an evening in September, 1724. The King was smoking a pipe in the Tobacco-house at Potsdam, when a sergeant approached him, and on being asked what he wanted, replied that he had a secret communication to make to the King. After the Majesty had dismissed the bystanders, and the drummer stated that upwards of twenty soldiers, mostly Frenchmen, had sworn to escape together,—to defend themselves to the utmost, and, if they could not help it, they had consequently tried to supply themselves with ammunition. Three of the accused were arrested, and a large number of bullets were found upon them; but they had been unable to procure any powder. When the King had one of the leaders brought before him, he commanded him to fire. The latter—for this hat on his head *à la Mordien*, steamed his fate in his soles, and said that he would not stand it any longer; he was bewitched, and he had sworn before the King had put him hung the latter." This wish, however, in which several of his comrades joined, was not satisfied. The chief criminal did not long live in this world, and none of the second was flogged by the hangman; both were declared infamous, and sent to Spandau for life, while the remainder ran the gauntlet.

Several of the impressed wretches even sought relief by inflicting themselves with dangerous wounds: we reported to us in which desperate men murdered others merely to suffer death. A young noble, belonging to a rich and respected family, had completed his studies at Leipzig, and was then recalled home, when, to his sorrow, his great height attracted the attention of a recruiting officer. He was carried off by force, and made a non-commissioned officer. But he melancholy lot for a whole year, but then earnestly implored his discharge, which was refused, and he then threatened to commit a crime if he were kept any longer. His parents hastened to console him, and induce him to wait a little while longer. The Prussians had meanwhile left the station, and he rushed into the street with the resolve to stab the first person he came across. A child was his unhappy victim. When the news reached his parents, they announced himself as the murderer, while openly confessing the fact in the hope of saving their son. The beginning of 1738 a fugleman at Potsdam slew his landlord, and also declared, upon examination, that he had only done it in order to be punished, as he had in vain tried by all possible means for his discharge, though he had served his time. He was condemned to death; but the King, who was not disposed to make a full exposition of the matter, which would have pardoned him, had it not been objected that an example was indispensable.

Notice had been found in the streets of Potsdam to the effect that a certain number of men, who could not obtain their legal discharge had sworn to fire the city, and not stop, till their demand was conceded. As this did not take place, one of the soldiers discharged a pistol at the King during a review, held on May 15th, 1717; but, as he was drunk, he missed his aim, and was already aim, and his person in the ribs, instead of the King. Reports of similar attacks in earlier years are also hinted at by Maximovitch.

It is a pleasing feature to find that Frederick William showed no leniency, but earnestly rejected the cruelty to which his hiring for tall soldiers led. Shortly before his death he conversed with the crown-prince about the Potsdam Guard, and declared frankly enough he had acted "in making the regiment his hobby, and spending above "700,000 thalers upon it. He also declared that he should "have spoken as a fool before God, if he had left a false *point d'honneur* prevented him. To this confession he added, he hoped that the prince would not move wisely on succeeding him, and dissolve the fellows." On the day after his father's death, Frederick II. informed the regiment of princely will, "that the oath of allegiance, that any men who desired their discharge should receive it, the ranks, and it would be granted at once. Only one man, however, came forward, and he was not intended to depart, but should now remain. According to Maximovitch only one battalion of the giant regiment was in existence in July, 1740; the rest had been distributed as boyhacks, discharged, or sold off to other regiments.

THE LATE MAJOR-GENERAL BUFORD.

The following General Order, issued by Major-General Pleasonton, commanding Cavalry Corps, Army of the Potomac, is dated Dec. 17, 1864:

The Major-General Commanding has the painful duty of announcing the death of Major-General John Buford, Commander of the 1st Cavalry Division.

This sad event occurred in Washington on the 16th inst., after a lingering illness contracted in the field, from exposure and hard service.

General Buford entered the Army in 1848, as a Brevet 2d Lieutenant of the Dragoons, and was soon after promoted to the 3d Dragoons, in which regiment he served until the present rebellion broke out, having acquired the rank of Captain, with a high reputation for skill and determination.

In November, 1861, he was appointed an Inspector-General in the Cavalry Service, with the rank of Major, in which capacity he remained until July, 1862, when he was tendered a commission as Brigadier-General of Volunteers, and assigned to duty with the Cavalry Army of the Potomac.

The intelligence and sagacity which General Buford so conspicuously displayed as a division commander, have been frequently acknowledged and commended from these and higher headquarters. To enumerate all the brilliant acts of his career would not be attainable within the scope of this order.

The country and the Army will remember with deep gratitude the services rendered by Major-General Buford, and his noble division in front of Gettysburgh on the 1st day of July last, by holding the rebel army in check, until the First and Eleventh Corps could arrive into position. The Secretary of the United States has gratefully recognized this service by his promotion to the rank of Major-General.

Spared through the perils of a hundred combats, a distinguished commander has thus suddenly fallen, by the insidious hand of disease, while in the prime of life, and with a glorious future before him. His memory remains to be cherished by his comrades-in-arms with all that is honorable, patriotic and gallant.

As a testimony of respect, the colors of the 1st Cavalry Division will be draped in mourning for fifty days.

By command of Major-General Pleasonton:

C. C. Suyam,
Official: Assistant-Adjutant-General.

THE LATE BRIGADIER-GENERAL CONCORAN.

An Order issued by Major-General Augur, commanding Department of Washington, in relation to the death of Brigadier-General Corcoran, who commanded the division at Fairfax Court House, says:

The Major-General Commanding announces with deep regret to the 22d Army Corps the death of one of its Division Commanders, Brigadier-General Michael Corcoran. He permitted to die battling for the cause he so warmly espoused, an all-wise Providence has cut him down by one of those accidents so fruitful against which human foresight cannot guard.

The original commander of the 69th New York Volunteers, Brigadier-General Corcoran was taken prisoner at the Battle of Bull Run, carried to Richmond, and by many months of rigorous confinement in the Confederate Capital, he was appointed a Brigadier-General by the President, and organized the Brigade known as the Irish Legion. Ordered to the Army of the Potomac, he served with distinction in the operations on the Blackwater and Peninsula under Major-General Dix. Transferred to the 22d Corps in June, 1863, he had, since that date, commanded successively a Brigade and Division occupying Fairfax Court House and surrounding country.

The Major-General Commanding sympathizes with the troops he lately commanded in the loss they have suffered, and commends their well-earned reputation of the Irish Legion he draped for thirty days.

Admiral Dupont.—A correspondent of the Evening Post says:

A few days since I spent a pleasant hour with Admiral Dupont, who commanded the Port Royal expedition, more than four miles from this place. With the knowledge that he has been forty-eight years in the naval service, engaged in active duty for the most of that time, I expected to see a man with some severe marks of time upon him. My first impression, therefore, was one of astonishment. I met a man with few men of more erect, commanding and vigorous appearance. He is a picture of robust middle age, and the signs of "going down" are not about him. His step is full six feet. His contour of his head and face is decidedly striking. A full, clear eye, large features, and a general expression of candor and manliness, are prominent. His English style, and hair not more gray than many a man shows with twenty years less to carry, is the best short description I can give of him. The impression which I received that we find in the ships is good, "as far as it goes," he does its subject pose pointer. I would not write these personal lines without expressing my belief that the men of Congress that our old naval officers are all *passé*. Whatever may be their opinion in respect to others, this is not the case with Admiral Dupont. I could not help thinking that our country must be rich in vigorous and noble men to spare him from active service.

Statistics of the Military Academy.—The total cost of the West Point Academy since its establishment in 1801, including the money expended for the land, erection of buildings, pay of officers, professors, and cadets, pay and subsistence of the faculty and cadets, &c., has been $7,435,235 70. This makes the average expense of educating a cadet $1,547 82, and not $1,000 as has been alleged. Out of the total number admitted, 4,626, but 2,030 cadets have been graduated. Up to the year 1813, the classes had been small, and the number of graduates about 30. In the 1812 the war with England awakening the martial spirit of the country, the classes began to increase, 85 entering that year, and the following year 168 graduating, which had before or has since entered the Academy. It numbered 1,076. Since then the number of graduates and yearly admissions fluctuated, the greatest number being 117—for class of 1857—and the lowest 60—the classes of 1844 and 1845. The class admitted in 1861 numbered 97. Of the students admitted to the Academy from the year 1802 to the year 1863, 1,782 were appointed from the Southern States, and 2,844 from the North. Of Colonels 19 are "regulars," and 2,375 from the Northern or free States and Territories. Of those who came from the South 187, or considerably less than one-third graduated, and of those who came from the North 1,194, or about one-half graduated.

Information has been received at the Department of State to the effect that orders have been given by the Spanish Government of France to the Commander-in-chief of the French naval forces in the Pacific ocean to place in a state of blockade the entire line between Panama and San Francisco shall continue to enjoy the privilege, notwithstanding the blockade, of touching at Acapulco, in order to renew their stock of coal which they may need for the completion of their voyage; it being understood, however, that these vessels shall not leave or receive any passengers at that port, or any merchandise.

The value of the prizes captured by our Navy since the commencement of the rebellion is said to amount to over $100,000,000.

ARMY AND NAVY PERSONAL.

CITIZENS of four counties in "Egypt," Illinois, have sent General Grant a fine horse.

CHARLES E. Lathrop, of Iowa, has been appointed Naval Storekeeper at the Washington Navy Yard.

GENERAL Rufus King, the newly appointed Minister to Rome, has arrived in Paris, on his way to the Eternal City.

CAPTAIN Ruthrauff, who dismissed the service on account of his difficulties with Lieutenant Cutts, at Cincinnati, has been restored to his rank and position.

THE enlistment of veteran volunteers is proceeding with great vigor in the Department of Washington. More than two-thirds of the present force will reënlist.

BRIGADIER-General Robert O. Tyler succeeds the late General George D. Ramsay, in command of his division at Fairfax and House and vicinity.

BRIGADIER-General Carleton, commanding the Department of New Mexico, has appointed Lieutenant Colonel Francis W. Wood, 1st California Vols., side-de-camp upon his staff.

ACTING Masters Hamilton and Hamlin and Second Assistant Engineer Cogswell and Hamlin, captured with the *Hornet Jane*, have arrived at New Orleans on parole.

MAJOR-General Grant has issued an order appointing Brigadier-General Alvin P. Hovey to the command of all the troops now raised or being raised in Indiana.

BRIGADIER-General Ullmann, who was reported to have been captured and sent to Richmond, was in New Orleans on the 19th instant.

ON Christmas day a magnificent gold American chronometer watch and massive gold chain were presented to Captain E. B. Jackson, U. S. A., by his friends in Armory Square Hospital, Washington.

CAPTAIN McNally, 166th N. Y. Vols., who was riding with General Grant at the time of his death, has had given him himself thrown from his horse, and has his leg broken above the knee.

BY command of Major-General Foster, Brigadier-General Jacob Ammen, U. S. Volunteers, is assigned to the command of the District of Middle Tennessee, with headquarters at Camp Nelson.

FIRST Lieutenant Henry T. Schroeder, 1st Regiment North Carolina Union Volunteers, is announced as Acting Assistant-Adjutant-General at the headquarters of Major General Butler.

ASSISTANT-General Schouler, of Massachusetts, has again opened at his post in Boston. He still suffers from the severe illness, but will soon regain his ordinary strength, and be able to attend to the manifold duties of his office—a consummation devoutly to be hoped for by his friends.

IN accordance with instructions received from the War Department, Captain Frederick Martin, 1st Regiment Loyal Eastern Virginia Volunteers, is mustered as Additional Commissary of Musters for the Department of Virginia and North Carolina.

A SPECIAL Military Commission convened at Fortress Monroe Dec. 28th. Detailed for the commission: Brigadier-General J. J. Wistar, U. S. V.; Colonel H. T. Sanders, National Guards; Major J. M. Bell, A. D. C.; Major Peter Haggerty, Recorder.

BRIGADIER-General Wood, of the Army of the Cumberland, has left for the United States on account of private affairs, a reply to the allegations in Rosecrans' report that he was responsible for the second day's defeat at the battle of Chickamauga.

SURGEON Henry Cuyahant of the 1st Virginia Cavalry, formerly Medical Director on General Stahl's and General Sigel's staff, has been appointed Surgeon in charge of the Libby regiment, now in camp at New Creek, Western Virginia.

GEORGE Alexander, 1st D. C. Vols., temporarily commanding Corcoran's Division, narrowly escaped death a few days since. In attempting to leap a fence, his horse fell with and upon him. He was picked up for dead, but soon recovered, and is again at his post.

COLONEL Chas. G. Sawtelle, the Quartermaster attached to the Cavalry Depot at Giesboro, Washington, has resigned, has been relieved, and Captain James A. Ekin, Quartermaster, has been ordered from Indianapolis to take his place.

THE Russian Admiral and seven Captains of his fleet visited upon Major-General Butler, on Saturday last. The Admiral and Captains thought that every thing was as it should be and was intended, but should send part of his fleet to Annapolis to winter, while he made a trip to the West Indies and returned.

THE week of the Board of Examiners of Officers for Colored Troops last week was comparatively light. The whole number of applicants was twenty-four, of whom seven were satisfactorily passed and recommended, as follows:—One captain, three first lieutenants, and thirteen second lieutenants.

AMONG the recent appointments to the grade of Brigadier-General of Volunteers is that of Lieutenant-Colonel James B. Wilson, Assistant Inspector-General of the Department of the Tennessee, and also a Captain in the Engineer Corps of the Regular Army. This officer was appointed on the express application of General Grant, on whose staff he has served for more than a year.

EIGHT officers were nominated as Major-Generals to the Senate on Thursday last. No nomination for Brigadier-General was sent in. Three of the nominees, Generals A. W. Whipple, John Buford and George G. Meade, are dead. The others are Generals David D. Bidwell, William T. H. Brooks, Alfred Pleasonton, John M. Schofield and Quincy A. Gillmore.

THE Richmond *Examiner* of the 28th contains the following interesting item:—"The three officers placed in irons at the Libby, to be held as hostages for the safety and good treatment of three of our soldiers, held in the South for the safety of the same number of Yankee officers of negro regiments, said to be in confinement at Fort Delaware, Captain First Rhode Island Regiment, J. B. Ritchfield, Captain Fourteenth Maine, and J. L. Kendall, Captain First Massachusetts. The names of the officers of negro regiments now disguised as the Libby, have not yet been disclosed."

GENERAL Hancock, although his strength is not fully restored, has gone to the army and assumed command of his corps. He was advised by his physician to go, as he would enjoy more quiet and have a better chance to recover in the army than in Washington.

MAJOR Nelson H. Davis, Assistant-Inspector-General, U. S. A., has been relieved from the Army of the Potomac to the Department of New Mexico, and his been announced as Inspector-General of that Department, *vice* Major Valley, who has been ordered to the command of Fort Sumner, at the Basque Redondo.

MAJOR-General Thomas, in General Orders, has designated Colonel H. A. Barnum, commanding 2d Heavy Artillery and Forty-ninth Regiment New York Volunteers, and Sergeant-Major Mortimer B. Badaley, of the same regiment, to be Lieutenants in the Regular Army. Chattanooga, to take to Washington, D. C., and deliver to the Adjutant-General the flags captured by the Army of the Cumberland from the rebels.

ASSERTIONS having been made in a Western paper that General Hooker needlessly sacrificed a thousand men in the fight at Ringgold, Ga., the Baltimore *American* says it may be well to state that in the late campaign General Hooker's command was in four battles, beside several skirmishes, captured over two-thirds of all the prisoners, arms and camp equipage taken, and seven pieces of artillery, with a total loss of between 1,500 and 1,600 men.

BRIGADIER-General Wesley Merritt, who now commands the division lately under General Buford, deceased, is a graduate of the class of 1860, and entered the Cavalry. He served on the Peninsula as side-de-camp to General Andrew Porter, and afterwards on the staff of Major-General Hooker. He was also on the staff of General Pope, in Virginia, and was soon after appointed brigadier-general of volunteers for gallantry in the action at Beverley's Ford. He is about twenty-eight years of age.

COLONEL Williams, commanding at Roseville, Arkansas, has secured for the Government, baled and in process of ginning, one thousand bales of cotton; and has, within reach of camp, one hundred thousand bushels of corn, and is gathering one thousand bushels per day. He has put in, at the Mississippi River, one hundred thousand pounds of pork. All of this is being done by one regiment, and the subsistence of the entire train, besides running two mills and hunting bushwhackers generally, several of whom have been captured.

LIEUTENANT-Colonel Lord Alfred E. W. Gordon, was married on the 22d inst., at Montreal Cathedral, by Pro Lord, ship the Metropolitan, to Miss Ella Magruder, daughter of Lieutenant-Colonel Magruder, late U. S. Navy, and niece General Magruder, commanding Confederate forces in Texas. Among those present were the members of the Magruder family, the bride's uncle, Major-General Lieutenant-General William, K. C. B.; Major-General and Lady Sarah Lindsay; Colonel Connolly, who acted as best man, and a number of officers of the Guards, comrades and friends of the bridegroom.

THE following commissions have been issued by the Governor of Massachusetts:—Major-General—Major I. Harris Hooper, of Boston, to be Lieutenant-Colonel, *vice* Joslin, promoted; Captain Lyman H. Ellingwood, of Beverly, to be Major, *vice* Hooper, promoted. Twenty-third Regiment—Second Lieutenant George V. Barrett to be First Lieutenant, *vice* Fiske, resigned; Commissary-Sergeant Henry B. Perce to be First Lieutenant, *vice* Wetherbee, discharged to be Captain and Commissary of Subsistence, U. S. Volunteers; Second Lieutenant (First Veterans)—Sergeant Albert W. Fessenden (2d Heavy Artillery) to be First Lieutenant. Fifty-seventh Regiment (Second Veterans)—Captain R. P. Hollister (31st Reg't Vols.) to be Lieutenant-Colonel. Fourth Regiment of Cavalry—Second Lieutenant David E. Reith to be Captain; First Sergeant Thomas J. Copeland, Captain David W. Kimball (51st Regt M. V. M.) to be Second Lieutenant. Fifth Regiment of Cavalry—Sergeant Andrew Chapman (4th U. S. Cavalry) to be Second Lieutenant.

ITEMS AND INCIDENTS.

THE fair for the Sanitary Commission, lately held in Boston, produced $145,000.

DURING the week 1,000 federal prisoners in Richmond on the 18th instant. There were eleven deaths among them on the same day.

GOVERNOR Andrew, of Massachusetts, ordered that a National salute be fired from Boston Common on the first of January in honor of the Amnesty Proclamation of the President.

BY order of the War Department, the county of St. Mary's, Md., and counties of Northampton and Accomac, Eastern Shore of Virginia, are annexed to General Butler's command.

ABOUT $7,000 have been collected lately at Paris for the Sanitary Commission, and the sum will be largely increased. A concert is to be given in the Chapel of the Rue de Berry in aid of this fund, at which the performers will be all amateurs and ladies.

GOVERNOR Yates, of Illinois, has issued a proclamation ordering the Assistant Provost-Marshals of the United States, in the State of Illinois, to cease and all persons recruiting white or black men in that State for companies or regiments in other States.

THE Spanish Government has proposed to the United States Government to submit to the arbitration of the King of the Belgians the question of the sea territory, as regards the Island of Cuba. The distance is fixed at cannon shot, or three miles, which it is now contended ought not to be measured from the coast, but from the small islands with which Cuba is surrounded.

MAJOR Sturgis was at Morris Island, S. C., on the 19th of December, as agent appointed by Governor Andrew to pay the soldiers of the 54th and 55th Massachusetts Regiments the same bounties for the same offences known their pay and that of white soldiers. The whole amount due, including arrearages, is about $70,000; of this they have made allotments of $30,000, leaving $40,000 due them.

IN accordance with instructions from the Emperor, the Russian Minister, Baron Edward de Stoeckl, has had an audience with the President for the purpose of presenting the thanks of the Imperial Government for the kind reception of the Russian fleet in the United States. Autograph letters from the sovereigns of the United States, and also the testimonial extended at San Francisco to a Russian corvette, the *Admiral Lazareff*, on her departure, was cordially received and courteously acknowledged by the President.

GENERAL Hurlbut compliments the colored soldiers engaged in the late fight at Vicksburg, Tennessee, by issuing an order saying that "the recent affair at Moscow, Tennessee, has demonstrated the fact that colored troops, promptly disciplined and commanded by officers skilled in their duty, and the General Commanding Corps deems it to be due to the officers and men of the 11th Regiment West Tennessee Infantry of African descent thus publicly to return his personal thanks for their gallant and successful defence of the important position intrusted to them and now assigned."

INSTRUCTIONS have been issued from the War Department directing that on and after the 5th of January next no United States Treasury notes other than one hundred dollars authorized by the law of July 22, 1861, promulgated in General Order 49 of that year, will be paid to any soldier entering or re-entering the volunteer service, or re-enlisting. This order does not affect the bounties paid by States, cities, or parties other than the United States. Persons who have enlisted or re-enlisted will receive their pay in such denomination as those who enlist prior to the 5th of January next; all the notes of three hundred dollars more in bounty than such as enlist after that time.

MR. Frank Moore of New York, proposes a plan to purchase a large tract of land to be occupied as a Soldier's Home, and the land to be so chosen by soldiers that the land shall have the facilities for doing so, at regular and proper prices, for farms, and also to pocket money: and for such as choose to practise their former business facilities will be provided, where they can labor at will, paying a regular price for the ground occupied and facilities for the accommodation. The stay of each man will of course be voluntary. He assigns no pension for but one year at a time: at the end of that time he can stay if he chooses; if he can better himself, he is at liberty to go elsewhere.

LIEUTENANT-Colonel Greene, Chief Quartermaster of the Department of Washington, has removed the headquarters of fifty additional boxes at "Greene Heights," on the Arlington estate, on the same plateau of ground, where the "Freedmen's Village" first began so beautifully located. The new buildings will be of the same style as those in the "Village," and will accommodate the contrabands who have been heretofore living in the Arlington House, on the side to Potomac, which has been broken up, and the inmates of which will be transferred to the "Village" as fast as work. The contraband camp at Alexandria will also be broken up in a few days and the freedmen put to work by Colonel Greene, on the "Greene Farm," as soon as houses have been prepared for their reception.

LATEST FROM EUROPE.—Our latest European dates are to December 22, 1863. The English Government approves who assisted in fitting out the *Sea-Queen* for the rebels. have been dismissed for a violation of the neutrality laws and the names of all persons on the English roll of the naval reserve who have served on rebel vessels are ordered to be struck off. The Liverpool *Albion* says that all persons who belong to the naval reserve will be struck off and not be allowed to re-enter the service. It is stated that the steamer *Vanderbilt* had seized the British bark *Sceva* in British waters, on the supposition that she was about to run a cargo of the American ship *Conrad*, previously captured by the pirates. She was sent to New York with a prize crew. President Lincoln's message was published in full. It was considered unsympathetic in England. The Liverpool *Post* says that Lord Lyons, in a recent interview, expressed his strong disapprobation of the American war within three months' time. It is stated that the rebel Government have made full provision for the payment of the interest of the 6's of 1863 on the 1st inst. The London *Army and Navy Gazette* regards General Lee's failure to follow General Meade in his retreat as a proof of the weakness of the rebel army, and in regard to General Meade's futile advance it says: "With good generalship, Richmond ought to have been the prize." The opinion is of no value. The *Gazette* is more accurate in its knowledge of American geography than most English journals; but its criticisms of American military operations are more than the prominence sometimes given them in the dispatches sent to papers in this country. It is stated that the capture of the ship *Rattler* on the east coast of Mexico, by a rebel cruiser, is regarded as unjustifiable. The Emperor of the French has made a brief and pacific speech in response to the address of the Senate and Corps Legislatif. The French loan is to be raised by public subscription. It is said that the Emperor of Russia has declined accepting the Crown, offers from the rebels a recognition of the Empire of Mexico, and asks a recognition of the Confederacy in return. The question of arrears of pension in regard to Confederate ships in French ports is this: When the American Minister had obtained and presented to the French Government positive proofs that the vessels were built in France for the Confederate States were in fact for the Confederates, the authorization for the building of the ships was withdrawn, and before one or more of the vessels had been sold to the Prussian Government, and that it was on this vessel, or these vessels only, that work had been resumed. When it was represented to the Government that the sale to the Prussian Minister might be a fictitious one, and that positive proofs of the contrary ought to be given, these might easily be furnished, it was replied that such proof had been promised, and would in due time be furnished. This has not been done up to the present. The Holstein question remains without change.

NOTICES TO CORRESPONDENTS.

The Editor of the JOURNAL will always be glad to receive from officers in the two services, communications of a general character, or a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a voucher of good faith.

Officers are especially requested to give an early notification of all movements of general interest; of the movements of vessels; of casualties among officers, and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to technical and other matters.

From personal knowledge of the material service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and recent forms of armament.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Subscriptions may be made in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their present address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The publication of the JOURNAL is strictly cash in advance, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, JANUARY 2, 1864.

THE STARS AND BARS AFLOAT.

NOT the least interesting of the series of official documents which have lately been made public, is the Report of the rebel Secretary of the Navy, MALLORY, which has just seen the light. Considering that the rebels have not now a single port in their possession, and not a single ship of their own afloat, there is a strong temptation to assimilate this Report of rebel *naval operations* to the famous chapter "concerning snakes in Iceland," by the work of the good bishop, and which was all comprised in the single sentence: "There are no snakes in Iceland." Mr. MALLORY might with more truth entitle his Report "Operations of our good British naval friends on our behalf."

The rebel naval Secretary sets out with the remark that "the operations of this branch of the Confederate "service have been chiefly confined to preparations "for ridding our waters of the enemy's vessels now "blockading our seaports." But the present condition of our blockade does not seem to indicate that they have met with very brilliant success in this laudable undertaking. The *Nashville*, designed to break the blockade at the mouth of the Ogeechee, was blown up by a shot from the *Montauk*. The *Atlanta*, considered the most formidable iron-clad of the rebels, and which came down from Savannah with two attendant steamers crowded with a gay party to witness the destruction of the Union fleet, was in five minutes knocked into a kite by the *Weehawken*—a bit of the naval history of the past year which the rebel Secretary most unaccountably forgets to make any mention of. The only remaining attempt to break the blockade made by the rebels during the past year, was the attempt of the three Charleston rams to sink our squadron off that harbor. The exploit gave BEAUREGARD the occasion to write a flaming proclamation, announcing to the four winds of the earth that the Federal blockade was raised: but this was its result, for it turned out that the rebel rams had suffered more damage than the wooden blockaders, and our sea-dogs continued none the less their watch and ward over Charleston Harbor.

The next department of the rebel naval operations embraced in Mr. MALLORY's Report comprises the doings of the privateers; and on this head he is able to blazon some successes of moment. The *Florida*, in her year's work, has captured and destroyed vessels and property amounting to several millions of dollars. The *Alabama* has been even more successful; and her commander, SEMMES—

> ——"the mildest mannered man, '
> That ever scuttled ship or cut a throat"—

comes in for MALLORY's most mellifluous praises. It appears that during the year he has captured ninety vessels—"*seventy of which were destroyed*, the others "being either bonded or released." Without at this moment entering into the vexed question as to whether our Navy has done all that ought to have been done and this might have been done for the extermination of these rebel sea-rovers, it is only too well known that their successes have been so great as to drive the carrying trade almost entirely out of American bottoms. Whereas, our mercantile marine formerly held two-thirds of this trade and England one-third, the relations are now reversed—England absorbing two-thirds, and leaving one-third carried in American bottoms.

The rebel Secretary peaches on an important point, in the acknowledgment that the English and French iron-clad steam rams were contracted for by the Confederate agents abroad. Mr. MALLORY's remarks on this head are as follows:

> "In accordance with the order of the President, early in the present year, I dispatched several agents to England and France, with orders to contract for eight iron-clad vessels, suitable for ocean service, and armed with the ordinary armament of the wooden vessels of the enemy. These ships were to be powerful, and specially designed expressly to break the blockade of each of the ports not yet blockaded by the iron-clad Monitors of the enemy. Five of these vessels are now completed in England, and three in France. Due precautions were taken against contravening laws of England in the construction and equipment of these vessels. Three have been completed; but owing to the unfriendly construction of her neutrality laws, the Government of England stationed several war-vessels at the mouth of the Mersey, and prevented their departure from England. Subsequently they were seized by the British Government. Another and larger vessel has been completed, and while it is doubtful if she will be allowed to leave the shores of England, although it is believed the precautions taken are sufficient to exempt her from the fate of the others, the vessels being constructed in France have been subjected to no many official difficulties, that I have forwarded instructions to cause operations upon them to await the result of negotiations now pending shall permit our agent to resume work upon them."

This information will add little to an assurance amounting already to moral certainty: but it is worth while to have the official acknowledgment thus explicitly made. LAIRD's dodge of fathering them on the "Emperor of China" and the "King of Egypt" will not do after this. And the acknowledgment is the more significant from the fact that there is still some reason to fear these rams will yet get out some time or other. Not but that we give the British government full credit for a sincere desire to act justly in the matter, but that government has already shown it too many cases its impotence to enforce respect for its own neutrality law to give serious grounds for wariness and apprehension. Matters look as if we might express the hope that in the case of the new and larger ram just completed sufficient precautions have been taken "*to except her from the fate of her consorts*," and the very fact that the French government has been willing to enter into any "negotiations whatever" for those under construction in France is also ominous. It need hardly be said that the permission, by either the British or the French authorities, for any one of these vessels to issue on the high seas under the rebel flag would be a cause of war. We presume our Government has made itself plainly understood in this regard; but it becomes the country to be watchful.

A review of the rebel naval operations as a whole, from the time of the inauguration of hostilities, though exhibiting some successes, does not inspire a high idea of the capacity of the rebel leaders for conducting sea warfare. Certainly their conduct of naval affairs has not manifested a tithe of the skill, energy, and talent that have marked their military policy. Their mode of obtaining and fitting out privateers in British ports has been of a nature to bring discredit on that business even in England. Had they, instead of adopting the easy but, for them, misguided policy of arming and equipping the purchased vessels in British ports, home or colonial, manning their British sailors, and then seeking the high seas to prey upon American commerce, been content to run the vesselsinto some Confederate port, manning, arming and equipping them there, and thus baptizing them with a quasi authority, they would to some extent have freed them from the imputation which their course attaches to them, and, above all, would have enabled their British sympathizers to have freely rendered them aid and comfort. But the course the rebel authorities have taken has rendered it difficult for even the Lairds and Lindsays, with all the warmth of their "sympathy," to stand up against the stigma that attaches to the fitting out of rebel cruisers in England. Besides, with greater energy they might have put far more privateers afloat —not merely one or two *Alabamas* and *Floridas*, but scores of them, filling the high seas and playing the saddest havoc with American commerce. Any one of the hundreds of light ocean steamers that during the past three years have run the blockade, might, if armed with a couple of guns, or even a single gun, have rendered very effective service. The paucity of steamers, indeed, an objection, and it is a great one; for with the extent of sea-coast that fringes the Northern States, the proportion of population devoting itself to sea-faring pursuits is astonishingly small: but this might have been provided for—seamen might during the past three years have been *made*, just as they have made soldiers. Then, all their destructions have been blunders—first the destruction of the ships at the Norfolk Navy Yard, then the blowing up of the *Merrimac*. It is, however, very far from our purpose to teach the rebel leaders how to manage their nefarious affairs: we simply wish to point out this feeble and uninstructed policy in regard to naval matters as one of the influences working favorably for the side of the right. It is said that the gods first dement those whom they design to destroy; and the ill-judged manner in which the rebels have conducted their warfare on the seas has almost the appearance of retributive blindness.

GLORY ENOUGH FOR ALL.

SUCH were the words with which NAPOLEON THE GREAT consoled one of his generals, who was despondent because of the small modicum of glory which fell to his share in a certain campaign. It is a pregnant text, in a more extended signification, from which to encourage all those gallant men who have hazarded their lives and sacrificed their comfort in the present great war. Disloyal men long cried out, "there is no glory to be gained in this fratricida war," and many ignorant persons, who were unable to form opinions for themselves, echoed these words, and made little of the noble heroism, the great battles, and the brilliant successes which have been displayed and achieved. These fallacies have been fully exposed. Never was it truer in the eyes of the country and the world that it is "sweet and glorious to fight for one's country" never was there patriotism which will be more richly rewarded with the choicest guerdons of history than that which has been manifested on our hard-fought fields.

But leaving the political phase, let us look a moment at the military philosophy of the question. A glance at the pages of all history will show us that military glory is the most stirring and enduring of any kind. We forget the internal troubles of ancient Greece; the quarrels of Phocis and Thebes; the democratic and aristocratic controversies of Athens and Sparta, when we come to consider ALEXANDER's passage of the Granicus and the Issus; the oblique order of EPAMINONDAS at Mantinea; the clever engineering at the siege of Platæa. We do not stop to ridicule FREDERICK THE GREAT was fighting about, when we fancy SCHWERIN leading his stormers upon the parapet of Prague, and falling, albeit a marshal and an octogenarian, like a simple grenadier, in the attack. When we read of Waterloo, we neglect claims, rights, and alliances, to charge with NEY, to stand with the English guards under the withering fire until the Iron Duke utters the magic words; to hope with NAPOLEON that GROUCHY will come back, or to echo WELLINGTON's agonized cry, "Night or BLUCHER!"

We would not for a moment undervalue the great cause in which we are now fighting, nor will history forget to stere it among the best causes; but we mean to say that there will always attach a transcendent interest in our *military* history. Considered apart from this, the peninsular campaign, with its checkered fortunes, will be a great study for all future ages. The siege of Vicksburgh will challenge the admiration of men as a military feat, when Ciudad Rodrigo and Badajos are forgotten. The capture of Fort Wagner, and the doleful sounds of the "SWAMP "Angel," throwing fire and consternation into Charleston, mark an epoch in the history of war. Gettysburgh is greater than Waterloo, in action and results; and the recent brilliant movements at Chattanooga give new lessons both in strategy and tactics. To have participated in these is great glory, now and forever, and when peace comes, there will be no greater claim to place, power, and renown than for a man to be able to say, "I was in the Army of the Potomac;" "I was "with GRANT at Chattanooga," or "I was with GIL-"MORE at Charleston"; and there is glory enough for all. There need be no envy, no fear, no bickering. Impartial history will do justice to all, and that justice will be great and enduring glory.

BY a recent prize decision of the United States District Court in this city, the schooner *Hattie*, which was captured last June, off Wilmington, by the U. S.

steamer *Florida*, was restored to THOMAS HILYARD and others, who proved to the satisfaction of the Court that they were loyal men, that the schooner belonged to them, and had been captured by the rebel privateer *Retribution*. The loyal owners were required to pay one-eighth of her value as salvage. The cargo, however, was prize, and the proceeds of its sale will be distributed.

MAKING WAR SUPPORT WAR.

EXPERIENCE is gradually bringing us up to the practice of the grand Cæsarian maxim that "war must support war." General HALLECK, complaining that many of our commanders have given themselves too much liberty in this matter, states that instructions have been given to the generals operating in hostile territory to subsist their armies as far as possible upon the country, receipting and accounting for everything taken, so that all persons of approved loyalty may hereafter be remunerated for their losses. General HALLECK also states that the rebel armies live mainly upon the country through which they pass. It is true that, in all their invasions, both those of LEE into Maryland and Pennsylvania and those of BRAGG into Kentucky, they *took all they could get;* but it is incorrect to suppose that those leaders ever cut themselves loose from their base, or the country they attack, as they are when they very long trains. This is, in fact, one of the inherent difficulties attending military operations in this country: the country, saving in exceptional districts, does not produce enough to subsist a great army. Still, this is no reason why we should not take all we can, and thereby cut ourselves as much as possible of *impedimenta*. The chief obstacle to our doing so during the early stages of the war, was the delicacy imposed upon our commanders, arising from the conviction of the large amount of Union sentiment in the South. In fact it will be remembered how many hands were uplifted in horror, when General POPE, in the summer of 1862, issued his order for the subsistence of his army on the country. We have, however, long ago recovered from any delusion of this kind, and now no general scruples to take whatever he can get, receipting for it, so that persons of approved loyalty may hereafter be remunerated for their losses. Several striking examples have lately been given of the extent to which, in favored districts, CÆSAR'S maxim can be applied. General BURNSIDE, for two months, subsisted his force on the resources of the Valley of East Tennessee; and Gen. LONGSTREET, who has for more than six weeks been wholly cut off from all base of supplies, has still been able, during that time, to find food for his column of twenty thousand men. The rich Virginia and East Tennessee Valley is, however, famed for its exuberance in the great staples that supply armies, and there are not many other parts of the country where the same thing could have been done. General AVERILL, in his report of his late brilliant raid, states that he subsisted his horses entirely upon a very poor country: he does not tell us how much they got to eat.

THE General-in-Chief made a suggestion of the very highest importance and value, when, in his late Report, he proposed that all the various Reports received at the various bureaus of the War Department should be collected and published in chronological order, under the direction of the Adjutant-General's Department. Some have already been published by Congress, and numerous dispatches relating to various portions of our military history are given in the three volumes of the Joint committee on the conduct of the war. In many cases, however, these are only given in fractions, and we have General HALLECK'S authority that they are so incorrectly printed and badly arranged as to be almost useless for historical purposes. The rebel authorities are already ahead of our own Government in this respect, having published a bulky octave volume of official reports of military operations. We fully understand that there are many communications the tone of which cannot yet be disclosed—many matters which it would not be prudent to disclose; and we may have to wait many years before this "secret history" shall be revealed. In the meantime it is of the highest importance that all papers relating to the conduct of the war shall be properly filed, classified, and preserved in the military archives. There is good reason to believe that this important trust is not at present receiving adequate care—that many important papers, reports, etc., are "lost or missing." The General-in-Chief himself gives testimony to this effect; for he states he has not mentioned all the operations of the year, as "*no official accounts or reports of some of them could be found.*" This reveals a deplorable carelessness. Our official records of the war are a sacred depository, with which are bound up the most important interests, both as affecting the glory or the shame of individual actors in the war, and the general truth of history.

THE Duke of Newcastle has written a note to the Governor of the Bahamas, interpreting a point in the rules which govern the admission of vessels of either belligerent to the hospitality of Nassau, or the ports of the islands. These rules, it is may be remembered, have been defined by Mr. RUSSELL, in his dispatch of January 31, 1862; and they provided that no ship-of-war or privateer belonging to either belligerent should be permitted to enter or remain in the port of Nassau, or any other port, roadstead or waters of the Bahama Islands, except by special leave of the Lieutenant-Governor, or in case of stress of weather. Now, doubts having arisen as to whether a belligerent ship-of-war or privateer should obtain the permission of the local authorities before entering the ports, roadsteads or waters of the Bahama out-islands, *when the Governor was not present*, it is the object of the Duke of Newcastle's present note (which bears date of October 6, 1863) to state that at the out-islands *no vessel can enter, the special leave of the Governor himself is required*, unless in cases of grave emergency and real necessity and distress. This regulation adds another to the restrictions imposed on the entry of American war-vessels to the ports of the Bahamas, and these restrictions were already much more severe than those that have governed British neutrality in any other quarter. This peculiar hardship of the case, of course, arises from the marked facilities which the ports of the Bahamas present as *entrepôts* of the Anglo-rebel blockade-runners: and the stringency of the rules adopted by the British Government may almost be said to put a premium on blockade-running. It is true that for any other action than such friendly expostulation as our Government may choose to make; for the British authorities have undoubtedly the right to define the terms of maritime neutrality in such way as they may see fit. But it can hardly be regarded as either a fair or a friendly act.

FROM a private letter published in the *Moniteur de l'Armée*, of Paris, we learn that the insurrectionists in China are deriving much aid and comfort from "a certain number of officers coming from the armies of MCCLELLAN, BURNSIDE and MEADE." It appears that one BURGEVINE, an American, who at the beginning of the rebellion had raised the Anglo-Chinese corps of the *Kiang Soe*, was some months since displaced by another adventurer, the Captain of the Anglo-Dutch army. After several fruitless efforts to reinstate himself in Imperial favor, he took his revenge by deserting to the rebels, with a number of Americans of kindred spirit; signalizing his departure by carrying with him two vessels belonging to his old employers, the Chinese government, which he had seized with the help of a corps of some 300 Europeans, whom he had succeeded in enrolling, arming and equipping in Shanghai itself. After this little specimen of American audacity, BURGEVINE, with his band of Americans willing to serve him, joins the rebels at Sont-Chéon-Fou, the capital of the province of that name, which the rebels have for some time held, in spite of several attacks upon the position by an Imperial force under one, Major GORDON, an Englishman.

Aided by this, to them, important reinforcement, well supplied with arms and ammunition, purchased of Americans willing to serve the rebellion, the rebels had taken fresh courage, and at last accounts the chief of the *Taepings* had assumed the initiative, and was concentrating a considerable force round Nankin. The size of his army is indicated by the fact that at the end of August he had 150,000 men in *Kiang-Nan*, the *Tche-Kiang* and the *Kiang-Soe*.

The Imperial government, alarmed by the change in the aspect of affairs, was making great preparation to attack Nankin in December. The chief command of the active army had been given to *Tseu Ko Fuva*, the ablest of the generals, who, aided by several European officers attached to his staff, had put his troops in so excellent position as to give the rebels much anxiety. The forces of the two parties are nearly equal, but the Imperialists were congratulating themselves that the balance would soon be thrown in their favor by the arrival of a number of vessels which were constructing for them in Europe, and which they were expecting in China toward the latter part of November. As the rebels had no navy, the advent of these vessels was expected to give the government a marked superiority.

So it would seem that the story of vessels building in Europe for the "Emperor of China," are not altogether to be credited to the desire on the part of the foreign shipbuilders to conceal the aid and comfort they are giving to our rebels. While the armies of MCCLELLAN, BURNSIDE, and MEADE" furnish rebels for the Chinese insurgents, the dockyards of England and France are supplying the Imperial Government with the means of defending itself against the assaults of Yankee cunning and skill. Perhaps, however, they may save themselves in another way from the danger they apprehend from the rebels under the lead of that most dangerous specimen of the "outside barbarian," a Yankee adventurer. We have no doubt that under sufficient inducement BURGEVINE and his associates might be persuaded to desert back again: for if they are really American soldiers, it is likely that a comparison of their names with the muster-rolls of our Army would prove that the trick of desertion is not unfamiliar to them.

WE have dates from Richmond to the 25th inst., inclusive, but no news of importance, though the rebel papers contain matter of interest, including the proceedings of the rebel Congress, which are just at present of a somewhat lugubrious nature. The Confederate legislators are getting into a hopeless state in considering the two "greatest needs of the country," as they are described, "to strengthen the army" and improve the currency." The question which "addresses itself most earnestly to our consideration," exclaims one of their Senators, "is simply this: 'Shall the Confederacy stand or fall?' If it is to stand, the pedestal must be built with all our hearts. All "unprofitable and recriminations and differences between the different branches of the Government "must cease. We must determine to stand together "in the common defence, or fall together in one common grave." A question on which they are expending much rhetoric without any result, beyond the introduction of measures of the most desperate nature, such as a bill abolishing the system of substitutes in the army, and compelling those who have furnished substitutes to enter the army in person, at the same time holding on to the substitute. The stories of great dissatisfaction in the rebel army may well be believed in view of such facts as these.

THE negotiations for the exchange of prisoners are again at a stand-still, and again the cause of the interruption is personal. The rebel Commissioner refuses to have anything to do with General BUTLER, whom JEFF. DAVIS has declared an outlaw. Of course this is the merest affectation; but if the Government really wishes to negotiate for an exchange, and was earnestly desirous of settling the pending difficulties, they have made an unfortunate selection in choosing General BUTLER for their representative. We would not advocate too much yielding to the over-nice notions of the rebels—it is for them to come to us and offer us to go to them; but remembering the long imprisonment and grievous sufferings of our men in Richmond, we could have wished that our suggestion of a Commission Extraordinary had been taken up as readily by the Government as it proved acceptable to the Army and people, and men chosen to conduct the negotiations against whom not even the slightest objection could be taken.

THE people are not forgetting their defenders in the field. Chicago, Cincinnati, Boston, Rochester and other cities have lately held immense fairs for the benefit of the Sanitary Commission, and New York and Brooklyn will follow soon with similar methods of raising money for the pressing supplies for the comfort of the soldier. The aggregate of their contributions will ensure the continuance of the beneficent work of the Commission. The evidence these movements afford of the constant and unflagging interest of the people in the Army, and the cause for which they fight, is ground for encouragement and gratulation. The Southern correspondent of the London *Times* was right in declaring that loyalty was stronger than ever at the North, and the determination to conquer at all hazards unbroken.

FOREIGN MILITARY AND NAVAL MATTERS.

THE marshals of France, in accordance with usual custom, are also to assemble in Paris to draw up promotion lists, etc., for the approaching new year.

A COMMISSION, of which Lord CHELMSFORD is to be president, is to be formed in England, to inquire into the state of military jurisprudence, and to report what changes may be deemed expedient.

IT is worthy of remark, says the Mechanics' Journal, that in designing screw propellers, those wheels which have a medium proportionate diameter, a medium pitch and proportionate fraction of the pitch in width or in length of the hub, give better results than extreme diameters, very quick pitches, and large working or superficial area on the blades. Experiments, carefully conducted, support the truth of these statements.

EXPERIMENTS with balloons continue to be made by military men in England. Mr. COXWELL's, moored balloon, now at Woolwich, is filled with 70,000 cubic feet of gas, is nearly ready, and it was proposed to make an ascent in the presence of Sir RICHARD DACRES and the general staff, for the purpose of reconnoitring and reporting the movements of the troops that are to be marched out in different directions.

SOME changes have recently been made in the *mortar*ified of British artillery. The system of carrying the spare wheel in rear of field artillery wagons has been introduced and the screws with the Armstrong equipments of 1859, is discontinued, and the former practice of carrying the spare wheel on the pole reverted to for all wheel and field artillery. A new 9-pr. for 9-pounder or 12-pounder Armstrong guns, fitted to carry the spare wheel on the perch, has accordingly been sealed as a pattern.

LORD NELSON'S coxswain on board the *Victory*, Mr. JOHN PRINDLE, recently died at his residence, Newton Bushell, Devon, having attained the extraordinary age of 103 years on the 19th of May last. He was by birth a Scotchman, having been born in the county of Fife, and on attaining the age of 20 he entered the British Navy. While in the service he took an active part in many of the celebrated naval battles, and amongst others those of the Nile, Trafalgar, and Copenhagen. He had a pension, and at the type age of 92 he married, and his wife survives him.

THE report that Prussia had bought the two large iron-plated vessels constructed for Denmark, and lately embargoed by the British government, appears to have been a *mare'nd*. It is thought, in Berlin, says the correspondent of the London Times, that Denmark would have been very useful in the event of a war with Denmark. An iron-plated screw-ship, to be called the *Arminius* is now constructing in Hamburg for the Prussian government. It is to have two movable towers, each containing two 48-pounders, and to cost 560,000 thalers, or upwards of $4,000,000.

ADMIRAL of the Red, JOHN AYSCOUGH, who died death occurred at the Royal Crystal Palace Hotel, Norwood, England, a few weeks since, had attained the advanced age of ninety-eight years. He was born on board her Majesty's ship *Swan* during a desperate action fought by that vessel while on her passage from North America, under the command of Sir PETER DENIS, the late Captain JOHN AYSCOUGH, and who lost a leg on the occasion. He entered the navy in August 1757. From 1811 to 1825 he superintended the dockyard at Plymouth, and was afterwards for some years Commissioner of the Jamaica and Bermuda Dock Yards. He obtained flag rank November 4, 1841, became Vice-Admiral December 24, 1849, and Admiral on October 3, 1855.

THE British iron-clad frigate *Minotaur* was successfully launched at Blackwall, on the Thames, on December 12th. She is nearly 7,000 tons, about 400 feet long, is protected throughout by armor-plates 5½ inches thick, and is designed to be the most powerful of the largest caliber. She is of the new class of Warriors, the difference between the new and the old being in the thickness of the armor backing. The frames are cases are 41 inches of iron and 18 inches of timber; the *Minotaur* and *Northumberland* class are 51 inches of iron and 18 inches of timber. The *Warrior* is not regarded as an improvement. The work of fitting the *Minotaur* with her iron masts, and generally completing her for sea, will be carried on in Victoria Docks. It will be quite next autumn, however, before she is ready for her first cruise in search of bad weather.

A NEW description of ship's anchor, invented by Mr. MARTIN, and ordered by the British Lords Commissioners of the Admiralty for trial, has been tested by the hydraulic machinery in Woolwich dockyard. A number of scientific persons were present to see the working of the apparatus, which is stated to has been awarded to Mr. MARTIN by the Commissioners of the International Exhibition. The weight of the anchor tested is 24 cwt. 2 qrs. and 18 lbs., and that of the stockless bar 1 cwt. 2 qrs. and 2 lbs. In construction and shape in no way resemble that of any other anchor yet in use. It consists of a shank, two palmed flukes, and a sector with palms, and has no stock. Both flukes take hold of the ground at the same time, leaving no part exposed to the danger of fouling or being fouled, however shallow the soundings and anchorage may happen to be. At the test, the tensile strain commenced at a pressure of 15 tons, which gave a deflection of 1 inch; at 20 tons 2 inches of an inch; and at 24 tons of 5-16ths of an inch, that being the required Admiralty test. The permanent set, 9 tons, gave a deflection of 5-16ths. The strain off, the anchor returned to the same point at which the pressure commenced, and exhibited no permanent deflection. The proof was pronounced thoroughly satisfactory. Arrangements have been entered into to carry out the manufacture of the anchors on a large scale.

CAPTAIN SCOTT lately gave a lecture on "Iron-clads and their armaments," to the naval and military officers at Sheerness. The lecturer commenced by showing that England must look at what other maritime nations are doing in the way of iron-clad and rifled guns that are sufficiently powerful to pierce an enemy's sides; that such guns would of necessity not be less than 12 tons, with large bore, in order to get a high initial velocity with the round ball; which, from the facility with which it could be loaded, would generally be preferred to the elongated projectile and cartridge. He referred to the powerful guns in use in our Navy, and said that the future navy of England should have 7 inches of iron on the water-line portion of the vessel, as a less thickness would not keep out the steel projectiles which Russia and America were making. In his opinion, the class of being heavy-armored ships, should be light iron vessels with a very high speed, which the commander of a squadron might, when closely engaged, signalize to the other ships under his command. The lecturer then explained his proposed plan of building a plated vessel. The Admiral-Commandant and Commanding Engineer invited Captain SCOTT to explain his views, which he illustrated by diagrams of the American and English guns, sections of turret and of broadside ships.

ORDNANCE EXPERIMENTS AT SHOEBURYNESS.

IMPROVABLE trials of guns against iron-plated targets have lately occurred at Shoeburyness, England. The first took place on December 15th, when the 9-pr. rifle gun from Whitworth and Armstrong guns against the "Bellerophon target," recently constructed by Mr. Reed, and designed to represent a broadside portion of the proposed side of the *Bellerophon* iron-cased frigate, ordered to be built at Chatham Yard. The part of the ship tested by the target was the iron skin, the beams and lower decks, and not in the line of ports, the object being to test the strength of the former. The skin was 4½ in. thick, 9 in. long, by 8 ft. 6 in. high, composed of rolled armor plates 6 in. thick, backed by 10 in. of teak, and two 4-inch plates for skin. The beams and lower deck were also of wrought iron and each armor plate through the whole length of the target. The two behind the lower plate are formed of armor 10 in. by 8 in. by 4 in. thick, behind the upper plate of angle iron 9½ by 3½ by 1. Frames 2 ft. apart. The deck was 2 in. thick, and 2 in. sheathing, and those in the upper 24 in., and have conical heads. The 24-in. bolts are double nutted, and the 24-in. single nutted.

In the construction of the target the probability of resisting shot and shell was not alone considered; regard was also had, in arranging its details, to the satisfactory and economical construction of actual ships on the same plan. Its trial was looked forward to with the keenest interest, as on the results mainly depended the form of construction which would be given to our iron-cased frigates will take.

The guns were laid at the ordinary range of 200 yards. The first two shots—a solid 68-pounder, with a charge of 16 lb. of powder, and a 110-pounder Armstrong, shortened to a weight of 66 lbs., and charged with 16 lbs. of powder. The projectations made were very slight, not exceeding a couple of inches. The target was as firm as a rock, and was no more affected by such shots than would be the broadside upon in the light of formidable artillery, than elephant would have been by the bite of a mosquito. A salvo from two 68-pounders and two 110-pounder Armstrongs, with shot shortened to 66 lbs., was next brought to bear upon the target. One gun missed fire, and the first shot struck of the Armstrongs struck the upper edge, and tore away a small piece of the plate, and the remaining two shots struck close to the first, one on each side of it. This was a hard and trying knock, but not a crack was perceptible. The indentations had the appearance as if blue clay had been, when in a soft state, struck with a sledge-hammer, and then allowed to dry or bake in the sun. Then came a 7-inch rifled gun, with 64 lb. shot, which did no damage. Mr. WHITWORTH's 70-pounder muzzle-loader was loaded with a steel shell, with a bursting charge of 21 lb. of powder, and, striking the plate at 1,000 yards, it penetrated in comparison with the other guns was immediately perceptible. The shell made a determined but vain endeavor to go through the target, but it only made a very much deeper indentation (from 30 to 40 per cent.) than the spherical shots, broke into fragments in front and around the target, which was otherwise unaffected in point of weakness.

The Armstrong rifled gun was tried with a spherical cast shot of 151 lb., fired with 35 lb. of powder. This struck, with a velocity of 1,570 ft. per second, on the edge of the upper plate, making an indent of 16 inches, breaking out a belt, slightly bulging the inner skin of the target, and crushed one of the ribs, but to a very insignificant extent. A steel shell of 150 lb. was projected with 35 lb. charge in the same gun with the same charge, and this struck between the upper and lower edges of the upper and lower plates. It completely buried itself in the woodwork, but so far as the shot as ever had been fired at a plate. It stuck fast in the iron as a marble would have in a piece of putty. A bolt or two gave way under the concussion, but no inconvenience would have been experienced on board a ship in action from this circumstance. A shot from a 7-inch muzzle-loading gun of the Ordnance Select Committee was fired with a 110 lb. steel shell loaded with 2 lb. of powder, but this did nothing but make a dimple on the plate, and no splinters. A shot from the rifled 250-pounder (a cast iron shell) loaded with 35 lb. of powder, did very little, in spite of its weight. It made a jagged indent of 31 in. deep, and bent back the upper plate a little more than 2 in. and produced a slight crack. Mr. Whitworth then elected to fire one of his steel shells which, about a year ago, did much damage. The gun was the 150-pounder, and the shell had a bursting charge of 9 lb. This struck the lower plate, and exploding, buried itself deeply into it, and had evidently penetrated the plates, it had failed to make any perceptible impression on the inside of the target itself beyond having bulged out the skin within which it was apparently confined by a slight tenure. The victory, therefore, fairly remained with the target; but Mr. Whitworth is about three months will be ready with a 9-inch gun, from which he asserts he will send a steel shell as easily through the Bellerophon target as a 68-pr. solid shot would go through the slighter erections which defied his powers as an artillerist. It remains to be seen whether the attempt to increase the calibre of the shell and the gun to penetrate the *Bellerophon* as easily as the *Warrior*.

On the 16th of December, also at Shoeburyness, the smashing powers of the Armstrong 600-pounder were tested against the Warrior floating target. A much more valuable one than the Bellerophon. This target consists of an exact counterpart of a section of the *Warrior's* side, measures 16 ft. long by 8 ft. high, and is composed of iron plates of the best homogeneous metal 4½ inches inch, bolted to a backing of teak 18 inches in depth. Behind this come two sets of 9-inch plates, riveted by means of T iron, the whole being shored up by slanting beams of or of immense thickness. The target was mounted on 1,200 yards distance from the firing points of the 40 and 68-pounder Armstrongs, and wooden targets for ascertaining the correct elevation for the range floated close by, a little to the rear of the iron one.

The first shot was a dummy cast-iron shell weighing 600lbs., and was charged with such amount of powder as on target as to smash it literally to powder. The elevation of the piece in this instance was 2 deg. 6 min., and the charge 16lbs. of powder. The shot was a solid 68-pr., a cast iron head weighing 610lb., and containing 24lb. of powder, which is only four-fifths of its normal charge. Before firing this shot a consultation took place among the gentlemen present as to the elevation to be given: it having been discovered that the previous shot had struck the target that it had been moored at 1020 yards instead of at 1,000 as had been originally intended. After some discussion the gun was fired at 1,000 yards with the elevation. The shot went over the top of the target a little to the right of the central line. The next two shots—fire shot shells similar in all respects to the 24-pr. common shell, with the exception of obeying the slightest change in elevation. For shot No. 2 the piece was depressed to 2 deg. 3 min., the shell pasting through the upper edge of the top of the target, and carrying away a piece of the wood framing of a semi-circular shape. The shell burst on striking, and only 4 minutes in elevation, and struck the target as near the centre as possible, making daylight through it, and exploding at the very moment of striking. The penetration of the 600-pounder shell by the pendorous missile was found to have surpassed expectation. A hole 2 feet by 2 inches yawned in the 4½ inch iron plate, level with the top of the 9-inch teak, 18 inches below. The teak backing was splintered into fragments from the size of a cocoa nut to the merest fibre, and the 4 inch plates and the iron skin were completely shivered. Nay its much paper. In front, below the hole, there lay a huge mass of iron, which, when put together, formed nearly half a circle. The plate above the one which was pierced was started from its place and bulged outward, nearly the whole of the bolts holding it to the teak backing having been torn away. Velocity of the 600-pounder projectiles was 1150 feet per second. The victory was decidedly with the gun.

At first it was intended to try the effects of the 600-pounder upon the Warrior target at 2,000 yards, but the first blow at 1,000 yards so disabled it as to render a new target necessary.

On returning to the firing point the 300-pounder was next tried, four shots being fired, but owing to several causes only one of them took effect.

REGULATIONS FOR THE FRENCH NAVY.

A MILITARY commission has been at work for the last three years in France, drawing up fresh regulations for the army and navy. Those which affect the former are not of especial importance. The principal changes in the latter service are these: Youths and men between sixteen years of age and twenty-one may enter the navy under the title "novices" to serve for three years, and men between twenty-three years of age may enter for a term of seven years as seapprentices. After receiving a certain amount of instruction they will be drafted into the fleet, those who enter eighteenth year, are to be rated as seamen of the third class. There are also to be volunteers for naval service. No deficiency will be made up by levy according to the existing law. Every person liable to serve is bound to present himself for examination in the year in which he attains eighteen. But it is optional for him to do so as soon as he is eighteen. Formerly, upon the completion of his first term of service of five years, if the engagement of the ship dismissed him, he could return home. He generally availed himself of this right, married and took to fishing, the coasting trade, or entered a merchantman in the distant ships of ports. As it was found that this gave rise to great inconvenience when the government wished to summon to perform their second term of three years, the Minister proposes that they shall in future fulfil the whole six years of service from the date of their entrance into the navy. Men are free from further compulsory service, except in the event of a great State emergency. If, however, it should happen that the number of seamen in the navy should prove found to be as great as to admit of it, this term of six years may be abridged, and a certain proportion of the service-men discarded on furlough. Substitutes are to be allowed: and the eldest of a family of orphans, and the only son, or the eldest son of a widow, or a blind father, or a father over twenty years of age; or in default of a son or son-in-law the sole or eldest grandson of such persons; and the sailor who left his mother entirely dependent on a charity are exempt. In case of the ground of exemption being removed before the six years have expired, the individual hitherto exempted has to present himself for service for the remainder of the term.

The volunteer who has completed three years of service, is entitled to an increase of pay of thirty cents per day, if he re-enlists during the term, or within two months' leave of absence on full pay, or four months on half pay. The effect of the changes above mentioned will be the substitution of a clause allowing voluntary for compulsory service, to render the system of maritime inscription more tolerable, inasmuch as those of the register will find themselves free to enter on any occupation after they are twenty-six years of age, or earlier if they like, without fear of being called upon again, as at present, should arise in which France is concerned; and ship-owners can enter into arrangements with sailors without difficulty, being compelled to release them from their engagements at any moment.

THE BATTLE OF CHICKAMAUGA.

OFFICIAL REPORT OF MAJOR-GENERAL THOMAS.

The Report of Major-General Thomas details the operations of the Fourteenth Corps from the 1st to the 30th of September, 1863. The operations of the first seventeen days are of such importance that we shall publish with our General Thomas's history of them, and comment on with the report of the operations of September 18th:—

September 18—At 4 A. M. the whole command was in the left alone Chickamauga Creek by Crittenden's Gap. On arriving at that place, I received orders to march to the support of Reynolds, by the Widow's House to the Chattanooga and Lafayette Road, one mile up a parallel road to Kelly's House, and then by the Dry Valley road to Gordon's Mills, one mile from my right at Gordon's Mills. The head of the column reached the Widow's House about 10 A. M., and I was in person at that point, halting up a portion at the forks of the road, facing toward Reynolds and Alexander's Bridges, when I received orders from General Rosecrans, being informed on that the enemy had crossed the Chickamauga at those bridges and was pushing the evening before with a heavy force across the State Road to the bridges on the east of the Widow Glenn's house, the position of Brannan's division, which was then approaching to Widow's bridge. The interval I intended to fill with the two remaining divisions of the corps, Baird's and Negley's, as they came up. Brannan, closely following Reynolds's division, was placed in position on his left, on the two roads leading from the Widow's House to Reynolds and Alexander's Bridges. Colonel Daniel McCook, commanding a brigade of the division, was placed on the extreme left of the line, and reported that he had been stationed the previous night on the road leading to Reynolds's Bridge, and had thrown out pickets on the left of every except one brigade, which had crossed to the west side of Chickamauga Creek. The left of Brannan's division was, therefore, not far enough to the left to connect with the right of Reynolds's division, and I rode forward to his position to ascertain the character of the attack. Colonel Croxton's brigade was on the left of the line, but was scarcely half in sight, but that he was then meeting with obstinate resistance. I directed him to direct a portion of his command to advance to Croxton's support, which he did with his whole division, Buegwarter's brigade, which was on the right of the line, and to form his line on one distance, taking many prisoners.

Upon inquiry I found that Reynolds had engaged for over an hour with greatly superior numbers of the enemy, and being nearly exhausted of ammunition, had ordered his troops to retire to the line of rest to fill their boxes, and Baird and Brannan having united their forces over the road, had driven the enemy back to the position from which they halted for the purpose of readjusting line, and learning from prisoners that the enemy was in force in front of the left of Brannan's line. I drew back his right wing in order to be ready to be at once from the enemy's flank, and directed Brannan to form his line on the left of Baird's division, and to throw back his left wing to the Widow's House, and drove them in disorder. Fortunately at the time Johnson's division of Reynolds's was passing to the rear to fill its ammunition boxes, and were immediately placed in position, Johnson's preceding Reynolds's, while the remainder of Reynolds's division, which had been on the right, halted on Johnson's right. Reynolds's was placed on the right of Palmer's, and Palmer's on the right of Johnson's. The line so formed they advanced upon the enemy, attacking him in flank and driving his right wing in upon his centre, and by the time Reynolds's troops shut them in front as they were pursuing Baird's retiring brigade, driving the front line of the enemy before them in confusion, which had been temporarily lost by Baird's brigades. The enemy was thus broken and badly pressed in front, Brannan's, Baird's, and Reynolds's divisions in flank, fell back in confusion on his reserves, posted in a strong position on the ridge between the Widow's House and Reynolds and Alexander's Bridges. Brannan and Baird were immediately reformed and pushed forward to the ridge, the enemy remaining ground on the road from McDaniel's House to Reynolds's Bridge, and held it in force. Reynolds's division was not pushed, as the enemy would be to gain that road and our rear.

This ended the fight for the day, which was hour, a furious attack was made on Reynolds's right, and he having called upon me for reinforcements, I directed Brannan's division to move to the support, taking King's brigade of Baird's division in the position at which Reynolds's division had been engaged, and Baird's division to the left of Brannan's. At the right on Johnson's division. It will be seen, by reference to the map, that the road from the Widow's House to Reynolds's Bridge

ing proper care of themselves until the ambulances come up. When the case is of a serious character it is reported to the surgeon in charge, or his assistant, will remain and deliver the men to one of the Medical Officers with the ambulances. At all other times the privates will be with their respective trains. The medicine wagons will, on the march, be in their proper places, in the rear of the ambulances for each Brigade. Upon ordinary marches, the ambulances and wagons belonging to a division will accompany the rear brigade of the division, while the ambulances connected with the artillery will march with those on the march, observing that no one rides in any of the ambulances except by the authority of the Medical Officers. Every necessary facility for taking care of the sick and wounded will be given by the men, will be afforded the Medical Officers by the officers of the ambulance corps.

8. When in camp, the ambulances will be parked by Divisions. The regular rolls-calls, reveille, retreat and tattoo, will be held, at which all the men ambulance-attendants will be present and receive the reports. Stable duty will be at hours fixed by the Captain of the corps, and at all times, while the ambulances are not employed in the stations, the privates will be employed in keeping the ambulances in which they are, and the harness, horses, hospital tents, etc., neatly and filled with fresh water, and in general police duties. Should it become necessary at any time for the ambulances to be sent to the rear of ambulances for transporting sick and wounded, he will make a requisition upon the proper commander of the troops for the guard which will comply with the requisition. In cases where no such guard can be had, the ambulances will be accompanied by two privates, to be then, will accompany the officer; should one of the men belonging to a train of ambulances be found absent from his post, the officer in charge will report the case, and the absentee will be punished.

9. The ambulances will not be used for any purposes than that for which they are designed, but for the sick and wounded of the army, and in transport cases only, for medical supplies. All officers are expressly forbidden to use them, or to permit the use of them for any other purpose. When ambulances are required for the transportation of sick or wounded at Divisional Hospitals, the number will be obtained, as they are needed for this purpose, from the Division Surgeon, and no ambulance shall be sent to the front, unless called for by the Medical Officers.

10. No officer or man will be selected for this service except those who are active and willing, and who will be obedient to the orders given by Corps Commanders only.

11. Corps Ambulance will rest that the foregoing regulations are carried into effect.

NAVY YARDS.

BROOKLYN NAVY YARD.

AT the Yard the following service on vessels of that station have been recorded during the past week: The *Vicksburgh* sailed Dec. 22; the *Hornpshrike*, formerly the tug-boat William *Penyy*, Cyrus Stone, Acting Master, sailed for Pensacola, sailed Dec. 22; the *Grand Gulf* arrived Dec. 21; the *Chenango* arrived Dec. 30; the *Union* sailed Dec. 31. The following vessels are now preparing at this port for the Mediterranean Squadron: the schooner *Penguin*, to be armed as a tender; *Tribune*, *Cartter*, *Belvidere* and *Gemsbg*; propeller *Pink*; steamsloop *Mohican*, tug *Narcissus*, *Howard* and *Matsias*. The last three are small, and will be used for harbor service. The *Penguin* will carry no more than a month's supply of provisions, as she will be supplied with fresh provisions from the Yard. The *Mohican* will be supplied with provisions for a cruise of three months, and the *Tribune* will be supplied with provisions for a cruise of six months. The *Mohican* will be supplied with provisions for a cruise of six months. The *Mohican* will be supplied with provisions for a cruise of six months. The *Mohican

William A. Gladding and John B. Lawrence, Acting Master's Mates, are ordered to the Naval Academy.

John H. Dayton, Acting Ensign, is ordered to the *Chippewa*.

Henry M. Greer, Acting Assistant Surgeon, and ordered to temporary duty at the Washington Navy Yard.

Percy Magee, Isaac J. Smith, John S. Hill, Duncan McIntyre and Samuel Lawrence, Acting Third Assistant Engineers, are ordered to report to Rear-Admiral Bailey, for duty in the East Gulf Blockading Squadron.

John H. Dimmick, Acting Second Assistant Engineer, and ordered to the Gemsbok.

David Garman and Robert Hoag, Acting Third Assistant Engineers, are ordered to report for duty to Rear-Admiral Lee.

David T. Gordon, Acting Third Assistant Engineer, and ordered to report to Rear-Admiral Lee, for duty.

John Bissell, Acting Ensign, and ordered to the *State of Georgia*.

Benjamin F. Franklin and George Hudson, Acting Assistant Paymasters, and ordered to the Naval Academy, for examination, and when ordered to report to Rear-Admiral Lee, for duty in the North Atlantic Blockading Squadron.

Edward P. Archer and Charles H. Bill, Acting Assistant Paymasters, and waiting orders.

James Bailey, Acting Gunner, and ordered to the *Wateree*.

Thomas Gee, Acting First Assistant Engineer, and ordered to the *Colorado*.

Thomas B. Gross, Acting Third Assistant Engineer, and ordered to the *Sabine*.

Henry Seavey, Acting Third Assistant Engineer, and ordered to the *Superior*.

Alexander McDonald and Bryce Wilson, Acting Third Assistant Engineers, and ordered to the *Pocahontas*.

S. W. Ailing, Acting Master's Mate, and ordered to report to Rear-Admiral Paulding.

DISMISSED.

Acting Assistant Surgeon Joseph Hoanard, of the *Pow Pan*.

Acting Third Assistant Engineer Augustus Rogers, Acting Assistant Engineer's Mate David B. Lawrence of the Mississippi Squadron.

Acting Assistant Surgeon John H. Aldridge, of the East Gulf Blockading Squadron.

LEAVE OF ABSENCE.

Acting Assistant Paymaster Edward W. Gladding, of the *Sassacus*, one week.

Acting Ensign Henry F. Darton, of the *Sabrina*, fifteen days.

Acting Ensign W. H. Otis, of the *Mystic*, ten days.

Acting Assistant Surgeon E. S. Bogert, of the *Sassacus*, two weeks.

Acting Ensign E. S. S. Sharkitte, of the *Commodore Read*, two weeks.

Acting Volunteer Lieutenant L. W. Pennington, of the *Sassacus*, thirty days.

Acting Assistant Surgeon John H. Aldridge, of the *Commodore Jones*, thirty days.

Acting Assistant Paymaster J. R. Bowler, of the *Genesee*, forty days.

Acting Ensign Daniel D. Bond, of the *Marmora*, thirty days.

Acting Ensign Robert Edgell, of the *Silver Cloud*, twenty days.

Acting Ensign Freeman Vincent, of the *Pittsburgh*, thirty days.

Acting Ensign Edward Hammond, of the *Pittsburgh*, thirty days.

Acting Third Assistant Engineer Lewis R. Jones, of the *Tuscola*, thirty days.

Acting Second Assistant Engineer Edward W. Goldie, of the *Forest Rose*, thirty days.

Acting Gunner Charles Pegler, of the *Forest Rose*, twenty days.

Acting Ensign John Bishop, of the *Ariel*, ten days.

Acting Assistant Engineer James Farren, of the *Anacosta*, fifteen days.

DEATHS

Reported to the Navy Department for the Week ending December 26, 1863.

George T. Taylor, first class fireman, scalded, July 27, Naval Hospital, New Orleans.

James Smith, ordinary seamen, remittent fever, August 13, Naval Hospital, New Orleans.

George W. Runcie, landsman, pneumonia, August 18, Naval Hospital, New Orleans.

Harry C. Hope, third assistant engineer, typhoid fever, November 9, Fort Pike.

John C. Cottingham, second class fireman, yellow fever, November 9, U. S. steamer *Kensington*.

Joseph Kent, acting assistant's mate, enteritis, December 5, U. S. steamer *Kensington*.

Anthony McGolton, landsman, small-pox, December 7, Memphis.

R. J. Pitts, quartermaster, chronic diarrhœa, December 11, U. S. steamer *Kansas* ad.

Mortz M. Pratt, acting master, December 15, U. S. steamer *New Ireland*.

Henry Smith, contraband, pneumonia, Naval Hospital, New York.

William White, landsman, pneumonia, Naval Hospital, New York.

Augustus Dixon, ordinary seaman, December 16, Naval Hospital, New Orleans.

William Johnson, seaman, peritonitis, March 7, U. S. steamer *Essex*.

John Berry, ship's cook, drowned, February 23, U. S. steamer *Kensington*.

Patrick McGowan, fireman, drowned, February 23, U. S. steamer *Kensington*.

John Kirby, second class fireman, drowned, February 23, U. S. steamer *Kensington*.

Isaac Dorr, coal heaver, drowned, February 23, U. S. steamer *Kensington*.

William Parker, coal heaver, drowned, February 23, U. S. steamer *Kensington*.

Arthur J. Dillon, acting assistant paymaster, consumption, December 26, at Key West.

Wilbur Bowers, marine, apoplexy, December 22, Naval Asylum.

John Bell, second class fireman, quinsy, December 22, Naval Hospital, Chelsea.

ARMY GAZETTE.

DISMISSALS

During the week ending Saturday, December 26, 1863.

Captain John E. Page, 6th Cavalry, Missouri State Militia, to date December 23, by order of the President, for absence without leave, and for being a Military Board of Examination, convened by Special Orders, No. 351, 1863, to have reported due notice from said Board to appear, &c.

First Lieutenant George L. Meshel, 11th Missouri Cavalry, to date December 23, by order of the President, for misconduct, in violation of the 5th, 9th, 10th and 13th Articles of War, in signing the names of fifteen citizens to the muster-roll of his company, as enlisted men, in order to obtain a bounty to which he was not entitled, and causing said muster-roll to be sworn to before a notary public, and causing same, with answer to their names, to be knowingly received and acted upon by the mustering officer, and causing the payment of said bounty to be received by him, and for refusing to pay over the amount so received, for their proportion, to the said persons so sworn as "deserters."

First Lieutenant John G. Chase, 1st Missouri Cavalry, to date December 26, 1863, having absented himself from his command in the Department of the Missouri, in April, 1863, and having been arrested as a deserter in Boston, Massachusetts, in August, 1863, and returned to Benton Barracks, Missouri, in custody.

Second Lieutenant James M. Wiley, 9th Ohio Volunteers, to date December 26, 1863, by order of the President, for desertion, in Cincinnati, Ohio.

Second Lieutenant V. B. S. Reber, 24 Missouri Artillery, to date December 26, 1863, with loss of all pay and allowances, for multiple disobediences of orders, neglect of duty, and desertion in the face of the enemy.

Second Lieutenant Augustus Kuhle, 17th New York Volunteers, to date November 29, 1863, for obvious without leave.

Second Lieutenant Albert G. Schaff, 17th Massachusetts Volunteers, to date December 26, 1863, with loss of all pay and allowances, for cowardice, misbehavior in the presence of the enemy, and disobedience of orders.

HONORABLY DISCHARGED.

Second Lieutenant Robert E. Bayne, 65th New York Volunteers, to date December 15, 1863, on account of disability, on account of incompetency on the battle-field.

DISMISSALS REVOKED.

The orders for dismissal in the following cases have been revoked: Captain Jerome Kunz Hilton, 2d Ohio Volunteers, and he is reinstated with pay from the date of dismissal.

Captain A. Bowman Hall, 148th Pennsylvania Volunteers.

Lieutenant L. Ling, 5th Ohio Volunteers, discharged on tender of resignation.

RESTORED TO COMMISSION.

The following officers, recently dismissed, are restored, provided the vacancies have not been filled by the Governors of their respective States:

Captain George L. Guthrie, 6th New York Volunteers, with pay from the date of his muster-out of service for duty.

Captain John Graham, 83d Pennsylvania Volunteers, with pay from the date of his muster-out of service for duty.

NOTICE TO DELINQUENTS.

The following named officers, having been reported at the headquarters of the Army for the officers heretofore specified, are hereby notified that they will remain dismissed from the service of the United States unless within fifteen (15) days from December 26, 1863, they appear before the Military Commission, now in session at Washington, of which Brigadier-General Ricketts, United States Volunteers, is president, and make satisfactory answer to the charges against them:

Absent without proper Authority.

Second Lieutenant John Kuhlgren, 5th N. Y. V.

Second Lieutenant Homer H. Rutter, 1st Massachusetts Cavalry.

Fraudulent conduct—Receiving a bribe of fifty dollars to exempt a Jewish gentleman from the draft.—Act of the United States.

First Lieutenant B. E. Quiseau, 9th Illinois Cavalry.

SENTENCES OF COURT MARTIAL.

First Lieutenant Francis M. Bolter, 2d Mass. Vols., to be dismissed the service for conduct unbecoming an officer and behavior towards his superior officers, conduct unbecoming an officer and a gentleman, and disobedience of orders, in refusing to prosecute the charges of the Court, disapproved of it, on the ground that the proceedings of this Court were illegal and unjust, and therefore order that the sentence be remitted and the accused returned to duty.

First Lieutenant John A. Bell, 5th U. S. Colored Troops, to be dismissed the service for cruelty to the men of his command. Colonel Bell after disapproving the proceedings and irregularities in the proceedings of the Court; but the accused having been found guilty by a competent Court, and the sentence in the case being satisfactory, he orders Lieutenant Bell to be dismissed the service, and that sentence be carried into effect.

First Lieutenant F. F. Robinson, Adjutant 5th Pennsylvania Cavalry, to be cashiered for conduct unbecoming an officer.

Second Lieutenant Peter Cummings, Battery A, 1st Pennsylvania Artillery, to be cashiered for conduct unbecoming an officer and a gentleman.

Privates Edward Hosley, 82d N. Y. V., and George M. Sullivan, 14th Rhode Island Volunteers, to forfeit for desertion, the sentences in the above cases approved by Major-General Butler, and ordered to be executed.

First Lieutenant Henry J. Quigley, 99th N. Y. V., and K. N. Pierce, 4th Mass. Vols., and Captain Edmund L. Clark, 99th N. Y. Vols. have been found guilty of absence without leave, but the Court do not attach any criminality to the offence acquit them. Which sentences approved by Major-General Peck.

Lieutenant Colonel Alexander Thomas A. Armecy, of the rebel army, have been found guilty of recruiting for the so-called Confederate States army in the United States Army, and have therefore been sentenced to confinement at hard labor at Fort Warren for the term of fifteen years. Sentence approved by the Secretary of War.

MEDICAL DEPARTMENT.

BELIEVED.

In consequence of the amount of other duties which he has to perform, Surgeon Robert C. Wood, U. S. A., has been relieved from duty as President of the Army Medical Board now in session in New York city, and Surgeon Charles McMurray and Assistant Surgeons and Assistant Surgeon of Colored Troops. In relieving Surgeon Wood from this duty the Secretary of War and the Surgeon-General expresses his gratification at the manner in which the duty has been performed.

DISSOLVED.

The Army Medical Board for the examination of Surgeons and Assistant Surgeons of Colored Troops has been dissolved, and a Board to consist of Surgeons Charles H. Crane and Alexander Wood, and Assistant Surgeon H. M. Sprague, U. S. A., will assemble at New York city, on the 1st January, 1864, for the examination of candidates for the appointment of Assistant Surgeons of Volunteers, Surgeons and Assistant Surgeons of Colored Troops, Contract Physicians and Medical Cadets.

ORDERED.

Surgeon Horace R. Wirtz, U. S. A., has been ordered to report to Surgeon C. McMurray, U. S. A., Medical Director, Department of the East, for duty as President of the Board, and for such other duties as he may assign him to.

MILITARY NOTES.

Via California we have dates from Mexico as late as December 7th. The Liberal troops entered Morelia on the 30th ult., without opposition. The Governments of Holland and Spain have recognized the new Mexican Government. The native Sonora French troop under Bazaine had been concentrated at Celaya.

Mr. Frank Moore has collected, and G. P. Putnam, of New York, will publish a volume of "Lays of Loyalty," a little pocket volume of the poetry of the war. It contains lyrics by Emerson, Longfellow, Whittier, Holmes, Lowell, Pierpont, Whittier, Lowell, Mrs. Howe, Bokee, Taylor, Read, Leland, Stoddard, Mrs. Stowe, and a variety of other known poets, besides a large number of anonymous pieces of merit. A second series is promised, containing "Songs of the Soldiers and Ballads of the Rebellion," and a third, devoted to "Political and Personal Poems." The publisher calls the series "The Red, White and Blue."

CAPTAIN THOMAS WILSON, C. S. A., has been appointed Chief Commissary of the Army of the Potomac, in place of A. F. Clark, who has been relieved and ordered to report at New York.

MR. GEORGE B. BUTLER, JR., who lost his right arm at Gettysburgh, and in consequence resigned his commission as Lieutenant in one of the New York Regiments, has resumed his former profession of artist. With his remaining arm he has lately painted a picture, which is now on exhibition in this city, and is attracting much attention. Its homely subject is a rough looking specimen of a cat crouched on a barrel, with a dinary wall as a background; but it has been so handled by the artist as to be original talent, and make an interesting picture. Mr. BUTLER was a pupil of Mr. THOMAS HICKS, and when he left CENTRAL PARK was somewhat remarkable circumstances that a fellow pupil, Mr. CHARLES STADLER, a Southerner, who enlisted in the rebel army, has lost both of his legs in action.

MARRIED.

(Announcements of marriages and deaths should be paid for at the rate of *fifty cents* each.)

POPPE—HOWELL.—In Canandaigua, N. Y., December 24, by the Reverend E. Peters, Assistant Adjutant General, to Miss SARAH HOWELL, daughter of Thos. M. Howell, Esq.

Chronological Record of Events, Commencing with the Inauguration of Abraham Lincoln, Nov. 1, 1860, to the present time.

It has been the object of the Compiler, in the preparation of the Handy Book, to bring into the most compact form possible whatever would be of advantage to the soldier and sailor in the service of his country, and to make the work, in short, emphatically what its name represents—a handy book. The work embraces everything needed to enable the soldier or sailor, or their widows, or wife, children, parents, or sisters, in the case of his decease, to obtain the pension, bounty land, back pay, etc., to which he is entitled, and all the instructions required in all the duties and obligations.
No soldier or marine, or friend of the soldier or marine, can afford to be without the work. Agents will find the sale of the best selling works ever produced. Send, post-paid, on receipt of price.
Price only 25 cents.
Address
J. G. WELLS,
163 William street, New York.

UNITED STATES
ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

The ARMY AND NAVY JOURNAL is established in the belief that a paper of the kind can be conducted by the press to independence will be absolute. Avoiding all personal and political bias, the Editor will devote his entire energies to the introduction of sound military principles, and the correction of abuses existing in the Departments. Its pages will be devoted to the discussion of all questions affecting the service, to the dispassionate discussion of topics connected with the Army and Navy, and to the publication of reliable record of all subjects of interest to those in any way connected with the military service, or interested in the art of war. The Department of War, the Army, the Navy, and the country in connection with warlike operations, will receive adequate attention; but the Editor will not suppress criticism of any Commercial Matters will also be supported. The JOURNAL will contain the latest intelligence from all parts of the world.

As a newspaper, its object will be to give, each week, a complete history of the Army and Navy for the week preceding, and to make the JOURNAL acceptable to all its patrons, the Editorial columns will be devoted to matters of interest to the service at large, and not to the personal fortunes of any officer. It shall be the duty of the Editor to make it not only a complete History of the Army and Navy, but at the same time to render it reliable, lively journal, which will be read with interest by officers of the service, and by others who desire to keep pace with the public service and by the great body of the intelligent public.

The importance which Military and Naval affairs have assumed in the United States renders it a matter of wonder that they should have the press an adequate representative. The ARMY AND NAVY JOURNAL proposes fully to the discussion of subjects coming under its public, its editorial opinions will commend itself to the National Union, shall commend itself to the public for the fair, the candid, and the loyal tone of impartiality in every text, fairness, hospitality and warmth. The Editorial Department of the JOURNAL will be placed in charge of one of the ablest writers in the country, who will be proud to recognize as their organ, and which shall be conducted with the strictest regard to the principles of honor and courtesy.

The Business and Publication Departments of the JOURNAL will be under the supervision of the Publisher, who will endeavor to make it worthy of the support of every officer of the Army and Navy.

The terms of the JOURNAL are as follows, and will be strictly adhered to:

Terms of Subscription.

Single copies, ten cents.

Subscriptions, $6 per annum, or $3 for six months, in advance.

Clubs of ten subscribers, $50 per annum.

Clubs of twenty subscribers, $100 per annum.

Subscriptions will be received to commence with any number of the JOURNAL, and will be continued unless ordered to be discontinued.

Remittances are at all times invited from subscribers, but at the risk of the Editor. It is the duty of the Publisher

THE MILITARY SITUATION.

THE position of affairs in Virginia continues unchanged, the soldiers being occupied in making themselves as comfortable as possible in their winter quarters. Little of importance has occurred to break the dull monotony of the situation. Some excitement was created on the first instant at Winchester by the driving in of our pickets as far as Bunker Hill, and by rumors of an extensive rebel raid under General EARLY, in retaliation for General AVERILL'S recent successful expedition into Virginia. But it soon transpired that the movement was nothing more than a scouting advance in more than ordinary force. It is supposed that FITZHUGH LEE'S cavalry, perhaps 1,000 strong, supported by three small brigades under Gen. EARLY, with IMBODEN and other local leaders, with detachments numbering perhaps 6,000 or 7,000 men, are near Woodstock and Mount Jackson, and will make no occasional dash as far north as Winchester. The latest indications point to the Moorfield Valley, west of the Mountains, as the probable theatre of operations for the rebels. No fears are entertained for the safety of the Baltimore and Ohio Railroad, on which the trains are moving regularly.

A reconnoissance has been made by General GREGG'S cavalry division, under command of Colonel TAYLOR, of the First Pennsylvania regiment. The division left on the first inst. for the purpose of proceeding to Front Royal, taking three days' rations and forage. Owing to the condition of the roads the cavalry attached to the division could proceed no further than Warrenton. The command returned on the 4th, having travelled ninety miles during the three days' absence. Severe deprivations were endured in consequence of the intensely cold weather. No trace of the enemy was discovered.

A small body of Union troops, numbering about 280 men, stationed near Jonesville, Va., was attacked on the 3d inst. by a force of 4,000 rebels under General JONES, and after a desperate resistance was compelled to surrender, losing thirty killed, about the same wounded, and two small howitzers.

A GALLANT affair took place in Stono Inlet on Christmas morning, between the gunboat *Marblehead* and a battery which had been planted by the rebels on the shore, below Legareville, near which town the *Marblehead* has been for some time stationed. An accurate account of the engagement is given elsewhere, by a correspondent of the JOURNAL. The *Marblehead* is commanded by Lieutenant Commander R. W. MEADE, JR., whose management of his vessel was every way admirable.

Legareville is a small village of about fifty houses on John's Island, facing Stono river, about five miles in a straight line from the sea-shore. It has been successively occupied at various times by the pickets of both armies.

A furious bombardment was opened upon Charleston at one o'clock on Christmas morning from the monster guns of Fort Putnam. For more than three successive hours were heard these terrible Christmas chimes. About three o'clock the sky over the fated city was illuminated by a kindling light, which disclosed to view the tall steeples of St. Michael's Church. The guns of Battery Chatfield were immediately trained upon that quarter of the city, adding their awful thunders to those of Fort Putnam. The bombardment was for a short time slowly answered from the guns of Fort Moultrie; but finding that they accomplished nothing, the enemy soon ceased firing altogether. The fire in Charleston continued burning until Friday noon, our batteries bombarding at intervals of five minutes. Fort Putnam threw eighty-four shells, and it is thought that few of them fell short.

WE have intelligence from Texas to the 27th of December. The military operations in that region were progressing favorably. The situation in the Teche country remained unchanged. Admiral PORTER had not yet made the projected ascent of Red River, and it was presumed that the expedition would be delayed until a land force was ready to co-operate with the gunboats. Indianola, at the entrance of Levacca Bay, in Texas, has been occupied by Brigadier-General WARREN. He reports that on his arrival there the inhabitants were much frightened, as great pains had been taken by General MAGRUDER to impress upon them the idea that the Northern troops would burn, ravish, and destroy wherever they went. Thus acting on their fears he endeavored to induce them to fly from their houses and destroy their property, to prevent its falling into the hands of the enemy. As soon as their minds were disabused of this error, they began to exhibit a much more friendly disposition towards our troops.

In a proclamation dated Houston, General MAGRUDER says that the defence of Western Texas will not be given up, and he urges minute men, exempts, and all others capable of bearing arms, to organize at once and proceed to the camp of General BEE, at Victoria. He says that the confederate troops are working to repel the invaders, and that San Antonio and Austin are being rapidly fortified.

FROM the Southwest we receive additional particulars of the defeat of the guerrilla General WHEELER, whose rout appears to have been disastrous and complete. The decay of rebel resources is nowhere more clearly manifest than in the increasing inefficiency of their cavalry. Two years ago they had the field to themselves. We had to mounted men to compare with them. Their cavalry swept through Kentucky, cutting off the communications of our armies with a leisurely contempt for our forces which was extremely galling, to say nothing of the mischief which they committed. But from the day when the North turned its attention to this branch of military service, our cavalry has constantly increased in efficiency and numbers, while theirs has gradually diminished in numbers, force, and spirit, until their inferiority to ours has become an acknowledged fact.

GENERAL LONGSTREET still lingers in East Tennessee, subsisting his army, it is said, on supplies collected by General BURNSIDE for his own use. When these are exhausted he will probably move on.

The Rebel cavalry make frequent dashes on our line in the vicinity of Cleveland, and in several instances have ventured within a short distance of Chickamauga Station, on the line of General BRAGG'S retreat. During one of these dashes they captured half a dozen cavalry pickets. General THOMAS will immediately take measures to prevent the repetition of this audacity. General FORREST, at the head of about 7,000 cavalry, menaces General GRANT'S line of communications with his base of supplies. He is said to be far superior to General WHEELER as a fighter, and is likely to give our forces much trouble. With the exception of cossé expeditions, it is highly probable that military operations on both sides will be confined this winter to the cavalry.

A VERY important service has been performed on the Florida coast by the blockading force at St. Andrew's Sound, under command of Acting-Master WILLIAM R. BROWNE, in destroying a very extensive and valuable series of salt-works, both at Lake Ocoln and in St. Andrew's Bay. Three establishments were destroyed on the 2d ult. at Kent's salt-works on the Lake, which turned out on an average 100 bushels of salt daily. A large quantity of salt was thrown into the Lake. On the 10th ult. Acting-Master BROWNE proceeded, at the head of a small force, in the sternwheel steamer *Bloomer*, to West Bay, where the rebel government salt-works, capable of producing 400 bushels of salt daily, were destroyed. At this place there were a large number of buildings, twenty-two large boilers, and 200 kettles, averaging 200 gallons each. These, with 5,000 bushels of salt, and several storehouses, containing provisions for three months, were entirely destroyed. From this point the expedition proceeded down the bay, destroying private saltworks, which fired each side for a distance of seven miles, to the number of one hundred and ninety-eight different establishments, averaging two boilers and two kettles each, together with a large quantity of salt. Five hundred and seven kettles were dug up and rendered useless, and over two hundred buildings were destroyed, together with twenty-seven wagons and five large flatboats. The entire damage to the enemy is estimated at $3,000,000. The town of St. Andrews, which had been occupied by a military force for the last ten months, was shelled and reduced to ashes.

A FIGHT occurred on the 18th ult. near Fort Gibson, in the Cherokee country, between one thousand rebels, under QUANTRELL, and Colonel PHILLIPS of the Indian brigade. The fight lasted several hours, and resulted in the defeat of the rebels, who scattered in all directions.

COL. MCCHESNEY'S EXPEDITION, which left Newbern, N. C., on the 30th ult., for Greenville, met the enemy on the 31st near Washington, and after a sharp fight routed them, killing a lieutenant and five men, and capturing ten men, one cannon, and the horses of a battery. Lieut. Adams was killed on our side, and five men were wounded.

ALL MATTERS relating to the exchange of prisoners have been placed in the hands of Gen. BUTLER, who, it is stated, has perfected arrangements which cannot fail to bring about the desired result. The refusal of the rebel authorities to treat with Gen. BUTLER, on the ground that he has been proclaimed an outlaw by Mr. DAVIS has not been allowed to influence the War Department in the selection of an agent to conduct the negotiations for an exchange. Thirty-eight thousand rebel prisoners now in our hands will be sent immediately to General BUTLER, for the purpose of effecting this object.

WE publish elsewhere in full General ROSECRANS' report of the battle of Chickamauga. Though it has great value as a military document, the events which it details have had so full and thorough a discussion in these columns that no further comments from us are needed.

THE HISTORY OF CHARLES THE BOLD.*

THE main subject of this work is the history of that long and terrible struggle between the French monarchy and the turbulent and sublime duchies of Burgundy, in which feudalism and royalty strove for the last time against each other for the mastery. In the career of CHARLES THE BOLD, his fierce rivalry with LOUIS THE ELEVENTH, the perpetual war which they waged against each other, by force, by intrigue, on the battle-field and in foreign courts, the author found material for one of the most interesting histories which American research has given to the world. Mr. MOTLEY, while more vigorous than PRESCOTT'S, exhibits all the clearness, the beauty and simplicity which are so conspicuous in the works of that eminent historian. He has availed himself of recent discoveries of material in England, in the Low Countries, and other German States, which enable him to present a juster view of the chief characters and events of that stormy period than they have hitherto obtained. With the narrative he has interwoven descriptions of manners, of cities, and delineations of character, which lend an additional charm to the subject, and connect the reader more intimately with the events and persons of that turbulent age.

In place of an extended analysis of this work, we shall confine ourselves to a few extracts, which display, in strong colors, the deceptive and unscrupulous policy of LOUIS XI. The state of France, after the treacherous murder of LOUIS OF ORLEANS, by JOHN THE FEARLESS of Burgundy, is thus portrayed:

The crown rested on the head of a lunatic. The discord in the royal family, and the rivalry of princes, prevented any serious effort to restor order and tranquility. The voice of authority was not merely unheeded but unheard.

The administration of the law, or the due execution of life or property was concerned, was entirely suspended. Murder and rapine no longer sought their prey by stealth, or waited for the darkness to conceal their deeds. The country was covered with armed bands wearing the badges of Burgundy or the Armagnacs, but subject to no law, and owning no chief than him who could best steer the plunder and guide them in the pursuit. These brigands infested every highway, and ravaged villages and farms, pursuing their work of devastation without hindrance and without fear. The peasantry, driven to despair, abandoned at length their ruined homes and wasted fields, and in woes and sufferings, fear and starvation and care, and fled in troops to the refuge of the thick forests, seeking assistance from the wild beasts, crowding from the sunlight that shone upon an earth of which they had already exhumed, was about to take entire possession.

France had never been a commercial country. It had few great market towns, few public fairs, and these were scarcely visited by the foreign merchant. But now, even domestic trade had almost ceased. The highroads were deserted.

Those parts of the country which had the richest soil, and had formerly furnished the largest supplies of food, returned to the condition of wild lands. An overwhelming portion of the vast and fertile plains of Normandy, Picardy, Champagne, and Le Beauce were entirely left uncultivated, overgrown with bushes and wild branches, and even in many parts covered with forests. All this state of things continued—with doses and lefty forests. All this state of things continued—with doses and lefty forests. All this state of things continued—with doses and lefty

"its birth in America." Which bit of our alleged devotion to the Almighty dollar deserves the admiral has a sure fur hunter as well as a taste for iron-clads.

CORRESPONDENCE.

A WAGON BRIGADE.

To the Editor of the Army and Navy Journal:

SIR—In July, 1862, I had the honor to submit to the War Department a plan for raising, arming, equipping and drilling a regiment of Mounted Rifles, with battery of horse artillery attached. The Department was pleased to order such a regiment to be raised, and the proposed organization was received with such favor that, notwithstanding enlistments were but slow for other branches of the service, in the unprecedentedly short period of twelve days thirteen companies had sixty of the very best men of the State of Michigan once reported into the service, forming the 5th Michigan Cavalry and Daniels' celebrated horse battery. This organization was immediately followed by the enlistment of two other regiments in almost as short a time; and the result was the Michigan Brigade of Cavalry, which has during the past season performed such excellent service in the Army of the Potomac.

The original idea of the Mounted Rifle regiment was really mounted infantry; and it was the intention to use the horses save as a means of rapid transportation, the men fighting exclusively on foot; but from the wants of the service they have been used as cavalry, although much of the most effective fighting has been done when dismounted. Mounted infantry has ever been recognized as a most important arm of the service, and must be especially useful when such prominence is given in the operations of the army, as in the present war, to extensive raids into the rich country of the enemy; destroying his depôts of supplies, harrassing his rear, cutting his lines of communication, &c., and in repelling similar incursions of his cavalry, which has heretofore been so active. But mounted troops are expensive—exceedingly so, and they can be used, or at least could make their horses of but little service in the present campaign. The operations occupy but a small portion of the year, and the balance of the time all the expense of regular cavalry must be incurred with the advantages of ordinary infantry only.

To produce an active command possessing all the advantages of cavalry with the mobility, by wagon, but little more expense than ordinary infantry, is the object of the following plan, for which I request a careful consideration as the result of much thought.

I propose to raise a brigade of infantry, consisting of four regiments, having the regular military organization, enlisting for 3 months, veteran soldiers. Every man must be proud of the soldier, and capable of effectively using and properly preserving a rifled musket. I will arm them with the Spencer Repeating Rifle and bayonet, and mount them in strong spring wagons (a pattern for which is being prepared), eight to the wagon, to each company. Each wagon will be carrying twelve men and three will be fully loaded, the cavalry intended to carry but ten men, or eight to the company, being the load of the ordinary wagon. Four wagons to the ranks of a company of infantry. These wagons to be drawn by four horses—wagons seated as an omnibus, with storage under-seats for the ammunition, rations, forage, cooking utensils, two spades, one pickaxe, one saw and one augur—also room for the men's knapsacks and shelter tents, ten days' forage for horses, ten days' rations for men and one hundred rounds of ammunition. Thus the men will have ready with them ten days' rations, and no extra train whatever will be needed. The men will carry nothing to weigh upon but the rifle and cartridge-box, thus rendering them lighter for action than any infantry. Every company will be provided with all the tools necessary for an engineer or pioneer corps, and the men will be enlisted with a view to fills. Each wagon will be loaded as follows:

Ten men and driver, 11 men, at 140 lbs. each:—			1540 lbs.
" rifles	8	" 12 "	120 "
Rations, 11 men, 10—120 rations	8	" 12 "	1440 "
Forage 4 horses, 10—80 rations	8	" 12 "	960 "
Eleven knapsacks	8	" 12 "	132 "
1100 rounds ammunition			700 "
Pioneer tools			350 "
Total load			5,642 lbs.

—which is a very moderate load for four horses, considering that on bad roads most of the load may be quickly taken off. With this load these wagons will move further and with less fatigue to the horses than any ordinary wagon, and with a much greater speed. They will certainly move with as much ease and rapidity as the same number of cavalry by troops and whole companies on march by fours wagons could ordinarily move in double file; the number of wagons being equal to the length of column of a cavalry regiment, and then there are no trains to look after.

There are few roads in this country where cavalry is used at all that these wagons could not travel over with facility. They could certainly be brought as near to place of action as it is required safe to bring the force of cavalry to be dismounted, or if kept even further back; the men being unencumbered by horses, can march, and not fatigued by marching, will, at the double-quick, move up to battle-line as quickly as cavalry. Thus they can be used whenever mounted troops or mounted infantry are used, can be moved as far and as fast, are less fatigued at any moment, and more of them can be brought into action; for of mounted infantry one is every four men required to remain to keep the horses herd remain. They can do more than mounted infantry and all that cavalry can do, except charge with sabre. Of course they are not intended to operate solely by themselves, but are to be attached to the cavalry corps—a part of it to accompany on all expeditions; thus giving to every cavalry corps a strong infantry support with the baggage, the use of which they are taught, or a force of dismounted skirmishers, leaving all the cavalry for the charge at the propitious moment. They also form an engineer or pioneer corps, every needy. Often the cavalry is dismounted because of their need, to destroy bridges, railroads, canals, obstruct passes, &c.

In almost every cavalry regiment more or less are dismounted as skirmishers, and in fact almost every man in the ranks good so as much more cavalry. I will now show that our cavalry *strength* may be increased at half the cost of ordinary cavalry. We have as the cost of a cavalry regiment which shall have any eight hundred men for duty, as follows:

800 horses, at $120	$96,000
800 sets horse equipments, at $ 30	24,000
800 pistols, at $15	12,000
800 sabres, at $12	9,600
800 carbines, at $30	24,000
16 wagons, at $150	2,400
96 horses for same, at $120	11,520
60 set harness, at $25	1,500
2 battery forges, at $300	600
12 horses for same, at $120	1,440
Cost cavalry regiment	$183,040

For regiment wagon troops, 800 effective men, we have cost:—

80 wagons, at $250	$20,000
320 horses, at $120	38,400
320 sets harness, at $25	8,000
2 battery forges, at $300	1,200
12 horses and harness, at $147	1,764
800 rifles, at $40	32,000
16 axes, at $1.50	24
320 hatchets, at $1.50	320
160 spades, at 75c	120
80 saws, 80 pickaxes and 80 augurs	250
Total cost wagon regiment	$102,556
Total cost cavalry regiment	183,040
Balance fever wagon regiment	$73,484

This in original cost. Now for the cost of maintenance we have:—

800 horses forage, at $125 per year	$172,000
800 horses shoeing, at $32 per year	6,400
Average life of cavalry horse, 2 years; of wagon not over two years; hence loss yearly 400 horses, at $120	46,000
Wear and tear of equipments, at least 25%	46,000
800 set of hats, at $10	8,000
Cost to maintain one year	$337,000

For cost wagon regiment one year, we have:—

320 horses forage, at $125	$48,800
320 horses shoeing, at $32	10,240
160 horses lost by death, at least at 25%	19,200
Wear and tear wagons, at least at 25%	5,000
80 wagons, worn out and lost, at $250	4,000
Balance fever wagon regiment	$86,240

This leaves out cost of trains in cavalry. In round numbers $125,000 may be saved annually in maintenance of such a regiment over cavalry, or more than two to one. Then there will be a saving in the first cost on pay of troops. In summing up, we have troops equally mobile, equally effective as cavalry, and in connection with it even more useful put in the field, at but little more than half the expense, and maintained three of much less than half the expense.

And there is a still further advantage, perhaps, in the fact that considering the novelty, the extreme ease of the service, no fatigue, no care of animals, no baggage to carry on persons, the perfection of the armament, the active, adventurous nature of the service, will all render the corps so attractive, that the best men—two years' soldiers, mine-mounted, can be enlisted for the war. And I do not hesitate to undertake to raise a brigade in thirty days, having the horses and wagons ready, which to raise a cavalry regiment. In thirty days more the wagons can be completed, by which time the men will be drilled, and in sixty days a brigade more could be raised and in the field will be all ready for active service. As the Government now speedily wants troops, I regard this the great feature of the plan. Its adoption would not be expected or demanded as a precedent to any others, and therefore the numbers for duty could be better kept up. Two-thirds of the force would not always be left to guard transport or dismounted as is generally the case with cavalry.

A COLONEL OF CAVALRY.

THE EFFECT OF MUSTER.

To the Editor of the Army and Navy Journal:

SIR—Many questions have arisen under the orders of the War Department relative to mustering into the Volunteer service. Among them are the following:

1st. An officer who has received a commission higher than that which he holds may be mustered out of his present grade, and into that in which he has received a commission. Can such an officer after he has been mustered out refuse to be mustered in and be discharged the service of the United States?

2nd. General Order No. 43 of the War Department, current number, specifies that no muster once made shall in any case be altered, except by authority from the Adjutant-General of the Army. Suppose an officer mustered into a regiment as of a certain grade, when there is really no vacancy of that grade in the regiment as authorized by law or the orders from the War Department. Because of commissaries of musters, or from the inefficient evidence furnished them), can an officer so mustered exercise the command and draw the pay of that grade, if he is certified by proper orders from the Adjutant-General?

I venture to suggest that these questions have arisen from a misapprehension of the effect of muster. Mustering in is simply *evidence of acceptance* by the PRESIDENT, of the officer mustered in.

If Congress authorizes the PRESIDENT to *accept* volunteers.

2d. Allowing officers and soldiers to be mustered into service is the mode and time of *acceptance*.

3d. Any other significant mode of acceptance is binding under the law.

4th. A gubernatorial commission, without acceptance by the PRESIDENT and assent by Congress, gives no authority to U. S. troops or "accepts" volunteers.

5th. Allowing a person with a gubernatorial commission to act in U. S. service is an acceptance and an assent.

6th. Mustering in is only one kind of evidence of acceptance and assent.

Applying these principles to the first case, mustering in is, as has been said, the method in which the Government signifies its acceptance of an officer; but in the case of an officer already in the service acceptance is signified by the double process of mustering in and mustering out, which is in reality two successive musters in one of one and the same sort, to wit, the acceptance. An officer presenting himself to the mustering officer signifies his acceptance of the commission, and when the Government has signified its acceptance of the officer, by commencing to furnish him with the evidence of the acceptance, it is too late for him to retract from his part of the agreement.

In the second point, the act of mustering derives no force from any act of Congress; but acts of Congress do specify the organization of the Volunteer forces and the number of officers that shall be allowed in a regiment, and this number cannot be exceeded by the executive or his agents; and consequently no officer can exercise command or draw pay in a regiment if he is in excess of the number of officers of his grade allowed to the regiment by law, although he be mustered in. The muster-in roll is merely *evidence* of his being accepted, and as the PRESIDENT has no power to accept him, the evidence of the muster rolls is false and the PRESIDENT is not the author of the fraud in which he has been wrongly mustered.

The remedy for any change in the muster rolls is forbidden, is probably to induce care in making them out and to furnish a uniform means in the application to the Adjutant-General's Office, by which they may be corrected and made to correspond to the facts.

GEO. H. GORDON,
Brigadier-General commanding Division.

HEADQUARTERS, GORDON'S DIVISION,
FORT ISLAND, S. C., Dec. 28, 1863.

A MANUAL FOR THE SWORD.

To the Editor of the Army and Navy Journal:

SIR—In answer to your correspondent "Line Officer's" request for information on this subject, I would say that I think there is a work published containing a manual for the sword; but I cannot at present call to his or my mind its title. I will endeavor to give the instruction required. I could, of course, write it much more easily accompanied by introducing plates, but cannot conveniently afford that for an article of this kind.

By way of preface let me remark that the third motion of "draw" and "salute" bring the sword to a "carry." In saluting on the march (the officer reviewing in his proper position, on foot, or on horseback) the salute is given within six paces of him under the salute, retaining the sword in the position described in the 3d motion, until you have passed, or been passed by the officer saluted, but in the face the while, when make the third motion or carry. In a regiment marching in review, it will be brought to the shoulder on the order being given to that effect. In "carrying" on the march let the sword-arm swing naturally with the other, bring the sword-hand forward from against the shoulder. The officer should accustom himself to making all the motions given below, without perceptibly dwelling between them, except, as previously remarked, in saluting.

BROAD SABRES—ONE TIME AND THREE MOTIONS.

First Motion.—Seize the sword-handle by the upper hand, with the left hand, turning its edge to the rear; bring the right hand across the body, passing it through the sword-knot, and move it to the right with the hand to take twist in the knot.

Second Motion.—Draw the sword straight up from the hip to the shoulder, the edge to the front and the hilt to the front, by extending the arm upward and to the right of the body at an angle of 45 degrees; palm of the hand turned down.

Third Motion.—Bring the sword to the hollow of the right shoulder, the edge to the front resting against the hip, edge to the front; drop the left hand to the side.

SALUTE IN THREE TIMES.

First Motion.—Bring the right hand as high as the breast, sword pointing up between the eyes and four inches from them, edge turned to the left.

Second Motion.—Drop it by extending the arm, making as nearly as possible a straight line from the shoulder to the point of the sword directed at the ground eighteen inches to the front and right.

Third Motion.—Bring the sword to the shoulder, as described in the 3d motion of drawing.

PARADE—REST—ONE TIME.

Bring the right hand to the front as high as the waist, thumb pointing to the front; drop the sword into the hollow of the left arm, edge up; encircle it by bringing up the left hand and resting it on the guard; the sword to point upward and across the body, the edge of the sleeve, guard resting against the waist belt.

BROAD SABRES—ONE TIME.

Bring the sword to the hollow of the right shoulder, as in the 3d motion of draw and salute; drop the left hand to the side.

BRONZE SABRES—ONE TIME AND THREE MOTIONS.

First Motion.—Bring the sword to the front, as in the 1st motion of salute; drop the scabbard to the left hand, turning it to the rear, as in drawing.

Second Motion.—Bring up the right hand over the left shoulder, reverse the sword; feel the point with the thumb and forefinger of the left hand; enter it in the scabbard.

Third Motion.—Send the sword home; make two turns to the left with the hand to release it from the sword-knot; drop the hands to the side.

INSTRUCTOR.

ATTACK UPON THE MARBLEHEAD.

To the Editor of the Army and Navy Journal:

SIR—The U. S. Steam Gunboat *Marblehead*, Lieut. Commander Nicholson, U. S. N., of six guns and seventy-two men, (12 men short of complement) was attacked at 6 20 A. M. Dec. 29th, whilst anchored off Legareville, S. C. by the rebel ram *Georgia*.

The attack was made by two batteries of field and siege pieces—one planted on a thick wood, and masked from view and the other in the open space to S. W. of the village. (where 100 Federal soldiers were quartered) and distant one mile from Legareville, and 1000 yards from the *Marblehead*.

The rebels only fired two shots when the *Marblehead* slipped her cable and replied. She then took a position and silenced the battery in the wood, and paying no attention to the light battery in the open, concentrated a fire of her starboard guns upon the *Georgia*. The guns of the *Marblehead* from rapidity of fire, becoming heated, broke adrift—the vessel were round, keeping up a rapid fire from

the two pivot guns and brought the port broadsides to bear. After a sharp and bloody contest of an hour, the rebels finished from their guns and retired in disorder, leaving behind them on the field, two 8-inch howitzer iron guns and caissons—6 dead horses, 72 shovels for intrenching—1 dead man, and accoutrements of every description. The rebels fired over 300 rifled projectiles at the *Merrkbead*. The *Merrkbead* fired 256 shell and shrapnel, nearly all of which went straight to the mark. The loss of the rebels in killed and wounded it is impossible to ascertain; it must have been very great, as the ground is torn up in every direction as if ploughed.

The loss of the *Merrkbead*, was 3 killed (cut almost in two by heavy projectiles) and 4 wounded seriously. Two other men were wounded slightly, but refused to report to the Surgeon. The Commander who was struck twice, first by an iron ball from the starboard fore bitt, but uninjured, and Acting Ensign HARRIMAN was knocked down at his gun but is also uninjured.

The coolness and courage displayed by the officers and men produced so creditable a result to the Navy.

The *Merrkbead* had only one shot in her hull—that 18 through the upper works and spars, and has lost her main topmast. The running rigging was all cut to pieces and some of the spars had ringed shot marks. The fleet sail bar was decided by short range and rapidity of fire.

The U. S. Steamer *Pawnee* at the time the action commenced was anchored in Stono Inlet, about two miles from Legareville; owing to a leaky boiler and little speed, she did not get up until the fight was over. Her 7 inch rifle gun and the Rhinah river and enfilading the rebels she contributed greatly to their demoralization. The rebels, however, did not fire a shot at her, as they had announced by a signal way when the *Pawnee* opened fire. The mortar schooner *C. P. Williams*, Acting Master FERNALD commanded, although anchored at a very few miles off in the Folly River, slipped her cable at the sound of the first gun, and came gallantly into the fight. She arrived in time to open fire on the retreating enemy.

The following is a list of the killed and wounded:—

KILLED.—Acting Ensign Brown, Capt. Forecastle; Lawrence S. Snow, Ordinary Seaman; Joseph Phillips, Ordinary Seaman.

WOUNDED.—John Hackett, Coal-hoover, seriously; Charles Moore, Landsman; Alexander Henderson, Landsman; Charles Simmons, Landsman; John Maravoy, Seaman, slightly.

The officers and men of the vessel are as follows:—Lieut. Commander C. R. Wolfe, U. S. Steamer *Merrkbead*; Acting Ensign George F. Winslow, Ex. officer; Acting Ensign G. A. Harriman; Asst. Surgeon, B. H. Kidder; A. Asst. Paymaster, James Wolfe; Master's Mate, A. G. Lee; Master's Mate Thos. L. Fisher; Master's Mate Frank Millet; 2d Asst. Engineer Frank Henderson; 3d Asst. Engineer H. W. Barkley; 3d Asst. Engineer A. B. Robertson; 3d Asst. Engineer J. J. Binnet; Captain's Clerk Frederick Wilson.

WHY SEAMEN LEAVE THE NAVY.

To the Editor of the Army and Navy Journal:

SIR—In the reports of the Northern papers, corroborated by the report of our most worthy Secretary of the Navy, we see what is too true a fact,—that there is a great scarcity of seamen for the Navy at this, in comparison, the vessels are detained at home. It is a well-known fact that many of our very best seamen and petty officers have left the service and joined the Army, or gone into the merchant service; and, unless Congress do something soon, more will leave it, and why so? Because, sir, the present rate of pay will hardly pay their bills in the service. Any man who knows anything about the Navy well knows that every officer and man must necessarily spend his money in the Navy, no matter how great the cost. Now, sir, every article in the paymaster's shops costs almost twice as much as it did two years ago. Not only does he pay double prices, but is drew what he ought to have monthly from the paymaster, including tobacco, will cost him not far from twelve dollars, which, with his sufferings during the month, for which to buy his potatoes and other little luxuries, which Government does not allow to the Navy. A large part of the men in the Navy have families to support, and when they leave home they leave a half-pay for their support;—the consequence is that when they return home they find the blockade for two years or more, and return home, they are generally paid off with a very small amount; they find their families in want, and they become disgusted and quit the Navy, join the Army, or take to the merchant service, where they can get fabulous dollars per month—more dollars than they can get from Uncle Sam. Thus the Government loses the services of the best men—men whom she so badly stands in need of just now.

To remedy this, Congress should at once increase the pay of officers and men comprising the Navy. We shall then see some of the worthless deserters from the Navy return to first love—naval service. But what is done, should be done quickly, as hundreds of good men' time is weekly expiring.

The prices of the paymasters' shops are unreasonably high, as the following will show:—Tobacco, formerly 30 cts. per pound (navy), now 80 cts.; flannel shirts, formerly $1.50 per yard, now 90 cts.; flannel shirts, formerly $4.00, now $5; satinet trowsers, formerly $2.50, now $3.50; sheeting, formerly 30 cts., now $1.36; shoes, formerly $3.50, now $5, and everything else in proportion. A landsman, at twelve dollars per month, must calculate pretty close to keep square with the paymaster.

By the way, there is no want of landsmen in the Navy. But the great difficulty is, that most of them only for one year, and what time that is out, they have just begun to be a little useful. I know by experience that no landsman can make a good naval seaman until he has been on a three years' cruise. And if they go on a second one, they never venture to ship higher than an ordinary seaman. Landsmen in time, if they stick to the service, will make good seamen; but seamen fit for petty officers, and fit to do seamen's duty, in all its branches, are now wanted in the Navy, and every inducement should and ought to be given to encourage our noble tars to stick to the old flag that thousands of them have toiled under so many years.

It cannot be denied, as it is a fact well known to the majority of our naval officers, that the stopping of Jack's half a gill of whiskey per diem has driven hundreds of good men from the Navy. I don't intend to advocate the restoring of the grog ration, but let me say, if you can't give Jack his small allowance of grog, why not give him pay enough,—so that he can pay for the clothes which the laws regulating the Navy compel him to draw from the paymaster, and which he is bound to wear on board of every ship. Do this, and we shall again see some, if not all, of the old man-of-war's men returning to the Navy. W. F. P.

THE SCHLESWIG-HOLSTEIN QUESTION.

The Schleswig-Holstein difficulty, which again threatens to embroil Europe in war, is too insignificant, in comparison with the questions which agitate our own country, to excite here the interest which it has aroused in Germany and other parts of Europe. Even the cause of it is but obscurely conjectured by the majority of our people, who know it only as an international quarrel of some countries' standing, which has never approached a satisfactory settlement from the time, viewed apart from national prejudice and unreasoning partisanship, the grounds of this long-pending difficulty are sufficiently clear and simple; and, as present appearances indicate the assumption, at no distant day, of hostilities between Denmark and the German States, it becomes a matter of interest to understand this cause, however trivial, which is fraught with consequences so momentous to the welfare of Europe.

The two duchies of Schleswig and Holstein, although represented on the map as a part of Denmark, have never been incorporated into it. They have, from time immemorial, been separate states, with a constitution, laws and jurisdiction of their own. Their connection with Denmark has been simply that of personal union, the Danish crown being worn on the head of every Duke of Holstein, who at the same time was Duke of Schleswig. Each duchy has its own Diet, which possesses a part, under them in the maintenance of their rights and their independence.

This conflict has produced an extraordinary excitement in Germany, which seems to be every day upon the increase. The liberal victory involved in the repeal of the press ordinances of September, the accession of King CHRISTIAN, by turning the energies of the Deputies, from a constitutional struggle, against King of Denmark. Schleswig-Holstein became the only thought of all parties. The unanimity of the German on this question is acknowledged by all parties. Even the Democratic Party has abandoned the protection of the two duchies. The Second Chamber of Prussia, by a vote of 261 to 63, adopted a resolution, declaring the duchies to be not separated from Denmark, and the Prince of Augustenburg entitled to the succession.

The powers which openly espouse this Denmark are Russia, France, England and Sweden; and, as Austria and Prussia signed the Protocol of 1852, it was supposed that these two powers would feel compelled to take part against the duchies. But, as members of the German Confederacy, both Austria and Prussia, on the 7th inst., bound by the action of the Federal Diet at Frankfort. In accordance with the decisions of the Diet, the troops of the German Confederacy have probably already entered Holstein. Advices to December 17th stated that the Saxon contingent was in the advance, to be followed by that of Hanover. Behind both were the Austrian and Prussian reserves, of 62,000 men, to act as supports, in case the Danes should attempt to offer any resistance to the Federal execution. It was hoped that the Danes would retire peacefully, without compelling to provoke a collision with the great military powers of Germany. But an accident may bring on a collision. Less threatening questions have filled Europe with bloodshed; and it is hardly to be expected that King CHRISTIAN can look on with equanimity while his kingdom is being rent asunder, and the fairest portion of his possessions bestowed upon another. But alone, he is powerless against the combination of the German States, the very magnitude of whose preparations involves the submission of Denmark, or a general war between the great powers assayed on opposing sides. There is as yet no indication but England or Russia will interpose with military forces, although either of these powers may do so at the last moment, in order to save Denmark from utter ruin. Such interposition would probably be the signal for a war of greater magnitude than Europe has ever beheld.

THE SPANISH CAVALRY.

THE school of the manœuvres and evolutions of the Spanish Cavalry is founded in three very rare volumes—so rare that it is almost impossible to procure them even at Madrid or at the great military centres of Spain. Many of the Spanish officers, not excepting those belonging to the cavalry, do not possess this work, which is published exclusively by the cavalry bureau, who suffer no one to reprint it. Besides these three volumes of cavalry drill there is a book giving the formula for every command, from the first lesson up to the evolutions of a division, preceded by the general principles of intonation. Remarkably well drawn plates accompany the text, which are clear, simple and concise. The greater part of the evolutions of regiments and of the line are copied, the Paris *Moniteur de l'Armée* asserts, from the *ordonnance* of the French Army; but the Spanish tactics do not admit the principle of natural order, and they consequently ignore the French "inversion," and which a portion of the French Cavalry officers have themselves sought to get rid of.

Before the adoption of their present system in 1850, the Spanish Cavalry were regulated by voluminous general orders, for the service, instruction and discipline of the corps of the army. These orders, adopted in 1768, were based upon principles dating from the previous century; had they been vigorously followed, the Spanish Cavalry as late as 1849 would have been seen executing movements abandoned by the armies of the north of Europe since the time of Gustavus Adolphus. But the adoption of the new code in 1850, they manœuvred by squadrons of 120 horse upon two open ranks, at a distance of one-half, one-third or one-fourth of their front, according to the will of the Commander-in-Chief of the line. Formations were effected by the passage of lines. For a charge the enemy was approached to within four paces of the first. This distance of four paces between the ranks was also adopted for forming column by fours.

These principles of formation, as laid down in the prefaces of 1768, were adhered to until 1788, when the officers of the Spanish Cavalry divided into two parties: one conservative, adhering to the royal *ordonnance*, the other adopting the French system which appeared in that year. Henceforth a deplorable confusion ensued in their cavalry, the German drawing out his own ideas in the corps he commanded. Somewhat later the appearance of partizans of the English school increased the confusion among the officers of the Spanish Cavalry. Some manœuvred in the French style, some in the Spanish, some in the English, and some confoundingly all three, and even in the most singular combinations. This anarchy of ideas continued until the adoption of the present system of tactics in 1850, which the French claim as a copy of their own. It exhibits some variations, however, not to the advantage of either of the corps named, the principal of the French school of the platoon; a modification based upon the regimental organization of the Spanish Cavalry, which then formed eight companies—four squadrons of two companies each. The Spaniards have also substituted for the French school of the company, its fine theories of

Counter-marching in Spain is not made by files, as in France, but by platoon, which gives greater celerity of movement, and enables the movement to be made while marching.

The very popular manœuvre is the march in line by columns in platoon. The regiment being in line of battle, the colonel commands—

"In each squadron, by platoons, break the squadrons."

Then the regiment marches, the first four platoons to the same depth, and with full distance between the columns. This movement serves not only for the passage of the lines, but for a great number of evolutions. The plates of the Spanish theory reproduce this order several times, as if it were considered to be a fundamental one. This march, when executed front, occupies much ground, does not form promptly on the flanks in battle, and is an easy prey to pro-

jectiles. The Spanish ploying, deploying, change of front and formation into battalions, are all executed like the French.

There is indeed now a great similarity in the cavalry systems of the different European armies. Until the time of NAPOLEON improvements generally came from Prussia, who was in turn inspired by the Swedes. Since the impetus given to military improvement in France by NAPOLEON, the French cavalry it is claimed have been the guide and model of Europe—the general features of its system of manœuvres have been adopted, with various modifications.

In Spain, as well as elsewhere, the question of the utility of cavalry in future wars has of late come up for debate, with the same difference of opinion upon it as exists in other armies.

FRENCH MILITARY MATTERS.

From the Exposition of the Condition of the Empire, delivered to the French Chambers, we learn that the total effective force of the French army in active service is 458,986 men, distributed as follows:—

Interior	326,316
Algeria	59,651
Italy	16,960
China and Cochin China	1,873
Mexico	34,186

The reserves, liable to be called into active duty, number 217,261, making the total effective force of the Empire 454,247 men.

The military operations of the past year have been confined almost exclusively to Mexico. The capture of Puebla was the most important military event of that campaign, as be entry into the city of MAXIMILIAN is not of any great political event. Notwithstanding several unimportant encounters with the elements of agitation, rather than of resistance, organized by JUAREZ, the French army is considered to have terminated its work, and proved that no task however arduous when surrounded with difficulties, can depress its courage, or overcome its spirit of endurance Already, the report states, under the genial influence of the banner of France, the towns occupied by the French troops have been transformed; order has been restored, and with it re-appear commerce, a brighter future, and the hope that the civilized world are turned towards Mexico; and, in spite of sinister prophecies, which had no effect upon the determination of the EMPEROR, France looks confidently for the *reconnaissance* of that country, where her genius is represented by her gallant army.

The operations attending the call for the class of 1862 were completed, as usual, with perfect regularity. Of the 100,000 men composing the contingent of the class of 1862, the number of exemptions admitted by the Board of Revision amounted, in 1863, to 29,917, against 30,000 of the preceding class. This difference is probably owing to the fact that the exemption tax has been reduced from 2,500f. to 2,100f.

The French soldiers in garrison are to be furnished with coal much, in imitation of the English practice. They are also to be allowed, as a measure of economy, to cultivate the gardens belonging to their barracks, for the purpose of supplying their kitchens with vegetables. An experiment of this kind has been made by the 43d line at Lille.

It was ordained by the Congress which followed the capture of Sebastopol, that the graves of the officers, non-commissioned officers, and privates belonging to the allied armies should be placed under the protection of the Russian Government, until some definite disposition should be made of them. The Russian Government has not neglected the fulfillment of its duty towards its soldiers and sailors, and a commission has been dispatched to the Crimea for the purpose of collecting into one cemetery the fallen heroes, who now lie scattered in a great number of grave-yards. A cemetery will be established, in the centre of which will be placed a mausoleum, containing the bodies of the generals and the staff-officers, whose names will be engraved upon this monument. Other sepulchres, less monumental in appearance, to the number of eighty, will surround the central mausoleum. The military officer, who was wounded at the siege of Schastopol, will be placed in one of these last monuments, which will be surrounded by a massive wall.

GREEK FIRE.—The following extract from a private letter of Brig. Gen. GILLMORE, of the Department of the South, we find in a Troy paper, and therefore feel at liberty to reprint it here:—"You ask why it is, since the shells are being constantly thrown into Charleston, that the city is not destroyed. Simply because it cannot be done. To fire buildings with shells is not generally possible under favorable circumstances, and these circumstances are certainly as unfavorable as could possibly be. To keep up a heavy and continuous fire many guns would be required, and points that I cannot now explain, connected with this new condition of the service of artillery, have to be investigated and solved, and new rules established for the management of fire before such a bombardment as that now going on can be considered successful. Besides—at least to the degree that the public hatred of Charleston seems to demand. And as you may suppose that Greek fire can do now what the journals have so generally reported as having already been done, I may add that Greek fire is only one of the many bumbugs of the day, and that not a shell containing it is known to have entered Charleston. On the contrary, it has been a complete failure, from the premature explosion caused by its use. Such I understood to be the merits of the Greek fire questions. Finally, there is probably no intention of *burning* Charleston, as such acts are not now considered quite as consonant with the spirit of Northern warfare (that is, of the highest type of civilized warfare) as even many folks consider admirable."

CONGRESS.

SENATE.

Congress, having adjourned over the holidays, reassembled on Tuesday, the 5th inst. On the same day the following Message was received from the President in relation to the question of bounties:

Gentlemen of the Senate and House of Representatives:

By a joint resolution of the 15th of July, approved Dec. 24, 1863, the paying of bounties to veterans volunteers, as now practiced in the War Department, is, to the extent of $300 in each case, prohibited after the 1st day of the present month. I transmit for your consideration a communication from the Secretary of War, accompanied by one from the Provost-Marshal General to him, both relating to the subject above mentioned. I cannot doubt that it will be for the public interest as to allow bounties to be paid as they now are, at least until the ensuing 1st day of February. I would merely add to the Secretary's suggestion in thus recalling your attention to a subject upon which you have so recently acted, and perhaps but a few days more than the public interest demanded it could induce me to incur the hazard of being misunderstood on this point. I do not suppose that any person can put into the resolution mentioned, and it is now by a clever attention and a little forbearance I can think that I best contribute to a more rapid consideration of the subject.

Jan. 5, 1864. ABRAHAM LINCOLN.

The Secretary of War, in a letter accompanying the Message, says no one seems to doubt the necessity of increasing the military force of the country, by all possible means, although much difference of opinion exists as to the merits of the system of raising troops by volunteers and the payment of bounties, yet it is certain that a large portion of the people in every State prefer the method of contributing more progressive to the draft; and that veteran soldiers who have become inured to the service, even when paid bounty, constitute a cheaper force than new recruits or drafted men without bounty. Prior to the passage of the resolution of December last, there were indications that a very large proportion of the troops then in the service would have cheerfully reënlisted for three years. Such enlistments have been seriously checked by the action of Congress. A communication from the Provost-Marshal-General confirms the statements contained in the letter of the Secretary of War. These communications were referred to the Committee on Military Affairs.

A petition was offered by Mr. GRIMES (Iowa), asking for such a modification of the confiscation law as will include all foreign residents; also a memorial from non-residents praying for exemption from the $300 clause in the Conscription Act.

Mr. POWELL (Ky.) offered a bill to prevent army and navy officers from voting in the military service from interfering in State elections.

Mr. WILSON (Mass.) introduced a bill restoring the $100 bounty to veterans who shall reënlist between until the 16th of February, and a bounty not exceeding $100 to persons of African descent enlisting and resident in States now in rebellion, during such time as the President may determine.

On Wednesday, the 6th, the bill introduced by Mr. POWELL was severely debated and referred to the Committee on Military Affairs. The House bill ordering the bounty to volunteers was passed to a second reading.

HOUSE.

On Tuesday, the 5th, Mr. Smith, (Ky.) introduced a bill, which was referred, providing for the pay of the bounty and pensions for soldiers called out in the Departments of Ohio and Kentucky in 1862. Mr. ELDRIDGE gave notice of the introduction of a bill providing for the payment of bounties to soldiers who have been honorably discharged and who have been honorably discharged and have served for a period less than three years.

On Wednesday, Mr. Farnsworth (Ill.) reported a joint resolution, which was passed, that the bounties heretofore paid under the regulation and order of the War Department for a term reduced to less than three years or for three years or during the war, shall continue to be paid from the 6th of January, 1864, till 1st of March next. On motion of Mr. Stevens, (Pa.) the Committee on Military Affairs were instructed to inquire into the expediency of including in the pay bill, now before the President, those who volunteered for the nine months service, and report by bill or otherwise.

COMP-FOLLOWERS IN INDIA.—A writer in *All the Year Round*, has written a friend of camp-followers who infest the British Army in India:

The native cooks, washer-men, grooms, tent-pitchers, and the hundred other natives who follow the soldier wherever he goes in the country, are not to be compared with him or his wife and children, and often his father, mother, uncles, and brothers—scored all belief; they seem to be more numerous than the sand on the sea shore. The evil of this immense following confined to the camp-followers themselves, for these, in their turn, must have their followers. In addition to the above, the native troops, and the native corps must have a large baggar establishment to feed its followers. The extent and consequent expense of this system may be in some degree conceived when I mention that during one of our campaigns in Afghanistan, although the followers were reduced to the lowest possible numbers, there were European regiments that counted no less than seven native camp-followers to every effective English soldier. Many old Indians will say that our men could not dispense with these native servants, and that if they attempted themselves to do the menial work of the barracks their efficiency would suffer. Now, I am an old Indian, and have seen service in the Punjab, in Afghanistan, and in other countries also, and I maintain that the English soldiers would suffer, even if deprived of all their native servants to-morrow. Surely our men are not more helpless than Frenchmen! And I have seen a brigade of the latter take the field for service in the burning plains towards the frontiers of Morocco—a far hotter climate, with far fewer resources than I have marched through in India, from Peshawar to Calcutta—not having with them more camp-followers than they would have in Europe. The average number of non-combatants with a French column in the field of Algeria is less than 1 per cent. of the soldiers present, and these are mostly all tailors or shoemakers, who are also of considerable use to the troops and do not take off a single man from the ranks. In our Anglo-Indian camps, the number of camp-followers is something like 700 or 800—I have known it as high as 1100 per cent.—more than the fighting men! In other words, where the French in Algeria take one camp-follower in the field, we take from 700 to 1100.

A CIRCULAR calling attention to the investigation instituted into the circumstances of Surgeon-General Hammond, and his subsequently being relieved from all quasi inspection, which is claimed to be the duty of the Medical Inspector-General's office, and asking that formal proceedings be taken that the real facts may be ascertained, and he reinstated in his office, has been circulated in Congress. The circular bears the name of President Hill and Professors Pirrey, Agnew, and Longfellow, of Harvard University; Drs. Valentine Mott, Willard Parker, and John William Draper, of University of New York; Dr. Jacob Bigelow, Warren Henry I. Bowditch, of Boston; Dr. James Anderson, President Jackson, and many of medicine and other prominent gentlemen of the medical profession.

NAVY OVERCOATS.—The following order relative to Navy overcoats has just been issued:—For all officers shall be a double-breasted overcoat and cape of dark blue beaver or pilot cloth, lined throughout with silk. The cape to be double breasted, pockets to side seam, buttons arranged as for frock coat, with flaps to pockets so as to remove at pleasure and provided with an extra cloth collar to button close to form a separate garment. On each of the collars of the overcoat shall be the following devices, viz: Admiral, 4 stars; commodore, one star; captain, silver eagle; commander, a silver leaf; lieutenant commander, a gold leaf; lieutenant, two silver lace buttons; master, one button; a small gold cord on the front edge of the collar; staff officers of assistant rank to wear the same designations. The overcoats of all the officers to be plain.

GENERAL McCLELLAN TO THE PRESIDENT.

The following letter is said to form a part of the forthcoming report of General McCLELLAN:

HEADQUARTERS ARMY OF THE POTOMAC,
CAMP NEAR HARRISON'S LANDING, VA.,
July 7, 1862.

MR. PRESIDENT:—You have been fully informed that the rebel army is in front of this position, and is evidently receiving or by actual position or reckoning us by blockading our river communications. I consider this army now in a critical position. I do not say this in view of possible contingencies, to lay before your Excellency, for your consideration, what course you may adopt in case I am overwhelmed by the enemy, although they do not strictly relate to the situation of the army, but I say it to express my opinion as an official fact. The army is in excellent condition, and are deeply impressed upon mind and heart:

That the present rebellion has its origin in the interests, passions and self-government. The Constitution and Union must be preserved at all hazards. It must be done. The North will be invincible in accordance with these dissolutions are clearly to be seen in the Northern States. The extreme Democracy is for the war, and the war shake our settled purpose to enforce the equal operation of the laws of the United States upon the people of every State. No one has come when the Government must determine upon a civil and military policy governing the conduct of the armies and the nation. The responsibility of determining, declaring and supporting such civil and military policy and of directing all the forces of the nation in their relations to the rebellion, must now be assumed and exercised by the Executive. The policy of the Government must be conciliatory as well as firm, and must not be inconsistent with the reasonable expectation of support in all the relations of the country.

All private property taken for military use should be paid or receipted for. The lives and property of citizens should be spared, and unnecessary trespass sternly prohibited, and offenders dealt with. Military arrests should be confined to persons in the military service, and should not be tolerated except in places where active hostilities exist. Military government should be confined to repression of crime, and should be neither demanded nor resisted. Military government should be confined to the shortest possible period, and should not be a pretention of political rights. Military power should not be allowed to interfere with the relations of servants to their employers, or compel the authority of the master, except for repressing disorder, as in other communities. Military power should not be exercised, seeking military protection should receive it. The right of the Government to appropriate property, and to destroy it when necessary for the safety of the army, and the right of the owner to compensation therefore, should be asserted and enforced

GENERAL McCLELLAN'S REPORT.

THE following synopsis of the lengthy official Report of Major-General McCLELLAN is given by one of the New York daily papers. Though the report has not yet been published, we have every reason to believe that this summary is correct:—

The report is dated New York, August 4, 1863. It begins with an allusion to the results of the victories in West Virginia, which, we learn, were not at all in connection with any general corporative plan of action; and then goes on to review the services of the General-in-Chief after Bull Run; the organization of the Army of the Potomac; the grand plan laid out for the general campaign of 1861-62; the final withdrawal of Virginia in 1862 in the Peninsula movement: the seven days' battles; and the short Maryland campaign of September, 1862. On the 1st of November, General McCLELLAN was appointed to the chief command of all the forces of the Union, and at once began active operations. The theatre of war had now extended along the whole circumference of the South; and it became necessary, as well as practicable, to plan a large and sweeping combination of military operations.

An organization of New England troops for occupying the coast-line of the South on the middle Atlantic and Gulf States, had been selected by General McCLELLAN in September, 1861, took shape in January, 1862, as an expedition under General BURNSIDE, designed to facilitate the movements of the main body in Eastern Virginia by an occupation of the coast-line of North Carolina. Gen. BURNSIDE'S force (somewhat less than 13,000 men) was to occupy and destroy the Weldon and Wilmington Railroad as far west as Goldsboro', and, should circumstances favor, to push on to Raleigh. Wilmington being, however, his ultimate objective point. "Caution about proclamation" was recommended, the General being urged "to say nothing about the abolition of politics or the negro," and to state merely "that the true issue for which we are fighting is the preservation of the Union and upholding the laws of the general government." At the same time letters were sent to General HALLECK (appointed to the command of the Department of the West), to General SHERMAN (commanding in South Carolina and Georgia), and to General BUTLER (commanding the Department of the Gulf). General HALLECK was charged with the duty of "reducing chaos to order" in his Department, in respect to military operations, and was ordered to hold the State by fortified posts and concentrate his force on the Mississippi. General BUELL was instructed as to the great importance of his operations against Eastern Kentucky and Tennessee. In Kentucky itself he was advised "to direct your military operations," and not be too urgent to hear in mind "that we shall most readily suppress the rebellion and restore peace and unity of the Government by religiously respecting the constitutional rights of all." In accordance "with the feelings and opinions of the Kentuckians," General BUELL was requested General BUELL was instructed to "direct your military operations," and not be too urgent to bear in mind "that we shall most readily suppress the rebellion and restore peace and unity of the Government by religiously respecting the constitutional rights of all." In accordance "with the feelings and opinions of the Kentuckians," General BUELL was requested to say nothing but the dictates of military "necessity" to cause him to "depart from the spirit of his instructions" in respect to slavery. General BUELL was ordered to throw the mass of his troops "by rapid marches by Cumberland or Walker's Gap, on Knoxville," "in order to destroy the railroad in that region," and the "rebels" by "ceaseless arrests and persecutions of individuals." In short, as General McCLELLAN tells BUELL, "what it is the tendency of subordinates to make "vexatious arrests on mere suspicion."

General BUELL was awarded the credit for favorable movement for *coup de main* against Savannah had been lost, and that the best course before him would be "to isolate and reduce" Port Pulaski. But the "advice of the Charleston and its "defences" was held up as the great moral advantage to be sought for, and this was stated to be the object of which General McCLELLAN was actively maturing his combinations. General BUELLER was instructed as to the obstacles to be encountered in reducing Port Pulaski, and was informed as soon as possible after the fall of that city, to "seize all "the approaches leading to it from the East," and particularly "Wilmington harbor," which was considered "as well to the capture of Mobile, as to the opening of the Mississippi." The instructions thus briefly set forth, it is remarked comprehended the entire scope of the plans of General McCLELLAN, of which plans the movement of the Army of the Potomac, under his own command, was the principal part. It was considered by him necessary to the success of these plans that they should be carried out simultaneously, or as nearly as no possible, and that after the Army of the Potomac upon Richmond beyond the lower Rappahannock, was kept in hand by him, to be delivered as the decisive blow, in conjunction with the rest of the forces of the country.

Passing over General McCLELLAN'S full and elaborate account of the consultations and operations which preceded his advance to Manassas, March 9th, 1862, we find that this advance was intended by him merely to occupy the troops during the preparations for the Peninsula campaign, then fully decided upon. The enemy's force at Manassas was estimated at 115,000, with 500 field guns and 300 siege guns. McCLELLAN computed his own force at 168,000, with 85,000 effective early in April. He gives his reason for not assaulting the Manassas intrenchments in front, viz., its attendant battles at Mechanicsville, fought June 26th, to Malvern Hill, fought July 1st, 1862. This closed," says General McCLELLAN, "the hard fighting, which had continued from the afternoon of the 26th of June, in a series of "engagements wholly unparalleled on the continent for its "tenaciousness, slaughter on both sides." July 4th the General telegraphed to the President that he occupied, at "considerable position" which, under ordinary circumstances, "overwhelming numbers." "The spirit of the army," he added, "is excellent; stragglers are finding their regiments, and the soldiers exhibit the best results of discipline." He sums up the results of the brief, but fierce campaign:—"I cannot now appreciate to any satisfaction "of our losses; but we were not beaten in any conflict. "The enemy were unable, by their utmost efforts, to drive "us from the field. * * We have lost no guns, except "twenty-five on the field of battle, twenty-one of which "were lost by the giving way of McCALL'S division, under "the onset of large numbers of fresh troops. The circumstances of the case are known, it will be acknowledged by "all competent judges that the movement just completed by "the army is unsurpassed in the annals of war. * * Under "the most difficult circumstances we have preserved our "trains, our guns, our material, and, above all, our honor. "To this the President replied: "Be assured the heroism "and skill of yourself, officers, and men is and forever will "be appreciated. No one can hold greater position, nor "shall have the enemy yet." On the 7th General McCLELLAN telegraphed:—"I not attacked to-day, I shall laugh at them. * * * Our position is impregnable; better he can "keep open my communications with the James."

Early in August the army was ordered to Aquia. The condition of affairs in Washington during the campaign of Fora is described. September 24 the President directed General McCLELLAN to assume command of his own and General Pope's armies, and find the enemy. On the 17th of September Antietam was fought,—South Mountain and Campbell's Gap having been carried the day up. Not a gun or color was lost by us in these battles, and our total loss in men at Antietam is stated by General McCLELLAN at 12,469. The advance after Antietam is related, with an account of the causes by which that advance was delayed, down to the night of October 7th General McCLELLAN was relieved, and the command transferred to General BURNSIDE.

LETTER TO THE HON. HENRY WILSON.

ON STAFF PROMOTIONS IN THE ARMY.

To the Hon. Henry Wilson, Chairman Military Affairs, U. S. Senate:

SIR:—Previous to the breaking out of the present rebellion, from twenty to thirty years were deemed the time essential to making a "Veteran" soldier. In the English service, if I am not mistaken, fifteen consecutive years' service under the colors has conferred of a soldier before he can claim the honor and title of a "veteran." But it is well known, and probably by no one better than myself, that the requirements of the art of war advances the efficiency of an army—field, staff, line, rank and file—as it moves the ever changing circumstances of the times. There is no impropriety in calling a soldier who has served for three years, during the present war, a "veteran," as he is such in everything pertaining to the art of war. The glorious records of our armies during the present war abundantly prove this fact. A "veteran" upon re-enlisting gets ($400) four hundred dollars bounty, and by law is not to be entitled to it by the value of his services; and that his experience and consequent usefulness may do not be lost to the service of our glorious Government? What is true of the rank and file in this respect would seem to be not less true of the commissioned officers.

Probably during the same period of time no country can show a better *personnel* in the officers of its Army and Navy combined for the purposes of military capacity, intelligence, honesty, fidelity and all those qualities which make an officer proud of his profession—than can the United States. I have had occasion to demonstrate the truth of this proposition, not less than our years of peace, when the services of officers of the Army and Navy through quite years always occasions of just pride to our official representatives at those places, whose pleasure it was to meet and confer with their head hospitable. In every diplomatic army officered by gentlemen whom we take a pardonable pride in contrasting with the cockneyed and privileged officers of their respective armies, and whose claims to their brains did not entitle them to,—" when he gets promoted" has been a standing jest among our army officers and a reproach to Congress, for the injustice occurring for those well earned and deserved promotion. As far as field and line officers are concerned, I believe that the present law remedies the matter to a great extent. In looking over our Army Register, I find Captains in the line are now Majors, Colonels, Brigadiers, Brigadiers have to be or old to the Captains and Lieutenants who have been made Brigadier-Generals and Colonels. In our Volunteer service a Captain can be a Major-General. He has been considered good for a Colonelcy, and a Colonelcy good for the next promotion. But while the line of the Army is thus rapidly and deservedly promoted, does it not seem that the various officers on duty in the Staff departments of the Army have been overlooked? Many of the most responsations a period of fourteen years' continual service (I am referring to the Staff departments) was necessary for a Captain to obtain a Majority. Such is the law and supervising, as they seldom did. Excepting the provisions of act of Congress approved 17th July, 1862, " the same, may I not say unjust, rule has been applied to the Staff, which does not be understood, sir, as contrasting the relative merits of the officers performing the duties of the Staff, but only to together harmoniously and efficiently in a common cause, and no such contrast is called for.

The Staff of the Army includes who incur the risk of battles are certainly entitled to its dearly-purchased promotion. At the same time Staff officers are expected to be on the field with their commanders during battles, and such an extent was this carried in his department, that General BUELL, then commanding the Army of the Ohio, published a General Order prohibiting Staff officers, having Government funds or property to account for, from incurring any of the risks of battle. The following part of the Staff officers of our Army (especially those of the Adjutant-General, Quartermaster, Subsistence and Ordinance Departments) have the rank and pay of Captains; and it is upon these that, with very few exceptions, the management of large details for furnishing immense supplies to the Commissary and Ordnance supplies for our armies devolves. Not unfrequently Government property amounting to millions of dollars in value is disbursed by them every month, —and for this can their rank be deemed adequate to the position they hold, or their pay ($120 per month) sufficient remuneration for the services performed and the responsibility incurred?

The Act of Congress referred to, though framed, as it would seem, with a view to secure the promotion of capable and efficient officers of the Staff departments, it is respectfully submitted, sir, has not accomplished that end. Out of over twenty officers promoted under this act, in the Department of the Cumberland, about seven months since, sixteen had been promoted from the regular army, owing to the changes of corps commanders, which have become of such frequent occurrence.

In concluding this letter, already too long I fear, sir, I would respectfully ask whether, if the position assumed in reference to the promotion of officers of the Staff departments, cannot, sir, through your influence and the important position held by you as Chairman of the Committee on Military Affairs in the United States Senate, some more considerate action for such Staff officers as performing satisfactorily and efficiently their duties be ascertained, deserve some credit for their zeal, their long service and their faithfulness as appreciated.

I have, &c., respectfully, sir, your obedient servant,

A STAFF OFFICER.

CHATTANOOGA, TENN., Dec. 30, 1863.

LAUNCHING SHIPS-OF-WAR.—In the New York *Tribune* it was stated that the unsuccessful attempts to launch the *Dictator* and the *Scientific American* "are the first instances of the kind in the Navy of the United States," &c. A correspondent of the *Evening Post* corrects the statement, instancing the following unsuccessful attempts to launch vessels of war:

The frigate *Constitution* (old *Ironsides*) built at Hunt's shipyard, Boston, in 1797, was not launched till after several trials on three separate days; but surely she has been pretty eminently the luckiest ship in the Navy. I know seven persons who owe their lives of her launching.

The old frigate *United States* was built at Philadelphia in 1797, and launched with difficulty, and with a full tide the same year. In launching, the tide rushed over the ways so badly injured, she had to be thrown does for repairs. She was always a lucky and popular ship.

The *Independence*, seventy-four, built at Navy Yard, Charlestown, Mass., Monday, 26, 1814, after put but unsuccessful efforts to get her off the ways on the Saturday and Monday, in which 40 or 50 persons are killed and several injured. The writer of this was present.

At the launching of the *Franklin*, seventy-four, at Philadelphia, in 1815, a number of persons were killed.

A steam frigate (I think the *Roanoke*) was so badly begod in launching at Norfolk a few years since, she so ploughed with a "weak back" for a long time (like a distinguished Northern Senator when the Missouri Compromise was passed).

There are undoubtedly many other cases where these attempts to launch our ships-of-war proved unsuccessful in the first trial. I have mentioned these instances to show that the late unsuccessful efforts to launch the *Dictator* at the *Seagoa* do not "constitute the first occurrences of the "kind in the Navy of the United States."

GENERAL GRANT'S CONGRATULATORY ORDER TO HIS ARMY.—The following is the congratulatory order to his army. It is dated December 10, 1863:—

The General commanding takes this opportunity of expressing to the officers and soldiers composing the late two Armies of the Cumberland, the Ohio, and the Tennessee, their comrades from the Potomac, for the recent signal and decisive victories over the rebel forces. In a short time you have recovered from him the control of the Tennessee River from the Chickapoint to Knoxville, taken from his great stronghold upon I kout Mountain, drove him from Chattanooga Valley, w ken his siege, relieved Knoxville, and driven the rebel host, a rapid with heavy loss to him his repeated assau...upon Knoxville, forcing him to raise the siege there, driving him it of Virginia, and relieving the loyal people of East Tennessee of the State. By your noble heroism and determined courage you have effectually defeated the plans of your enemy for gaining possession of Kentucky and Middle Tennessee. You have secured positions from which no rebellious power can drive you, and shown to the world that Government determining thanks you collectively and individually. To the loyal people of the United States thank and bless you for the heroism you have shown for your success against the unholy rebellion are with you daily. Their faith in you never failed in vain. Their hopes will not be blasted. Their prayers will be almighty God to bless you. You will yet go to the fields of strife; and with the invincible bravery and unflinching loyalty to justice and right which have characterized you in the past, will prove that no enemy can withstand you, and that no defences, however formidable, can check your onward march.

ENGINES WITHOUT BED-PLATES.—In the engines of the new steamer *Scientific American*, which is sufficiently important to merit notice. These engines have neither bed-plates nor frames, properly speaking. The parts of these engines usually found in other engines, is transferred to hull but rigid wrought-iron beloxes, or buildings, which shape the entire machinery, and are firmly secured in place by these lokens; girders they are in reality for while they carry the engines they also form a bed to the arc of the ship's bottom and materially strengthen it built. The absence of bed-plates dispenses with a large mass of iron. In addition to these details and their appendages would, with engines of the usual construction weigh that amount, while the absence of bed-plates will reduce this amount with a saving of considerable money. Similarly the case in a vessel-of-war, where every pound of weight is a positive injury, increasing the draft, the load

and adding to the labor of the ship in a sea-way. The cylinders are bolted directly to the wrought-iron lodmans mentioned previously, and the power exerted within the ship is transferred to a short rock-shaft, supported on vertical pillow-blocks, bolted and braced firmly to the same keelson: beyond this arrangement there is no other. Cumbrous and heavy frames which interfere with a thorough inspection of and access to the machinery, and massive bed-plates, are both wanting, and the other details of the engines are equally sound from an engineering point of view. These improvements are important ones, and might be advanced to advantage in the construction of other engines than those intended for war ships. Captain Ericsson is certainly entitled to much credit for the ingenious and admirable plan of these engines. If they obtain a commensurate piston speed, they will certainly make the *Dictator* and *Puritan* what it is claimed they will be—the fastest war vessels in the world.

ARMY AND NAVY PERSONAL.

CAPTAIN JAMES M. MOORE has assumed charge of the Army Assistant Quartermaster's Department in Washington.

MAJOR-GENERAL GRANT, in alluding to the use of his name in connection with the Presidency, says: "I think the rebellion is suppressed and our country saved, it will be time enough to talk upon that subject.

The *Intelligencer*, known as the petition of "Miles O'Reilly," and all compositions under that *nom de plume*, are by Lieutenant-Colonel Chas. G. Halpine, late A. A. Gen. on Major-General Hunter's staff.

GENERAL Wright, commanded the Department of the Pacific, has ordered officers commanding volunteer companies to forward to the headquarters of each one a statement of their commands who have not been mustered into service by an officer of the regular army.

MAJOR-GENERAL Sherman has been relieved of his command as Chief of the Bureau of Cavalry, and been assigned to Major-General Grant, as Chief of his cavalry. Brigadier-General Stoneman, a cavalry officer of the Southwest, replaced General Stoneman.

On Christmas day a grand dinner was given on board the ship-of-war *Preble*, commanded by Flag-officer Farragut, at New Orleans. The officers, sailors, and marines all partook of it—the tables being arranged on the berth decks. A large number of distinguished guests also partook of it.

CAPTAIN John Ellison, commander of troop 1, 12th New York cavalry, was presented with a splendid sabre, sash, belt, and pistol by his officers under his command on Christmas day, at Plymouth, N. C. Lieutenant Wm. A. Irvin made the presentation in a neat speech.

MAJOR-GENERAL Banks has issued an order dishonorably discharging from the service Lieutenant-Colonel G. G. Martin and Second Lieutenant Henry M. Day, both of the 1st U. S. Colored Troops, for intoxication on duty and other coming officers of the United States, subject to the approval of the President.

MAJOR-GENERAL Foster met with an accident a short time since, by the falling of his horse. One of the General's legs, which had been wounded before in battle, was caught under the animal, and considerably injured, though not very dangerously. It is expected that the General will soon be on active duty again.

An order has been issued creating the Military Department of Kansas, including Fort Smith, and assigning Major-General Curtis to the command. No action has yet been taken with regard to the Department of Missouri, but we will there be, until the Senate shall have considered the nomination of General Schofield to be a Major-General.

An order is out from the Navy Department, calling upon officers of the Army and Navy moved in a body from the departments, to pay their respects to the President; the army officers headed by Major-General Halleck and all of the naval officers headed by Admiral Davis and Commodore Montgomery, the new commandant of the Washington Navy Yard. Among the officers present were Generals Augur, Martindale, Griffin, Barry, and others.

ORDERS of States for appointment as Assistant Surgeons United States Army, examined by the Army Medical Board now in session in Washington, 75 were recommended for such appointment. Of this latter number about 20 have been appointed to the full surgeoncies. The candidates for appointments to be surgeons, or assistant surgeons of colored troops, have been examined, and a portion of that number having been full surgeon, and he was colonel.

GEN. John J. Mudd, 24 Illinois Cavalry; Lieut. Col. John M. Crebs, of the 87th mounted Infantry; Maj. Robt. W. McClaughertry, 118th Infantry; Second Lieutenant James Samples, same regiment; Capt. Wm. H. Gray, 118th Infantry, Lieut. W. M. Clark and Captain Wm. A. Crandall, 87th, with thirty non-commissioned officers and privates, all from the Gal Department, have been ordered to Illinois on recruiting service.

A severe injury occurred to Surgeon-General Hammond recently, during his tour inspection. He fell as the train was going in a hurry out of a door, he struck his head violently against a beam that had escaped his sight. The blow prostrated him insensible. It was supposed at the time it was thought he was recovering, but paralysis of the bowels came on after sit in, though it was hoped he would soon improve.

COLONEL Frederick E. Embick, dismissed the service of the United States by sentence of a general court-martial, of which Brigadier-General Joseph Hooker was President, on the 16th day of September last, for having addressed a contemptuous letter to a superior officer, commanding 3d division, 3d corps, has been re-appointed Colonel of the 106th Regiment of Infantry, N. Y. V., by Governor Seymour,—the President having graciously removed the disability under which he was resting by reason of his dismissal.

CAPTAIN Amos D. Combs, 104th N. H. Vols., has been dismissed the service for being concerned in the fraudulent enrporal in his company, in selling liquor and other articles to officers and soldiers of the command,—much of the materials sold having been purchased from the commissary, on the captain's certificate that they were for the use of his company. The store was adjoining and connected with the Captain's quarters. The reviewing officer says, that the "length of time this continued does not speak creditably for the vigilance of the commanding officer, or for the soldierly tone of the officers generally."

THE troops at Hilton Head were reviewed December 2nd by Major-General Gillmore. In the evening the General gave a *soiree dansante* in a temporary structure adjoining his former quarters. The supper was sumptuous and plentiful, and the whole entertainment was very successful. Those present were Mrs. General Saxton, Mrs. General Lander, and the wife of Captain Allen, Provost-Marshal. Among the military present were Generals Gillmore, Strong, Genin, Saxton, General Turner, Chief of Artillery; Colonel Howell, Colonel Osborne, of the 25th Illinois; Colonel Byrd, Colonel Montgomery, Colonel Hallowell, 45th Massachusetts; Colonel Alvord; Colonel J. J. Elwell, Chief Quartermaster; Colonel Sewell, of the 54th Massachusetts; Col. Bell, 4th New Hampshire; Captain Burgen, A. A. G.; Captain Seeley, Captain Bragg, Captain F. H. Cruso, of the Engineers; and Captain Van Buren, Aide-de-camp. About 500 in all, began to disperse at midnight,—ambulances and carriages being provided for their accommodation under the able management of Quartermaster C. C. Bingham.

A NUMBER of the friends of Brigadier-General Alexander Hays, of Pennsylvania, commanding the 3d division of the 2d army corps, took a secret method of expressing their appreciation of his bravery and skill, by presenting him with a magnificent sword, belt, and sash of silver, being cast in the form of two Zouave soldiers with muskets at a shoulder arms. This is surmounted by an American eagle in solid gold,—the hilt being of the same solid gold. The scabbard is of gold, and is beautifully embossed with wreaths and crests, and terminating in the broad blunt end that we see in the Roman swords. The belt and sash is of following inscription :—"Presented to General Alexander Hays, by the citizens of Pittsburgh, 1863." Below is the following record expressive in military history :—"Mexico, 1846-47; Yorktown, Williamsburg, Fair Oaks, The Chickahominy, White Oak Swamp, Malvern Hill, Bristow, Gettysburgh, Auburn, Bristoe, Locust Grove." The belt is of Russian leather, embroidered with solid gold, with representations of Fame, Mars, and Victory. There are also gold buttons, hooks, and snaps to match. The hand uniting the belt to the body is of silver, surrounded with wreaths. The sash is of rich crimson silk, the ends of which is signed by citizens of the city of Pittsburgh, representing men of all parties. They are the townsmen and friends of the General.

ITEMS AND INCIDENTS

THE Headquarters of the Department of the Ohio have been removed to Lexington, Ky.

FOUR Confederate prisoners were frozen to death on the cars last week, Thursday night, while en route from Jeffersonville, Ind., to Chicago.

DESPATCHES from Mr. Pruyn, the American Minister in Japan, announce that the Japanese Government has agreed to pay the claim for damages, $10,000, for intercepting the American steamer Forest Queen.

OF the whole number of men held to service under the first draft, about one-seventh served in person, two-sevenths served by substitute, and four-sevenths paid the commutation money.

JAMES R. Murdock, the actor, has presented to the Cincinnati Sanitary Fair an anchor, the fluke of which are made from the old *Alliance* from the cross-piece of the Polk Treaty Tree, and the small coil attached to the anchor, of the old frigate *Constitution*.

THOSE portions of Kentucky and Tennessee south of the Cumberland, and between the roads leading from Carthage to Clinton, Tennessee, and thence to Point Isabella, are erected into the Department of Middle Tennessee, under command of General Jacob Ammen, with headquarters at Camp Talbot.

MRS. Davidson, wife of Lieutenant Hunter Davidson, formerly of the U. S. Navy, and who left it at an early stage of the war to join the rebel service, was captured a few days ago while crossing the Potomac in a skiff. Mrs. D. was on a visit to friends at Annapolis, and the skiff having become disabled, was about to shove shore, when she was brought to Washington, and confined in the Old Capitol Prison.

AN order has been issued from the Army of the Potomac prohibiting all newspaper correspondents connected therewith from publishing or causing to be published the number or designation of regiments composing the army or brigade the same, the number of reenlistments or the number of men furloughed. Another order from Provost-Marshal Fairchild regulates the transportation of all civilians and army followers, excepting actual residents, within the limits of their respective corps. Deserters from the army to them who have sought refuge in the Army to avoid the draft.

THE Minister from Sweden and Norway, Count Piper, in accordance with instructions from his government, lately had an audience with the President for the purpose of presenting him with a copy of a work, in volume containing engravings of the Royal collection of arms. This is understood to be in reciprocation of a similar compliment of the President, and in token of the cordial relations now existing between the two governments.

THE Charleston *Courier* has the following account of the recent explosion at Sumter, by which eleven men were killed and forty-one wounded :—"A small magazine in the southwest angle of the fort, containing about 150 pounds of powder, and a number of shells and other ammunition, was exploded about half-past 9 o'clock on Friday. The explosion ignited the powder magazine, which was attached, killing or wounding all those in the immediate vicinity. The wounded were burned with greater or less severity. The passages were instantly filled with dense volumes of smoke, introduced by a blast of great strength, which prevented any prolonged or successful attempt to extinguish the fire. A heat from the Navy, with a supply of water buckets, was promptly sent to the assistance of the garrison, and reached all the aid in their power. The behavior of the garrison under their trying circumstances deserves the highest credit.

MASSACHUSETTS VOLUNTEERS.

THE following commissions were issued during the week ending January 2, 1864, by direction of the Governor of Massachusetts :

Nineteenth Regiment—First Lieutenant Wm. A. Hill, to be Captain, vice Hampton, discharged.

Second Lieutenant Ephraim A. Hall, Jr., to be First Lieutenant, vice Adams, discharged.

First Sergeant Wm. A. McGinnis, to be First Lieutenant, vice Hill, promoted.

Twenty-First Regiment—Rev. John C. Payne, to be Chaplain, vice Rice, discharged.

First Lieutenant Alfred F. Walcott, to be Captain, vice Hill, discharged.

Second Lieutenant Edward E. Howe, to be Captain, vice Aldrich, discharged.

Second Lieutenant Ira B. Goodrich, to be First Lieutenant, vice Wheeler, promoted.

Sergeant-Major George E. Davis, to be First Lieutenant, vice Walcott, promoted.

Sergeant George H. Bean, to be First Lieutenant, vice Howe, promoted.

Sergeant Felix McDermott, to be First Lieutenant, vice Sampson, promoted.

Second Lieutenant D. Chamberlain, to be First Lieutenant, vice Hayward, discharged.

Sergeant Jonas B. Davis, to be First Lieutenant, vice Gilman, discharged the service.

Twenty-Sixth Regiment—Sergeant-Major Stephen B. Smith, to be First Lieutenant, vice Davis, discharged.

Thirty-First Regiment—First Lieutenant Luther C. Howell, to be Captain, vice Rockwell, deceased.

Second Lieutenant Albert M. Lee, to be First Lieutenant, vice Howell, promoted.

Second Lieutenant Sylvester B. Bond, to be First Lieutenant, vice Howell, promoted.

Thirty-Seventh Regiment—First Lieutenant John C. Robinson, to be Captain, vice Moody, promoted Major.

First Lieutenant Joseph O. Jones, to be First Lieutenant, vice Robinson, promoted.

Fifty-Sixth Regiment—(First Veterans)—First Lieutenant James Lawrence, to be First Lieutenant, vice Carleton, resigned.

Fifty-Seventh Regiment—Second Veteran)—Second Lieutenant John W. Jones, to be Captain.

Samuel M. Bowman, to be First Lieutenant.

Edward I. Coe, to be Second Lieutenant, vice Sanderson, promoted.

Second Lieutenant Joseph W. Gird, to be Captain.

Dexter Edson, to be First Lieutenant.

Julius M. Tucker, to be First Lieutenant.

Fifty-Ninth Regiment—(Fourth Veterans)—Second Lieutenant Samuel Hall, to be First Lieutenant.

Fourth Regiment of Cavalry—Captain David B. Keith, to be Major.

Fifth Regiment of Cavalry—Assistant Surgeon George S. Osborne, to be Surgeon.

James S. Newell, to be First Lieutenant.

Jacob B. Cook, to be Second Lieutenant.

A. G. Swain, to be Second Lieutenant.

George B. Sanborn, to be Second Lieutenant.

F. L. Gilman, to be Second Lieutenant.

Windsor Hatch, to be First Lieutenant.

Fourth Battery of Light Artillery—Lieutenant George N. Jenkins, to be Second Lieutenant, vice Dean, discharged.

Sixth Battery of Light Artillery—Edward J. Jones, to be Captain.

Edward P. Morrill, to be First Lieutenant.

George W. Hall, to be First Lieutenant.

William Woodsum, to be Second Lieutenant.

George W. Sanborn, to be Second Lieutenant.

Fifteenth Battery of Light Artillery—Second Lieutenant Lovin L. Dane, to be First Lieutenant, vice Kirk, discharged.

Sergeant Edward D. Morrill, to be Second Lieutenant, vice Dean, promoted.

Joseph S. Grush, of Lowell, to be Second Lieutenant, vice Littlefield, discharged.

A NEW Breech-loading Gun.—R. B. Reynolds, of the U. S. Naval Academy, has invented a new breech loading gun, which claims great advantages over the ordinary guns. The mechanism about the breech is new, and the piece is rifled and bored differently most guns. The bore is not parallel, but is taper for a portion of its length. In the explosion chamber just forward of the breech block, the bore is larger and the projectile fits rather easily, but at the muzzle the size is decreased, and here the shot just fills it; by this method, and that of rifling the weapon, the concussion of the discharge was obtained; the rifles or grooves end at a short distance from the explosion chamber, and do not, consequently enter at all, and they begin and increase in depth from their starting point until they end at the muzzle, and here they assume their full proportions. It is claimed by the inventor that the projectile will start easier and take the grooves with much less strain on the weapon than with the ordinary plan of rifling, also that the shot is guided by the thorough compression of the packing on the shot, as it enters the rifles easily at first; by this method of rifling, it is made to fill the grooves without liability of stripping or tearing off the bands at the base, than shot as generally made; also that the metal packing on the projectile may be made much lighter, and answer its purpose much better.

THE battle flags captured in General GRANT's recent battles were presented to the New York Assembly on the 6th, by Colonel HARVEY, of the 149th N. Y. regiment, who has just returned from the front. The flags were Confederate, five were captured by New York regiments and five by Western regiments.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suitable for its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give an early publication to all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to editorial and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military medicine, practical surgery, and reports of notable operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Government Drafts, Post-Office or other checks, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers will fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers should state the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is scarcely even a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, NEW YORK.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

ANSWERS TO CORRESPONDENTS.

ONE ANSWER to 5th P. U. V. C. has been called in question by correspondents, who deny that Army Surgeons are competent to sit on Courts-Martial. We commend the following extract from the Law and Course, which, by the way, have never received the sanction of the War Department, we must adhere to the opinion that these officers are competent to act in such duty. The law requires that all members of a Court-Martial shall be commissioned officers. That it has not been "the custom of service" to exclude Surgeons from such details is no reason why they should not be legally Advocate-Office. Numerous instances can be cited where officers of Pay and Medical departments have been members of Courts-Martial, sitting thereon by virtue of their commissions, and taking precedence with the officers of the same rank, according to date of commission. Nor have the proceedings of such Courts ever been declared illegal because of their constitution. The opinion of Attorney-General Bonaparte, given in answer to query "Whether Chaplains, Surgeons or Parsons" are competent to sit as members of Naval Courts-Martial, is not only based upon a Surgeon of the United States Army, regular or volunteer. He decides "that non-combatants, whose duties do not lead them to acquire the practice of information [like Surgeons and Chaplains, we add] and usage, etc.), and who have no rank, either real or accumulated, could not be deemed competent to sit on Courts Martial." (Report p. 20). But Surgeons do not enjoy de facto military rank, while the rank and precedence of the service is restricted by regulations, so as to give them command only in their own department over other officers, "but, by virtue of their commissions," they "enjoy many social rights" and even, like other commissioned officers." The admissibility of detailing medical officers on Courts-Martial must be decided by the nature of the case to be tried, with that we have already had to do in the present.

SIDELTS.—A sentinel would challenge the officer of the day in the manner prescribed in Regulations, whether he were mounted or on foot.....The manner in which camp and garrison equipage are to be condemned and destroyed, or drawn, is so clearly stated in the Regulations that no explanation seems necessary.... A soldier who has been on guard the night before, may or may not be excused from Sunday morning inspection, just as the proper authority may decide. It is usual to have this inspection before the new guard marches on. If this were not done all the old guard would be excused, and there would be almost from an inspection where a full attendance is desirable.

QUERIST.—1. If the line of skirmishers is marching to retreat, facing by the right flank or left flank, would mean their *present right or left*, and not the absolute right or left. II. As to a sentinel, he is only to salute on the *present* occasion. The third paragraph Regulations of the Army explains when he is to bring up his hand. III. We should say that when a company of infantry is marching to dress parade, the last formed should march with shouldered arms. IV. All forfeitures of pay by Courts-Martial or Field Officers, inure to the United States.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, JANUARY 9, 1864.

PROBABLE REBEL COMBINATIONS FOR THE SPRING CAMPAIGN.

THE present lull in military operations is not without a certain impressive interest of its own, that has not marked any similar period in the history of the war. If we trace this to its source we shall probably find that it grows out of the general conviction of the momentous issues that hang on the Spring campaign. It is felt by the people, though the new parliaments would find themselves able to assign any precise reason for the sentiment, that, somehow, the coming campaign has in it an element of intensity, importance and *decisiveness* that the war has not hitherto seen.

There are excellent grounds for this impression. The opening of active operations last Spring, as well as the previous season, found our armies still planted on the circumference of the theatre of war, and too little progress had yet been made to authorize any forecasting of the future. But the stupendous work of the past year has changed all this. It leaves the rebel territory bisected by the opening of the Mississippi; it leaves the main Union Army planted in the centre of the Confederacy. The Spring campaign, therefore, will open under such relations that *any* move must entail stupendous consequences. The simple prolongation of General GRANT's line of operation must take in reverse the tier of seaboard States, and open a base for the Union arms on the Atlantic or the Gulf.

No forecasting of the complexion of the coming campaign, however, can be of value which does not take into account the probable military policy of the rebels. It would be a simple problem were it merely a question of forming a plan of campaign against an enemy acting purely on the defensive; but Americans on enemy who, quite as often as we, has assumed the offensive, and who is very likely to do so again in the spring, it becomes a much more complex matter. The rebel leaders are compelled by the necessity of their position to carry into the conduct of the war all the vigor, energy and audacity it is possible to put in. It is evident that for them to take up the attitude of passively standing to receive blows delivered by the Union force must be fatal to the cause. Their resources are drained; three successive conscriptions have reaped the field bare of all the fighting population, and they have been compelled, in order to retain an armed force on the field, to *take the place* of the present armies to the end of the war—an act of perfidy unmatched in military annals. It is therefore with them a question of turning to the best possible account what remains to them. They must endeavor to make up by fruitless military action for their material inferiority. It is in this sense no man to say that the chiefs of the rebellion may not form such military combinations as will turn back the tide of victory to their side. And we may depend upon it that they will exhaust every resource of skill, energy and daring to do so.

In attempting to estimate what is the probable course of military action that will be taken by the rebel leaders, we are compelled to fall back on such theoretical considerations as are indicated by the relations, conditions and purposes of the two contending parties. What may be passing in the secret counsels of the rebel chiefs no man can know: and yet we have with them so much in common that essentially the same rules of policy are presented to us for speculative consideration as are before them for the momentous issues of practical action.

It is obvious both to us and the rebels that the danger to them lies in the possible moves that may be made in the spring by the grand Union force now planted in the centre of the Confederacy, and building in its grasp the door of Georgia and the States of the Gulf. Any move which General GRANT can make must be into the vitals of the Confederacy; and whatever line of operations he may adopt, if he is allowed to continue his advance, the national force of this rebellion is forever broken.

The first dictate of military prudence, therefore, admonishes the rebels to look out for GRANT. They can only do so by concentrating in Georgia in force sufficient to bar his farther advance, and, if possible, strong enough and under such leadership as will enable them to drive the Union force back on its base. The rebels have not at present in Georgia a force adequate for either of these purposes. The highest force which can be assigned to the rebel army of the Southwest, now under General JOE JOHNSTON at Dalton, is forty thousand men. We hope that General GRANT will be able to move in the Spring with triple that force.

The only resort left the rebel chiefs, therefore, is to make a thorough concentration of their forces, by drawing in detachments and isolated bodies and uniting them with the force in Georgia. But even after doing this there is no probability that they would have a sufficient force. It will therefore be found necessary to draw largely from the Army of Northern Virginia. With a view to offensive operations, LONGSTREET's corps, if it can maintain itself in the Virginia and Tennessee Valley for the next three months, is well posted, on the subject of their great line, ready to issue through the *debouchés* of the mountains for the purpose of operating against GRANT's communications. There is every likelihood that, in addition to LONGSTREET's corps, they will detach another of the remaining two corps of the Virginia army. But there is the strongest presumption that they will concentrate in Georgia not merely their material forces, but that they will give this army the very ablest leadership. In a word, they will send General LEE to take command of the army of the Southwest. If the combinations here anticipated are effected, it will reduce the force in Virginia to a very subordinate rôle, and it would be a pure waste of General LEE's military talent to confine him to the task of defending a barren strip of territory, when the very life of the Confederacy is threatened by its operations in the Southwest.

With an army of from eighty to a hundred thousand men in his hand, the rebels may hope that LEE will do much. And while appreciating to the full the talent which General GRANT has displayed in his great operations, it is incontestable that he has never had a man of LEE's or JOE JOHNSTON's mark. General GRANT will operate under the enormous disadvantage of being removed three hundred miles from his base, while every step he takes in advance but extends the line of communications he is compelled to keep open. What precise policy LEE will adopt—whether to remain on the defensive, covering Atlanta, or attempt an offensive movement on the rear or flanks of the Union force—is very doubtful; but there is little doubt that it will be bold and energetic, and heaven only knows with whom victory shall rest.

This concentration in Georgia, made at the expense of a great decimation of the rebel force in Virginia, will be consequences, bring about important changes in the military programme for the left zone. It is not necessary to suppose that the rebels will give up Richmond and Virginia. They may rely on the corps left behind to keep back the advance of the Union army, contesting the advance foot by foot, and then retiring behind the fortifications of Richmond, until they are able to return with the force of the West. A full commanding considerations should dictate the total abandonment of Virginia, we believe the rebel chiefs would do so. Richmond, stripped of its arsenals, workshops, factories, etc., would cease to be of any military importance.

The latter is undoubtedly the *safer* plan: but we doubt if it will be consonant with General GRANT's plan. Without attempting, however, to push speculative beyond the warrant of fact, there cannot be a doubt that the operations of the Spring campaign will be characterized by a grandeur and momentous importance overtopping everything we have yet seen. If the rebels should succeed in the move indicated, the Spring will witness a war of the Titans that must shake the continent to its foundations.

INCREASE THE CAVALRY.

THE rebels taught us at the first to look upon their raids as next to unparalleled performances. STUART advanced to Chambersburgh, more than a year since, with such rapidity and secrecy, and got across the Potomac with such impunity, that we were inclined to agree with the general opinion of the world in considering the rebel cavalry far better than our own; in attributing better horsmanship to the riders, better bone and bottom to the horses, and better organization to the corps, to the rebel army than we could ever hope to obtain in our own. *Nous avons changé tout cela.* When we come to compare historic notes, we shall set the names of GRIERSON, ELLIOT, STONEMAN and AVERILL at an elevation never to be reached by STUART, LEE and MORGAN. They must hide their diminished heads. Of course we now speak of raids. We are equally ready to demonstrate the superiority of our cavalry in other modes of service; and in doing so we should have a long and distinguished list of generals to mention. But this is all preliminary to a simple suggestion which we intend to make. It is this: let us organize, during the present Winter, a large cavalry force, principally of *dragoons*, who, as we have informed our readers, are essentially mounted infantry; and let us keep these continually employed in cutting rebel communications. This important labor has been most successfully performed by detachments of our comparatively small cavalry force. *A fortiori*, how much should we be able to accomplish with a large force, organized expressly for these duties? It would be a popular service, because it is full of adventure, has immediate results, and its deeds are constantly blazoned in detail before the admiring world.

There is another consideration which we mention as

giving additional force to our suggestion: it is that while we can do this, we shall establish a great superiority over the rebels, who cannot maintain an increase of cavalry, for lack of horses, lack of men, lack of forage, increasing lack of everything.

The manner of increase would be easily indicated as the Cavalry Bureau at Washington, which has become so efficient under the command of General STONEMAN. Sorry as we are to hear of his withdrawal from so important a post, we hope the Government will supply his place with an officer who can proceed to a vigorous organization of a large number of cavalry—not for use now, but for special use in the Spring, to still further cut in pieces and isolate the already *disjecta membra* of "the Confederacy."

One of the most offensive features of the voluminous "Army correspondence" of the daily press, has been the freedom with which it has indulged in praise and censure of officers high and low. These letter-writers from the camp have been, as a class, entirely irresponsible persons, who have been transferred from the business of the collection of "city items" and from general sensational writing to the new field of "items" in the movements of our armies. Very few of them have had the least conception of military strategy or any appreciation of the dignity of the profession of arms. Their letters have been crowded with exaltations of personal friends and personal favorites, and have backed that grasp of the meanings of the movements which they could describe, which would entitle them to attention. We would not make any sweeping condemnation of these certainly industrious, and very enterprising knights of the quill. There are descriptions of battles to be found in the files of our leading daily journals, which will become historical documents, and the respect which a few of the correspondents have been able to secure from our best military men, is evidence that the whole class is not of the character we have mentioned. But these exceptions only serve to make the majority appear the worse.

We have been induced to make these remarks by the perusal of the records of a recent court-martial in New Orleans. One BAKER, a correspondent of the New York *Tribune*, at that city, some time since, in several letters wantonly charged Dr. FRANCIS BACON, a surgeon in the volunteer service, with disloyalty to his flag and unfaithfulness to his duty as an officer in the military service. Though an emphatic denial of the charges was sent to the *Tribune*, it failed to find a place in the columns of that paper, and the charges were not withdrawn. BAKER, the correspondent, was subsequently arrested and tried by a court-martial, which, with greater leniency than we could have wished to see shown—for we would that the maligner had been made an example of—let him off with a reprimand, while it entirely exonerated Dr. BACON of the gross charges made against him.

The most aggravating feature of the case is that the gentleman who was thus assailed, is known to us as an officer of the most unquestionable and uncompromising loyalty. His military record has been without a blemish, and his services have always been prompt and unselfish. There was not a man among those who knew Dr. BACON, who did not feel himself to be personally insulted by the reiteration of the unfounded charges of this flippant writer. This is one case out of very many. The bravest and best men in the army have suffered in like manner. It is surprising that respectable journals will lend themselves to the propagation of such slanders, and that they are not more careful in choosing men to represent them to the Army.

INDICATIONS have been observed by the quick-witted, that General EARLY is coming up the Valley of Virginia to Winchester and beyond; indeed he has driven in our pickets in front of Winchester, and seems to mean mischief. Reinforcements have been sent to General KELLEY's command to receive him, and AVERILL's merry men are grooming their horses and cleaning their sabres for his special benefit. But if the secessionists of that region have been indulging in a new version of TENNYSON's ballad, "You must wake and call me EARLY"—we fancy that EARLY is rather late in the season for answering their call or doing his work. Rains, and snow, and Winter rigors, and no supplies, must give him pause, notwithstanding the depletion of our forces along the entire front. We have ventured, in days past, to point out that the rebels have but one grand, astute stratagem, which they have played upon us so often that we ought to understand it by this time. It is to make a great flurry in front, in order to make some movement in the rear; and this movement of EARLY's is of that character, we think. Probably they are making great efforts to cover their movements, and EARLY has thrown enough dust in our eyes, he will suddenly take the back track and go down to Salem and beyond. Should it be more or other than this, we take it for granted that our forces are adequate and properly posted; as it would be a disgrace sufficient to awaken "inextinguishable laughter" should the rebels be able, whenever they choose, to march upon Winchester—to scatter our men like chaff, as they did MILROY's command—and move "into the bowels of the land without impediment."

THE success of the ARMY AND NAVY JOURNAL is the subject of wondering exclamations on the part of the foreign military journals. They cannot understand the establishment of such a journal in the United States—a country which they have been accustomed to regard as utterly devoid of military taste and experience, where, as the London *Army and Navy Gazette* says, "a real soldier was as rare as a griffin three years ago." THE ENGLISH ARMY AND NAVY JOURNAL and "GAZETTE of the Regular and Volunteer Forces," it says, "gathers strength as its career lengthens. It "announces that 'we must be a military people, the "youth of the nation must be systematically and uni"versally trained in the military art.'" To this quotation from one of our correspondents it adds: "This is not a promising sign for the great republic." He looks as if they were preparing to fight all "the world, in case of inability to pay all the world at "home. No doubt the end of this war will see some "hundreds of thousands fit for little but soldiering, "and 'blue-moulded for want of beating' like Neal "Malone, but that will not make the Americans a "military people. The traditions of years, and the "habits of mind conducing to respect for authority, "order, and obedience are wanting. But still the "Americans are becoming fonder of soldiering than "was their wont, and in time perhaps they will furnish recruits for their regulars, instead of taking them "from the Irish and German population."

Colburn's *United Service Magazine* also remarks upon the fact that a weekly journal now appears at New York "which professes to be directed solely to the in"culcation of sound military ideas, and to the eleva"tion of the public service in all its departments. "What would President JEFFERSON think of this?"—it exclaims: "He who used to declare that it was the "expesure of the 'public service' that sent the Euro"pean laborer supperless to bed, and who predicted "ruin to his darling Republic from the instant that a "standing army or a military manual found a foot"ing in it."

THAT patriotic Thersites, the Count GUROWSKI, whose opinions are of interest, not only from their intrinsic strength, but from the fact that they are based upon his long experience as a soldier and statesman, and who has been among us three years in Washington, watching closely and critically the political and military conduct of affairs, is about to publish a second volume of his "Diary." We have been favored with a glimpse at some of its early sheets, and we can only say that in the audacity of its assaults upon nearly every statesman and General of the present period, it surpasses even the first volume. As we turn over the leaves, our eye falls upon a sharp sentence that occurs in the course of a severe criticism upon a commanding officer's report of one of our great, lost battles, and which we may transcribe:—"The "report says, *'but for the fog,'* etc. All lost battles "would have been won for cause *'but,* except "the genuine *but* in the brains of the commander."

WE took occasion, in a recent issue, to give a decisive denial to the statements made from time to time in French and other European journals, and which were repeated on occasion of the recent decease of the French-Algerine General BEDEAU, that our Government, or any one speaking authoritatively in its name, ever offered him any such position as "Commander-in-Chief of the Federal armies." We have now a note upon the subject from a very well-informed source in Washington, which may help make the matter clear. "I suppose," writes our correspondent, "that the statements concerning an offer having been "made to BEDEAU were based on the meddling ac"tivity of certain amateur agents in Europe; but "certainly, as you say, upon no direct Government "action. I knew that as early as 1861, shortly after "the bursting of the rebellion, Seguier ——, at the "instigation of certain parties in Boston, visited at "import from Europe General DEMBINSKI, an old "Polish fool; and you recollect that Minister SAN"FORD made proposals to GARIBALDI, which were "rejected. I strongly suspect that the same official "personage may have been officious in the case of "BEDEAU."

THE loss of the iron-clad steamer *Wechawken* was readily explained by her projector, and the blame thrown upon the officers of the vessel. A few days after the west wave, a count of inquiry was ordered to be held on board of the flag-ship of Admiral DAHLGREN. That body has closed its labors, and from all we can learn, the facts brought forward at the examination, and those obtained from competent and reliable divers who have visited the vessel beneath the water, show that the cause of her foundering was a rupture between the overhang and the hull of the vessel. So great an aperture was made as to allow the water to enter the hull, with such rapidity that the combined pumping force of the vessel was not, nor could be, of any avail to save her.

It is very well known among naval men that every month adds to the weakness of this class of vessels, especially where they lie in a sea-way and are pounding their overhangs upon the waves. Oxydation is rapidly destroying the strength of the innumerable rivets by which the raft is fastened to the hull, while the immense weight of the engines, turret, guns and stores lead to no less serious a result than the dropping out of their bottoms. To make the vessels live a lengthened lifetime, the greatest care must be taken of them. The rust must be removed from their internal surface—a task of great difficulty, owing to their peculiar mode of construction—while the outside of the vessel must be covered with a paint which will prevent oxydation, and at the same time keep the bottoms clean.

The Monitors are adapted solely for defensive purposes, and their only proper sphere is inside a harbor, away from violent waves, ready at an hour's notice to go forth to attack a ship. Many, however, they are sent to engage works either of sand or stone, being insubquately armed as they are, they go beyond their line of usefulness and serve simply as an invulnerable target, receiving more damage than they inflict. Rapidity of fire is the desideratum in an engagement with a land battery. It is the shower of shell, falling thick and fast, which pains the Navy. It is not so much the weight of the projectile, but that incessant fire which embarrasses the enemy and quickly causes him to leave his guns, and thus close the engagement.

DURING the first two years of the war, our gunboats were a great terror to the rebels. Their great strongholds were upon navigable rivers, such as the Cumberland and Tennessee, the Mississippi and lower Potomac, etc; and in almost every action the gunboats rendered the most opportune aid to our land forces. So frequently did they turn the tide of battle, and so indispensable did their services appear on many occasions, that a facetious rebel suggested that our Government should furnish each equal every one of our soldiers with "a private gunboat," to be always used in case of attack or defence. As it is impossible that our gunboats should now pursue the rebels through the mountains of Georgia, or through Eastern Virginia, they seem to have lost part of their terrors for them; but with the disappearance of this danger another has sprung up no less intolerable; for a Richmond scribbler, commenting upon the late remarkable raid of General AVERILL, says that "LINCOLN's "squadrons of horse now threaten to be as universal a "terror, as pervasive a nuisance, as his squadrons of "gunboats were some months since."

THE question of soldiers voting was brought up in each branches of the New York Legislature immediately upon the opening of its session, by the introduction of bills providing for the extension of the privilege to all New-York soldiers. This question is one of great interest and importance to military men.

FOREIGN MILITARY AND NAVAL MATTERS.

THE French iron-clad steam-frigate *Hermione* was safely launched at Lorient on the 10th of December.

IT is stated that the Channel Squadron, under the command of Rear-Admiral S. C. DACRES, C. B., will, following the example set by the French, take a run to Madeira.

THE iron-plated screw steam-ship fitting for construction in the British Navy, will mount 35 guns, eight of which consist of the 110-pounder breech-loading guns, and the remainder of the ordinary 68-pounders.

MARSHAL RANDON is about to open to the Parisian public a library containing 5,000 volumes and 6,000 maps, belonging to the war office, which have till now been hidden in the archives of that ministry. The collection is said to be of vast interest and value.

THE *Regent*, a 90-gun line-of-battle vessel, built at Toulon for the Italian government, has received on board her officers and crew. She will shortly be ready to join that fleet which is costing so large a sum to the Italian government.

THE Emperor of Russia has commanded a large supply of heavy steel shot and shell to be forthwith forwarded to the Imperial arsenals. The manufacture of these missiles is partly to be carried on in Russia and partly in England, Messrs. Jessop, Brown & Co., of the Atlas Works, Sheffield, having already received directions to prepare with all dispatch for shipment 5,000 large shot, carefully prepared under the Besseмer process.

ADMIRAL SIR HENRY W. BRUCE died on the 14th of December, after a prolonged illness. The late Admiral was the last surviving son of the late Rev. Sir HENRY H. A. BRUCE, and was born in February, 1792. He entered the British Navy in 1805. Shortly before his death, the Admiral's eldest son and heir was conferred upon him. By the demise of the gallant officer, Captain Sir FREDERICK W. E. NICHOLSON, Commodore and senior naval officer at Woolwich, obtains his flag rank.

DURING a recent violent storm, a lieutenant and 32 men of the iron-cased frigate *Couronne*, who were returning in the ship's launch from the gun-practice vessel to distress in the roads of Cherbourg, were upset and drowned. The EMPEROR, wishing to honor the memory of those devoted men, commanded that their funeral should be performed with great solemnity. All the troops and seamen in port were under arms, the ships of war carried their flags at half-mast high, and cannon were fired at intervals until all was concluded. All trades were suspended in the town, and the entire population joined in the ceremony.

THE four 20-ton guns cast at the Lowmoor Ironworks, to the order of Captain BLAKELY, for the Russian government, were proved on successive days at the butt in Warwick Road. The first gun fired withstood the test satisfactorily; the fourth was fired with the ordinary proof charges, viz. : 50 lbs. of powder, a wad, and a 600-lb. cylinder shot. The gun stood, went the first round with apparent success; but on making the usual survey and examination it was discovered that the base section at the head of the breech, and into which the "button" appears to be screwed, had given way, and a large rent or split was clearly perceptible.

A LARGE military gymnasium has been erected at Chatham, England, and is open to all comers in operation. The exercises of the gymnasium form a daily portion of the physical training of every soldier and sailor at Chatham. The exercises include every kind of defensive exercise, fencing, sword exercise, and bayonet drill, besides those usual to gymnastic training. Ample arrangements are made for light and ventilation, the necessity for a constant supply of pure air being especially required in a building in which as 300 men will be engaged for several consecutive hours in active bodily exertion.

LORD CLARENCE PAGET gave the youngsters on board the training-ship Worcester a treat lately, on the occasion of the distribution of prizes among them. He inveighed most strongly against drunkenness and other vices which young seamen, from their susceptible minds, so readily acquire on board ship; and he very properly impressed upon his hearers the necessity of the very opposite course, steadiness and religious duties, as the best means by which they could hope to escape from the toils which would be spread to catch them during their career, and by the aid of which they were likely to succeed in obtaining advancement.

THE works in connection with the enlargement and extension of the existing defences which protect the entrance to Chatham harbor are being augmented by the construction of a large fosse, so as to materially strengthen the fortifications and add to the height of the fences. The work will extend from a position of about 1,700 yards from the salient angle of No. 1 bastion of the line of fortifications facing the sea, and will be of semicircular form, its breadth varying from 100 feet at the extremities to 40 feet at its narrowest limits, with a mean depth of about 15 feet. The ditch will intersect the Isle of Sheppey, at the entrance to the Medway, in a westerly direction, terminating at a point of connection with the Swale, which borders the southwesterly portion of the island. At the northeast entrance to the fosse, from the sea, it is intended to erect a powerful casemated fort, which will mount a formidable armament. At the other extremity of the ditch a similar fort will be constructed, which will also mount an armament of equally heavy calibre. In addition to these forts, it is also said that the two new land batteries are also to be built, the guns of which will sweep the entire length of the moat from the flanks to the re-entres. The forts will also serve for operating against any attack on the land side of the batteries. The works connected with the excavation of the ditch are expected to be completed in about twelve months; the forts and batteries will then be commenced.

SOLDIER'S TRICKS.

AN army correspondent of the *Commercial Advertiser* says that a voluminous book might be written on army legerdemain and the tricks which the soldier has had experience in them. This writer thus describes some of the tricks:

"A surgeon of a New-York regiment in Gen. DAVIDSON'S brigade was much puzzled during the Winter of 1861-62, to account for so many of his men having contagious. It was almost a distemper in the regiment. After much diligent inquiry he discovered that the trouble arose from a druggist who furnished for a trifle his comrades with a white mixture, which they applied to their tongues whenever desirous of getting off from duty. The discovery was not made, however, until after nearly the whole regiment had deceived him at one time and another.

"When a soldier is drafted into the advance, then it is that the weak-kneed, those liable to the 'cannon-fever,' or dead beats," as they are called, set their wits at work and strive by hook or crook to get impending conflict. Numbers are suddenly taken sick before leaving camp, and others fall out by the way, and report to the doctor in the forests. Under the surgeons are unmanly shrewd and stern, they are extensively imposed upon by new troops in this manner. I recollect a case where a New-York army doctor went out to dell to treasure up. When orders were received from Gen. HOOKER to move, last April, a large, stalwart fellow belonging to the 3d N. Y. Cav., was suddenly troubled with lameness in one of his limbs. Indeed, he was so "demoralized" that he could scarcely walk, and reported to the surgeon's call, on the morning prior to the advance. But Dr. CUMMAN had marked the fellow before, and knew he was a "playing off" game. "Let him go," the doctor cried out to him, "Straighten up there, old fellow; you must walk lamer than that if you expect to get off." The current of the soldier's face changed, the blood were of his veins, and he was ordered to "fall into line." After bobbling along for about half a mile, he rolled over on his back, declaring that he could not walk another step to save his life. His comrades haughed heartily at him, and moved on. I suppose that the fellow, after the surgeon was straightened the fellow up, but as often as we stood him on his feet, he would come down and stretch out like one in the agonies of death. Finally the doctor ordered that he be gassed: he could bring him to, and proceeded to draw from his saddle bags a bottle of *sweet oil*. The sight of this nauseous liquid had a most ridiculous effect upon the soldier, and springing to his feet, he walked off with alacrity. But we had not gone more than a third of a mile before down came the lame man again. At the sight of the sweet oil he bottle again restored him, and we finally got him to the river bank. At the Chancellorsville battles of the day succeeding, escaped unharmed.

"When tobacco becomes very high and scarce, various expedients are resorted to by unprincipled men to obtain it, who have always a plentiful supply. Notwithstanding the stringent orders against holding intercourse with the enemy the pickets on both sides frequently meet on the river's bank, and going down to the Rappahannock wade in and exchange sugar for tobacco, half-way across. They likewise frequently floated their articles over on logs, or pieces of board or wood. In the same manner newspapers were exchanged unknown to the officers.

"It is astonishing the craving which soldiers have for tobacco. I have seen them, regardless of the threats of an officer, pick up a piece of a cigar, or a tobacco-box, and return to their places loaded down with the weed. The sight of a tobacco warehouse will "stampede" a regiment of men, when a furious charge by the enemy has no effect upon them.

"The stringent regulations against the use of ardent spirits broke in many places for officers, too. When the troops were encamped near Washington at the commencement of the war, they were found to have liquor constantly, and sometimes in large quantities, with them to keep it from them. After several weeks they were detected smuggling it into camp in their gun barrels, the ramming incident transpired last Winter at Falmouth. Gen. BURNSIDE ordered several hundred barrels of commissary whiskey to be sent down from Washington to Aquia Creek, and thence over the mud. Lieut. —, 89th New-York, acting brigade commissary in Gerry's division, sent repeatedly to the creek for a supply, but every time that team was turned him would disappear from the cars before reaching Falmouth rumor having it that the regular Hawkie's Zouaves "gobbled" them. At length desperate, the officer, in charge of the stuff by order, he proceeded personally to Acquia creek for a supply. He obtained a barrel of whiskey, and to find the barrel coming with him, empty. Some ingenious soldiers had bored a hole up through the bottom of the car, which the train hailed at Potomac creek or Burk's station, tapped his barrel, and drained it to the dregs."

A LETTER has been received from John M. Dillingham, one of the last men of the Steamer captured in Charleston, dated December 10, in which he says himself and comrades are in the Cow's Building, Richmond, where they have good quarters.

THE BATTLE OF CHICKAMAUGA.

OFFICIAL REPORT OF MAJOR-GENERAL ROSECRANS.

THE rebel army, after its expulsion from Middle Tennessee, crossed the Cumberland Mountains by way of the Tantalon and University roads, then moved down Battle Creek, and crossed the Tennessee River on bridges, it is said, near the mouth of Battle Creek, and at Kelley's Ferry, and on the railroad bridge at Bridgeport. They destroyed a part of the latter, after having passed over it, and rolled to Chattanooga and Tyner Station, leaving guards along the river, for their several destinations. Chattanooga was immediately to throw up some defensive field works at that place, and also at each of the crossings of the Tennessee River so as to hold them.

Our troops, having pursued the rebels as far as supplies and the state of the roads rendered it practicable, took position from Mc-Minnville to Manchester, with their cavalry well to the front and flanks. The latter soon after moved to Bridgeport in time to save from total destruction a saw-mill there, but not to prevent the destruction of the railroad bridge.

After the expulsion of Bragg's forces from Middle Tennessee, the next objective point of this army was Chattanooga. It commands the approaches to East Tennessee, Northern Georgia, and Alabama. If any the chief sources of supplies of coal for the manufactories and machine shops of the fourthern States, and is one of the great gateways to the interior of the Confederacy, both for military and commercial purposes.

To obtain better understanding of the campaign, I submit a brief outline of the topography of the country, from the barrens of the northwestern base of the Cumberland Range to Chattanooga and its vicinity.

The Cumberland Range is a lofty mass of rocks separating the waters which flow into the Cumberland from those which flow into the Tennessee, and is crossed by the road from McMinnville to Chattanooga, in southwesterly direction, nearly to Athens, Alabama. Its northwestern slopes are steep and rocky, and scalloped into coves in which are the heads of numerous streams which flow into the Tennessee. Its top is undulating, or rough, covered with timber, not comparatively barren, and in dry seasons scantily supplied with water. Its western slope is more gradual, generally well-timbered, with a precipitous rough and difficult all the way up to Kingston. The valley between the foot of this slope and the river seldom exceeds a mile in width, and is cut by the spurs of the ridge in a manner border along the banks, is undulating or hilly.

The Sequatchie Valley lies along the river of that name parallel. It is one of deep cut, splitting the Cumberland range parallel. It is only three or four miles in breadth and fifty in length. The sides of the valley are generally precipitous, and the bottom is fertile. Richland creeses that branch of the Cumberland range, west of the Sequatchie, through a low gap, by a tunnel, two miles east of Cowan, down the valley to the Tennessee River, at Jasper, Tennessee, at the mountain, on the Memphis and Charleston Railroad, three miles from the Tennessee and ten from Bridgeport.

The road from Bridgeport to Chattanooga, on the south of the Tennessee, are two ranges of mountains, the Tennessee River appearing between them, and flowing to the northwest, a great chasm cut through the mountain masses, which in some places stand directly on the river. These two ranges are separated by a narrow valley through which runs Lookout Creek.

The Sand Mountain is next the Tennessee, and its northern extremity is called Raccoon Mountain. Its sides are precipitous and in top it is from one to two miles in breadth, and from 1,000 to 1,500 feet above the valley. No wagon roads by which to ascend and descend at the slope of this mountain exist.

Lookout Mountain, on the opposite side of the valley, is a splendid rocks rising 2,400 feet above the level of the sea, in abrupt, rocky bluffs, and presenting to the valley and river below, on its west, a precipitous face, in many places 1,000 feet high, and in others broken abruptly upon the Tennessee, two miles below Chattanooga, and the Chattanooga and Atlanta Railroad, and the mouth of the mountain, at this point, one of Johnson's Creek, twenty-six miles distant, and on the Tennessee's Kelley's ferry, two miles distant from Battle Creek.

Between the eastern base of this range, and the line of the Chattanooga and Atlanta or Georgia State Railroad are a series of narrow valleys, separated by ridges of rocks and timber mountains, one which there are quite a number of practicable wagon roads raising mountains and crossing ridges.

The first of these ranges is Missionary Ridge, separating the valley of Chattanooga Creek from that of Citico Creek.

A higher range with fewer gaps, on the south-east side of the Chattanooga Valley, is Pigeon Mountain, between Lookout, and Dougherty's Gap, some forty miles south from Chattanooga. Its eastern slope is the water-shed between the waters of the Coosa, and in the general level of the country near the line of the Chattanooga and Lafayette Railroad.

East of these two ranges and of the Chattanooga, starting from Chattanooga, and extending southward, is the ridge known as the Chickamauga, rough, rocky range, irreversible by wagon roads only, through the gaps by which streams cross it.

Missionary Ridge passes about two miles east of Chattanooga, ending near the mouth of the Chickamauga. Pigeon Mountain, Lookout Mountain, and Georgia Railroad lead the Chattanooga and Atlanta Railroad.

The Chickamauga Valley lies between the ridge east of Taylor's ridge and west of the rough mountain region, in which are the sources of the Chickamauga. This valley is from two to four miles wide, is the natural southern gateway into East Tennessee, with the railroad and wagon roads passing through Ringgold in the Georgia line to the west of the east of it, and extend in a southwesterly direction to Dalton, in Georgia, and Cleveland, in Tennessee, on the Cleveland Railroad, crossing of the Atlanta road to Rome and thence to Gadsden, in Northern Alabama.

From the position of our army at McMinnville, Tullahoma, Decherd and Winchester, the roads to Chattanooga are as follows: Those above it, it was necessary, either to pass north of the Sequatchie Valley, or to cross the Cumberland Mountains by the Sequatchie and the Sequatchie Valley by Dunlap or Thurman and Walden's Ridge, between Sequatchie Valley to Thurman.

The most southerly route on which to move troops or supply trains is that from Winchester, Decherd, Tullahoma, way by Cowan, University, Battle Creek and Jasper, or by Tantalon, Anderson, Stevenson, Bridgeport, Battle Creek and Battle Creek, to same point, and thence by Tiftoman, or Dunlap and Poe's Tavern, across Walden Ridge. The University Road, though difficult, is the best of these two routes. It is the shortest and most practicable way for transportation between Cowan and Anderson, and much longer.

The next route, by which troops can move to the Tennessee River below Stevenson, the best, but much the longest, by Fayetteville to Shelbyville, and thence to same point.

The next, a very rough wagon road from Winchester by Salem and Murfreesboro, and an exceedingly rough road by the way of Manchester, Hillsboro, and Pelham.

Top, one branch leading thence to Bellefonte and the other to Stevenson.

The three latter routes little or no forage was to be found, except at the extremities of the lines, and they were also scarce of water. The one by Athens has both forage and water in abundance.

It is evident from this description of the topography, that to reach Chattanooga, or penetrate the country south of it, on the railroad, by crossing the Tennessee below Chattanooga, was a difficult task; it was necessary to cross the Lookout Mountains, with vehicles, ammunition, at least a limited supply of forage, and a bridge train; to cross these mountains by the only practicable road, that from Lookout Mountain directly to Chattanooga; or Missionary Ridge, Mission Mountain, Chickamauga Creek, and the mountains of several miles in front of it. The Valley of the Tennessee River, though fertile, is not a broad alluvial farming country, but full of narrow ridges, sparsely settled, and but a small part of it under cultivation.

PRELIMINARIES.

The first step was to repair the Nashville and Chattanooga Railroad, so as to forward to Tullahoma, McMinnville, Dechard and Winchester, and to Stevenson and Bridgeport, the supplies which had been sent from Murfreesboro to those points over the turnpike roads which had been constructed on our arrival at Murfreesboro. This was to extend the repairs of the main stem to Stevenson and Bridgeport, and the branches to Winchester and Decherd, and was to be so rapid at those points, from which to draw after we had passed the mountains.

Through the zeal and energy of Colonel Innis and his regiment of Michigan Engineers, the main line was opened to the Elk River Bridge by the 18th of July, and the Elk River Bridge and the main stem to Bridgeport by the 26th, and the branch to Decherd by the 31st of August.

As soon as the main stem was finished to Stevenson, Sheridan's division was advanced, two brigades to Bridgeport and one to Stevenson, and the mounted and quartermaster's supplies were pushed to the latter place, with all practicable speed. These supplies began to be accumulated at Stevenson by the middle of the month of July of August, and corps commanders were that day directed to supply their troops for twenty days, if possible, with the means of transportation for a general movement.

The Tracy City road, built for bringing coal down the mountains, has not been used, as the wagons which were sent to it were not loaded, as only one set had, answering the purpose, having been broken down by the time Sheridan's division reached Battle Creek on the 30th August. It was deemed best, therefore, to delay the movement of the troops until the 31st, to permit the necessary number of transporting stores to Tracy City.

The movement of the Cumberland Mountains began on the morning of the 16th of August, as follows:—

General Crittenden's corps, Thomas's division, General Wood from Hillsboro by Pelham to Tiberius, in Sequatchie Valley.

General Negley from Winchester by the Cowan and Sherwood route to Dunlap.

General Van Cleve with two brigades from McMinnville, the third being left in garrison there, by the most practicable route to Pikeville, by way of Sparta and Spencer.

General Negley's cavalry to move, on the left, by Sparta, to draw both Crittenden's and Van Cleve's attention to the movement of those troops, under Forrest, were concentrated, and then, covering the left flank of Van Cleve's column, to proceed to Pikeville.

The 18th Army corps, Major-General George H. Thomas commanding, moved as follows:—

General Reynolds from University by way of Battle Creek, to take post, cautiously, at Jasper.

General Brannan to follow him.

General Wood to Pelham, to Altamont and take on Cross Creek, between Anderson and Stevenson.

The 20th corps, Major-General Hooker, and camp near Anderson.

The 21st corps, Major-General Thomas J. McCook, commanding, moved as follows:—

General Johnson to Pelham, and Lucifer's Ford to Selesford.

General Davis by Mount Top and Cross Creek to near Stevenson.

The time required to move by the most practicable routes to the line of the Tennessee from Whitesburg up.

On the arrival of Van Cleve at Pikeville General Crittenden was to send a brigade of infantry to reconnoitre the Tennessee, near Harrison's Landing, and to cross it, if practicable, at Evert's Ferry, and to reconnoitre from Washington down, and take post at Smith's Cross Roads, and Wyly's bridge and ferry, and to keep up a communication from Harrison's Landing to Chattanooga, and be supported by a brigade of infantry and a battery from Pikeville, to be posted at Cleveland, to the foot of the eastern slope of Walden's Ridge, in front of Chattanooga.

These movements were completed by the evening of the 30th of August. Sheridan's division was then concentrated at Battle Creek, leading, and reported the enemy throwing up works there, and took post at Jay's Mills, on the 31st. On the 30th General Van Cleve reported Wolder in his reconnoissance on Chattanooga, which they opposed and had driven across the Tennessee, burning the bridge after them.

Thus the army passed the first great barrier between it and the objective point, and arrived cautiously on the banks of the Tennessee.

The crossing of the river required that the best points should be chosen, and a means provided for the crossing of the troops. This accomplished, the pontoons and trains ordered forward as rapidly as possible, and the troops in front of Chattanooga made to believe that by the time they were ready, the passes of crossing had been selected.

If demonstrations were to be made, it was

It was very desirable to cement to the last moment the points of crossing, so that the enemy should have no time to fortify the positions or the preparations ready built in the height of 800 or 1,000 feet, completely commanding the river, which could be seen for miles up and down it opposite.

Not having pontoons for two bridges across the river, General Sheridan was directed to make one of parts of a train of that kind and of Reynolds' division existing shallout, captured canoe boats, and from them and material found on the banks, construct a bridge at Shellmound, and General Brannan prepared rafts for crossing his troops at the mouth of Battle Creek.

The laying of the pontoon bridges at Operton's Ferry was very judiciously done by Major Prime, Engineer officer of the staff and Director of General McCook, who crossed his advance in pontoons at daylight effecting the crossing of the river from the point of Battle Creek very early for crossing by 11 o'clock a. m. the same day, but in plan view from the time they were commenced on the 29th.

The bridge at Bridgeport was finished on the 29th of August, but was not completed until the 31st, and was then reported to be unsafe.

The movement across the river was commenced on the 30th, and completed on the 4th of September, leaving the Regular brigade in front of the mouth of the Battle Creek road, and the brigade of Major-General Wagner, who was directed, as soon as practicable, to relieve it and take charge of the ferry.

General Thomas' corps was to cross as follows:—One division at Operton's Ferry, one at Battle Creek Shellmound, Reynolds' division at the lower division at Battle Creek, as rafts. All were to use the bridge at Bridgeport for the passage of their trains, and to cross by the fords.

Negley and to concentrate near Trenton, and send an advance to seize Price's Cove Gap, and to be followed by the rest of the division. Negley's division to take route leading down the mountains into the valley, and to the mouth of Lookout Cove, which leads to Trenton, and to be followed immediately toward Chattanooga.

General Wood's division to cross two divisions at Operton's Ferry, one to Valley Head and seize Winston's Gap, with the other, when to cross Lookout Mountain by way of Trenton.

General Crittenden's corps was to cross as follows:—One division at Battle Creek, one at

the right occupied by Gen. Negley's reserve in the morning. Gen. Crit tenden was ordered to move from his centre to our right on the left of the position, and Gen. Davis was also ordered to close up the support of the line near Wonder Hill.

The battle, in the mean while, reared with increasing fury and approach from the left to the centre. Gen. Baden arrived successively with his new brigades from Gen. Thomas, asking for reinforcements. The first was directed to cap their fire. Negley had already gone and should be ready at hand at that time, and that Brannan's reserve brigade was available. The other two could be sent from the centre. Davis was at once ordered to his assistance, which was very promptly rendered.

The battle raged fiercer. Thomas soon followed that he was heavily pressed. Gen. Negley's division was the first engaged, and the last to leave that Gen. Brannan was out of line, and Gen. Reynolds' right was exposed. Davis was then dispatched to the right to support Reynolds, and word was sent to Gen. Thomas that he should be supported, even if it took away the whole of the reserve under Gen. Negley.

Gen. Davis was ordered to close on Gen. Wood, and Gen. McCook was advised of the movement of Negley's division, and ordered to support on the left with all dispatch.

Gen. Wood, according to the position to "close up" on Gen. Reynolds, supposed he was to support him by withdrawing from the line and passing to the rear of Gen. Brannan, when, in fact, he should have filled his place in column, and rightly in rear of Reynolds' right. By this unfortunate mistake a gap was opened in the line of battle, and in the rear of my both lateral advantage, and striking Davis in flank and rear, as well as Brook, Reynolds' right division in front.

The same attack weakened the right brigade of Wood before it was entered the gap. Davis, finding the enemy in his rear, as well as on his battery, then in movement to a new station, were taken in front by overwhelming forces, and by last brigade of Wood, which had fallen to the left, throwing his division into confusion, from which a lower requested until it reached Rossville.

While the enemy poured in through this breach, a long line, stretching beyond Reynolds' right, was advancing on the left of Thomas, pressing the rear of Davis. Sheridan's other two brigades in movement to cover this left, under orders to close up on Reynolds' right, were thrown back by the enemy's advancing column, but were driven in turn by the fire of Sheridan's batteries, and Gen. Sheridan was thus compelled to retire to Rossville, where he was joined by Gen. Davis, who had rallied his division after being compelled in yield to superior numbers, and ordered a movement of the whole line to the left, to the position held by Gen. Reynolds, from which they advanced in the La Fayette road to support our left.

Thus Davis's two brigades, one of Van Cleve's, and Sheridan's entire division were driven from the field, with the consequent disorganization of the divisions of Baird, Johnson, Palmer, Reynolds, Brannan and Wood, two of Negley's brigades, and one of Gen. Thomas' corps, in the desperate conflicts against the whole power of the Rebel Army, which, dividing from previous to the attack, had massed its strength on the right of Thomas. At the moment of the repulse of Davis' division, I was standing by a rear of the artillery on the completion of the line, and ordered them to the left. Seeing confusion among Van Cleve's troops, and the fugitives thereof were re-formed back, and the artillery was ordered to the support of Sheridan's troops to intervene because imminent, and Sheridan's troops, who had thus overcome all opposition, were thrown across on the flank of the advancing Rebels. It was too late. The crowding of retreating troops from the left, and the overwhelming force of the troops directly to rally behind the ridges west of the Dry Valley road. I passed across it, supposed to be occupied by our troops, and Sheridan and Major Bond of my staff, and a few of the escort, under a shower of grape, canister and musketry, from the enemy's line on the left, and attempted to rejoin Gen. Thomas and the troops sent to his support, by passing to the rear of the broken ground in front of Gen. Negley's line, reared troops far toward the left, and hearing the enemy's advancing musketry and artillery fire, I ordered the troops to halt and hold the ground, and started for Rossville. On consultation one further reflection, however, I ordered the troops to fall back to Rossville, as the line was too long, to give orders for the recovery of the position in front

entirely some three months' provisions—the whole estimated at half a million of dollars—the private sutler's stores being proportionately and a million of dollars—the private sutler's stores being proportionately and in like way, every article of clothing, camp and garrison equipage, distance of seven miles between the two hollows and two ædifices each, together with a large quantity of salt: 107 bottles were dug up and rendered useless, huge quantity of salt: 107 bottles were dug up and rendered useless, and several hundred buildings were destroyed, together with 27 and several hundred buildings were destroyed, together with 27 and several hundred buildings were destroyed, together with 27

PROPOSALS FOR BUNTING AND DRY GOODS.

BUREAU OF NAVIGATION,
NAVY DEPARTMENT, January 15, 1864.

Sealed Proposals will be received at this office until 12 M. on the 25th day of January next, for furnishing the requisite supply of Bunting and Dry Goods for the use of the Navy and Marine Corps of the United States during the year ending the 30th of June, 1864.

Proposals must be endorsed "Proposals for Bunting and Dry Goods," and addressed to the Chief of the Bureau.

Blank pamphlets to be included in these proposals are particularly described in the printed schedules, copies of which may be obtained on application to the Navigation Offices at the Brooklyn Navy Yard or to the Bureau. Samples will be seen and special information obtained on application to the Navigation Office.

All articles must be delivered to the Yard at the option and expense of the contractor, in suitable packages, which must be properly marked thereon; and the articles must be subject to such inspection, measurement, weight, &c., at the Yard and entirely satisfactory to the Navigation Officer in charge.

Payment will be made monthly, or quarterly, as may be agreed upon.

Bonds, with sufficient sureties, will be required in the contract, and their responsibility certified to by a United States District Judge, Attorney, Collector, or Navy Agent.

"The only Authentic History of the War."

TO THE LIBRARY OF HISTORY AND FOR PUBLIC LIBRARIES,
THE WORK IS INVALUABLE.

It is a record of the materials for history. From these volumes the future historian will obtain information and every clear and distinct narrative, from the Southern side, as well as from the intelligence and the documents and narratives of the Union side.

It is Recommended, Impartial and Complete. It is essential to every

LAWYER'S LIBRARY.

It has already been received as Authentic Evidence in trials for Treason in the United States District Courts of Philadelphia, New York, Boston and San Francisco.

The Philadelphia *Press* of Oct. 26, 1863, thus speaks of it: "During the trial in the United States Circuit Court, which commenced yesterday in the custom-house, Mr. Charles J. Biddle, on one of the jurors, the *Jeff. Davis*, a great deal of documentary evidence to show the character of the vessel, was put in evidence by the counsel for defence, taken from Frank Moore's 'Rebellion Record,' a work which the Attorney and Solicitor-General have pronounced to be, in fact not higher than it seems, the best compilation of the kind. In connection reporting the origin and progress of the rebellion. It is the first time the work, or any literary history, that a book not yet completed, has been consigned with such authority, to be admitted as evidence in a court of law, and on a trial involving life and death."

When the *Savannah* pirates were tried in New York, the various canards for the United States under the defence used The Rebellion Record as evidence.

In the case of Charleston pirates, recently tried in the United States Court at San Francisco, "the United States District Attorney offered the Rebellion Record as evidence of the rebellion, and the Court admitted it." (See *Alta California* of Dec. 30, 1863.)

The record of the Southern Confederacy, as published in detail in this work. The present publication of this work will be practically the first complete history of our country will be here recorded, and THE REBELLION RECORD will be the fountain.

UNITED STATES
ARMY AND NAVY JOURNAL;

AND

Gazette of the Regular and Volunteer Forces.

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISCUSSION OF CORRECT MILITARY PRINCIPLES.

The ARMY AND NAVY JOURNAL is established in the interests of no party, and will be conducted by its editor. Its independence will be absolute. Having all personal and political bias, its columns will be directed solely to the institution of sound and healthful principles, and to the exposure of errors in all its departments. Its pages will be devoted to the earnest, laborious, and honest discussion, to the dignified discussion of topics coming within the scope of its professed objects. A full and reliable record of all subjects of interest to these in any way connected with the military or naval service, or interested in the art of war. The Department Reports, Orders, and all official documents in connection with warlike operations, will receive adequate attention. The official publications of the Adjutant-General's Office will also have an appropriate place. Accuracy in all its statements of fact, the JOURNAL will contain from week to week:

An accurate record of all events that occurs in all parts of the world of value to our Army and Navy to collect with a view to permanent use. Original articles in all its parts, and communications on appropriate subjects, from officers of the Army and Navy, will be solicited and welcomed. It shall be the object of the editor to make it not only a valuable record of the present, but a work to which men can look in all future time, for information on any subject connected with the public service and by the great mass of the intelligent, read.

The importance which Military and Naval affairs have assumed in the United States Government commands that they should have in the press an adequate representation, which, by its ability, entire impartiality in the discussion of subjects coming under its notice, and its accomplished and thorough knowledge of the National Union, shall command itself to the confidence of the public. The want of such a publication is necessity in every mart, barrack, hospital and wardroom in the land. The ARMY AND NAVY JOURNAL aspires to such a demand, and it shall be the purpose of the proprietor to make it worthy of the support which it will be proud to recognize as their organ, and which it will be their pride to complement with ability by any of the cities in the world. Arrangements for editorial and correspondence have been made with competent writers on Military and Naval affairs in the principal cities of the Union, and contributions of unusual excellence in the line of the JOURNAL'S objects will be solicited from the early and many of colleges, orders, &c.

The ARMY AND NAVY JOURNAL is now published, and ARMY AND NAVY JOURNAL has awakened in the Army an ardent love of country.

From Major-General GEORGE G. MEADE.

HEADQUARTERS ARMY OF THE POTOMAC,
September 15th, 1863.

W. C. CHURCH, Esq., HD Broadway—

DEAR SIR: I have received several numbers of the ARMY AND NAVY JOURNAL, and have noted with satisfaction the ability with which the present war is treated in its columns. It affords me sincere pleasure to add my commendation to the success which I trust will attend your enterprise.

Very respectfully, your obedient servant,
GEORGE G. MEADE, Major-General, Commanding.

From Maj.-Gen. D. N. COUCH, Department of Susquehanna

I have received the ARMY AND NAVY JOURNAL regularly, and I trust it will meet with such success as to assure its long and prosperous existence. It is the only paper in the work of the kind—one that shall be a monument—as long as the Union shall last, to the valor and patriotism of the soldiers and sailors.

From Major-General W. B. FRANKLIN, *Commanding 3d Army Corps.*

"I say that the ARMY AND NAVY JOURNAL is commencing its career under the most favorable auspices, and a great military establishment is what I really think."

From Major-General JOHN NEWTON, *Commanding 1st Army Corps.*

"It will afford me much pleasure to recommend the ARMY AND NAVY JOURNAL to officers in my portion of the Army. Its publication is timely, and its management judicious. I wish its destiny into such hands."

From Major-General S. HOLMES, *Second Division Army Corps.*

"You possess my personal and official interest in your enterprise. Whatever contributes to the efficiency or honor of the Army and Navy is of importance."

From Prof. H. CORTEZ, University of Pennsylvania.

"A good paper and one that has long been needed. Every former officer within my knowledge has been a subscriber, and numerous applications have been made to me for information concerning it. Its publication is timely, its form attractive, new, and reliable—in which case and more—and I trust it will receive the support it deserves, and appear admirable; and your own military experience will enable you to conduct it especially worthy and useful to our service."

Of the numerous notices of the newspaper press we have room only for the following:

The ARMY AND NAVY JOURNAL is the paper to fascinate observers, both regular and volunteer. It proposes to devote its columns to the discussion of naval, military, and naval and military affairs, who spoke from their knowledge of the character of the service, and the wants of officers and men. Intended to be taken by every army officer in the field, and by every one who has a friend in the service, it will circulate not only among the military and naval men as well as the general public, who are those such a demand as to aid materially in the success of the enterprise in its highest value and interests. Its articles are from the pens of men who are competent to write on the topics which they propound in our Military and Naval Journal. Its editor is Mr. W. C. CHURCH, late of Major-General Dix's staff, and formerly editor of the *Army and Navy Chronicle* of New York Times.

From the New York Correspondent of the Boston Post.

(NOVEMBER).

The NEW ARMY AND NAVY JOURNAL has printed a second edition of its first number, which is a very handsome, well-filled, and literally conducted, this paper will be published weekly, and will be devoted to the interests of the soldiers and sailors of the United States. The subscription list is already very large, and numbers among its subscribers thousands, and the paper has every prospect of meeting a success which its merits deserve. Among its regular contributors are many of our Military and Naval officers of high rank, and the publication will be conducted with marked ability. Its columns will be open to communications from whose pens are prompted by the same enlightened spirit of patriotism which has called the JOURNAL into existence, and in the event with the events now on the double spirit of the times. It is a paper which every soldier and sailor should own, and deserves that the ARMY AND NAVY JOURNAL should receive a liberal support.

The terms of the paper are FIVE DOLLARS PER ANNUM, PAYABLE IN ADVANCE. It is printed on a large-sized quarto sheet of 16 pages, convenient for binding, and printed in the best manner on fine book paper. This will furnish a yearly volume of 832 pages, filled with information of independent interest to every soldier or sailor and evidence of improvement in his profession, as well as a lasting instance of taking an intelligent view of the military and naval operations of the present gigantic struggle. Subscriptions and communications should be addressed to W. C. CHURCH, Publisher of the ARMY AND NAVY JOURNAL, New York.

SALE OF REAL ESTATE IN THE CITY OF WASHINGTON, D. C.
Under the direction and instructions of the President, I shall expose for sale, at the front door of the Register's office, in the City of Washington, on Monday, the 11th day of December 1863, in pursuance of the 12th section of an act entitled "An Act for the Collection of Direct Taxes in Insurrectionary Districts within the United States," and the several acts supplemental thereto, and as an ancillary of the said act, approved February 6, 1863, and an act of the Legislature of the District of Columbia, entitled "An Act to Provide for the Collection of Taxes in the District of Columbia," approved June 7, 1862, and in accordance with the proclamation of the President of the United States, dated March 3, 1863, that a public sale will be held at the office of the Commissioners aforesaid, in the town of Alexandria, State of South Carolina, on Monday, the 18th day of January, 1864, at 12 o'clock M., and each day, for such portions of the several lots, parts of lots, and blocks of land constituting the said Southern Boundary, together with the buildings thereon, to wit: Block One (1) to Block Eighty-two (82), between Fifteenth and Twenty-first streets, according to a plat or map made of said town, Feiter, 1862, duly published and authenticated by the Commissioners, and recorded in Valuation Book "A," of said Commissioners.

The following blocks, lots, and parts of lots are exempted from sale from and after this date, to wit: Lot 1 in Block 8; Blocks 15 and 16; Lot 1 in Block 21; Blocks 22, 23, 24, 25, 26, 27, 28; Lot 1 in Block 29; Lot 1 in Block 30; Lot 1 in Block 31; Lot 1 in Block 32; Blocks 33, 34; Lot 1 in Block 35; Lots A and B in Block 36; Blocks 37, 38; Lots A and B in Block 39; Lots A and B in Block 40; Lots A and B in Block 41; Blocks 42, 43, 44; Lots A and B in Block 45; Blocks 46, 47, 48; Lot 1 in Block 49; Blocks 50, 51, 52, 53, 54, 55, 56, 57; Lot 1 in Block 58; Blocks 59, 60; Lot 2 in Block 61; Blocks 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75; Lots A and B in Block 76; Lots A, B, C and D in Block 77; Lots A and B in Block 78; Blocks 79, 80, 81; Lot 1 in Block 90 and Blocks 124, 125, 151 and 152 of Square 406, and all public ground of 406, including the buildings now occupied, and continuing to be occupied, for the use of said sale, as armory and arsenal hospitals, and as offices and storehouses of the Quartermaster's Department, and Ordnance Department, and Revenue and Police purposes.

The sale will be kept open longer than thirty days from the commencement of the same.

The Government reserves a right to bid on each of said lots and blocks, to be publicly made by them, or by their authority, of such sum as they may deem eligible, not less than one third of the appraised value of each of said lots and blocks, but parts of lots and blocks which shall not be bid to one-third of their appraised value will be withdrawn from sale.

Given under my hands at Beaufort, South Carolina, this second day of December, 1863.

R. E. WOMBLE,
Col. 54th Regt. Mass. Vols.
U. S. Direct Tax Commissioners for the District of South Carolina.

$2,000,000 LOAN OF THE COUNTY OF NEW YORK.
Subscriptions are hereby invited to a loan of Two Million Dollars, authorized by an ordinance of the Board of Supervisors, approved by the Mayor, October 31, 1863, entitled, "An Ordinance for the procurement of substitutes for drafted soldiers for the service of the Union, provided the same can be counted and allowed on the quota of the city and county of New York in any future draft."
The Bonds issued for such subscriptions will be signed at the Comptroller's office, on and after December 15th, by the Mayor of New York, and remain open until the whole sum shall be taken.
Subscriptions will be required to deposit with the County Treasurer at the Broadway Bank, within five days after notice of the acceptance of their proposals, twenty per cent of the respectively, and on presenting the receipts for such deposits to the Comptroller, certificates of stock will be issued to the subscribers, for equal amounts, redeemable on or before January 1, 1884, with interest from the date of payment, at the rate of six per cent per annum.
MATTHEW T. BRENNAN, Comptroller,
CITY OF NEW YORK, DEPARTMENT OF FINANCE,
COMPTROLLER'S OFFICE, December 5, 1863.

SAMUEL V. NILES,
ARMY AND NAVY AGENT,
(Late Colonel of Second Iowa Cavalry.)
MILITARY, NAVAL, AND PENSION AGENCY,
(Established in 1857.)
OFFICE AND RESIDENCE, No. 320 & 322 st., 4th & 21st st.,
Washington, D. C.
Having had the exclusive charge of the "Recollections of a Private Life," General Scott's celebrated Army Letter Book, for several years, and being familiar with the business of the Army and Navy, with the Department and of the Bureau of the "Commissioner of Pensions," offers his services to the officers of the Army and Soldiers in the adjustment and collection of
ARREARS AND OTHER CLAIMS AGAINST THE GOVERNMENT,
in all departments, especially claims growing out of the present war.
Particular attention is given to Pensions due to Officers, Soldiers, Seamen, and Marines of the Army and Navy of the United States, and to the widows, children, mothers and sisters of those who have been killed, or died from wounds and sickness contracted in the service.
Claims for indemnity for property destroyed, and claims of Contractors, Quartermasters, and for recruiting and subsistence, for Hospital Stores Cook, &c., and billed in the services, and for the Bounty, Arrears of Pay, and Prize Money of Officers, Soldiers, and Seamen of the United States, or their heirs at law.
Any business before the General Land Office, Indian Office or other Bureaus of the Interior, the Court of Claims, requiring the services of an Attorney, will receive prompt attention.
REFERS TO
Hon. Thomas A. Hendricks, late U. S. Senate, late Gov. D. D. Shelbyville, Ind.; Hon. John Wilson, late Comm. Pensions, Washington, D. C.; Hon. Wm. Kellogg, late Com. of L. Off., Washington City; Hon. George C. Whiting, late Asst. Sec. Treas., Washington, D. C.; Hon. Geo. Sanders, Washington, D. C.; Rittenhouse, Fant & Co., Washington, D. C.
Correspondence solicited from Attorneys at Law, and respectable Agents from all sections of the Country, for the prosecution of valuable claims; agencies for the prosecution of Military and other claims.
Blank forms and circulars will be furnished correspondents in relation to claims, together with every information that may be necessary as may be required to conform to any modifications of the laws, or the requirements of the Departments in relation thereto.
Reference required.
All letters, to secure prompt attention, should enclose postage stamps.
Address SAMUEL V. NILES, Attorney,
Washington, D. C.

SOMETHING NEW IN THE CARD WORLD!
A COMPLETE REVOLUTION!
TIME FOR A CHANGE!
Foreign Emblems and long enough by a Republican People.
NATIONALITY EVERYTHING!!
THE AMERICAN CARD COMPANY,
Conceiving that the introduction of
NATIONAL EMBLEMS
in the place of Foreign, in Playing Cards, will be hailed with delight by the American people, take pleasure in presenting the
UNION PLAYING CARDS
as the first and only GENUINE AMERICAN CARDS ever produced, and they now have the satisfaction of announcing that they are rapidly becoming the leading Cards in the American market.
The Suits are:
EAGLES, SHIELDS, STARS AND FLAGS.
GODDESS OF LIBERTY in place of Queen, COLONEL for King, and MAJOR for Jack.
In playing with these Cards, they are to be called by the names the Emblems represent, and as the Emblems are familiar as household words, everywhere among the American people, they can be used as readily the first occasion on Cards bearing Foreign emblems.
THE UNION PLAYING CARDS
are the prettiest cards made, and they are put up, each pack, in neat, handsome card cases, suitable to keep them in when not in use; there are put up in elegant dozen boxes for the trade.
Two sample packs, in elegant card cases, sent postpaid on receipt of $1. Address

UNITED STATES
Army and Navy Journal,
A WEEKLY NEWSPAPER,
DEVOTED TO THE INTERESTS OF
ARMY AND NAVY,
and to the
DISSEMINATION OF SOUND MILITARY INFORMATION.
Terms—$5 per annum in advance; $2 for six months in advance. Clubs of 4 receive one copy gratis; and to the columns of the Journal will be inserted, to all subscribers, twenty cents a line for each insertion. Advertisers are requested to make their favors as early as possible.
All letters should be addressed to The UNITED STATES ARMY AND NAVY JOURNAL, and all remittances may be made in United States Notes, Quartermaster, Paymaster or other drafts, which should be made payable to the order of the publisher.
The Editor of this JOURNAL will always be glad to receive from officers in the two services, communications and general communications of interest to the service. But he must not be responsible for the views of the writer should, in all cases, accompany a communication with the name of the writer, as a guarantee of good faith.
W. C. CHURCH, Proprietor,
192 Broadway, New York.

THE MILITARY SITUATION.

THE situation of the past week presents few features deserving of comment. It is reported that LONGSTREET has been heavily reinforced from the armies of LEE and JOHNSTON, and also largely increased by conscripts. His headquarters are at Red Bridge, and his army is said to occupy a very strong position, the picket lines of the two armies fronting each other at Blair's Cross Roads, twenty miles northeast of Knoxville.

A heavy cavalry fight occurred on the 10th inst. near Strawberry Plains, in which the enemy were repulsed with serious loss.

General EARLY's attempted raid in the Shenandoah Valley has proved a complete failure, and he is now falling back. His latest attempt was to capture the Union garrison at Petersburgh, Western Virginia, which was surrounded on the 8th by a formidable force consisting of three brigades, under command of General FITZHUGH LEE, which however speedily retreated without accomplishing the object of their attack. An empty wagon train returning from Petersburgh was captured by a portion of the enemy's troops; but with this exception they were unable to inflict any damage upon our forces.

MAJOR COLE, in command of a battalion of Maryland Cavalry, encamped in London county, was attacked on Sunday morning, the 10th, by the guerrilla MOSEBY, at the head of nearly four hundred men. After a severe fight of an hour's duration MOSEBY was compelled to retreat, leaving his dead and wounded on the field.

The noted guerrilla McCONN was captured, with three of his men, on the 9th inst, near Culpepper Court House by the Forrester New York Cavalry Regiment.

A NAVAL expedition left New Orleans on the 30th ult., the strength and destination of which were not divulged. Little doubt was entertained, however, that its ultimate destination was Mobile.

Information had reached New Orleans, from several different directions, that all the rebel troops which have been operating in Western Louisiana and on the Mississippi are concentrating in Central Texas, and uniting to form a large army to attack our new acquisitions on the coast of that State. The most ample preparations have been made to meet this threatened movement.

THE situation at Charleston remains unchanged; but if it be true, as reported, that the rebels have constructed two iron-clad rams, closely resembling the *Dictator* and the *Dunderberg*, we may expect to hear of mere active operations in that quarter before long. The recent storm has washed ashore another rebel obstruction. It was a novel iron cable, composed of entire T-rails, linked very securely together. The high tides, rapid currents, and strong wind have accomplished more than human ingenuity could do in the removal of those obstructions. The bombardment of the city still progresses. Twenty shells were thrown into the city on the 7th inst., with what result was not known.

COURT-MARTIAL OF COLONEL CRAWLEY.

A COURT-MARTIAL of extraordinary interest has just closed its labors at Aldershot, in England. Its proceedings extended over five weeks, and occupied twenty-one days of actual session. The prisoner was Colonel CRAWLEY, a stern and rigid disciplinarian, commanding the Inniskilling Dragoons in India, who was accused of extreme harshness and cruelty towards three non-commissioned officers of his regiment, against whom he was supposed to entertain a feeling of personal animosity. So great was the popular excitement produced against Colonel CRAWLEY by this accusation, that he was transferred from India to England for trial. Public opinion and the press were almost unanimously against him, and it was supposed that it would be impossible for him to obtain an acquittal. Nevertheless, after full investigation of the evidence, Colonel CRAWLEY was honorably acquitted upon all the charges which were brought against him. The gratification of the Colonel at this result is somewhat marred, it is stated, by the fact that the expenses of the trial have eaten up his entire fortune, and his personal friends are considering how the loss can be made up to him.

The court-martial commenced its sitting about the middle of November, and throughout its whole progress excited the most extraordinary interest in England. The daily newspapers were filled with the excessively voluminous evidence, and the weeklies were obliged to issue extras in order to satisfy the craving of their readers for a full report of the proceedings. As an important and interesting illustration of military rule in the English colonies, we lay before our readers a brief account of the circumstances that led to the arrest of Colonel CRAWLEY, and of his subsequent trial.

In the early part of 1862, the Colonel, then commanding the Inniskilling Dragoons at Mhow, India, placed his Paymaster on trial before a court-martial. In the course of this trial—which involved an investigation into the character of Colonel CRAWLEY as a commanding officer—it was discovered by the court that the Sergeant-Major of the regiment had read a report of a part of their proceedings to other non-commissioned officers at his quarters. The court forbade the publication of the evidence until the case was closed; and Colonel CRAWLEY, after investigating the circumstances of this transaction, forwarded the evidence which he obtained respecting it to his superiors, Generals FARRELL and MANSFIELD. General FARRELL immediately gave an order for the close arrest of the regimental Sergeant-Major LILLEY and the troop Sergeant-Majors WAKEFIELD and DUVAL, and forbade any one to have access to them, except through special permission. Shortly afterward, General MANSFIELD issued an order to the officer that the Sergeant-Majors were not to be released from confinement until the proceedings of the court-martial were entirely closed. The three Sergeant-Majors were accordingly placed under close arrest. LILLEY was first confined in a bungalow, containing five rooms, which he occupied with his wife, then very ill from consumption, but the Sergeant was subsequently removed to others less commodious. He seems to have been subjected to great annoyance from the continued presence of the sentries, who were ordered never to lose sight of him, day or night. After having been kept several weeks in strictest confinement, the Sergeant died of an illness caused, it was charged, by the undue severity of his arrest.

The account of these proceedings produced intense excitement in England, and Colonel CRAWLEY was accordingly brought to trial, on the charge of having caused the orders under which Sergeant-Major LILLEY was confined in close arrest, to be carried into effect with unnecessary severity.

The full and honorable acquittal of Colonel CRAWLEY does not entirely satisfy the public. The evidence shows that beyond all question, illegal proceedings took place in the Inniskilling Dragoons, and that these proceedings tended to cause the death in confinement of a non-commissioned officer who had always borne a blameless character, and who had been guilty of no crime. Nor can it be questioned that, although sheltered by the orders of his superior officers, he was the instigator of the illegal confinement to which LILLEY and the other Sergeants were subjected. As Colonel CRAWLEY stated in his defence, neither General FARRELL nor General MANSFIELD had any animosity against these men; but the action of these Generals was the result of his own representations, and if it is true, as has been charged, that he knew that these non-commissioned officers were to be damaging witnesses against him, he certainly might be suspected of animosity against them. The evidence appears to show that at Colonel CRAWLEY's instance, an illegal proceeding was hereby carried out, with his full knowledge, though not upon his legal responsibility. His acquittal was based upon purely technical grounds, and does not relieve him of the charge of harsh, cruel, and unjustifiable proceedings towards men whom he wished to have out of the way.

The result of the trial seems to justify the rather startling conclusion of one of the English military journals, that the law may sometimes be violated against a British soldier with impunity, provided the legal responsibility can be distributed between two or three officers of high rank.

A CORRESPONDENT, whose letter we insert in another place, makes the excellent suggestion that the officers of the Regular Army raise by subscription a fund for the purpose of erecting a monument in the National Cemetery, at Gettysburgh, to the memory of the officers and soldiers of the Regular Army, killed during the war. We have already called attention to the fact that while the different States are, with praiseworthy zeal, providing for the commemoration of the services of their troops, the brave soldiers of the old National Army, who have fallen during the war, have no place and no monument in the Cemetery. We shall be very glad to receive and appropriate to the object suggested by our correspondent, any sums that may be sent us.

THE Stafford projectiles have recently had a successful trial at West Point. An iron target 6 and 8 inches thick, backed with 15 inches of live oak, was perforated and set on fire by two shells containing one gallon of Greek fire each. The aperture made in the iron was 14 inches in diameter, and the wood and bolts were terribly broken. The gun used was an 8-inch Parrott rifle.

WHILE our daily papers are busy discussing the status of the rebels who seized the *Chesapeake*, news comes that the Nova Scotia authorities have seized the master for them, by determining to treat their prisoners as pirates and not as honorable combatants. This decision will be welcome to all who are interested in maintaining sound principles of international law.

ABOUT PROMOTIONS IN THE NAVY.

To the question, what has mainly contributed to the wonderful development of the resources of the United States, covered the land with railroads and telegraphs and advanced so many of our citizens to wealth and position, the answer is undoubtedly to be found, in a great measure, in the sound policy of throwing open all business to general competition; while on the other hand Government monopoly has had a very large share in keeping back more than one of the countries of Europe in the general march of improvement.

Competition, by inviting individual enterprise, and stimulating that strongest incitement to exertion, the desire of self-advancement, has brought us up to our present proud eminence; while some of the old countries have made but little progress, comparatively, since the days their adventurers first sought these shores.

The desire to apply the same principle to another question, it is hoped, will be sufficient excuse for stating this well-known proposition. Competition has the same vitalizing effect in the Navy. The English Channel fleet was for a long time the best naval school in existence, exchanging among its many hundred scholars, Admirals, Post Captains, scores of Lieutenants, seamen of every degree, and boys. Such was the competition among the ships of this fleet that we read of the manœuvres and evolutions performed by them with great incredulity, and yet the manœuvres for the most part literally true. Soon after it was determined to build up the French Navy the same system—a squadron of instruction—was adopted there. To Admiral LALANDE is generally ascribed the credit of commanding the first of these *squadrons of evolution*, and it was in his squadron where was first started what is now known as the "Règlement," "sur le Service Intérior," "rules which, like those of grammar, were not arbitrary, but deduced from the most approved usage under his flag. This squadron gave rise to a new school of officers, and the present admirable organization of the French marine. LALANDE was followed by CAMBIS-VILLE, DUCAS, and HAMELIN, each in turn adding something to the discipline of the squadron, until finally when the two fleets met in the Black Sea it was a mooted point which bore off the palm of excellence, that of England or France. Indeed, we never grow so far out of the old routine, as connected with manœuvering, evolutions and gunnery was beyond comparison more smartly, quickly and exactly executed by the French than by the English, "and the "spectator must have observed the brilliant prestige, which "had so long surrounded English naval skill, and the "rising glories of her rival." "It is not an unusual per-"formance," it is related, "on board of a line-of-battle "ship (French) not six months in commission to heave in "ninety fathoms of chain and make all sail within fourteen "minutes after the signal was given to weigh anchor. "A topsail will be shifted in little more than seven "minutes and a half; and a whole squadron have been "known in a gale, with a heavy sea running, to strike top-"gallant masts in nine minutes." It is mentioned particularly that one crew line-of-battle ship (French) could not took a single reef in her topsails in something less than two minutes and twenty-five seconds, from clearing down to hoisting the sails to a taut leech. In gunnery, fitting out boats, and all exercises pertaining to a man-of-war the same alacrity prevailed.

So much for competition, which with the French operated in a three-fold degree: among the officers of the same ship, among the ships of the squadron, and between the entire Navy of one country—France—and that of another—England.

Where such "squadrons of evolution" have not existed, such extraordinary proficiency has been unknown. True, there are a few isolated cases where the crews of single ships (ships cruising singly) have been dragged into a certain degree of activity, but these are exceptions which only prove the rule; and in view of present laws it would be scarcely expedient, even were it desirable, to try such an experiment in our service.

The tide of promotion in the English Navy flows steadily upwards, but without any fixed law; so that its regulations get filled to overflowing, and little bayous of "retirement" and "half-pay" have to be formed to hold the surplus. The system of promotion in that navy (if that can be called system which no system is) creates much discontent, and is productive of much evil.

The French, who seem to think such matters of sufficient importance to be studied out carefully, and when a good plan is devised, adopt it forthwith, have introduced into their scheme of advancement of officers somewhat of that rivalry which was so successful in promoting the discipline of the navy at large. As applied to officers, this rivalry might rather be termed a spirit of generous emulation. To begin at the beginning: The standard of admission into the French Naval School is much higher than in ours. At the examination* for cadets great stress is professional studies and exercises, the graduate goes into active service with a well-cultivated mind, which enables him to apply himself without effort to the more extended branches of his profession. This state of mental culture, however, is not allowed, as with us, to run to waste, or be maintained only according to the bent of the individual; but the whole theory of promotion has a direct influence in keeping it up, and carrying it to the highest state of perfection, so that the best of them—those who have energy, ambition and intellectual power—push ahead, and in time fill, as they should, the highest positions in the navy; while the indolent, the vain, and the frivolous remain in the grade of the country or the honor of the day entrusted to their keeping. Our grad. uates on leaving the Academy naturally enough consider their studies over, and that they have nothing more to do in that way. They have attained a position on the Navy List, from which nothing can drive them by any exertion of their own, or lowered by the superior excellence of others. Their relative rank, however unchangeable, is at least secure, and there is no stimulous to improve it, for it is simply impossible.*

The graduate from the French Naval School becomes an *élève* of the second class, and goes to sea for two years, at the end of which time he must be examined for promotion to an *élève* of the first class. In this latter position they must serve two years longer before becoming ensigns; thus they have to serve at least four years, half of it at sea, and undergo two rigid examinations before they can be considered as officers.

The promotion from *élève* of first class to ensign is by seniority. In the promotions from ensign to lieutenant a threefold system is established, viz: seniority, selection. Hence the lowest ensign on the list may by exertion effect his own promotion, and all are stimulated to try.

From the grade of lieutenant to that of commander, one-half of the promotions are made by seniority and one-half by selection; so that the lowest ensign who achieves his advancement to a lieutenancy may have won by perseverance the epaulettes of a commander. After an officer has arrived at this latter rank, the record of his professional life is so complete that there can be no difficulty in coming at a tolerably accurate estimate of his ability; so that all promotions from commander to captain and so on up are made by selection.

Four years service in command of a corvette qualifies an officer for the command of a frigate, and two years must be spent in the latter capacity before he can get a line-of-battle ship.

Rear-admirals are eligible only from captains of line-of-battle ships of eight years' standing, at least four of which must have been passed before. A rear-admiral must have had the entire command of a squadron of not less than five vessels before he can become a vice-admiral.

Such is a rough outline of the French system of promotion. But this system imposes upon every commanding officer an onerous duty. He is not only obliged to make out once a year a special report on each one of his officers, and send it, through the flag officer, to the Minister of Marine. For these reports printed forms are supplied containing ten or more columns—for example: "Health," whether strong and robust, or delicate and feeble; "Aptitude for profession," "General bearing as an officer, "Habits," "Proficiency in languages," ditto "in sciences," ditto "in drawing or painting," &c.; and in the last column the captain nominates, as his judgment may dictate, for "promotion by selection." These reports are examined by the admiral, who makes his own remarks and nominations, and the whole are sent to headquarters. Here they are all recorded, and a list, made from all the nominees, is prepared and published in the annual register. In this manner a complete record of the service and of every rivalry† we spoke of, and as superior staff of officers, are the natural results. It is not uncommon to find these officers, while abroad, making surveys of harbors, determining astronomical points, constructing charts, drawing or painting, making mineral, or vegetable collections, and carrying on a taking daily observations and keeping the run of the ship.

Every lieutenant is obliged by the regulations to keep his own reckoning and his own journal. Officers thus kept constantly employed on professional subjects are generally found to have a high standard of intellectual thought, and more elevated and refined tastes; while those who are left in idleness must seek in doubtful pleasures a relief from the tedium of a long cruise. In the one case time and talents are devoted to the service of the country, and a just return is made for the care bestowed on their education. Whereas in the other, the service is altogether secondary, and only thought about as it enables one to see the world and provide a subsistence.

Foreign stations may frequently be seen two distinct classes of officers. Those who can, on their return from abroad, tell something of the society of the countries they have visited, of the politics, the natural productions, peculiarities of climate, and such general information as would prove interesting and instructive in conversation or reading; and those whose observations seem to have been limited to the cafes and places of amusements. The majority of French officers belong to the former class, a fact which is due to their education.

Having endeavored to show the value of competition, we would now propose the plan of introducing a small measure of it into our naval service; for, however conscientious our officers may be in the discharge of their duty—when there is something worth striving for they more than satisfy their conscience, their duty is more than well done. Our ships in more than good order—active service afloat will be more sought after, and marriages—but here we burn our fingers.

With the incentive of winning one's own way up, the graduate will not leave the Academy with a sigh of relief, as if his work was over—it will be but then commenced; a fact which all valedictory addresses tell them, but which they do not realize, and the result is, they will set out with all the glowing aspirations of health and youth.

Our young officers are now justly regarded with great favor, but could such a policy be introduced into our system of promotion, and which would at the same time in no sense work the injustice of the present, it would indeed influence—they would in a short time become, as a body, truly superior, and the Navy and the country would seem my the benefit—which would be very great.

THE MILITARY SPIRIT OF THE NORTH.

We frequently find, in English newspapers, the opinion of a very tender character, that, if together smelt into concern, least we should emerge from this war a thoroughly military people, so deeply imbued with the love of camps and glory, with such an unquenchable thirst for conquest, as to be a foe to peace and a perpetual terror to all the rest of mankind. We are kindly admonished that the soldier's pursuit of martial glory is very apt to bring a nation to grief. The dreary consequences of a war for empire are spread before our eyes in the most lurid colors. We are invited with the supposed loss of our liberties, with the burdens of taxation which we are about to impose upon ourselves, and wrung against an almost inconceivable number of debts, some of which are real and others more phantoms of the imagination, which lie before us in the pathway we are treading.

While we are exceedingly obliged to our friends for their interest in our welfare, we beg to say in reply that they take a wrong and partisan view of the spirit which animates the people of the North in this struggle. It is perfectly true that the war-spirit is predominant and powerful, and that the North means to fight it out to the bitter end. Secur ed as we shall be by the dismemberment of the Union, we would continue the struggle a course of years. But not because the people have become enamored of war. They probably never was a time when as a nation we felt a more sincere appreciation of the inestimable blessings of peace than now. We fight for victory as the precursor of peace and permanent union, and the day when our militia-men veterans shall be permitted to lay aside the implements of war and return to the common avocations of civil life will be glorious in our annals. The impulse that, as if by magic, transformed half a million of citizens into soldiers, was the impulse of duty, and not of martial ardor and ambition, like that which has so often made France the terror of Europe. To characterize the uprising of a great people in defence of its liberties, its cherished institutions, and in fact its national existence, as a war-madness, is to give utterance to what every soldier in the Union ranks knows to be untrue.

We may remark, in passing, that English ideas of the wrongfulness of war, and the folly of engaging in it, probably originated in the character of the wars which have been waged by their own country. They could not have been suggested by ours.

It is easy to denounce war. It is pleasant to descant upon the sweets of peace, and to chant the praises of the pen at the expense of the sword. But it is useless to deny that within the ages, has been the constant auxiliary of civilization and intellectual progress. The splendid philosophy of Greece was planted in distant lands by the soldiers of ALEXANDER. CESAR's legions carried the civilization of Rome into every corner of the ancient world. The cross of PETER and HERMIT gave the signal for a new crusade against barbarism. The flaming march of civilization through the night of history is, indeed, marked chiefly by war. The mighty epochs flash upon us and disappear, as lightning is swallowed up in darkness. Doubtless war has often filled the land with tears. But it is one of the conditions of human advancement that through the sorrow and travail of

* The Blitts work may be obtained at Van Nostrand's, and should be read by every officer desirous of professional improvement.

* The policy now adopted of promoting for gallantry in action is inevitable in time of war, but it must be said that in every regular profession equally; but it must not be considered in discussing a plan which is intended for a time of peace as well as war.

† The EMPEROR reserves the right of reducing these times one-third during a period of war.

the generations which pass away is born the spirit of those which are coming. Every glorious age which has ever dawned upon the world has been preceded by one of turbulence and upheaval. Society stagnates easily in peaceful times, and, as has been shrewdly remarked, requires to be well stirred and shaken every few years to keep it from boiling.

It is in this spirit that the North has accepted the necessity of the time, and thrown itself with unprecedented activity into a fiercely-contested, expensive and protracted war. But having taken up the sword only when the alternative was national death, it will lay it aside as soon as the moment arrives when it can do so with safety to its imperilled interests.

CORRESPONDENCE.

GENERALS AND POLITICS

To the Editor of the Army and Navy Journal:

SIR:—A remarkable letter of General McCLELLAN, which is incorporated in the, as yet, unpublished report of the operations of the Army of the Potomac while under command of that officer, has seen the light during the last week. The letter is not very fresh, being dated eighteen months ago, while our army was at Harrison's Landing, on the Peninsula. It is addressed to the PRESIDENT. As you have published it in these pages, no general analysis of its contents is necessary.

I have characterized the letter as remarkable. It is so no less on account of the circumstances under which it was written than of its character and object. It was written, as we are informed, at its opening, while the condition of the Army of the Potomac at Harrison's Landing was such as "not be regarded as *critical*," while the rebel army was in our front "with the purpose of overwhelming us by attacking our position or forcing us to abandon it for want of our communications," and the fact that at such a moment the commander of the army thought fit to lay his views on public policy before the PRESIDENT, "in view of possible contingencies" (to his army), indicates not only the perils of the hour, but the unhappy divergence of the individual mind as to what would be the upshot of affairs. It was the critical moment which General McCLELLAN seized to communicate to the PRESIDENT his views on the subject "covering the whole ground of our national trouble" that should be determined upon by the Government. The fact that the letter was made to the "civil and military service" "silention" of the PRESIDENT, and that it was confessed that the topics discussed were "strictly executive matters," "some of the writer's official duties," might seem to remove it beyond the range of public or professional criticism; but, when it is considered that the General himself has seen fit to incorporate it in an official and public report of the operations of the army which he commanded.

The military views of General McCLELLAN, so far as they relate to the purely military policy of the war, are given very briefly and favorably in a couple of sentences toward the close of the letter. These are to the effect that the "plan of the Government must be supported by *concentration of military power*." The National forces must be "directed against the rebellious armies and organized combinations of treasonable citizens;" but should be mainly *collected into masses* and "kept in hand" until the majority are rendered reliable and acted upon by the controlling military authorities at this day, they were ignorant or discredited two years or eighteen months ago.

With the exception of the sentences quoted, the letter is occupied with the political ideas which animated General McCLELLAN, and which he was anxious should be upheld by the Administration. Of the ideas themselves I need not but little say. There is no doubt that they were based upon patriotism, that they were as sincerely held as they are earnestly expressed, and that his anxiety for their establishment as the national policy was the result of his belief they would be most conclusive to the country's welfare. Some of them have been carried out with profit; others have been superseded with profit; others have been tested by time, which has but added to their strength, while others have been tested by time, which has condemned them, and now only stand as evidence how hard it is to divine the course of events, or the course of public sentiment, in revolutionary times like these.

But the main question suggested to me by this letter and its political philosophy, is not the validity or invalidity of the ideas, per se, but the propriety of the mingling of military commanders to the policy of the Government. Has any one General, or any two Generals, or have all our Generals combined the right to assume, singly or in concert, their dissatisfaction with the political measures of the Government and the Administration, and to communicate to authorities the measure of public policy which, in any event, they shall adopt? The question is a very wide one, and, beside the direct issue, has other issues growing upon the entire public political conduct of military commanders. May a General exercise his authority in such a way as to affect the political position of his subordinates in the army as a whole? Should a General, while in the service, "take the stump" in a political campaign, and "electioneer" for or against those candidates for principles which represent the views of the Administration in power? In short, should a General, while in the active and effective professional and military, or should he, like other citizens, exercise his privilege of "dabbling in politics"—of controlling the policy of the Government and dating the sentiment of the country?

The question, I confess, is not without its embarrassments,—embarrassments so great as almost to preclude the possibility of passing anything like a fixed judgment upon it. The political views of this country, as entertained by citizens in the Army to their Government, are unlike those which exist in any other nation under heaven. We have no precedents, no experience, to guide or warn us. We must simply in this, as in so many other matters that come up for practical decision in America, "experiment," and we must do it on our own responsibility. Even in the case of the great dangers in having our armies commanded by men, however patriotic, who would attempt to control the action of the Government and the country; and it would seem that this danger could only be surpassed by that of having an army in political unity composed of officers and men who took no active, intelligent interest in the political relations of the country.

Fortunately, at this time, the question can be weighed dispassionately and impersonally, without reflecting in any way upon a single prominent officer in the field. I believe that the views of General McCLELLAN's politics has never yet been solved, and as to General GRANT's, I believe it has never been made public. General GRANT and Banks, though well known as adherents of conflicting political parties before the war, have been purely soldiers since they entered the military service. Each has devoted himself to his public views only through his artillery, and so with Generals Hooker and Thomas, and nearly every distinguished name in the military service. Some may be said to owe Vicksburg, Fairfax and Dutch Gap.

And perhaps this simple fact, that our greatest and best soldiers and leaders have purely abstained from all attempts to dictate to the Government its policy, or to interfere with the political action of the country, or to influence the political sentiment of the country—perhaps this furnishes the best index and guide as to the true course to be pursued by military commanders in their relations to the politics of the country. EYAT-MAGE.

CHAPLAINS COMMISSIONED OFFICERS

To the Editor of the Army and Navy Journal:

SIR:—In your paper of Jan. 24, "R. D. M." supposes that "Chaplain" made a mistake in asserting that chaplains are commissioned officers. He says: "Though mustered into service, he (Chaplain) has neither 'commission nor warrant—nothing but the appointment of the commanding officer and the muster roll, which is also a company commanders and field officers."

Now, permit me to say that I am not one who are in the service ought to know whether we have been commissioned or not; and when we take up our parchments, read along until it is come to the chaplain's name, look at changing, and find the whole authorized by the Governor and Adjutant-General of the State, we begin to think that it looks a little as if we were in the service by virtue of a commission. Our experience has taught us that no chaplain can be "mustered into service" *until he has been commissioned.* Let me then state the law, that he may be observed, and that we may can be a chaplain in the volunteer service.

The regiment to which I belong was raised and approved of by at least two-thirds of the officers of the regiment. His name is then forwarded to the Governor of the State from which the regiment is raised, and he requests him to be commissioned as chaplain. Before the Governor can commission him, regard must be had for the following law, viz.: That no person shall be appointed chaplain in the United States Army who is not a regularly ordained minister of some religious denomination, and who does not present testimonials of his good moral standing as such ministers, with a recommendation for his appointment as an Army chaplain from a majority of the commissioned body, of not less than five accredited ministers belonging to said religious denomination." Having been nominated by the officers of the regiment, upon presenting the testimonials required by the above law to the *Governor of the State*, the candidate is commissioned as much as any other officer in the service. As soon as the Governor has constituted a man a chaplain, any more than the nomination of any one by the colonel makes him a captain; in both instances the evidence of the appointment is the commission. The chaplain being a commissioned officer, does not retain his place on the muster roll, but receives his pay as such, but is amenable to military law; and hence, can retain his place for the time mentioned in his commission, unless a court-martial has found him guilty of violating the Articles of War.

These being the precise facts with regard to the appointment of chaplains, I do not see how "R. D. M." can assume to speak so positively against the view here presented. It is gratifying to find him ever at our friends, though we have not been able to see him rank as the author. Formerly, a chaplain ranked as captain, but by a late act of Congress his rank has been changed to that of major, as his commission says, he is appointed to "rank as chaplain." We have not objected to this, and yet, as our expressive colarges, we begin to think that we have been given the slave in this regard. That the present Congress will do something to relieve us of some wrongs is to be hoped, but we discover nothing in any law relative to the matter, that the chaplain is to be on an honorable man, entitled to equal rights with other officers in the same circumstances. CHAPLAIN.

HOSPITAL STEWARDS

To the Editor of the Army and Navy Journal:

SIR:—I desire to call the attention of the public, through the columns of your paper, to a subject that is of no little importance to the Government. I allude to the question of increase in rank and pay of Hospital Stewards. I venture to say there is no class of men in the army whose rank and pay are less commensurate with the responsibilities imposed upon them than the stewards of hospitals. They have no higher rank to be sure of promotion. He may be ever so attentive to his duties, watching with unceasing diligence everything that pertains to the welfare of the sick, and may never look forward to anything higher, nor does his pay bear any relation to his labors or responsibilities. In a first-class hospital—say one of 1,000 or 2,000 beds—the stores under the care of a steward are equal in extent to the entire stock of the medical surveyor in any of the departments prior to the rebellion, while the clerical work greatly exceeds the labor in any of the department headquarters at the same time. Brig. General CHARLES SUMNER, in his report, in connection of muster rolls, care of descriptive list, &c., is made the duty of the invalid officer; but, so far as my observation has extended, the only part of the order complied with is "to provide within the hospital limits," while the labor which it was intended he should perform is still done by the steward, who has the care and dispensing of the medicines, hospital stores, furniture, and, in many hospitals, the quartermaster and subsistence stores and ordnance property. Unless the steward is very careful, and exercises the utmost diligence in the duties entrusted to him, how many of our surgeons are there that would have some trouble in settling their accounts as Washington? The surgeon has all he can attend to, in looking after the sick and wounded entrusted to his charge, and cannot be expected to devote his time to the property, accounts and returns. Now, for all this labor and responsibility the steward receives the magnificent sum of twenty-three dollars per month, as a part payment for the rebellion, where the number of beds rarely exceeded fifty, the steward had this work, and the compensation was proportioned to the responsibilities imposed on his labor performed. The authorities, in establishing the rate of pay, had in view the number of beds which accompanied 1,000 or 2,000 beds, of the responsibilities of the steward, or of the class of men required for the position. My acquaintance with stewards is somewhat limited, but of those with whom there is not one who could not command from eight to twelve hundred dollars per annum in civil life. It is a fact that no same map will imagine, and the services of Hospital Stewards are worth as much to the Government as that of a private soldier under the same contract, who receives a hundred dollars per month, and whose daily service will not average five hours, and whose only knowledge of discipline or regulations may be what he learns from the steward.

I trust I have said enough to awaken thought on this subject, the result of which may lead to an increase of rank and compensation to the class of men mentioned, who, by their services, and who, by their services, are entitled to a better position than that they now hold.

NON COM.

JEFF. DAVIS AND THE END.

To the Editor of the Army and Navy Journal:

SIR:—We have lately heard the intelligence brought from Richmond by a "reliable gentleman," but still needing confirmation, that the end of the rebellion is near. That witness DAVIS will cut his throat when the crisis of the rebellion arrives. At first one felt like counseling him differently, but on more mature reflection, I am inclined to think that this threat is the part in danger if he falls into the hands of the Government, and it will save us some trouble if he will add to his threat the fact of committing the one of suicide. Besides, it will be a good historic parallel; JUDAS went out and hanged himself, and JEFF. DAVIS could not do better. He had as it is, it argues to us something like a late repentance, a self-immolation, because the good has triumphed. Of course, we do not expect him to acknowledge this, but, in effect, if his heart is bold enough, and his hand steady enough, will do with him, and we can only fancy his real remorse at hell he has made.

But to speak with a little more gravity, JEFFERSON DAVIS means to die as such thing. It is not for this that he has been sending to Europe for England and France, and that he has been keeping some ports open as a means of escape. He has made good his escape; and it is an even chance if he do not succeed. But we should destroy that chance, if energy, vigilance and forecast can; for to catch JEFFERSON DAVIS will probably be the climax of all our success. This story of cutting his throat is made up to deceive the people. The Southern Confederacy is doomed. Its peasants were made of different stuff from that which enters into the corporal matter of JEFF; and the "sheep" of Richmond are not going to rise against their master. Desertion, and hail the coming of the Union hosts, when the grand collapse takes place.

TROOPS ON SNOW-SHOES.

To the Editor of the Army and Navy Journal:

SIR:—It is not a rare thing in that land of snows, Canada, to see a body of men at drill on snow-shoes. As such a drill is a novelty in this country, it would be unobservant ing to your readers to read a short description of the drill. A clear day is, of course, selected for the drill, and the men, in their ordinary clothing, are all for sport. They mount on their feet, and a pair of snow-shoes stung over their back, and march off to the parade in the open country. They then halt, and each man puts on his snow-shoes. His trowsers are tucked into his moccasins, which are tied round the ankle with long deer-skin thongs. The men then march off in snow-shoes by strong things of the same skins. All being ready, they file into the ground, form column by company, and if the men are not all in moccasins, a skirmish line company is sent out to clear the ground of an imaginary enemy. In doing this, it deploys in two ranks at intervals of six to ten paces. The enemy is driven in, and the men are now close to their file leaders as they would on foot, the snow-shoe being as long as the man. In this order the company moves on, and in time opens fire. A second company follows the first at about two hundred yards, as a "support." The first company, after firing by a couple of rounds, the files not being close, and the rear rank men at "open order." If there are other companies they stand to support, until the first company has fired its ammunition, when they move on. After the first company has been out a little time, it is relieved. The second company deploys, and forms another line of skirmishers opens fire, and moves on. In this way the little body advances, passing over the deep snow and snakes fences. Again, the two companies out may be called in, and two others be sent out from the main body. It is done in this way—One company is sent to relieve the support, which then retires, and another is moved to support the first. The latter two deploy, runs up to the line of skirmishers, and passes through in the same manner. In this mode the two old companies fall to the rear and take their place in column. The drill being over, the body marches to the road, the men sling their snow-shoes, and after a

chort rest, they march in. Such is a brief description of a drill on snow-shoes.

Would it not be well for our militia corps in Maine and Vermont to go out on snow-shoes now and then, in order to drill, for the spirit of the thing, if for no other reason, though it is easy to understand how useful proficiency in the drill may be in time of war?

THE DEATH OF THACKERAY.

To the Editor of the Army and Navy Journal:

SIR:—The news comes to us by the cable that "THACKERAY, "the author, is dead." That is the whole of the brief announcement; but it is enough to bring sadness to many of us to whom death is a not unwelcome relief, and to all his friends and companions a constant and almost daily incident of our lives. THACKERAY can but be dear to all who reverence generosity, independence, gentle and genial humor; and as a master of a pure and graceful style, our English letters lose in him one of their most ornamental ornaments. To the soldier, who loves his profession, and would seek to dignify it by all manly virtues and graceful chivalries, this man, whose death saddened last night the London evening tide in thousands of English homes, seemed especially near and sympathetic. Where in all literature do we find such faithful portraitures of the old army as in THACKERAY'S writings? Of what we had more Colonel NEWCOMES, and more of those soldiers whom the great satirist delighted to hold up in contrast to the shams and snobs of civil life!

There has been much said about the treatment THACKERAY gave WASHINGTON, in the "Virginians." I never could share the feeling of dissatisfaction and regret. It has always seemed to me that the author sought to do him honor after a manner peculiarly his own; I knew well that to man in history was an object of greater admiration to THACKERAY than to his *Peter Parley*.

It is not for me to discuss his works; I would merely offer a soldier's tribute to his memory, and express a soldier's sympathy with those who know him and mourn his loss. STAFF.

A MONUMENT FOR THE REGULAR OFFICERS AND SOLDIERS.

To the Editor of the Army and Navy Journal:

SIR:—An article in your paper relative to the Regulars killed at Chickamauga, and their friends, has led me to a suggestion. It is to raise a fund by subscription among the officers of the Regular Army to erect a monument in the National cemetery to the memory of the "Regular officers and "men of the Regular Army" killed during the war. From Sumter to Chickamauga, and from Bull Run to Gettysburgh, they have been giving their best efforts for their country's cause, and now but a handful remains.

Their services have been rendered in every way that the public necessities demanded, and I think I may safely assert that they have never failed in any capacity. In the field, in the bureau, in the council, in the halls of legislation, in line and staff have been performed zealously, creditably, and from a motive of devotion to "our whole country."

The thinned ranks bear, in their silent testimony to the exertions of the rank and file, and every officer can bear witness to the bravery and discipline of the officers and men of the Regular Army. It may be that the living remnant will need a memorial stone as well as the dead. I hope not; but let us not trust to something that has fallen comparatively rescue their names from oblivion. If any officers feel disposed to cooperate with me I will be happy to hear from them. HENRY E. ALVORD,

Captain 10th U. S. Infantry.

No. 388 19TH STREET, WASHINGTON, D. C.

SOLDIERS' HOME AT CHICAGO.

To the Editor of the Army and Navy Journal:

SIR:—The ladies of this city, with that practical energy which has ever been the characteristic of the Great West, are perfecting their arrangements for the establishment of a SOLDIERS' HOME, where sick and wounded soldiers, from every quarter of the Union, may find a temporary or permanent place of refuge. The success of the first effort undertaken must be apparent to every one. The casualties of war have thrown upon the community a class of helpless sufferers, comparatively few in number, but until recently almost unknown to the present generation of Americans, whose claims upon the humane or the purse cannot be too strongly stated. Our border conflicts with the Indian tribes, and even our war in Mexico, sent back to us but few witnesses to the horrors of war. The sick and wounded left on the wounded were speedily lost sight of, and made no permanent impression on the popular mind. But the present war has produced on a different aspect of affairs. We have all heer of the horrors of the battle field and the sufferings of the hospital, but we so them. We have come to meet with the scarred and maimed children of the Union, returning to honor from the well-fought field of battle.

While public duty and the call have been stricken down with sickness or disabled by wounds while in the service of their country, will recover and return to the active duties of life, therefore will be thrown upon the charity of some community for support. This imposes a new duty upon the people. These noble men must not be left to the precarious support of private charity. Their wants must be provided for by the country. Homes must be established for them, on the plan of the great military asylum at Chelsea, Europe, where they can pass the remainder of their days in that repose so easy to which their patriotic sacrifices have entitled them.

Such is the noble ladies of Chicago have undertaken to establish for them here. It is intended to be a thankoffering of the Great West to the soldiers. A society has been organized to canvass the entire West for subscriptions, and the ladies, refusing to expand any of the funds thus obtained upon agents, those cormorants of public charities,—have taken upon themselves the labor of collecting the necessary amount. Although the enterprise has just been started, a large sum has already been obtained, and contributions for this truly national work are flowing in from every Western State. The plan has been adopted of sending a circular to every minister throughout the West, requesting his influence with his people in favor of this enterprise. Thousands will be enlisted in this way who could have been reached in no other manner.

The plan of the establishment has not, I believe, been fully determined upon. It is the intention to secure a spacious plot of ground in the immediate vicinity of the city, for the erection of a massive and commodious building, of solid but simple architectural proportions, in which there will be accommodations for several hundred invalid and disabled soldiers. The surrounding grounds will be transformed into a handsome park and garden, to be placed under the care of the inmates, who will find both pleasure and healthful occupation in the work.

It is proposed that the Home shall be adjuncts to the formation of a National museum, in which shall be deposited trophies of the battle field, the camp, and transports service of every kind relating to the war. In their appropriate departments will be placed models of all our vessels of war, of various forms and rigging, models of forts, and models of the niche of honor is to be prepared for the reception of the original manuscript of the President's Proclamation of Emancipation, with the signatures. To this purpose a patriotic Virginian now residing in the city.

This Home will be national. It will be open to soldiers from every part of the Union. Hundreds of invalid Union soldiers, belonging to the East, are now in this city, who are unable, from want of means, to return to their homes. Many, indeed, are homeless, and were they not provided for here, they would be thrown upon public charity. Here they will find a home, temporary if they recovery, permanent if they do not.

The certainty that sick or disabled men will be provided with a comfortable home in the West will lighten the hearts of many of our brave soldiers in the distant South. It will assure them that those for whom they are fighting have not forgotten them, and do not undervalue their gallant services.

CHICAGO, JANUARY 6th, 1864.

THE MONITORS.

To the Editor of the Army and Navy Journal:

SIR:—The national interest attaching to the above class of vessels, induces me to forward to the JOURNAL some facts with reference to their history and achievements.

The Secretary of the Navy invited the world's attention October 30th to an extra session in 1861 to the subject of armored vessels, and under the authority then granted public competition was invited. The board of naval experts to whom all all proposals were submitted, selected for their recommendation the *New Ironsides*, the *Galena* and the *Monitor*. The two first were built on well-established principles persevered in abroad, is a success, with the exception of her speed. The *Galena*, with no new principle involved, and built of iron, has proved one of the most unsuitably supported, failed in keeping out ordinary calibres at one thousand yards. Her iron has been stripped off, and she is now ready for sea as a wooden corvette.

The *Monitor*, invented by Captain JOHN ERICSSON, is a raft with a revolving fort on it, and was accepted as a venture by all amongst rapids will comprehend the principle. A raft in a sea-way is steady, because the waves go over it. Dispensing with the lower portion of the hull, and its enormous weight of iron, he obtained cheapness of construction and an insignificant target opposed to the enemy, with power to steer anywhere, and to bring the fort's guns to bear to any desired thickness. It will be recollected that an enormous raft of timber was towed in safety from Canada to England, travelling like a Monitor, mostly under water, instead of nearly one-half above, where all the violence of the waves exist.

The application of this principle is due entirely to Captain ERICSSON, and is totally at variance with Captain COWPER COLE'S system, the Navy Department, and Navy Yards, in places his turret upon an ordinary armored vessel high out of water, and thus invites the difficulties which are met in all vessels constructed on this principle. It is simply the ordinary form with armor applied to its sides. The result of the unsuccessful attack upon Fort Sumter, Charleston, in 1863, decided the Secretary of the Navy to adopt the Monitor class for harbor and coast defence, with the fifteen-inch gun as an armament. The Secretary was then driven to any first-class frigates and one ram were defeated by the *Merrimac*, and only saved from utter annihilation by the arrival of the *Monitor*, which engaged and drove her formidable antagonist crippled from the field of battle. The fifteen-inch gun of ROMILLY'S invention was adopted because it would strike a blow of 450 tons of iron-and, which was the heaviest calibre then in use in the naval service. The next achievement of the Monitors was the fight under Commodore JOHN ROGERS' firth and courage. This officer put to sea in the *Weehawken* with the usual towing steamer in company, and encountered the rebel iron-clad *Atlanta* in calm coming on, he sent his consort into the Brealwater for safety, and stood boldly off shore in the *Weehawken* to test her in a vessel's power. The *Atlanta* was in readiness to put to the vessel's behavior in this hurricane. Subsequent passages of other Monitors down the coast in winter weather confirmed Commodore ROGERS' favorable opinions of them.

The next trial was at the Ogeechee sand batteries, a distance of eight miles, and within hundred yards. Commodore presenting a nearer approach. Several gunboats and mortar boats assisted, and though the fort was literally torn to pieces in the shortest time, it was only repaired at night and force not having been sent with the naval force to threaten the rear of the fort, it was not to be expected that the enemy could be driven from the distance of eight hundred yards. The privateer *Nashville* attempted to pass the Monitors in this river, and was destroyed by a fifteen-inch shell. The next attack was upon Fort Sumter, and for the first time seven Monitors were brought under a concentrated fire of two hundred and fifty guns. The result was the death of one man and the temporary disabling of five Monitors. A careful examination showed that the injuries were not fatal or even injurious to the principle involved in the construction of these vessels. Weaknesses were discovered to be remedied in the vessels afloat, and guarded against in those under construction. The Monitor was a legitimate success for the Navy. It was iron-clad against iron-clad—the Republic against the Republic—both the Federals and the Rebels had produced their champion vessel and champion gun, and the *Merrimac* of Savannah came out to witness the fight. The first fifteen-inch shot decided the battle against the *Atlanta*, and in favor of the little *Monitor*. Amalus.

In the brilliant operations of General GILLMORE, there vessels have played a subordinate but important part. Their flank operations along MORRIS Island enabled that General to run his sap past Wagner without a single serious loss of garrison—neither could the enemy increase his works or make additions to his armament. Evacuation followed, and the possession of Morris Island by the army enabled the Monitors to go inside the bar, and to bring the guns to bear upon the city of Charleston. The daily endurance of these vessels there was remarkable, not one of which has been disabled, and the position they hold on our coast service is the best measure of the year; the powerful blow given by the fifteen-inch gun, and the confidence and courage of the brave men to be found of them—has been a theme of universal admiration across the water. The EMPEROR OF Russia has built a fleet of Monitors, and the English have thrown away their famous 68-pounder for the fifteen-inch gun. For the future, turn of our foreign relations, we are more indebted to the Monitors than to anything else, for the fact that we are ready, no maritime Power, not even proud England, could approach our shores. As Commodore JOHN ROGERS says, "I would ask no better vessel than the *Canonicus* to go out "and meet the *Warrior*."

CONGRESS.

SENATE.

JOINT resolutions were offered on Thursday, the 7th, by Mr. HOWE, authorizing the President to call out one-fifth of volunteers, to serve for ninety days, to be employed in carrying public mails, to escort the trains of the army, and that the forces so raised to be placed under the command of Gen. GRANT. Referred to the Military Committee. On Friday, 8th, a resolution was introduced declaring the officers of the army, and referred to the same committee. On Tuesday, the 12th, the House bill continuing bounties to volunteers to March 1st, 1864, was passed.

On Thursday, the 14th, the original amendment of the Military Committee to the Enrollment bill, striking out the \$300 clause, was offered by Mr. SUMNER'S amendment providing that persons furnishing substitutes or money shall be liable to draft in their respective districts. Commutation fee to \$500, was rejected, and Mr. HOWARD'S motion, retaining the \$300 clause of the old bill, was adopted by a vote of 23 to 14.

HOUSE.

On Thursday, the 7th, the Committee on Naval Affairs was instructed to inquire into the expediency of establishing a navy-yard and depot on the Pacific coast, and the legislative to the alteration in the plans of Marine engines. On Monday, the 11th, Mr. FERNANDO WOOD moved the appointment of a committee to investigate certain alleged fraudulent practices against Gen. BUTLER. Laid on the table Mr. BINGHAM offered a resolution to further the enlistment of colored soldiers, by offering full pay and bounties to slaves yet under Rebel control. On Wednesday, the 13th, the Committee on Commerce was instructed to inquire into the expediency of amending the enrollment act so as to make the term of service one year, leaving the commutation at \$300 as it now is. The bill providing for the return back from the Committee on Naval Affairs a resolution, which was passed, calling on the Secretary of the Navy to obtain proposals for the purchase and delivery of iron-clads, as exhibited in former engagements, with a view to intelligent legislation on the subject.

DEATH OF REAR-ADMIRAL STORER.

REAR-ADMIRAL GEORGE W. STORER, died at Portsmouth, N. H., on the 8th inst., in the 75th year of his age. He was a native of Boston, and was retired from the Naval Retiring Board, in session at the Brooklyn Marine Barracks, in 1855, preventing him from continuing his duties, at a ripe old age. He died at his residence in Portsmouth, and had been ailing for some time. Admiral STORER was born near the town of Portsmouth, N. H., in 1789, and entered the service as midshipman in 1808. His commanders were SKINNER, NEWTON, SMITH and ROSEAU. Rear-Admiral GREGORY, at present Superintendent of Iron-clad Steamers, was a schoolfellow of his. He served seven 21 years and nine months, and was on shore service nine years. He was promoted to a Captaincy in 1855, and since that time has not performed any active duty afloat. Although he had been sitting on courts-martial and similar boards during the present war, it is said that Admiral STORER'S health was anything but good. He was always beloved by his officers and crew, and has left an honored name of high moral acts.

A friend writes of him:

"He was a native of Portsmouth—a gentleman in the highest sense of the word, and was known to Portsmouth where the light of his countenance shone. He was a nephew of Colonel JOSIAH LEAR, the private Secretary of WASHINGTON, and in 1789, when WASHINGTON came to Portsmouth, he visited the house of COLONEL LEAR, on Hucking street. The whole family were present in the room of reception among them was a babe presented who had been christened GEORGE WASHINGTON. The President placed his hand upon the infant's head, and remarked that he might be a better man than the one whose name he bears." In early life Admiral STORER was a favorite of the PRESIDENT, and attained official in the various grades through which he has passed to the highest rank—enjoying the confidence of the Department, and has at all times scrupulously maintained it. He has honored the name he received, and that early paternal blessing of WASHINGTON has seemed to have had an influence on his whole life."

GENERAL Order No. 6 of the War Department, January 4th, 1864, cancels G. General Order No. 337 of 1863, dismissed Col. James A. Tait, 1st Dist. Columbia Vols., from the 21st day of September, 1863, by having been transferred out of service May 31st, 1863.

A SOUTHERN VIEW OF THE WAR.*

THE editor of the Richmond *Examiner*, Mr. EDWARD A. POLLARD, in spite of his persistent prophecies of the perpetuity of the "Confederacy," has evident premonitions that its history is to be a brief one, to judge from the industry with which he is taking advantage of it while it continues. Not content with the daily record of events with which he entertains the readers of the *Examiner*, he is occupying his intervals of leisure with a "History of the United Southern War for Independence,"—a history following so hard upon the events described that we already have from a Northern publisher a reprint of the Richmond edition of the second volume,—bringing the record down to the battle of Gettysburgh and the fall of Vicksburgh. Though not sufficiently artful in its statements to be valuable in a military point of view, it furnishes us with some facts which are of service in forming a more complete idea of the operations of the year than we could do from the reports of our generals alone. Even though the Richmond editor has not the key of any premeditated value, it is always interesting to pass from facts and conjecture in regard to your enemy's movements, and to view them with an eye-witness. It is interesting too, to know what your enemies have to say of you, even thought, as in this case, their opinions are by no means complimentary.

In his opening chapters, Mr. POLLARD adds his testimony to the evidence we already have of the essential weakness of the South at a time when we were extending to them all the consideration and delay which a most liberal spirit could prevail on us to use. Our forces in Virginia, he tells his readers, had reached the highest state of efficiency, in the spring of 1862, the rebel army was passing through "successive stages of disorder to dissolution." Its organization was defective, its discipline retarded by the loss, the spirit of volunteering was so dead that there was no prospect of supplying the places of the troops whose terms of enlistment were rapidly expiring,—one hundred and forty-eight regiments going out of the service within a period of thirty days. Then were dark days in the "Rebel Confederacy." The capture of New Orleans following in the train of disasters, found them "with scarcely more than three entire States—Texas, Alabama, and Georgia"—and the destruction of the *Merrimac* or *Virginia* had put an end to their hopes of meeting us on the water, and opened the way for the passage of our gunboats up the James river to the rear of GEN. MCCLELLAN'S advance on the rebel capital. It was a time of excitement and alarm in Richmond; and "the visible tremor of the Confederate authorities in that city, we are told, was one spectacle calculated either to nerve the army, or assure the enemy." "Many of the officials were already in favor of their capital, and were making preparations to leave it; and the members of the Congress, without waiting for ceremony, sojourned in haste, and left the city." "The air was filled with those rumors of treason and disloyalty which grow out of a sense of danger, and which are the first to betray their professions of resistance and self-devotion when the Yankees were at a distance, were now engaged in secreting their property. * * * The railroad trains were crowded with refugees. At the railroad depôts were to be seen piles of baggage, and trunks containing the valuables of the most fast and humiliating signs of the panic were to be seen in the number of pine boxes about the departments, ticketed 'Columbia, South Carolina,' and which contained the most valuable of the public archives."

But with the first day in advance of our army, the sunken spirits of the rebels revived; public confidence was restored, and vigorous preparations were made to complete the work of defence, too long neglected. "The James was rapidly filled up, the works at Drewry's Bluff were strengthened, and a chain was stretched across the river to obstruct which had appeared within a few miles of the city, at a moment when the last gap in the river obstructions was filled up by a scuttled schooner." Our opportunity for striking a decisive blow had passed unimproved, and the fortunes of the Confederacy were once more ascending. The action at Drewry's Bluff assured the safety of Richmond from an assault by water, and the successful diversion effected by JACKSON in the valley of Virginia had thrown the plans of the authorities at Washington into confusion, and destroyed MCCLELLAN'S hope of cooperation from the North.

The position of the two armies in front of Richmond at this time is described as entirely to the advantage of the rebels. MCCLELLAN, having divided his army on the two sides of the Chickahominy, and operating apparently with the design of half circumventing Richmond, had spread out his forces to an extent that impaired the facility of concentration, and had made a weak and dangerous extension of his lines. It was to take advantage of this fault that General LEE, on the return of JACKSON from his campaign up the valley, assumed the offensive, and brought on the engagements of Mechanicsville and Gaines' Mill. The situation of the rebel forces on the Richmond side of the Chickahominy—where, after these battles, General MCCLELLAN had succeeded in massing his forces for the withdrawal to the James—is described by General MAGRUDER, in an official report, as one of the gravest peril. "He states that "a large portion of the enemy was on that side of the Chickahominy; that the bridges had all been destroyed, and but one rebuilt—the New Bridge—which was commanded fully by the enemy's guns; and that there were "but twenty-five thousand men between MCCLELLAN'S army "of one hundred thousand and Richmond. Had MCCLELLAN," he says, "massed his whole force in columns and "advanced it against any point of our line of battle, as was "done at Austerlitz, or under similar circumstances, by the "greatest captain of any age, the centre of his column "would have suffered greatly, its momentum would have "insured him success."

The facts, however, are contrary, Mr. POLLARD asserts, to the theory of GENERAL MAGRUDER; as communication between the two wings of the rebel army was never reëstablished before the battle of Gaines' Mills, by the occupation of the position near New Bridge. In the account, which follows, of the battles of the seven days, he says:—

"The battle of Cœnesig, known as that of MALVERN HILL was perhaps the most exasperating of the series of bloody conflicts which had taken place, and was followed by one of the greatest of a defeat, it broke the chain of our victories. It was made memorable by its untouchably successful repulse of the enemy. Notwithstanding GENERAL MAGRUDER'S estimate, which states that our loss fell short of thirty thousand, that of the enemy was no advantage, except in the unrivalled sacrifice of the lives of our troops; and the loss of his artillery was at least double that of the Confederates. The river through mud, swamp, and forest.

"The skill and spirit with which MCCLELLAN had managed to retreat was, indeed, remarkable, and afforded no mean proofs of his generalship. At every point of the line of march he opposed our forces with a strong rear-guard, and had encountered us with well-chosen lines of battle, and with the greatest display of industry, cowardice, and artillery.

Turning from his description of the Peninsula campaign, MR. POLLARD grows eloquent and enthusiastic over the series of engagements with the army under General POPE, which, we are told, "at last confronted it with an army of "avengers on the historic plains of Manassas; and culminated "in the most victory that liberated Virginia from the "invaders, broke the 'line of the Potomac,' from Leesburg "to Harper's Ferry, and opened an avenue for the first "time into the territory of the North." No new facts of interest are furnished in the account of these engagements, of which one mainly occupied with dramatic descriptions of the invincible prowess of the rebels, sweeping away "the "choicest veterans of the Federal army," and marching resistlessly on to the final victory at Manassas, where the appearance of the field of battle after the engagement attended in the most terrible and hideous manner the carnage they had made in the ranks of their enemy.

Over the gullies, ravines, and valleys, which divided the opposite hills, the dead were scattered in indiscriminate heaps as they could reach. The woods were full of them. In front of the China House, which had been converted into a hospital, there was one terrible. The ground was strewn, not only with men, but arms, ammunition, provisions, blankets, knapsacks, &c., which the rebels in their flight Federals could throw away to facilitate their flight. In front of the ground quite full of dead men. Here, in a space of about twenty-five yards was found lying at full length upon the grave of the aged Mrs. Carter, who had died by the hand of disease. But a dead Federal soldier had raged upon this spot. There others were upon the very spot where Lieutenant Pelham had fallen. The brigade of General Early was still another group. A little further on a wounded Federal lay in the agonies of death, with his head resting upon the body of a dead rebel on either side, he could touch the dead bodies of his enemies. Such was the scene that followed on one of these Confederate soldiers were also to be found in the midst of these putrefying masses of death; but the most conspicuous object in the centre of the field of the dead were rendered ghastly by an extraordinary circumstance. There was not a dead Yankee in sight, from whom the foe had not been stripped of his shoes or stockings, and in numerous cases boot and all, as much as their feet were in them. But not a dead rebel in the same condition. Their necessities were even from the garments of their enemies.

The purpose of General LEE in crossing the Potomac, after the defeat of POPE, is distinctly declared to have been "to hold and occupy Maryland," and the subsequent return to Virginia is ascribed, not to the stress of any single battle, but "to the force of many circumstances, some of which his "story should blush to record." In this respect MR. POLLARD gracefully acknowledges the Maryland campaign to have been a failure; but consoles himself with the reflection that it was "a failure relieved by brilliant episodes, mixed with "at least one extraordinary triumph of our arms (in the "surrender of Harper's Ferry), and to a great extent compensated by many solid results." The battle of Antietam is asserted to have been a hard and drawn a battle as his "story exhibits,"—fought "for half the day with 45,000 "men on the Confederate side, and for the remaining half "with no more than an aggregate of 70,000 men, against a "host which is admitted to have consisted of 130,000, and "which was in reserve." In General MCCLELLAN'S failure to advance after the battle, evidence is found that the claim of victory was a mere pretence.

Leaving the field of operations in Virginia, with the rebel army again on the backward tramp toward Richmond, attention is next called to the movements which were meanwhile transpiring in the West; where the brief retirement of General BRAXTON BRAGG from active command, on account of ill health, had left the way open to the promotion of General BRAGG,—"a favorite of the army, who had no "certain military reputation, but, as an active commander "in the field, had the confidence neither of the army, nor "of the public." The first steps of the campaign were easily decided by this commander;—it was to use the forces of General KIRBY SMITH, to threaten Cincinnati, and thus distract the attention and divide the forces of the enemy; while General BRAGG himself, cooperating with SMITH, was to fulfill the great purpose of the campaign, which was the expulsion of the enemy from Kentucky, and the capture of Louisville.

The successful advance of General BRAGG, almost within sight of Cincinnati, excited cheerful dreams at the South "of the speedy capture of this great city of the West, with "its valuable stores and yards for building gunboats"—dreams, which, like the high hopes awakened in Virginia, were but the prelude to bitter disappointment, and culminating on the causes of the failure of this campaign, from which so much was expected, MR. POLLARD says:—

For the failure of General BRAGG'S campaign in Kentucky, the excuses was also given, and the public was told that they had been beaten, that they had not joined its standard in considerable numbers, and that they had disappointed the hopes of the most sanguine friends of the Southern people with respect to their public sentiments. It is scarcely necessary to say that these are little applicable such an account is to positive blunders in the conduct of an army, and to those imperfections of the military art which are chargeable to a commander in their remote connection, as the immediate occasions and responsible causes of disaster.

But it is to be admitted that the South was bitterly disappointed in the expression of public sentiment in Kentucky; and that the enthusiasm of sympathy in this State were meagre and contemptible, and amounted to little more than a few hundred recruits. The subject was one of the most perplexing and mysterious in the war. When the cautious and unsanguine reception given to our armies, both in Kentucky and Maryland, is compared with the hearty welcome and resistment of each of these States, leaves but little room to doubt the present prosperity of the Union cause, and that the sentiment of all the property were too powerful to make them take risks against these the lives of a single people and a single man, and a single generation without any attachment to it higher than those of selfish calculation.

To the Southwest the view was still more discouraging to Confederate hopes. The campaign in that quarter was a complete disaster,—"owing less, perhaps, to inadequate numbers than "to the blind and romantic generalship, which carried them "into the jaws of destruction." The fall of New Orleans, the failure in the attack made by General BUCKNERRIDGE on Baton Rouge, and the retreat of General BRAGG from Tupelo at Corinth, were sad blows to hopes, for a time revived by the events in Virginia. Again the sky was overcast.

The defeat of CORINTH was followed by swift news of disaster and discouragement. "The Confederacy began to see that it had lost much of the brightness it had only a few weeks before. Kentucky was lost, and Tennessee was lost. In Mississippi there was no hope of a peace on the Potomac had for the time been given up; the RANSOM and MARSHALL forces, back against the Rappahannock, and the JACKSON forces, back against the Shenandoah Valley." Charleston was left alone with the other ports of the Confederacy, the prospect was not much relieved.

"At the thrilling tidings of Fredericksburgh" the hopes of the South again rose high, and it was felt by all that they were at last to realize some important and practical consequence from "the prowess" of their arms. But again did disappointment succeed to promise; and the army of BURNSIDE, supposed to be at the mercy of their invincible hosts, after the most terrible slaughter, was left to retire, one day in Fredericksburgh, on the next crossed the Rappahannock without accident or interruption, and quietly reorganized in perfect security on the north side of the river. "It was the old lesson to the South, of a barren victory."

From Murfreesboro' came the news of a similar victory, with the message from General BRAGG that "God has "granted us a happy new year,"—a report which was followed fast by the news of the disaster of the 2d of January, "the ill-omened Friday," which compelled the rebels to retreat from the battle-ground which they had held for several days. MR. POLLARD states, at the close of the first day fell despondent; some favored retreat; but the constancy of ROSECRANS remained untouched. One of his staff officers remarked, "Your tenacity of purpose, General, is a theme of "universal admiration." "Yes," he replied, "that the troops have discovered that BRAGG is a good dog, but "hold-fast is better"—a truth which the rebels, as MR. POLLARD confesses, soon learned, to their bitter sorrow; and "the vivid recollection of the 'bloody crossing of Stone's "River,' in which in less than one hour two thousand of "our men were killed and wounded, long survived," he tells us in their army. The joy awakened by the news of MAGRUDER'S recapture of Galveston was equally shortlived; the surrender of Arkansas Post, with its garrison following hard upon it, and overshadowed their prospect in the region beyond the Mississippi.

And thus the second year of the war closed as it had opened, with gloom and disappointment shrouding the "Confederate cause." Though it gave them victories, "fire over the Southern heart," it brought them no substantial conquests, and left them with no better proof of the prowess with which they make their boast than boundaries still further circumscribed. But, on the whole, their prospects were better than at the opening of the year, when the year of all disasters—the disbandment of their army—was impending over them. The conscription act had established a military system for the South, and given that solidity and efficacy to their armies to which they owed such successes as they had, and which have been their only salvation from utter ruin.

THE amount of prize money distributed last month was over $200,000 among 1100 persons, averaging to each man $300.

---

* THE SECOND YEAR OF THE WAR. By EDWARD A. POLLARD, Editor of the Richmond *Examiner*, author of the "FIRST YEAR OF THE WAR." NEW YORK: CHARLES B. RICHARDSON, 598 BROADWAY.

IMPORTANT PRIZE DECISION.

The case of the prize steamer *Cherokee*, recently decided in the United States District Court, by Judge SPRAGUE, presents several points of interest to naval men. The facts of the capture were as follows:—On the morning of the 5th of May last, the *Cherokee* ran out of the port of Charleston. She was first discovered by the steamer *Flag*, which had one or more guns at her, as she was passing by, and also threw up a rocket. She was then discovered by the *Commodore*, a steamer lying outside of the *Flag*, which immediately got under way in pursuit. This was about eleven o'clock at night. The pursuit was continued about two and a half hours, when the *Commodore*, having come within cannon range, fired a gun, and the *Cherokee* hove-to and surrendered. The commencement of the chase was seen by several of the blockading vessels, but no one of them started in pursuit. All remained at their stations. The purser and pursued were entirely lost sight of about one hour after the chase began; and the place where the capture was actually made was thirty-five miles from the blockading squadron. No vessel of the squadron was within signal distance of either the *Commodore* or *Cherokee* at the time of the capture. But the *Flag* and nine other of the blockading vessels, the *New Ironsides*, *Stettin*, *Wamsutta*, *Paul Jones*, *Ladona*, *Markhead*, *Huron*, *Powhatan*, and *Housatonic*, made application to share in this prize.

All prize-suits for any shipped or other property actually in the United States, and any person who claims to participate therein must show a grant from the Government. There have been three Acts of Congress making such grants, that of 1779, that of 1800, and that of 1862. The fifth section of the Act of 1800 says that "the vessels and cargoes of enemy vessels, and the goods taken on board of them, which shall be adjudged good prizes, shall * * * * * when of inferior force be divided equally between the United States "and the officers and men making the capture." The 6th section provides that "whenever one or more ships of war or vessels are in sight at the time any one or more ships "are taking a prize or prizes, they shall all share equally in "the prize or prizes." The Act of 1862, section 24, preserves the first of the foregoing provisions verbatim, but it deviates from the phraseology of the second. It says: 3d it says: "When one or more vessels of the Navy shall "be within signal distance of another making a prize, all "shall share in the prize."

Judge SPRAGUE then says:

This appears to be a substitute for the corresponding provision in the Act of 1800. But it is unnecessary to consider whether it be so or not, it being immaterial in the present case whether the former is repealed expressly or by the latter, or whether both may stand and be enforced together.

These petitioning vessels do not come within either clause. No one of them was within either the actual or signal distance of the *Commodore* when she was taking or making this prize. This is not contested for. They rest their claim wholly upon the fact that they were within

ARMY AND NAVY PERSONAL.

MAJOR-General Meade has been to Philadelphia to visit his family.

MAJOR-General Grant and staff arrived at Louisville on the 11th from Knoxville.

MAJOR-General Frank Blair has taken his seat in the House of Representatives.

HIS Excellency Governor Curtin has appointed Colonel of the 24 Regiment of volunteers in New Mexico.

GENERAL Boyle, of the 20th Kentucky, has succeeded General Rosecrans, of the command of the post of Louisville.

BRIGADIER-General Brown, in command at Norfolk, will be transferred to a command in the Army of the Potomac.

THE following nominations of Navy officers have been made by the President:—Captain Rodgers to be Commodore; Captain Gillis to be Commodore.

THE captain of the 169th New York, Rev. Mr. Taylor, has had constructed on Folly Island, under his own eye, a unique and beautiful chapel.

LIEUT.-Col. Greene has been promoted to the colonelcy of the Eighth Regulars, and is, it is said, to be provost marshal of Wisconsin.

MAJOR-General Dix has returned to New York from Washington, having completed some important business with the President and War Department.

THE recent entire cessation of active operations enables many of our commanding officers to obtain short leaves from the field.

MAJOR-General Blunt, of Kansas, has obtained leave to visit Washington to consult with the Indian Bureau on the subject of Indian affairs in the South west.

GEN. George Cadwalader, late Assistant A. D. C., to Major-General Lew Wallace, has been reinstated, and ordered to report to Major-General Butler.

COL. L. C. Turner, late Assistant Military Disbursing Officer, has succeeded Brig.-Gen. Quinby to the command of the Illinois Military Depot. From two to three thousand recruits are now there in camp.

MAJOR-General Hancock has come North with a view, it is said, to arrange in the several States wherein his corps was recruited, a system of furloughs whereby each may obtain leave to visit his home, the whole destined for special service.

MAJOR-General Burnside has taken rooms at the Fifth Avenue Hotel, New York, where he will await orders from Washington. The report that he is about to resign are untrue. The general is in good health and spirits, and anxious for service.

GENERAL Meigs has returned to Washington and resumed charge of the Bureau of Quartermaster-General, during the absence under orders of the Secretary of War, the suspension of active operations in the West rendering the General's services unnecessary in the field.

SURGEON-General Hammond has been presented by the Directors of the Union League of Philadelphia with an elegant silver salver, in token of the high appreciation brought by the commission that not long since examined into the affairs at his office.

CAPTAIN A. H. Plummer, 10th U. S. Infantry, being unable to perform active mounted service, on account of ill-health, is relieved by Captain G. M. L. Johnson, 24 Indiana Cavalry, acting Assistant-Adjutant-General, and announced as Ordnance Officer for the District of Nashville.

COLONEL Adam B. Underwood, 23d Massachusetts Regiment, has been appointed a brigadier-general by President Lincoln for his bravery at the assault upon Lookout Mountain under General Hooker. Colonel Underwood was grievously wounded at that fight, and still continues in ill health.

MAJOR-General Rousseau commanding, announces the following additional staff officers:—Major T. O. Bigney, 9th Wisconsin Volunteers, Provost Marshal; Captain E. D. Baker, U. S. A., Chief of Artillery; Captain Hosmer, 9th Kansas Volunteers, Judge Advocate; Lieutenant W. H. Barr, 3d Tennessee Cavalry, Assistant Provost Marshal.

COLONEL H. A. Barnum, 149th New York Volunteers, 12th Corps, and Sergeant-Major M. B. Birdseye of the same regiment, selected for the Medal of Honor by General Thomas, have presented to the War Department ten stands of colors, captured in the assault upon Lookout Mountain, Missionary Ridge, and Ringgold during the recent fight of the Army of the Cumberland.

MAJOR-General Peck publishes a brilliant affair, under Captain Blakely of the Second Michigan Cavalry, against 300 with one hundred infantry, marched forty miles in twenty hours, and captured the captain, one lieutenant, and thirty-three men, thirty horses and saddles, four mules, and much valuable property, without the loss of a man. These officers and the gentle will be presented for promotion, as well as such others as shall do likewise.

GENERAL McClernev, commanding Pamplico Sub-District, of the District of North Carolina, has issued an order assigning on the night of the 30th ultimo, within six miles of Greenville, with about 140 men of the 12th New York Cavalry, 1st North Carolina Volunteers, and 23d New York Artillery, was attacked by a superior force under Major Moore, who attempted to cut off his return to Washington. After a hard fight the command, the enemy retired, leaving one lieutenant and five men dead, with one piece of Starr's fine battery, caisson, and horses. Darkness prevented further knowledge of the injury sustained by the rebels. Our loss was one killed, six slightly wounded, one missing, and three horses disabled. Lieutenant Wm. S. Adams, of Co. I, 1st North Carolina Volunteers, a gallant and dashing officer, fell while making a charge at the head of his command. He was accompanied by Acting Aides Lieut McChesney, the officers, men and guides, for this bold and successful affair.

MAJOR-General Peck, commanding Army and District of North Carolina, announces in General Orders a successful expedition to New Berne under the direction of Colonel Jourdan, commanding Sub-District of Beaufort, by which several very extensive salt manufacturing establishments were effectually destroyed, and 1,500 bushels of coarse salt and some prisoners taken. Colonel Jourdan fully realized his expectations in this affair. His thanks are due to Colonel Ripley, Deputy Quartermaster, Lieutenant-Colonel McNary, 158th New York Volunteers, and their gallant commands, including the companies of the 2d Massachusetts Artillery, Captain Bigelow, who were cold in consequence of having been obliged to wade a long distance from the boats to the shore. Special attention to said his acknowledgments to Colonel Jourdan's for the earnest and efficient naval cooperation of Commander Dove, and especially to Lieutenant-Commanding Lamson, and the officers and crews of the gunboats *Hunnicutt* and *Daylight*.

AT a late meeting of the Chamber of Commerce, a letter from Rear-Admiral Farragut was read, acknowledging the receipt of complimentary resolutions passed by that body. The Admiral expressed his thanks "for this and other distinguished marks of their high appreciation of the services I have rendered our common country, and particularly its commerce, both internal and external, by what they are pleased to consider the successful accomplishment of my time, the capture of New Orleans.' That we did our duty, to the best of our ability, I believe; that a kind Providence smiled upon our efforts, and crowned our attempts, believe which I fear the stoutest of our hearts would have quailed, I am certain, and I trust that the recipient of the honors will ever remember to offer a part of the poor, 'if thou hast strength, it was Heaven that strength bestowed; for know, that small, that great, that weak, that wise, is right, but God to give mercy.' Being on the eve of departing for my station, I fully feel and shall gratefully cherish their kind remembrance of me, and pray that I may be worthy of the rest which I have the honor to command, and that these hopes may be realized, is the prayer of your obedient servant."

ITEMS AND INCIDENTS.

GEN. Van Rensselaer has called a meeting of the Veterans at Albany, N. Y., for the 16th, to petition the Legislature for the final settlement of the Militia claims and certified claims for contingent expenses and clothing advanced by themselves in the war of 1812.

BY General Order No. 15 of the War Department, dated Jan. 2d, 1864, the percentage of men allowed to be absent at one time under the authority given in General Orders, No. 391, of 1863, to grant furloughs to enlisted men in hospitals, is changed from five to twenty per cent.

THE following batteries will constitute the artillery reserve of the 9th army corps:—Battery "A" 1st regiment Pennsylvania volunteers, Captain Rank; battery "G" Junior artillery of Maryland vol., Captain Phelps; battery "B" eagle artillery of Maryland vol., Captain Jos. H. Audoun.

A NUMBER of ladies, possessing large influence in New York society, have formed a "Sanitary Commission and Sanitary Commission," with the following single and definite object in view—To procure the passage by Congress of a law authorizing the formation of a corps of commissioned ambulance and sanitary corps. We hope and believe their human object will be realized.

GEN. C. C. Washburn, of Illinois, has invented a new system of armor-cladding for war vessels. The system consists in overlaying iron armor with wood, the latter yielding to the shot, and thus preventing it that the exterior yielding coating offers a gradual resistance to the blow of the shot, and that the armor itself may be of a thinner and thereby greater area. By personal Orders from the War Department, dated January 8th, 1864, the hospitals and ambulance flags of the army are established as follows:—For general hospitals, yellow lozenge, 8 by 4 feet, on white flag, 24 inches by long, of green bunting, in centre; for post and field hospitals, yellow bunting 6 by 4 feet, with letter H, 24 inches long, of green bunting in centre; for ambulances and guidons to mark the way to field hospitals, yellow bunting 24 by 28 inches, with a border, one inch thick, of green.

THE bill of Senator Sumner, to change the pay of officers when not in the field, though on duty or under orders, gives Brigadier-Generals, $3,200; Colonels, $2,000; Lieut.-Colonels, $1,800; Majors, $1,575; Captains, $1,500; Lieutenants, $1,200. When absent on leave—Brigadier-Generals, $2,500; Colonels, $2,000; Lieut.-Colonels, $1,800; Majors, $1,575; Captains, $1,200; Lieutenants, $960. The pay of Major-Generals has been reduced to $4,000 when on duty, and $3,000 when absent.

MAJ.-Gen. Heintzelman's Court-Martial has now before it, on trial, Hazeli Magruder, a wealthy planter of Prince George's County, Maryland, who is charged with violating the fifty-sixth Article of War, (harboring enemies). This is, strange to say, only the second case of the kind that has come before a court-martial since the commencement of the rebellion. The evidence that far proves conclusively that the prisoner did harbor and entertain rebel officers in the dwelling, and that he himself were with the rebellion. The prosecution is being conducted by Col. Hastings, Judge-Advocate; the defence, by C. M. Zollich, Esq., a lawyer from New-Jersey.

A SUFFICIENT number of men from the Second Battalion companies of the Invalid Corps are being received by transfer from other companies, that the enlistment of men for the *battalion* will be discontinued. Hereafter, only those capable of performing duty in the First Battalion companies will be enlisted in the Corps. Recruiting officers are required to use the utmost diligence in obtaining recruits for the First Battalion of the Corps, but must be careful to select men of good character, who fulfil the required conditions.

COL. James B. Fry, the Provost Marshal General, has issued the following order, under which the 6th is addressed to one of the Assistant Marshals engaged in recruiting volunteers, directing that recruits must be credited to the localities from which they receive local bounties, and that the muster-in-rolls show them enlisted and mustered in as of the said localities. The muster-in-rolls must show the facts of the case, and will be the evidence for awarding credit. Veterans in service re-enlisting, are to be credited to the localities in which they were enlisted and mustered. Rolls show them as belonging; and hence until such veterans have been re-mustered, it cannot be determined to what particular locality they are to be credited.

THE following troops of the 9th army corps will hereafter constitute the 1st separate brigade:—3d regiment Delaware vol. infantry, Colonel Wm. P. Wilson; 4th regiment U. S. H. Maryland vol. infantry, Lieutenant-Colonel Charles Gipin; "Purnell Legion" Maryland vol. infantry, Colonel Samuel A. Graham, and such other troops as may be assigned to duty in that section of country within the Department lying west of the Chesapeake Bay south of, and adjacent to, the line of the Baltimore and Ohio Railroad, except the command of Colonel C. A. White, U. S. A., and the hospital at Annapolis, under Surgeon-in-Charge Edward R. R. Hall, U. S. V., is assigned to the command of the first brigade, with his headquarters at the Relay House, B. & O. R. R.

NEW WORK ON THE CONFEDERATE STATES.

THERE has just appeared in Paris a new work, entitled "Les Etats Confédérés, Visités en 1863." It is in the form of a *mémoire* to NAPOLEON III., and was written by Dr. CHARLES GIRARD, formerly Secretary of the Smithsonian Institute in Washington. The author reached Charleston on the 8th of July, and remained there long enough to witness the desperate assault of the 10th on Fort Wagner. He then proceeded to Richmond, where he obtained an interview with Mr. DAVIS, and received permission to visit the army of Tennessee, under General Lee. We cannot follow the Doctor through all his wanderings, in which he sees everything *calme de rose*, and will therefore merely extract a portion of his statements in regard to the treatment of rebel prisoners at the North. Of course, he takes the extreme rebel view of the question. Mr. DAVIS and his papers are so anxious to impress upon the public mind of Europe, and which is so utterly false and preposterous that any attempt to refute it would be a work of supererogation. Our readers will be very much amused by the following:—

In one of our conversations with the President (DAVIS) reproach were talked of. I had been often present at warm discussions on this subject on the part of men in various grades of the army, and sometimes instructive. The papers treated the question in all its aspects. General LEE, in one of his orders of the day, had summed it up in such noble words that I had no conviction to admit the right of extermination. "The question," said he, "is not as to what our "enemies deserve, but what is worthy of us." The President, in the following, to which I allude, exclaimed, "I am "forced to do myself violence to prevent being carried away "by the just feelings of hatred and vengeance which the "conduct of our enemies inspires me with,—men without "faith or law, with no principles of morality, depraved and "lost to every sense of honor, outrage can express."

It often happened also, that when a carriel had been agreed to between the belligerents, instead of forwarding those who were included in it by the most direct road, as was usually done in the South, they marched them long round-about streets from penitentiary to penitentiary, through petitionary, to the Capitol square, fatigue, and privations of all sorts had decimated their numbers. It was thus that 5,000 prisoners were left in the camp coming from Arkansas to Virginia. I need hardly add that the prisoners for whom the South received them had long since returned to their homes, and many were already dead in the Federal army.

Another detachment of some hundreds of prisoners, who, after their exchange was agreed to, had been thus marched from prison to prison and back, at last United States, passed lately through Washington, where Mr. LINCOLN reviewed them. The men who composed it were all mutilated, the feet and hands of a large number, who had survived the misery and disease under which their fellows had sunk during their long captivity, were frost-bitten, and what the natural state must have been. One of them saw a negro in the crowd who had once been his servant. "Master," said the negro, "I am sorry to see you in want of the most necessary things. Here are $100, and as soon as the war is over, "when I can get out of this uniform, I will come to "Virginia and work for you." * * * I, one evening, at General COCHRANE'S, heard the Governor of North Carolina tell how, in the Federal prisons one had to live. The army was carried off by force whole families of negroes; that on several occasions, being surrounded at the moment of embarkation, the negroes had succeeded in taking the opportunity of escaping, to return to their masters; and that then the Yankees turned their fury on the negro children, whose they knew turned their fury on the negro children, whose they tore from their mothers' arms and flung into the water. On other occasions they drowned the negroes by wholesale, when they realized the attempt to carry them off.

THE Yankees exercised similar cruelty on the whites. In one detachment of prisoners, of whom a great part was ill of smallpox, caught in the miserable huts in which they had been lodged, they *caused* themselves with fastening them two and two, with a rope round the healthy one, to the sick. Those of the latter who became unable to keep up, were left behind to die, when the disease reached its height, they would throw them overboard with lead sheets.

NOTICES TO CORRESPONDENTS.

The Editor of the JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give an early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to technical and other matters.

From gentlemen in the medical service we shall be glad to receive communications on sanitary hygiene, practical surgery, and reports of remote operations and severe forms of injuries.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, JANUARY 16, 1864.

SHOULD SOLDIERS VOTE?

TO these who ask the question doubtfully, we would put another:—What are soldiers? what are the soldiers concerning whom the question is asked? Are they citizens, serving their country, for a while—for a special occasion—under arms? or are they professional men-at-arms? Are they men who will, as soon as the present war closes, return to their homes, and to civil pursuits; or are they homeless rovers? Are they men who serve their country for love of its institutions, and because they desire to perpetuate these? or are they men who take the recruiting sergeant's bounty, for lack of better pay, and whose interest in the country is satisfied by the account of their pay and rations?

A professional soldier, in truth, may be rightly and even prudently denied the privilege of voting; though even with the private soldiers of our Regular Army, patriotic and soldierly devotion to the flag, seems to have been a shining virtue; scarcely a single private among the regulars deserted, or could be corrupted by the rebels at the beginning of the war; even JEFF. VAN DORN, a favorite officer, who had done much to ingratiate himself with certain companies, failed to secure a recruit, in his special effort in Texas. Men so genuinely patriotic should make us ashamed to speak of their class as mercenaries.

But the real question at issue, and now before the Legislature of the State of New York, is: "Shall volunteers vote?" We think they should, and for several reasons. In the first place, they do not give up their citizenship by taking up arms; they are volunteers for a particular service; the country is attacked; they go to its defence; they go because they believe it is unjustly attacked; they voted first for the Congress which calls for volunteers, and they now support in arms the measures they approved at the polls. It is absurd to tell these men that the moment they take this patriotic step, they shall lose all influence in the country; and that the condition on which they shall serve it in arms is, that they shall have no share in framing the political future. It is fixing a penalty on patriotism; and not only that—it is asking them to give themselves helplessly into, they cannot beforehand tell, what hands. Once in the service, they must of course obey. Now, it may happen, that a war begun for just and righteous ends shall be perverted from its true objects; if you disfranchise the volunteers, they are powerless in such cases; but let them have the right to vote, and they will presently express their opinions, and help their fellow-citizens at home to put a stop to WRONG.

Again, the volunteers, in a case like this, form a large portion of the voting population; in some of the States probably a third of the voters have gone to the war: now, if we deprive them of votes, the opposition, who may be in a clear minority at the beginning of the war, may get the control of the Government, and change the purposes of the war before its close, simply by the drain into the army, of the men who represent the real sentiments of the country.

A war, in a free country, must be a popular war; if the majority of the nation, after fair and full discussion does not WANT to fight, the Government has no right to make war. But clearly in such a case, the majority must be of the whole people, and not of the part—the least patriotic and least deserving part —who stay at home.

Lastly, the laws which prevent votes being cast except by those present at the polls, within the State and district, were not intended to disfranchise volunteers: they were intended to prevent fraudulent voting.

DICKERSON vs. ISHERWOOD.

THE proposition which has been made in Congress for an investigation into the conduct of the Bureau of Steam Engineering by the Committee on Naval Affairs, is a good one, and we shall be glad to see the work undertaken. We know, also, that the Navy Department itself is desirous of such an investigation, and is not disposed to shield any official who may seem to deserve censure. The opponents of the Bureau, however, are as unfortunate in their self-appointed champion, as the department can be in the officer in charge of the Bureau; and to those who understand the merits of the case, and know the facts involved, the wordy combat between the Messrs. DICKERSON and ISHERWOOD affords no small amount of amusement. Of course the public cannot separate the chaff from the grain—they have no means of telling the facts from the fiction, except the statements of the antagonists. But to those who have watched the engineering career of the rival *amateur* engineers, the case is quite different.

To obtain the best results from the old consumer in a steam-engine may require an unusual degree of engineering ability; but nevertheless, it is rare to find engineers within the past four or five years who have constructed marine engines which are really inefficient. The only exception to this which we can call to mind, are the gentlemen who are now engaged in a sharp controversy over the merits of their respective systems —DICKERSON and ISHERWOOD.

The former inaugurated his professional career (in the engineering line, not the law) by applying his inevitable "cut-off" to a Long Island Sound steamer, the *Empire State*, shortly after which that steamer collapsed the lining of her steam-chimney, thereby scalding half a dozen people to death. The inference is fair that the cause of the "cut-off" had a great deal to do with this terrible catastrophe; for by endeavoring to increase the speed of the vessel by increasing the measure of expansion, the boiler pressure of course had to be correspondingly augmented. Next, after the failure of ALLEN'S patent plug-cock valves on the COLLINS' steamer *Adriatic*, he obtained the job of applying the "cut-off" to that vessel, and on and his *confreres* tinkered with her engines until they rescinded the inside of a JURGENSEN watch. Before this ship went to sea, DICKERSON & Co. were relieved of the job, and the engines rejuvenated by other engineers.

Next in order comes the Detroit pumping engine, designed by DICKERSON & Co. to perform an amount of work unheard of in the annals of pumping engines. The bungling engineering of the Cornish engineers was to be exhibited in bold relief; but alas! DICKERSON'S improved Cornish pumping engine performed only about one-third the duty it contracted to do. For further particulars in which this well known land-mark in DICKERSON'S engineering practice, the report of the Detroit Water Works Commissioners should be read.

Finally, come the engines of the U. S. steamers *Richmond* and *Pensacola*—the former with valve-gear, combining, of course, the "cut-off" designed by DICKERSON & Co., and the latter with the entire steam machinery designed by the same concern. The history of the performance of these two vessels is too well known to require comment.

MR. ISHERWOOD commenced his steam engineering career by doctoring the machinery of the U. S. steamer *Princeton*, and curing her vibration, but he was then among his other "improvements" he applied the "Sickles cut-off;" this was, however, before it had been modernized so as to cut off the fraction of an inch. Next came the machinery of the U. S. steamer *Alleghany*, which was a sad failure; then he designed a new-fangled rudder for the U. S. steamer *San Jacinto*, about which he wrote an article, but it was not steer her, notwithstanding.

MR. ISHERWOOD is an author whose writings would fill many ponderous volumes. He has ransacked the "classics" and collated experiments with the most assiduous industry, to prove that if the engine *per se*, *en rapport* with its propeller had been proportioned differently the result would have been different. MR. ISHERWOOD has made experiments also in relation to the friction of large unbalanced slide-valves, which may be exceedingly valuable in pointing out to young engineers what *not* to make.

On the whole, were he not so violent in his attacks, the country might be greatly benefited by the efforts of MR. DICKERSON, and the career of MR. ISHERWOOD as "designer-in-chief of the steam machinery of the Navy," with its results in cramming our new vessels with proverbially bad engines, be brought to a happy close.

THE PAY OF THE ARMY AND NAVY.

AMONG the propositions for change in the existing conditions of the army, already before Congress, is one introduced by MR. GRIMES, a representative from Iowa, who undertakes to recast the table of officers' pay. By the bill as reported, the present rule of half pay for officers when on leave is done away with, and the plan introduced of graduating their pay according to their presence or absence from the field, when on leave, or when off their leave and off duty. The principle of this change is well enough, but we cannot see what system MR. GRIMES has followed in drawing up his scale. Thus, the pay of Major-Generals, of Brigadier-Generals, of Colonels, and of Lieutenants, "on duty not in the field," is made considerably less than their pay for field service, while the pay of Colonels, Lieutenant-Colonels, Majors, and Captains, is increased, under the same circumstances. The following table exhibits the present rate of pay for officers in the Army, as at present, and as proposed by MR. GRIMES, compared with the rates of pay for officers in the Navy of corresponding rank:

Present Rate of Pay.	Pay per annum when on leave or waiting orders.	Present Rate of Pay.	Pay per annum when on leave or waiting orders.	Present Rate of Pay.	Pay per annum when on leave or waiting orders.
REAR-ADMIRALS.		MAJ.-GENERALS.		MAJ.-GENERALS.	
On active duty	$5,000	Pay and Rations for		On active duty with commission of full service	$6,750
On shore duty	4,000	Field Service	$10,340	On leave or waiting orders	5,000
On leave or waiting orders	3,000	On leave for sixty days	7,670	BRIG.-GENERALS. On active duty	5,000
COMMODORES.		BRIG.-GENERALS.		On shore duty	3,750
On active duty	4,000	Pay and Rations for		On duty not in the field	3,334
On shore duty	3,500	On leave for wounds or sickness	7,334	On leave or waiting orders	3,000
On leave or waiting orders	2,400	On leave for other purposes	5,797	COLONELS. On duty in the field	3,333
CAPTAINS.		COLONELS.		On duty not in the field	2,722
On active duty	3,500	When on duty or on leave for wounds or sickness	3,525	On duty not in the field	2,500
On shore duty	2,800	On leave for other purposes	3,164	On leave or waiting orders	2,250
On leave or waiting orders	2,100	LIEUT.-COLONELS.		LIEUT.-COLONELS.	
COMMANDERS.		When on duty or on leave for wounds or sickness	2,940	When on duty in the field	2,667
When on active duty	2,500	On leave for other purposes	3,020	On duty not in the field	2,250
When on shore duty	2,250	MAJORS.		On leave or waiting orders	1,800
On leave or waiting orders	1,650	When on duty or on leave for wounds or sickness	2,940	CAPTAINS.	
LIEUT.-COMMANDERS.		On leave for other purposes	3,020	When on duty in the field	2,333
When on active duty	2,343	CAPTAINS.		When on duty not in the field	1,875
When on shore duty	1,875	When on duty or on leave for wounds or sickness	2,520	On leave or waiting orders	1,500
On leave or waiting orders	1,500	On leave for other purposes	2,520	LIEUTENANTS.	
LIEUTENANTS.		FIRST LIEUTENANTS.		When on duty in the field	1,800
When on active duty	1,875	When on duty or on leave for wounds or sickness	2,100	When on duty not in the field	1,500
When on shore duty	1,500	On leave for other purposes	2,100	On leave or waiting orders	1,200
On leave or waiting orders	1,200	SECOND LIEUTENANTS.		MASTERS.	
MASTERS.		When on duty or on leave for wounds or sickness	1,890	When on duty in the field	1,800
When at sea	1,500	On leave for other purposes	1,890	When on duty not in the field	1,500
When on shore	1,250			On leave or waiting orders	1,200
On leave or waiting orders	1,000				
ENSIGNS.					
When at sea	1,200				
When on shore	1,000				
On leave or waiting orders	750				

Present Rate of Pay.	Pay per annum when on leave or waiting orders.
MAJ.-GENERALS.	
On active duty with commission of full service	$6,750
On leave or waiting orders	5,000
BRIG.-GENERALS. On active duty	5,000
On shore duty	3,750
On duty not in the field	3,334
On leave or waiting orders	3,000
COLONELS. On duty in the field	3,333
On duty not in the field	2,722
On duty not in the field	2,500
On leave or waiting orders	2,250
LIEUT.-COLONELS. When on duty in the field	2,667
On duty not in the field	2,250
On leave or waiting orders	1,800
CAPTAINS. When on duty in the field	2,333
On duty not in the field	1,875
On leave or waiting orders	1,500
LIEUTENANTS. When on duty in the field	1,800
On duty not in the field	1,500
On leave or waiting orders	1,200
MASTERS. When on duty in the field	1,800
When on duty not in the field	1,500
On leave or waiting orders	1,200

By this table it will be seen that an attempt has been made in the new bill to graduate the pay of the Army according to that of officers in the Navy of the same assimilated rank. But while the pay of officers "on duty not in the field," and "on leave of absence" has been changed or increased accordingly, there has been no corresponding increase in the pay of officers on duty in the field. An injurious discrimination is thus made against those most of all entitled to consideration, and who have the most to good reason to claim of officers in the Army should not be made, under all circumstances, equal to that of officers of corresponding grades in the Navy. Their duties, as a whole, are not less exacting, and their privations and hardships are, if anything, greater. As it stands now, besides their rations and servants, whose wages are paid by the Government, the pay of officers is greater than the total compensation—including rations and servants —given to officers of the same assimilated rank in the Army. This does not, of course, apply to Navy pay

for shore duty, and we must except Rear-Admirals and Ensigns, whose pay is less than that of Major-Generals and Second Lieutenants, respectively. It is true that up to the grade of Colonel, Army officers get no extra ration, thirty cents per day, for every five years service; but there are comparatively few in our Army, as at present constituted, who derive any profit from this regulation.

We are not aware that there is any general demand for a change in the pay of our Army officers. Though they suffer more, perhaps, than most others from the increased cost of living and the depreciation of the currency, they do not urge an increase of pay, for they understand that our finances are not in a condition to admit of liberality to them or others. They are laboring for something beside a mere stipend, and as they can exist under present circumstances, they will not complain if they are left as they are. Above all do they scorn to be made a party to any such bid for influence as has been made in the proposition to pay them in gold in place of greenbacks. They accept at its true valuation the friendship of those who thus seek to embarrass the Government under the guise of consulting their interest, and wish no favors from them. But if a change is to be made, it should be some just plan of equalizing the pay of the two services according to the present assimilation of rank. This Mr. GRIMES' bill does not do.

OUR RETURNING SOLDIERS.

It has been the last hope of the Rebel leaders and their sympathizers in Europe that by the expiration of the term of enlistment of our soldiers now in the field the Government would be deprived of its military power, and become unable to continue the war against the rebellious States. Volunteering was supposed to have proved a failure, and it was hoped that the Government would not again venture upon the experiment of a draft. The patriotic action of our veterans in re-enlisting for another term of service, has disappointed these sinister expectations. Taking place at the present juncture of affairs, when everything betokens the final lapse of the Confederacy into ruin, it may be said to ensure the success of the Government in its vast military undertakings. No event of the war has been fraught with greater consequences to us. It will not only ensure to the Government a numerous and effective army of veterans with which to commence military operations in the Spring, but the depressing effect of this course upon the rebels will in itself be equal to the loss of fifty thousand men from their armies. Nor will its influence stop here. The fact that the men who have already been three years in the service are ready to reenlist for another term, cannot fail to have a cheerful moral effect on the country. It will be felt in the accelerations of the enlistments of volunteers, and in the strengthened faith of the people in the final suppression of the rebellion and the reëstablishment of the Union. The action of our soldiers is thus, in every aspect, one of the most hopeful tokens of the approaching termination of the war.

The reënlisting regiments are returning North, on short furloughs, for the purpose of recruiting decimated ranks. Let their welcome be heart-felt and enthusiastic. It is discreditable to this city that none of the returning regiments have met with any reception, either by the authorities or through any association of citizens. During the past two or three weeks several regiments have returned from the field of battle, their flags rent and torn with bullets, and the soldiers have gone so quietly to their homes that but for an item in the newspapers their arrival could have been scarcely known to the public. This ought not to be. Although the country has become so much accustomed to military pageants that the march of ten thousand soldiers through our streets would not attract much attention than a single militia company three years ago, yet special pains should be taken everywhere to show our returning veterans that the country appreciates their services and does not undervalue the worth of their patriotic sacrifices in defence of liberty and government.

We hope the question of competitive examinations of candidates for admission to West Point, to be substituted for the present method of Congressional appointments, will not be allowed to stop with the last Board of Visitors to the Academy—which, by the way, left from its inspection of the institution, thoroughly converted of any prejudices against it—recommended that the number of cadets be increased to four hundred, that the age of admission be advanced, that the standard of attainments, which is substantially the same as that of sixty years ago, be also advanced, and the competitive examinations, to which we have referred, be substituted for the appointment system. These recommendations commend themselves to general favor, and we know they are entirely in accordance with the views of the able officers of the Academy. A few changes of this kind will add very much to the usefulness of our Military School, and do a great work in the elevation of the Service.

THE report that LONGSTREET has been heavily reinforced from the armies of LEE and JOHNSTON, is probably in the main correct. His railroad communications with Richmond, disrupted by General AVERILL'S raid, were promptly repaired within a week after the departure of that General from Salem; and as LEE could count with certainty upon the inactivity of the Army of the Potomac for several weeks to come, he could safely detach from his army a force of fifteen or twenty thousand men for the purpose of enabling LONGSTREET to follow up his sudden and effective blow for the recovery of East Tennessee. But it is hardly reasonable to suppose that General LONGSTREET'S force has been much increased from the beaten and disorganized army now said to be under the command of General JOHNSTON. That General will find sufficient occupation for all his troops in defending his own position at Dalton, and any decided weakening of his army would ensure a repetition of the terrible punishment which GRANT inflicted upon BRAGG at Chattanooga. It is not improbable that LONGSTREET has called in all the scattered commands which were recently operating on the line of BURNSIDE'S advance along the frontier of North Carolina and Virginia. A rumor to this effect was circulated several weeks ago by the rebel newspapers.

From all sources the effective strength of LONGSTREET'S army may have been increased, with a view to spring operations. But there is no reason to fear that, even with so large a force at his disposal, he will be able to jeopard our position in East Tennessee. To be successful, a rebel movement upon Knoxville must be executed with an army sufficiently strong to cope with all the forces under the command of General GRANT. For that General, moving upon interior lines of communication, could leave a small force to impede a rebel advance from Atlanta, and concentrate all his forces for an attack upon LONGSTREET, and immediately turn, if it were necessary, to fight the rebel army under JOHNSTON. His position enables him to observe both armies, and to hold himself in readiness to inflict a crushing blow upon either.

By the pamphlet edition of the annual report of the General-in-Chief which we have received from Washington, we observe that a typographical error occurred in the report, as at first printed in the newspapers, which conveyed something of the force of General HALLECK'S commendation of the operations of General GILLMORE before Charleston. "General "GILLMORE'S operations," said the report, "have "been characterized by great professional skill and "boldness. He has overcome difficulties almost unknown. Indeed, his operations on Morris Island "constitute a new era in the science of engineering "and gunnery." The word "almost," which is to be found before the words "a new era" in the newspaper copies of the report, has no place in the original.

SOME excitement has been occasioned among the New York papers during the past week, by certain discoveries in regard to the wretched character of the accommodations furnished to soldiers passing through the city, in the barracks in the City Hall Park. As they seem to be very much in doubt as to where the responsibility of the latest evils rests, it is proper that we should inform them that the municipal authorities of New York are the parties at fault. One of the first acts of General HAYS, as Provost Marshal of this department, was an attempt to induce the local authorities to coöperate with him in providing better accommodations for soldiers and for the prisoners in his hands, for whom we had no ready place of confinement but the miserable City Hall Barracks. The attention of the Common Council was called to the matter by Major ODDYKE, who promptly coöperated with General HAYS; but with the Common Council the matter stopped, they refusing to give permission to use the ground asked for at the Battery, except on condition that the buildings should be erected at the expense of the Government, and made the property of the State, to be controlled by State authority. We understand that the Quartermaster's estimates for buildings are already made, and the work will be begun as soon as the Common Council furnish permission to use the ground selected.

A PRIVATE letter to us from a cavalry officer on duty in Southwestern Tennessee says:—

"I have been out with my regiment scouting for three "weeks in the region lying between the Tennessee and "Mississippi Rivers, northeast of Memphis. For the first "few days, we were after a guerrilla company, who were "engaged in hunting up, or hunting down, conscripts with "dogs. Brutal and horrible as it may seem, it is nevertheless strictly true, and you may rely on it, that at this very "hour, hundreds of the people of West Tennessee, Mississippi and Alabama, are being hunted down with blood-"hounds. I could not realize it until by the most positive "evidence I find it true. We were once almost within "hearing of the baying of the hounds, and sent out a scout-"ing party who came very near catching some of the "dogs. If they had been caught, they would have received short shrift."

If any confirmation of these statements were required—and it certainly is not for us—it could be given in the advertisements for dogs for this purpose published in the Southwestern rebel States, and in the admissions which we ourselves have seen in Southern newspapers that the bloodhounds formerly used in hunting down the fugitive black slaves were now used in hunting fugitive or recusant white conscripts. It is the guerrilla gangs under the rebel FORREST who have been for months carrying on these operations in the quarter referred to; and the latest advices from that region indicate that they are in no wise abated, though the active operations of our troops from time to time make efforts to check them. We are glad to be able to say that one or more expeditions, composed of forces sufficiently strong to be effective, set out shortly before Christmas from different points in Western Tennessee for the purpose of putting an end to these infamous doings.

BEFORE a party caucus of certain members of the House of Representatives, Mr. Representative BROOKS, of New York, introduced a resolution that the officers, soldiers and sailors of the Army and Navy, be paid in gold or its equivalent. Mr. BROOKS may have thought in offering such a resolution, to gain the sympathy of the class he proposed to benefit. But though they don't count easy to be politicians, our soldiers and sailors understand very well the animus of such a proposition, and that it is offered to make political capital. To show the feeling on the subject, we make the following extract from a private letter we have just received from one of our most distinguished Naval officers: "Let those who have contracted debts pay them gold or silver—the gratitude of the Nation for duty well and gallantly done. Our correspondent refers to the resolution of Mr. BROOKS, and says:

"Now, I take it, no officer of the Navy or Army wishes to receive any preference over the rest of the people. I do not wish to be paid in any other currency than the Government pays, so long as our Government is obliged to pay in paper—greenbacks are as good for me as for "any other man." Much less do I ask any aid or sympathy from any one whose good-will is an *insult* to patriotic men. If you will get up a counter memorial, I and others will sign it. Put the ball in motion."

By direction of the PRESIDENT, Major General S. P. HEINTZELMAN, U. S. Vols., has been placed in command of the Northern Department, which will be composed of the States of Michigan, Ohio, Indiana and Illinois—headquarters at Columbus, Ohio. Major GRANVILLE E. JOHNSON and Captains C. P. HORTON and HENRY NORTON, of his staff, will accompany him

By order of the PRESIDENT, Major General STEELE, U. S. Vols., has been put in command of the Department of Arkansas, which is to consist of the State of Arkansas, except Fort Smith. The troops of General STEELE'S command will constitute the Seventh Army Corps, and will be subject to the orders of General GRANT.

FOREIGN MILITARY AND NAVAL MATTERS.

It is stated upon undoubted authority, that the Messrs. LAIRD have refused several *bona fide* offers for their celebrated iron-clad rams from friendly powers who are at peace with themselves and the rest of the world.

An English paper says that a naval officer has come to America, in the service of the British government, to see with his own eyes, and report upon the artillery which the respective belligerents are using in their work.

The shipwrights at Chatham Dockyard have commenced building the keel for H. M.'s new screw-steel frigate *Lord Warden*. The following are the principal dimensions of the new vessel:—Length between the perpendiculars, 280 ft.; length of keel for tonnage, 232 ft. 11 in.; extreme breadth, 59 ft. 9 in.; breadth for tonnage, 58 ft.; depth in hold, 20 ft. 9 in.

It is reported in the London clubs that Rear-Admiral the Hon. CLARENCE ANDREW PAGET and Captain ELLIOT has declined the appointment of naval Commander-in-Chief on the Southeast Coast of America, in succession to Rear-Admiral EDWARD JAMES WARREN; and that the command has been offered to and accepted by Rear-Admiral of the Blue, the Hon. GEORGE POWELL HASTINGS.

JOHN GILES, of London, has invented a novel steamship for express use as a blockade runner. Starting out with the proposition that, in water propulsion there are two points to be considered—*resistance* and *resistance to the vessel*, the other *resistance to the screw*; the first, or resistance to progress, to be as small as possible; the second, or resistance to the vessel, as great as possible,—he claims to have constructed the model of a vessel which will attain a speed of 30 to 40 miles per hour! His model is in the form of cucumbers, and there the screw is placed to secure depth of immersion.

The *London Engineer* thinks the British navy needs more than anything else a fleet of really serviceable gunboats, armor-plated, sea-worthy, carrying large guns, and yet drawing but little water. "Had we 200 such boats now we should not fear the issue of their cost and keep. We need, too, a number of very swift vessels which might be employed as despatch boats. A score of vessels of 1,000 tons each should be capable of sixteen knots in calm weather. We should, in time of war, doubtless have a command of such steamers as these for the merchant service, but none of these are suited to the real purposes of war, except after extensive changes."

NUMEROUS experiments have just taken place through Europe with the coarse cast iron of which pieces of artillery were called upon to lend their aid. They have testified to the correctness in firing, and to the advantages of these pieces for either land ground or siege operations. But all the experiments have produced the same result with regard to the durability of these new guns. After 12,000 rounds, they have become indifferent materials, and the cannon is found unfit for further service. To remedy this grave defect, steel was used instead of bronze, but steel was found to be much less durable, and artillery officers are now in search of a metal capable of resisting both heat and pressure.

THE NAVAL POWER OF ITALY.

Not more than two centuries ago, Italy was complete mistress of the Mediterranean. The fleets of Venice and Genoa denominated its whole extent and monopolized its trade. It was virtually an Italian lake. Had Italy remained free and united, she would have been mistress still. But falling under the domination of powers whose interest it was to keep her weak and divided, in order that they might monopolize the Mediterranean trade, her naval power gradually declined, until even her merchant fleets altogether disappeared, and she remained so long debarred from the ocean, that her people have now scarcely left of her ancient glorious tradition.

The rise of Piedmontese influence, which restored the unity of Italy, and re-awakened the long-slumbering sense of nationality, at once revived the maritime ardor of her people, and gave a new impulse to the development of their naval forces. Italy already possesses a respectable fleet. At the recent naval review in the Bay of Naples there were present seven armor-clad frigates, with an aggregate of 12,000 tons each, a sloop of 12 to 15 guns, six paddle-wheels and three sailing corvettes, of 1,000 tons burden each, and three four-gun despatch boats. This was not, it is true, an extraordinary display for so-gift Italy, a power which aspires to the position of the fifth in the Mediterranean, and which in exception of the seven frigates and the screw sloop, all the vessels were of antiquated models, long abandoned as all but useless. But these were the vessels which made the present naval power of Italy. The two-decker, *Re Galantuomo*, now in our own waters, and two small iron-clads in the harbor of Genoa, were the most powerful ships of the fleet. Besides these, two iron-clads are on the stocks at Genoa, eighteen gun-boats are building in the arsenals, constructing in Spezia, one, the *Re d'Italie*, expected from this country, several have been ordered in England, and some are building in a private yard at Toulon. A seventy-five six months from now may show that Italy has resumed her old position as mistress of the seas that wash her eighteen hundred miles of coast. The spirit of her people is still thoroughly maritime. The coast population has never lost its taste for the sea. When drawn for the conscription, the recruits, especially in Southern Italy, endeavor to qualify themselves for entering the naval service by going on board a coasting trading craft and obtaining the necessary certificate that they are sailors. And though the ships are mostly old and of antiquated models, in appointments they are said by competent authority to be equal to the first-class British men-of-war. The old Piedmontese army was organized on French and Austrian models, while in the ships the system prevailed which obtains in the English. This pattern has passed from the Piedmontese to the Italian navy, and the imitation has been more successful than in any other navy, except perhaps that of Denmark.

In view of the unfriendly attitude of the unmaritime powers of Germany, the Italian Government has the necessity of developing the land forces at the expense of the naval. The ordinary and extraordinary yearly expenditure for the army amounts to about 30 millions sterling, while that for the navy amounts to only about twelve millions. But with her army augmented, consolidated, and as well appointed as that of Prussia, Austria, she is now at liberty to give almost exclusive attention to the development of her maritime resources.

AN ARGUMENT AGAINST IRON-CLADS.

THE recent launch of the iron-clad *Minotaur* affords a Navy correspondent of the London *Herald*, the occasion for giving expression to some pretty radical views on the subject of iron-clad vessels. His reasoning will, however, find many supporters among the non-Navy men, who will read with interest the following extract from his letter:

Respecting, then, the theory of these iron-clad brutes, I venture to recount my opinion that the whole thing will end in very long grief. The *Warrior* and her sisters, as now are all excepting Captain Coles' cupola ships, which for harbor and coast defence are, beyond any question whatever, almost the perfection of naval art, and in particular services they should be, and, moreover, as much superior on other grounds to the *Herring*, &c., as the train 60-gun screw of to-day is to the *Victory* of Trafalgar fame. Among the many hundreds of good reasons of every description why I consider them such, I think a failure may be cited one or two chief ones; as for instance:

1. Too great length to beam, and consequent slow or difficult veering power.

2. Too much complexity of material and workmanship.

3. Want of sufficient stability to ensure a proper platform, on which the guns may be mounted and fired with precision in anything but smooth water.

4. Incapacity to carry at most coals for over 11 days' continuous steaming, without being overladened, necessary if such a distance from home, to establish coal depots every 2,000 miles and as many regular fleet of armed coal transports for keeping up the supply.

5. Too great draught of water, ranging from 25 to 32 feet, rendering it impossible for them to get into any but very few ports in the world where it would be any object to enter, and as they are essentially a class of vessels that cannot winter and refit in any port, such as other ships, it thence becomes necessary to construct any number of dockyards abroad to harbor them, and to meet the indispensable requirements of repairing every month for cleansing their bottoms of weeds and barnacles that diminish their speed one or more, which, if the dockyards and workmen, too, will have to be kept constantly in these yards, with plant and stock for executing necessary repairs.

6. The tendency of such immense masses of iron acting chemically on the vegetable matter of the wood-work to generate certain deleterious gases, and produce a fatal dry-rot, basis on which any contagious disease would spread rapidly, especially in hot climates; as well as, beyond doubt, unfavorable results to the health of the crew, if not, from the magnetic effects of being walled in by from 5,000 to 10,000 tons of iron.

7. The greater specific gravity of iron than wood renders such huge masses of iron when disabled either in hull or machinery by the most unmanageable and difficult to be saved from foundering, under circumstances where a wooden vessel or less heavily plated ship could readily be preserved; for it is my opinion that no amount of pumps will be found that would so completely defy human efforts to do anything with her as would a vessel as the *Minotaur*, lying with her machinery disabled or rendered helpless in a swamp, out of reach of other help; she would so surge and heave as effectually to keep the pumps choked and unmanageable by a mountain of her iron sides. The *Prince Consort*, wrap the matter up as the Admiralty may, barely escaped from foundering by the use of all her pumps, and it is a matter of notoriety that the dropping of a sixpenny nail in certain parts of her machinery, or the loosening of a screw, would utterly have crippled her.

8. Increase in first cost of 5 or 6 to 1 over wooden ships, and increase in annual expenditure for keep of 6 to 1 or more, for where the keel and general frame of a wooden ship would be sound, or for the most part available at the age of thirty years on an average, that of the iron ship, in the latter's service or less not one of these iron-clads but will be used up by corrosion of salt-water, or literally obsolete to please by the vibration of her machinery, and the wind and water lift by the elastic working (for all ships must have elasticity) of plates against bolts, and of both these in efforts to tear themselves to pieces, and by the congeries of destructive cost of one *Warrior* or *Minotaur* would build three first-class 120-gun screws, or six 50-gun frigates, or eight first-class sloops.

These, sir, are a few good reasons why iron-clads will not answer. Now for a glance at the fighting side of the question.

First and foremost, the theory of making men whose trade it is kill one another, appear to me to be the best to set it on shore, will not answer on sea, because that the very life and soul of a good seaman is his indifference to the ever open grave which yawns for him during every minute of his sea-life, barely a plank 'twixt him and oblivion, so that to shut up this child of peril in an iron safe, implying that henceforth a sea fight is to be unattended with any probable danger to his carcass, is to metamorphose the old stamp of dare-devil man-of-war'sman, who has always courted rather than shrunk from danger, into a sort of Shaftesburyian frigid fool—one who has the soul of a tailor. As the best of our sea-kings, Nelson, has said, "Never was a fool or a coward the equivalent *Times* tried so shamefully to make him appear). "Take the devil out of a man, sir, and he's no seaman for me." If, then, British men-o'-war's-men are to be carefully preserved from all danger we may have some hope of Dr. Cobden's long-anticipated Utopia, the Millennium, that his "blue-books" have foretold fruitfully, like Mozart's almanac, these past 29 years; adverse ships meeting will signal to each other their respective strength, the one proving to be the weaker terminating by "politely declining a fight," or, like JONATHAN's coon, civilly "coming down to be catched."

Suppose, however, for argument, that fight is the word. Seeds with the *Warrior* and her sisters, the 60-gun screw frigates, carrying each 10 100-pounders and 2 200-pound pivots, built low, broad, long-floored, quick ends, and steaming 15 knots. Let the head of both of these, the *Warrior* in the centre, a manœuvre that cannot be prevented, while a frigate should run for the nearest of the 3 squadron. If B. finds he cannot get out of the way he prepares to receive the *Warrior* with full broadside, double-shotted, meanwhile hoping his ship's company will fire, as they often do, on occasion of concussion he may, by a powerful turn of the wheel, so drive the blow at an acute angle on to a fore-and-aft line, at the same time lowering and grappling on board the 100 well-trained boarders on to his opponents' decks. While this is going on signal is made to the other ships to "Close and engage the enemy," the *Warrior* being left to be "carried on the drumhead of every British man-of-war), they bearing down from different points of the compass, and when at short range delivering a concentrated murderous fire from starboard and port, which no man of war afloat could either reply to or outsail, with her unarmed bow to dread, from whatever else. Suppose that 5 shots out of B.'s ships fatally probable in such a *melée*, some of the others are unavoidably lost, and that the 100 unbroken men of the broadside directed against his screw and stern-post will sooner the gigantic brute helpless if not send her down all together. From that it is obvious that there must be the same chance of success against the 3 squadron ships, as that twice as many guns, but above all, possesses the overwhelming superiority of opening fire or boarding from six or eight different points, while that always in close communication; "the suppositious engagement I submit to the criticism of advocates for *Warriors* and *Minotaurs*.

Now, as to the superiority of these iron ships, the *Minotaur* on her straight broadside of say 350 feet has 25 guns, say, 7 feet wide, making an aggregate of 50 feet open to 300 feet of a wooden ship, or 1 to 6. Now, will some clever calculator of the Armstrong school favor me with the data on which to approximate, or approximately, the probable spot where an enemy's shot shall always strike, whether between two ports, or in through one of the 25? Let me add that a considerable shot shall appear in the Gunnery Manual indicating the exact pointing of a gun to ensure unfailing precision seaway or no seaway. Then, again, I have a strong impression that our iron ships shall not fire in at one another's ports, at they will be too close. I reply that, put on to the sides of a ship 18 inches, if you can stop the shot of 68, 95, and 100-pounders, specially be produced guns that will pierce them like matchboard, as has been proved in firing from guns of the new Spanish BLAKELEY elsewhere. But failing such reliable practice, if a built-up live shell do come in at a port, the speedy solidity of the ship will stop the progress of the gross, and shrinking against the solid mass would, in bursting, literally sweep the deck from end to end; whereas, but for the solidity of the ship, the shell would, in bursting, fly itself, and so narrow the sphere of destruction, or, if not exploded, pass through harmlessly.

Again, shot even if they cannot penetrate iron for planting will at least indent it, so that a number hitting on the same spot will make the plating look as though it would sweat from the small-pox, and not at all improve her sailing qualities. I admit possible indentation or battering without penetration, but the moment the slightest crack appears of any plate in twenty, as supplied from the sample put up for His Grace to wonder at down at Shoebury, is at all equal to such indentation, it is, I think, fatal. However, I am not a practical iron-clad is decked, and of course plates with indenting shot in them will be taken out and new ones put in, probably the wooden frame behind broken off, and so forth, but a whole plate must come off, because of one big bursting shell not infrequently bringing with it a whole mass of iron at the iron-clad.

In the latter my argument out of a purely technical field, and put it on ground that non-professional persons may judge of. I will suffice to remember that ball-a-dozen resolute lads of fifteen stone each, with a 56-pound shot each, would, however powerful, a man by persistent and simultaneous attacks, that would eventually master him. Just so with the *Warrior* under the circumstances I have cited, and with the factory, rebuild, or design what sort of ships you please, stun boarders you never will, for the very delay against all else in the long run; two indispensable qualifications for good men, that the iron-clad "safety" system will be fatal to, in the long run.

Her Majesty's navy, therefore, should be a working navy; for use, not show, composed of medium-sized, well-built, handy, fast, powerful steamers, armed with the most powerful artillery, combining safety, simplicity, and precision, the first requirement being to have officers and men well trained to their guns and small arms; for improve upon that splendid weapon, the Blakeley (miscalled Armstrong) gun, as you may, with all the matchless science of a WHITWORTH to boot in perfecting great guns, yet if crews are lacking in the essential qualities of good seamen, and slovenly in handling their guns and cutlasses, so by better trained opponents will overcome them with the inferior guns and weapons. It is on old experience with artillerymen that your true sailor-man will be found the most natural gunner, and that, however splendid may be the achievements of Big Will (or

at I think, Weak Bill) at Shoalhurnes, giving a good appetite for the customary "Admiralty lunch," after the "powder-play" is over. Mr. Bill, it is all a hoax of Jeff. Davis' color on the back of an unwieldly iron-clad, that smiles from 13 to 28 degrees off the plane, with a dozen rifled guns, and wife-Arabs, though wooden opponents, burning about her stern.

Pay less attention, then, to ships and more to the crews, for you may rely on it that it is less a question of tools, but more a matter of the sort of men you have to handle them; proper of which discipline has almost taken its leave of her Majesty's navy.

ARMY GAZETTE.

PROMOTIONS IN THE REGULAR ARMY.

In the Senate of the United States:

TUESDAY, January 12, 1864.

To the Senate and House of Representatives:

I transmit herewith a return of the accompanying communication for appointment in the Army of the United States, as proposed by the Secretary of War.

ABRAHAM LINCOLN.

Washington, Dec. 31, 1863.

GENERAL OFFICERS.

Major-General George G. Meade of Volunteers, to be Major-General, July 3, 1863.

Brigadier-General William T. Sherman of Volunteers, to be Brigadier-General, July 4, 1863.

Brevet Colonel James B. McPherson of Volunteers, to be Brigadier-General, August 4, 1863.

Brevet Colonel George H. Thomas of Volunteers, to be Brigadier-General, Oct. 27, 1863.

ADJUTANT-GENERAL'S DEPARTMENT.

Captain Samuel P. Lyle, Fifth Artillery, to be Assistant Adjutant General, with rank of Major, July 17, 1863.

QUARTERMASTER'S DEPARTMENT.

Captain John C. Whistler, Fourth Artillery, to be Quartermaster, with rank of Major, July 17, 1863.

Captain Robert Allen, Assistant Quartermaster of Volunteers, to be Quartermaster, with rank of Major, April 13, 1863.

Captain Austin C. Wentzel, Assistant Quartermaster of Volunteers, to be Assistant Quartermaster, with rank of Major, April 13, 1863.

MEDICAL DEPARTMENT.

Medical Inspector Joseph K. Barnes, Medical Inspector-General, with rank of Colonel, July 17, 1863.

Surgeon Dillon Wallace, to be Medical Inspector, with rank of Lieutenant-Colonel, July 17, 1863.

Surgeon John L. LeConte of Volunteers, to be Medical Inspector, with rank of Lieutenant-Colonel, July 17, 1863.

Assistant Surgeon Charles S. Nichols, to be Surgeon, June 3, 1863.

Assistant Surgeon Charles Y. Alexander, to be Surgeon, Feb. 9, 1863.

Assistant Surgeon Edward Ely, to be Surgeon, Feb. 23, 1863.

Assistant Surgeon Lewis Taylor, to be Surgeon, August 14, 1863.

PAY DEPARTMENT.

Harvey E. Brown, New York, April 24, 1861.

Robert L. Dunn, Pennsylvania, April 24, 1861.

Edward S. Dodge, New Jersey, April 24, 1861.

Edward C. Wheeler, New Jersey, April 24, 1861.

William B. Wilson, Pennsylvania, June 11, 1863.

Howard Cravens, Veranda, June 18, 1863.

Richard Hilliard, Kentucky, June 18, 1863.

CORPS OF ENGINEERS.

Lieutenant-Colonel James B. Graham, to be Colonel, June 1, 1863.

Lieutenant-Colonel Orlando M. Poe, to be Colonel, June 1, 1863.

Major Jesse P. Woodbury, to be Lieutenant-Colonel, June 1, 1863.

Major James A. Duane, to be Lieutenant-Colonel, June 1, 1863.

Captain Peter C. Hains, to be Major, June 1, 1863.

Captain Orlando Metcalfe, to be Major, June 1, 1863.

Captain Cyrus B. Comstock, to be Major, June 1, 1863.

Captain Henry Quinby, to be First Lieutenant, June 1, 1863.

Captain Nathan Michler, to be First Lieutenant, June 1, 1863.

First Lieutenant Edward Maynadier, to be Captain, June 1, 1863.

First Lieutenant Henry L. Abbot, to be Captain, June 1, 1863.

First Lieutenant Francis U. Farquhar, to be Captain, June 1, 1863.

Second Lieutenant Peter S. Michie, to be First Lieutenant, June 1, 1863.

Second Lieutenant William H. Sanford, to be First Lieutenant, June 1, 1863.

Second Lieutenant Charles E. Kilbourn, to be First Lieutenant, June 1, 1863.

Second Lieutenant Edward Burr, to be First Lieutenant, June 1, 1863.

ORDNANCE DEPARTMENT.

Lieutenant-Colonel George D. Ramsay, to be Colonel, June 1, 1863.

Lieutenant-Colonel Stephen V. Benet, to be Colonel, June 1, 1863.

Major Alexander B. Dyer, to be Lieutenant-Colonel, June 1, 1863.

Major Wm. A. Thomas, to be Colonel, Sept. 15, 1863.

Major Robert N. Scott, to be Lieutenant-Colonel, June 1, 1863.

Major Peter V. Hagner, to be Lieutenant-Colonel, June 1, 1863.

Major Robert Anderson, to be Brigadier-General, June 15, 1863.

First Lieut. Isaac N. Lewis, 1st Regiment of Cavalry, June 9, 1863.

First Lieut. Edward Heyl, 1st Regiment of Cavalry, June 9, 1863.

Second Lieut. Henry Quinton, to be First Lieutenant, June 9, 1863.

Second Lieut. Wm. H. Boyle, to be First Lieutenant, June 9, 1863.

Second Lieut. Reuben F. Bernard, to be First Lieutenant, June 9, 1863.

Second Lieut. Wm. W. Forse, to be First Lieutenant, Sept. 30, 1863.

ARTILLERY.

First Sergeant Thomas Bascom of Co. I, April 1, 1863.

First Sergeant Wm. H. Hall of Co. F, 2d Artillery, June 1, 1863.

First Sergeant Camille C. C. Cluis of Co. F, Oct. 31, 1863.

CAVALRY.

Sergt. Isaac N. Palmer, of the 8th Cavalry, to be Second Lieut., Sept. 23, 1863.

Sergeant Wm. Hemphill, of the 8th Cavalry, April 23, 1863.

Sergeant Wm. Christian, of the 8th Cavalry, April 23, 1863.

First Lieut. Charles Weil, Lesser, to be Captain, June 9 1863.

Second Lieut. Edward Heyl, to be First Lieutenant, April 27, 1863.

Second Lieut. Robert Lemon, to be First Lieutenant, April 27, 1863.

Second Lieut. Isaac N. Lewis, to be First Lieutenant, June 9, 1863.

Second Lieut. Michael Lee, to be First Lieutenant, June 9, 1863.

INFANTRY.

Private George H. Hunt, Co. A, 1st Infantry, died of wounds received in battle.

Private Charles H. Lester, June 11, 1863.

Sergeant Benjamin James Child, August 10, 1863.

Sergeant Wm. Henry Harrison Child, 4th Cavalry, August 10, 1863.

Sergeant Joseph Hamilton, Co. B, 1st Infantry, Dec. 7, 1863.

First Sergeant Patrick W. Horrigan of Co. B, Oct. 31, 1863.

Sergeant Joseph P. Merrithew of the 6th Cavalry, to be Major, Sept. 23, 1863.

Corp. Joseph P. Merrithew, of the 6th Cavalry, to be Major, Nov. 11, 1862.

Private Joseph Bryan, Co. B, 1st Infantry, Dec. 7, 1863 (since dead.)

First Lieut. Andrew J. Alexander, to be Captain, Sept. 13, 1863.

First Lieut. Wm. Hemphill, to be Captain, Sept. 13, 1863.

Second Lieut. John R. Phelps, to be First Lieutenant, Oct. 27, 1863.

Second Lieut. Wm. Christian, to be First Lieutenant, Oct. 27, 1863.

Second Lieut. Isaac N. Palmer, to be First Lieutenant, Oct. 27, 1863.

Sergeant Major Alexander Hamilton, April 24, 1861.

Sergeant Major Wm. Wood, 8th Cavalry, April 23, 1863.

Sergeant Major George Harrington, Oct. 31, 1863.

1ST REGIMENT OF CAVALRY.

Capt. John P. Hatch, of the 2d Cavalry, to be Major, Oct. 27, 1863.

2D REGIMENT OF CAVALRY.

First Sergeant Lewis G. Morris of Co. A, May 12, 1863.

Sergeant Francis G. Wood of Co. K, May 12, 1863. (Since died of wounds received in battle.)

Quartermaster Sergeant Sebastian Gunther, May 12, 1863.

Sergeant Major Charles Ramsey, Co. A, 2d Cavalry, Oct. 27, 1863.

Sergeant William Scott, Co. A, 2d Cavalry, Oct. 27, 1863.

3D REGIMENT OF CAVALRY.

First Lieut. Emil L. Boerstler, to be Captain, Sergeant, Oct. 27, 1863.

Sergt. David B. Hastings, 1st Cavalry, to be Major, Sept. 23, 1863. (Since dead.)

4TH REGIMENT OF CAVALRY.

First Lieut. Julius W. Mason to be Captain, March 3, 1863.

First Lieut. Wm. Harris, to be Captain, April 13, 1863.

First Lieut. Joseph C. Woodward, to be Captain, June 9, 1863.

First Lieut. Leicester Walker, to be Captain, Nov. 3, 1863.

Second Lieut. Thomas Hamilton, to be First Lieutenant, April 13, 1863.

Second Lieut. James Hanlon, to be First Lieutenant, Sept. 23, 1863.

Second Lieut. Wm. Wilson, to be First Lieutenant, Sept. 23, 1863.

Second Lieut. Lester S. Boardman, to be First Lieutenant, Nov. 7, 1863.

5TH REGIMENT OF CAVALRY.

First Sergeant Joseph P. Hartley of Co. M, Oct. 22, 1863.

Private Robert F. Wilson of the 13th Infantry, June 1, 1863.

Private Edward Kennedy, June 15, 1863.

First Sergeant Richard Higgins of Co. I, Recruiting Service, Oct. 24, 1863.

Private Joseph Bryan, Co. B, Oct. 31, 1863.

6TH REGIMENT OF CAVALRY.

Major Samuel D. Sturgis, 4th Cavalry, to be Lieutenant-Colonel, Oct. 27, 1863.

Capt. Robert B. Mitchell, 6th Cavalry, to be Major, Oct. 27, 1863.

Capt. Samuel E. Starr, 3d Cavalry, to be Major, April 26, 1862.

Second Lieut. Wm. Hemphill, to be First Lieutenant, Oct. 27, 1863. (Since dead.)

To be Second Lieutenant.

Sergeant Joseph Scott of Co. A, January 1, 1863.

7TH REGIMENT OF ARTILLERY.

Lieut.-Col. Israel Vogdes, 1st Artillery, to be Colonel, Aug. 1, 1862.

Major Wm. F. Barry, 1st Artillery, to be Lieutenant-Colonel, Aug. 1, 1862.

Capt. James E. Hobart, to be Major, June 1, 1863.

Capt. John R. Brinton, to be Major, August 1, 1863.

Second Lieut. Orestus Cook, jr., to be Captain, June 1, 1863. (Since retired.)

First Lieut. Wm. Hays, to be Captain, August 1, 1863.

First Lieut. Wm. Hoffman, to be Captain, June 9, 1863.

Second Lieut. Alexander S. Von Michahelowski, to be First Lieutenant, May 1, 1863.

Second Lieut. Bertrand Tully, to be First Lieutenant, June 1, 1863.

Second Lieut. Wm. Hemphill, to be First Lieutenant, June 1, 1863.

Second Lieut. Wm. Christian, to be First Lieutenant, June 1, 1863.

Second Lieut. Philip H. Sheridan, to be First Lieutenant, Sept. 1, 1863.

Second Lieut. Daly McCrea, to be First Lieutenant, Nov. 4, 1863.

To be Second Lieutenants.

Custer Thomas Ward, June 11, 1863.

Chief Quarter Master Sergeant Wm. Bell, June 11, 1863.

Chief Quarter Master Sergeant Thomas Hamilton, C. S. Infantry, Oct. 3, 1863.

First Sergeant Michael Leahy, of Co. C, October 26, 1863.

First Sergeant John D. Wilson, of Co. H, October 31, 1863.

SECOND REGIMENT OF ARTILLERY.

Major Lewis G. Arnold, 3d Artillery, to be Lieutenant-Colonel, Aug. 1, 1863.

Capt. James A. Hardie, to be Major, June 1, 1863.

First Lieut. George D. Bertsch, to be Captain, May 23, 1863.

First Lieut. Thomas M. Vincent, to be Captain, July 23, 1863.

First Lieut. Henry C. Symonds, to be Captain, Aug. 1, 1863.

First Lieut. Wm. Austine, to be Captain, Aug. 1, 1863.

First Lieut. Henry Metcalfe, to be Captain, Aug. 1, 1863.

First Lieut. Thomas Grey, to be Captain, Nov. 4, 1863.

First Lieut. Lyman B. Ives, to be Captain, Dec. 1, 1863.

Second Lieut. Theodore Bradley, to be First Lieutenant, July 23, 1863.

Second Lieut. Wm. Hoffman, to be First Lieutenant, July 23, 1863.

Second Lieut. Wm. P. Duvall, to be First Lieutenant, July 23, 1863.

Second Lieut. Joseph C. Breckenridge, to be First Lieutenant, Aug. 1, 1863.

Second Lieut. Wm. Hays, to be First Lieutenant, Aug. 1, 1863.

Second Lieut. John H. Calef, to be First Lieutenant, Nov. 4, 1863.

Brevet Second Lieut. John Mendenhall, Jr., to be Second Lieutenant, April 27, 1863.

Brevet Second Lieut. William Egan, 5th Artillery, to be Second Lieutenant, April 27, 1863.

To be Second Lieutenants.

Sergeant John Scott, Co. A, 2d Artillery, Oct. 31, 1863.

Sergeant Wm. Hemphill, 8th Cavalry, Oct. 31, 1863.

Sergeant Wm. Christian, 8th Cavalry, Oct. 31, 1863.

Sergeant Wm. Wood, 8th Cavalry, Oct. 31, 1863.

Sergeant Joseph Hamilton, Co. B, 1st Infantry, Dec. 7, 1863.

THIRD REGIMENT OF ARTILLERY.

Major Wm. Maynadier, 5th Artillery, to be Lieutenant-Colonel, Aug. 1, 1863.

Major Henry J. Hunt, 2d Artillery, to be Lieutenant-Colonel, Aug. 1, 1863.

Capt. Wm. Chapman, to be Major, August 1, 1863. (Since dead.)

Capt. Alfred Pleasonton, to be Major, August 1, 1863.

Captain Alfred P. Rowe, to be Major, Aug. 12, 1863.

First Lieut. Wm. Chapman, to be Captain, August 1, 1863.

First Lieut. Alfred Pleasonton, to be Captain, August 1, 1863.

Second Lieut. John M. Stephenson, to be First Lieutenant, July 1, 1863.

Second Lieut. Wm. Chapman, to be First Lieutenant, July 1, 1863.

Second Lieut. Henry B. Rossiter, to be First Lieutenant, Aug. 11, 1863.

Second Lieut. Alfred Pleasonton, to be First Lieutenant, Aug. 11, 1863.

Brevet Second Lieut. Terrence Reilly, 2d Artillery, to be Second Lieutenant, March 16, 1863.

To be Second Lieutenant.

Cadet John G. Butler, June 11, 1863.

Ordnance Sergeant Richard Rickards, Aug. 10, 1863.

Ordnance Sergeant Benjamin James Smith, Co. C, Dec. 7, 1863.

Private Henry Harrison Child, 4th Cavalry, to be First Lieutenant, Aug. 1, 1863.

First Sergeant John Mitchell of Co. B, Aug. 10, 1863.

First Sergeant Wm. Henry Harrison Child of Co. C, Dec. 7, 1863.

First Sergeant Chas. Cushing, Co. B, Dec. 7, 1863.

Private Richard Cushing, Co. B, Dec. 7, 1863.

Lieut.-Col. George Nauman, 1st Artillery, to be Colonel, Aug. 1, 1863.

Lieut.-Col. Horace Brooks, 5th Artillery, to be Lieutenant-Colonel, Aug. 1, 1863.

Major Israel Vogdes, 1st Artillery, to be Lieutenant-Colonel, Aug. 1, 1863.

Capt. Wm. Hays, 7th Artillery, to be Major, August 1, 1863. (Since retired.)

Capt. Wm. H. Wood, 5th Artillery, to be Major, August 1, 1863.

Capt. George W. Getty, to be Major, Aug. 1, 1863.

First Lieut. Wm. Hoffman, to be Captain, August 1, 1863.

First Lieut. Norman J. Hall, to be Captain, Aug. 1, 1863.

First Lieut. Wm. Austine, to be Captain, Sergeant, Aug. 1, 1863.

First Lieut. Henry Metcalfe, to be Captain, Sergeant, April 27, 1863.

Second Lieut. Lloyd M. Harrison, to be First Lieutenant, June 16, 1863.

Second Lieut. Lloyd M. Harrison, to be First Lieutenant, June 16, 1863.

Second Lieut. Wm. E. Van Reed, to be First Lieutenant, Aug. 1, 1863.

Second Lieut. Wm. Austine, to be First Lieutenant, Aug. 1, 1863.

Second Lieut. Horatio G. Reed, to be First Lieutenant, Sergeant, Aug. 1, 1863.

Second Lieut. Henry Metcalfe, to be First Lieutenant, Sergeant, April 27, 1863.

Brevet Second Lieut. James E. Wilson, 1st Artillery, to be Second Lieutenant, April 27, 1863.

To be Second Lieutenants.

Cadet Robert Catlin, June 11, 1863.

First Sergeant Leonard Smith, of Co. C, October 31, 1863.

First Sergeant Leonard Smith, of Co. L, Oct. 31, 1863.

First Sergeant Benjamin James Child, of Co. C, Dec. 7, 1863.

FOURTH REGIMENT OF ARTILLERY.

Capt. Andrew D. Bache, 3d Artillery, to be Major, March 13, 1863.

First Lieut. Wm. Price, to be Captain, August 1, 1863.

First Lieut. Charles H. Fletcher, to be Captain, Aug. 1, 1863.

First Lieut. Edward R. Campbell, to be Captain, Aug. 2, 1863.

Second Lieut. Albert Sabin, to be First Lieutenant, Aug. 1, 1863. (Since dead.)

Second Lieut. Edgar M. Cullen, to be First Lieutenant, Sergeant, Aug. 1, 1863.

First Sergeant Wm. Thomas, of Co. B, Aug. 10, 1863.

Sergeant Daniel F. Cadman, of Co. C, Aug. 10, 1863.

Sergeant Joseph Hamilton, of Co. B, Aug. 10, 1863.

Sergeant Major Thomas Dry, Oct. 31, 1863.

FIFTH REGIMENT OF INFANTRY.

First Lieut. Lloyd M. Harrison, to be Captain, Aug. 1, 1863.

First Lieut. Wm. P. Duvall, to be Captain, May 1, 1863.

First Lieut. Joseph C. Breckenridge, to be Captain, Feb. 9, 1863.

First Lieut. Francis E. Lacy, to be First Lieutenant, May 14, 1863.

First Lieut. Theodore Bradley, to be First Lieutenant, Aug. 1, 1863.

Second Lieut. Daniel W. Flagler, to be First Lieutenant, July 7, 1863.

SIXTH REGIMENT OF INFANTRY.

To be Second Lieutenant.

Ordnance Sergeant William W. Morrell, Oct. 31, 1863.

SEVENTH REGIMENT OF INFANTRY.

Major Fred. Steele, 11th Infantry, to be Lieutenant-Colonel, Aug. 30, 1863.

Capt. Custer Augustus, to be Major, Aug. 1, 1863.

First Lieut. Andrew Burnham, to be Captain, Feb. 9, 1863.

First Lieut. Wm. Wallace, to be Captain, Sergeant, Aug. 1, 1863.

First Lieut. Wm. Hemphill, to be Captain, Aug. 1, 1863.

First Lieut. Dangerfield Parker, to be Captain, Oct. 30, 1863.

First Lieut. Wm. Christian, to be Captain, Sergeant, Feb. 9, 1863.

Second Lieut. John Whitney, to be First Lieutenant, Feb. 11, 1863.

Second Lieut. Wm. Wallace, to be First Lieutenant, Sergeant, Aug. 1, 1863.

Second Lieut. James A. Pumery, to be First Lieutenant, Oct. 30, 1863.

DISMISSALS

During the week ending Saturday, January 9, 1864.

Major A. A. Constable, 1st Virginia Artillery, to date January 8, 1864, with loss of all pay and allowances, for capturing money from private citizens in his office while provost-marshal of the 6th Corps staff of Major-General Wool, and for general bad character unfitting him to hold any office under the government.

Captain J. A. McDool, 2d U. S. Infantry, to date January 8, 1864, for drunkenness and absence without proper authority.

Captain Milton C. Dore, 1st Maryland Cavalry, to date December 31, 1863, for absence without proper authority.

First Lieutenant Charles H. Merrill, 12th New York Volts., to date December 31, 1863, for absence without proper authority.

First Lieutenant Alexander Hamilton, 5th Michigan Volts., to date January 8, 1864, for absence without proper authority.

First Lieutenant H. B. Eggleston, 11th Michigan Volts., to date January 8, 1864, for absence without proper authority, by order of the military principle.

First Lieutenant Michael Feeney, 2d New York Volts., to date December 14, 1863.

First Lieutenant John T. Vankuren, 6th Tennessee Cavalry, to date December 14, 1863.

First Lieutenant Quartermaster E. L. Bishop, 100 New York Vols., to date Dec. 22, 1863, for absence without proper authority.

First Lieutenant Lewis Merrills, 12th New York Vols., to date January 8, 1864, for being in the City of Washington without proper authority, and for disobeying a special Hospital Inspector Provost-Marshal under arrest.

First Lieutenant J. R. Sulis, 12th Massachusetts Battery, to date August 12, 1863, for violation of the 57th article of war.

Lieutenant J. Wilson, 11th Michigan Vols., to date August 31, 1863, for absence without proper authority; published September 16, 1863, as Lieutenant J. Wilson, 11th Michigan Vols.

Second Lieutenant L. D. Foster, 9th Missouri Cavalry, to date January 8, 1864, with loss of all pay and allowances, for disgraceful conduct unbecoming an officer and gentleman, offering violence to his superior officer, and drunkenness on duty.

DISMISSALS REVOKED.

The orders of dismissal in the following cases have been revoked, and the officers honorably discharged as of the dates of dismissal:—

Major H. L. Ivins, 16th New York Vols.

Captain Patrick Duffy, 6th New York Vols.

RESTORED TO COMMISSION.

The following officers, honorably discharged, are restored, with pay from the dates at which they retain their regiments for duty, provided the vacancy has not been filled by the appointment of their respective States:—

Captain Wm. H. Weaver, 12th Pennsylvania Reserves.
Captain Wm. J. Herre, 7th Ohio Vols.
Lieutenant Wm. C. Ferguson, 7th Ohio Vols.
Lieutenant H. Livingston, 7th New Jersey Vols.

ORDERED TO REGIMENTS.

The following named officers, having been reported at the headquarters of the Army for the offences hereinafter specified, are hereby notified that they will proceed without delay to join their regiments, and State unless within fifteen (15) days from January 11, 1864, they appear before the Military Commission now in session in Washington, of which Brigadier-General Ricketts, United States Volunteers, is president, and make satisfactory answer to the charges preferred against them:—

Failing to report at Seminary Hospital, Georgetown, D. C., on expiration of leave of absence.

Lieut. C. S. Smith, 1st Maine cavalry.
Lieut. M. S. Hall, 10th Maine cavalry.
Assistant Surgeon W. Westcott, 17th Maine Volunteers.
Chaplain E. G. Wilson, 9th New York Vols.
Lieutenant T. H. Hoge, 6th New York cavalry.
Assistant-Surgeon Charles Hoffman, 7th Ohio Volunteers.
Adjutant R. S. Sowers, 1st Virginia Cavalry.
Lieutenant-Colonel Aaron M. Stanton, 7th Ohio Volunteers.
Major A. Field, 1st Michigan cavalry.
Colonel T. A. Smyth, 28th Iowa Volunteers.

Absence without leave, as officially reported by the rolls of the regiments and otherwise.

First Lieut. S. S. Foster, 1st Iowa cavalry.
First Lieut. P. Stone, 42d New York Volunteers.
First Lieut. C. Bell, 124th Pennsylvania Volunteers.
First Lieut. F. B. Hawley, 14th Connecticut Volunteers.
Captain G. W. Bowers, 29th Pennsylvania Reserves.
Second Lieutenant A. A. Moore, 126th Ohio Volunteers.
Captain Hiram Hill, 125th Illinois Volunteers.

DECEASED.

Assistant Surgeon Cordelia Morrow, 45d Ohio Volunteers.

Conduct prejudicial to good order and military discipline, advising parolees men of his command to visit their homes without furlough.

Colonel J. F. Stanton, 67th Pennsylvania Volunteers.

EXEMPT FROM DISMISSAL.

First Lieut. H. T. Cox, 5th New York Cavalry, charged with offenses, and heretofore published, is exempt from being dismissed the service of the United States, the Military Commission, appointed by Special Orders, No. 353, series of 1863, from the War Department, having reported that satisfactory defense has been made in his case.

SENTENCES OF COURTS-MARTIAL.

First Lieutenant Husbands, 6th New York, has been cashiered for drunkenness while commanding the guard, and for breaking his sword. Sentence confirmed by General Schenck.

Second Lieutenant John D. Ellis, 134th N. Y. Volunteers, to be cashiered, for conduct unbecoming an officer and a gentleman, and for gross neglect of duty, and refusing to obey the orders of his superior.

First Lieutenant James Cain, 168th N. Y. Volunteers, to be dismissed the service, with loss of all pay now due, or which may become due, for absence without leave.

The sentences in the above cases have been approved by Major-General Hooker.

First Lieutenant John R. Brooker, Co. C, Provost Guard, Philadelphia, charged with violation of the 59th article of war, conduct unbecoming an officer and gentleman, and breach of arrest. Sentenced to be cashiered.

Second Lieutenant Michael Dougherty, of the 69th Pennsylvania, charged with absence without leave and breach of arrest. Sentenced to be cashiered.

Second Lieutenant Isaac Keesey, of the Columbia Troop, Independent Battalion Provost Guard, Philadelphia, charged with absence without leave and conduct unbecoming an officer, and found guilty of both charges. Sentenced to be dishonorably discharged from the service of the United States.

Surgeon Wm. H. Gobrecht, U. S. Vols., has been ordered to report to the Surgeon-General for duty.

Assistant Surgeon Wm. Thomson, U. S. Volunteers, has been ordered to report to the Surgeon-General

FRENCH AND ENGLISH ARMORED VESSELS.—The French semi-official *Press*, the leading daily paper of the empire, examines the positions of England and France in respect to naval armaments. "The opinion of all competent men," says the writer, "is that ships drawing but little water, with their lines which, coming to a point, may serve as a spur, are the best ships of war, for they combine speed and other nautical qualities with invulnerability. Such a vessel is *Le Solide*. It is a ship, as I have already said, of great merit, looks upon the plated fleet of England as of little value, and fears not even the *Warrior*. We are not quite of his opinion; the *Defence*, for example, is a veritable ship of war, and the *Achilles*, constructed entirely of iron, escapes defects resulting from a mixture of that metal with wood. England possesses to-day a fleet of 320 vessels of all sorts, but of these has only about 45th. But this difference in number is compensated by the fact that the enormous colonies to guard, and most of her vessels are engaged in protecting her coasts and her colonies. A great number of her fleet is composed of sailing and other vessels quite unfit for naval warfare. France has but a small colonial empire; her coasts are not very considerable, and she possesses the nucleus of a squadron, and ships of all qualities for the defence of her coasts. In this respect she has no reason to envy England. It is now known how the *Normandie*, the *Gloire*, the *Invincible*, the *Magenta*, and *Solferino* behaved in all weathers during their recent experiments. Yet these demented military force made no allusion to *La Gloire*, which has so fully answered all the expectations conceived of her, and the *Provence*, and *Heroine*, armored frigates. To these will soon be joined the *Venders*, *Gendene*, *Guyenne*, *Magnanime*, *Surveillante*, *Couronne*, and *Valmeree* frigates and 16 floating batteries either afloat or being constructed. To complete, we can add to the battle line the *Solide*, *univiseuls* or *unicirs* (wooden frame plated vessels), and 26 gunboats. England has not more vessels better equipped, to-day at the present, and we should congratulate ourselves on the activity which has lately been displayed since we completely equalized the maritime forces of two great powers."

"THE RIFLE AND THE MAN" is the title of a curious little book lately published in England. The book is a marketing to the soldier, treated of in simple prose, but explains in theoretical principles in the form of a didactic poem; as a matter of the following extract will answer. It is supposed to embody useful instructions to the rifleman as to being careful when loading:—

"Meanwhile, whence'er you find your grease box flown,
Rouse the butler in your mouth—enliv'n known
To do as well as when by perfect rule
And fit spittle of saliva and of lard,
Your bullet down the bore you drove hard—
Or shook it top, as money in the till—
Leave in the air a chance of moisture still—
Fortwirth repeat it! chance of moisture still—
And get a better exhaust from the store."

The work is, it appears, brought out under high military auspices.

LIEUTENANT J. F. Nichols, whose name has been brought before the public by the recapture of the steamer *Chesapeake* in Sanborn harbor, Nova Scotia, was one of the first to leave a lucrative business in the merchant service, and enter the Navy, to assist in putting down the rebellion. In command of the 2d cutter *Onward*, off the coast of South Carolina, he was an active and a strict disciplinarian. Afterwards he was in the Florida blockade, in the Western Islands and the coast of Brazil, in pursuit of the *Alabama*, and the *Sumter*. Upon the return of the ship to Boston, he was detached from the *Onward*, and was subsequently ordered to the command of the steamer *Cherokee*. While waiting for this vessel to be fitted up at the Charlestown Navy Yard, he heard of the capture of the *Chesapeake*, applied for permission to go in pursuit of her, was ordered to the temporary command of the *Ellis and Anthony*, and succeeded in recapturing the *Chesapeake*.

COMPLAINTS having been made to Major-General Banks that peaceable private families have been forcibly removed by visits of unauthorized persons, officers and soldiers of the Army and civil employees of the Government, he has ordered that hereafter no visits into the families of his Department, shall not be disturbed on the possession of their household goods for exhibition of written ord rs from proper military authority, or from an authorized agent of the Treasury Department.

A PAIR of 5-barn weighing twenty-four tons has been built at Birmingham, England, which the Russian Government, to be used in a large iron works in the neighborhood of St. Petersburgh.

1 Patent Capstan.
1 old Hawser.
A lot of Spherical Shot and Conical Shells.

And some other small articles which will be collected ready for examination previous to the day of sale.

Each vessel and lot of articles above-named will be sold separately, and where practicable, by the piece.

The Navy Department has reserved the purchaser to remove the wrecks from the Navy Yard basin, and the piers open for the removal of all other property contained in the above sale.

The same will be paid for at the amount of sale must be deposited with the Disbursing Clerk of the Yard at the time of sale, and in no case shall the property be delivered until payment in full in case of failure, will be forfeited to the Government.

No claim to a deficiency in the Government interest in any articles can be removed.

Every facility given and permission to examine the property, apply to the Commandant of the Gosport Navy Yard.

$2,000,000 LOAN OF THE COUNTY

OF NEW YORK.

Subscriptions are hereby invited to a loan of Two Million Dollars, authorized by an ordinance of the Board of Supervisors, approved by the Mayor, October 24, 1863, entitled "An Ordinance for the procuring of subscriptions for bounties for volunteers for the war with Rebellion," provided the same can be counted and allowed on the quotas of the several wards of the City of New York under the call."

The proper books for such subscriptions will be opened at the Comptroller's office, on and after Tuesday, the 17th day of November instant, and remain open until the whole amount is taken.

Subscribers will be required to deposit with the County Treasurer at the Bank of the Bank, within five days after entering their subscriptions, the amounts of their subscriptions, respectively, and on presenting his receipts for the money to the Comptroller they will be entitled to receive the bonds of the county, for equal amounts, redeemable on or before June 30th, 1868, with interest from the date of payment, at the rate of six per cent per annum.

MATTHEW T. BRENNAN, Comptroller.

CITY OF NEW YORK, DEPARTMENT OF FINANCE, COMPTROLLER'S OFFICE, Nov. 10, 1863.

SAMUEL V. NILES,

(Late of the General Land Office)

MILITARY, NAVAL, AND

PENSION AGENCY,

(Established in 1837.)

OFFICE AND RESIDENCE, 322 F st., bet. 20th & 21st sts., WASHINGTON, D. C.

Having had the exclusive charge of the "Revolutionary, and War of 1812, Bounty Land Bureau, General Land Office, for many years, and from which I derived the business of the various branches o this Department of the Government, such as "Commutation and Pensions," offers his services to the public as an Attorney and Solicitor in the following enumerated cases:

DEMANDS AND CLAIMS AGAINST THE GOVERNMENT

in all departments, especially claims growing out of the present war.

Particular attention given to Pensions due to Officers and Soldiers, Widows and Heirs of the late Army and Navy of the United States, and the widows, children, mothers and heirs of those who have died or may die hereafter from wounds and sickness contracted in the service.

Claims for indemnity for property destroyed, and claims of Loyal Citizens, Quartermasters, for Forage, Quarting and subsistence, &c., and for horses lost, killed or taken in the service, and for the Bounty Lands of Pay, and Prize Money due Officers, Soldiers, and Seamen of the United States, and their heirs and legal representatives.

Any business before the General Land Office, Indian Office, or other Departments, Congress, or the Court of Claims requiring the services of an Attorney, will meet with prompt attention.

REFERENCES.

PROPOSALS FOR BUNTING AND

DRY GOODS.

BUREAU OF NAVIGATION,

NAVY DEPARTMENT, Washington, Dec. 15, 1863.

Sealed Proposals will be received at this office until 12 M. of the 30th instant, for supplying and delivering the requisite supply of Bunting and Dry Goods for the use of the Navy, at the Brooklyn Navy Yard and the balance of the year ending the 30th of June, 1864.

Proposals must be endorsed "Proposals for Bunting and Dry Goods," addressed to the Chief of Bureau.

Each article to be included in these proposals are particularly described in the printed schedules, copies of which may be had on application to the Navy Agent, Navy Yard, Brooklyn.

All articles must be delivered to the Yard at the expense and risk of the contractor, in suitable packages with the name properly marked thereon. All the articles must be subject to the inspection and approval of the officer at the Yard, duly authorized to receive them.

Samples of the articles required by a written guaranty, as required by law.

Each proposal must be accompanied by a written guaranty, as required by law.

The successful bidder will be required to sign the contract, and their responsibility certified to by a United States District Judge, Attorney, Collector, or Navy Agent.

UNITED STATES

ARMY AND NAVY JOURNAL;

A WEEKLY NEWSPAPER, DEVOTED TO THE INTERESTS OF THE ARMY AND NAVY, AND TO THE DISSEMINATION OF CORRECT MILITARY INFORMATION.

The ARMY AND NAVY JOURNAL is established in the interests of no party; it will be controlled by no clique. Any communication will be received, dealing all personal and political bias. Its influence will be constantly directed to the inculcation of sound military ideas, and to the elevation of the public service to a true professional standard. It will be devoted to impartial military criticism by competent authorities, to the faithful chronicling of topics passing within the scope of its observation, and to a full and accurate record of all matters of interest to the army or navy connected with military or naval affairs. It will endeavor to be the organ of the best interests of Engineering, which now has no intimate or authorized connection with Literature, and to secure adequate attention in this connection, and the interests of correct information which have also been unrepresented there. Amongst other matters the columns of the JOURNAL will contain from week to week

A summary, in short, of whatever occurs in all parts of the world of value to our Army and Navy. To effect this it is opined to make the JOURNAL contain a digest of the military and naval news of the week, which will be carefully prepared from items culled from those interested in the Art of War, and to which the best of the foreign papers will be added. To this will be appended a digest of the army & navy & engineer & railroad & mining journal, which will be read with interest by the families and friends of those connected with the public service, and by the general public as one of the intelligent public.

The correspondence which Military and Naval officers have assumed in the United States imperatively demands that they should have the use of a first-class organ of representative, which, by its ability, entire impartiality in the discussion of subjects of interest to the public, its official recognition and thorough devotion to the National cause, will be a credit to itself, to the public and to the Army and Navy, and become a welcome guest at the fireside of every officer and seaman. The JOURNAL is established in obedience to such a demand, and in the full confidence that the prospectus so modest a paper which our soldiers and sailors will be glad to welcome. The JOURNAL, in short, will be found a paper which will possess no ability or any of its class in the world, and which every officer and seaman should be made welcome. Our correspondents will be found to be men of the highest culture and literary attainments, and the JOURNAL will assume as will assume to the Journal, circle and compare favorably with the ablest periodicals of the day.

From the numerous expressions of approval the ARMY AND NAVY JOURNAL has awakened in the Army we select the following:

From Major-General GEORGE G. MEADE.

"I like your prospectus, and wish your JOURNAL success."

From Major-General JOHN A. DIX.

"I will send the money for the JOURNAL as soon as I receive a bill. It affords me much pleasure to recommend the ARMY AND NAVY JOURNAL to the favorable consideration of the public. I think the opportunity to express my gratification that the design of the JOURNAL is so good."

From Major-General JAMES S. NEGLEY, *General Division Pennsylvania Reserves.*

"I perceive my personal and official interest in your JOURNAL will be appreciated, and I therefore enclose the amount for one year in the Army and Navy Journal."

From Prof. H. CORTEZ, University of Pennsylvania.

"A good project and will likely succeed. I will forward further order within my knowledge has been a failure; but yours appears to be a fair one. Should it be carried out as projected it should be taken by every army officer in the field, in garrison, and in quarters. It will be taken by all officers; and our more intelligent private soldiers and sailors will be glad to subscribe for it. It will be a credit to the country and to the profession, and a source of pride to the higher order and interest. Its articles are from the pens of writers of ability and experience, and will be read by practitioners in our Military and Naval academies. As proof of the interest I take in the JOURNAL I forward you a check for ten dollars in it. YE NOTHARD, 122 Chestnut street, Philadelphia."

From the New York Commercial Advertiser and the Boston Post.

(NON-VETERAN).

The new ARMY AND NAVY JOURNAL has proved a success in the start, and will undoubtedly be a success. It is well edited, and liberally conducted, the paper looks like to be a credit to the country and to the profession, and a source of pride to the higher order and interest. It

A. R. POTTS, Proprietor.

REVERE HOUSE,
BOWDOIN SQUARE,
AND
TREMONT HOUSE,
cor. of Tremont and Bracon streets, Boston.
The most centrally located First Class Hotels in the city. Stood favorite resorts for Officers of the Army and Navy have been refitted in the most thorough manner for harmonious comfort and economical living are still unsurpassed in the country. Mr. Revere himself, and the Proprietors of Tremont House, are now under engagements to remain
BINGHAM, WRISLEY & CO.

TREMONT HOUSE, CHICAGO, ILL.
Situated on the corner of Lake and Dearborn streets (Rebuilt, remodeled and refurnished in 1863.)
In accordance with the modern improvements, and is one of the best appointed Hotels in the country.
This Hotel is a favorite resort of the officers of the Army and Navy, and for SOLID COMFORT and SUMPTUOUS LIVING is unsurpassed by any in the Northwest.
GAGE & DRAKE, Proprietors.

ASTOR HOUSE,
STETSON & CO.,
PROPRIETORS,
Broadway, NEW YORK.

BURNET HOUSE,
CINCINNATI, OHIO.
S. P. SAUNDERS & CO.,
Proprietors.
The Burnet House has been thoroughly repaired, refurnished and refitted throughout, and the proprietors propose, by attention to business, to merit and obtain the liberal patronage heretofore extended by a liberal traveling public.

GALT HOUSE,
LOUISVILLE, KY.
SILAS F. MILLER & CO., PROPRIETORS.
We take great pleasure in calling the attention of Army and Navy Officers, and the traveling public generally, to the well-known house, still under the superintendence of the popular Miller, who gives his personal attention to the business, and spares no pains to make it one of the best hotels in the comfort of its guests.

EUTAW HOUSE,
BALTIMORE, MD.
R. B. COLEMAN, Proprietor.

UNITED STATES HOTEL,
PENNSYLVANIA-AVE., (near the Capitol),
WASHINGTON, D. C.
M. B. HEAD & CO., Proprietors.
We take pleasure in calling the attention of ARMY and NAVY OFFICERS, and business men generally, to this hotel. The Proprietors spare no effort to make their part to make guests comfortable.

MILITARY GOODS.
W. J. SYMS & BROTHERS,
300 Broadway, New York,
Importers and Manufacturers of
PRESENTATION SWORDS, SASHES, BELTS, EPAULETTES, CORDS, PISTOLS, AND MILITARY GOODS.
Every article in the military line, wholesale and retail.

UNITED STATES 5-20 BONDS.
United States 7-30 Treasury Notes,
United States Compound Interest Notes,
United States Certificates of Indebtedness,
Gold, Silver, Uncurrent Money, Exchange on all parts of Europe and Northern California,
BOUGHT AND SOLD BY
JAY COOKE & CO.,
We are authorized to furnish 5-20 bonds at par. Orders for bonds will be executed in order of time received, and delivered at once.
No charge for commission.
RITTENHOUSE, FANT & CO., Bankers,
302 Pennsylvania Avenue, Washington.

FRICK'S UNITED STATES
MILITARY AND NAVAL AGENCY.
Commissioner for all the States.
Established in 1846.
Bounty, Pay, Pension and Prize Money Claims.
JOHN H. FRICK, Esq.,
Office, No. 223 Dock st., op. Exchange,
PHILADELPHIA, PA.
Refers to Gen. Winfield Scott, Washington, D. C.
For Pensions, Bounty, Prize Money, Claims, for Soldiers, Sailors, Marines, Widows, Orphans, States, Widows, and others, promptly collected.
REFERS TO 800 OFFICERS.

SWORD MANUFACTORY.
GEORGE D. SIMONS & BRO., SADDLERY STREET HALL, Sansom street, above 8th, Philadelphia, Manufacturers of Fine Swords of every description, and dealers in every variety of Military Goods. Also, Importers of Fine Cutlery, &c. Staff, Field and Line Officers' Swords, Sashes, Belts, Epaulettes, &c., &c. Swords repaired, tested, and manufactured from all the Celebrated Sword Blades. Swords, Sashes, Belts, &c., furnished on a Harrison, of London. Also, all the home fabrics of Sheffield, Solingen, Paris, &c. Agents for Army and Navy Officers and Sutlers supplied by express.

MILITARY DEPOT.
BENT & BUSH,
Cor. COURT and HANOVER STREETS,
BOSTON,
Manufacturers, Importers and Dealers in every description of MILITARY GOODS, consisting of Caps, Belts, Shoulder-straps and Cap Ornaments, and every style of Staff, Field and Line Officers' Swords.
Officers of the Army and Navy, visiting Boston, are respectfully invited to call and examine our stock.

SMITH & SPALDING,
(Late James S. Smith),
Nos. 15 Dutch and 260 Broadway,
NEW YORK.
BEAUFORT, S. C., and 27 WICKSBURG, MD.
Manufacturers of and dealers in
ARMY AND NAVY GOODS,
Swords, Belts, Sashes, Shoulder Straps, Cords, Spurs, Caps, Hats, and Belts, Plumes, Sword Knots, &c., for Officers of the Army and Navy.
Also, Dress Coats, Pantaloons and Full Dress Suits, Gold Shoulder Straps, Embroidered Shoulder Straps, Embroidered Stripes, Embroidered Shoulder Straps, Embroidered Stripes, Gold Epaulettes, Gold Lace, Gold Buttons, Gold Bullion, Gold Cord, Gold Tassels, Gold Fringe, Gold Aiguillettes, Gold Sash, Gold Belts, Gold Sword Knots, Gold Hat Cords, Gold Hat Ornaments, Gold Hat Trimmings, Gold Hat Bands, Gold Hat Loops, Gold Hat Tassels, Gold Hat Plumes, Gold Hat Pompons, Gold Hat Cockades, Gold Hat Feathers

ARMY AND NAVY JOURNAL.

GAZETTE OF THE REGULAR AND VOLUNTEER FORCES.

THE MILITARY SITUATION.

NO important changes in the position of military affairs have taken place during the past week; but rebel papers contain intimations of an intended Union expedition from Charleston, to be composed of land and naval forces, which may soon break up the dull monotony of the siege. The object and destination of this expedition have not yet been made public, and it is useless to speculate upon them. It appears from Southern papers that the rebels anticipate an attack upon Wilmington, or an attempt to sieze some point on the railroad between that city and Charleston, to serve as a base for land operations against the latter.

Richmond papers of the 15th inst., state that up to the 14th the bombardment of Charleston was progressing with increased vigor, several new Parrotts having been opened upon the city from Fort Gregg. During the 12th and 13th, 47 shells had been fired at the city, but with what effect is not mentioned.

On the 30th ult., a skirmish occurred near St. Augustine, Fla., between a small guard of the Tenth Connecticut and the Twenty-fourth Massachusetts and DURESSEAU'S rebel cavalry. The guard was protecting a body of men employed in cutting wood for the garrison, but allowed themselves to be surprised and defeated. Lieutenant WALKER, the commandant, was killed, together with twenty-one of the Connecticut regiment and four of the Massachusetts.

A FORCE of about 200 rebels, on the night of the 14th inst., attacked a small body of Union Cavalry at Three Mile Station, near Beaufort, Va., but were repulsed, after several desperate charges, and retired, leaving three dead and twelve wounded.

A UNION force, consisting of 300 infantry and 130 cavalry under General MANSON, started on the 12th from Point Lookout for a raid into Westmoreland, Northumberland and Richmond counties, Va., on which they were gone three days. In that time they destroyed large quantities of rebel supplies, several tanneries with all their stock, burned a bridge at Farnham's Creek, and returned with twenty-five prisoners, and a number of horses, mules, cattle and sheep, losing only one man killed. Commodore PARKER, of the Potomac Flotilla, rendered essential service to the expedition.

THE rebel General VANCE made a raid on the 14th inst., towards Temoville, Tenn., and captured a train of twenty-three wagons. He was promptly pursued by Colonel PALMER, who recaptured the wagons, took no ambulances loaded with medicines, 150 saddle-horses and 100 stand of arms. General VANCE himself, his Adjutant-General and Inspector-General, were among the number taken prisoners.

THE town of Madisonville, La., on Lake Pontchartrain, has been captured from the rebels without resistance, and is now garrisoned by our troops.

THE new first-class rebel steamer *Dove*, was on the 6th inst., run ashore by her captain, off Wilmington, in order to avoid capture by the United States steamers *Montgomery* and *Aries*. The *Dove*, which was on her first voyage, makes the twentieth steamer destroyed or captured off Wilmington since last July.

THE SPEED OF NAVY VESSELS.

MR. DICKERSON must be congratulating himself upon the success of his newspaper controversy with the Engineering Bureau of the Navy Department; for he has accomplished what he doubtless sought—personal notoriety. Captain FOX, the Assistant Secretary of the Navy, has so far noticed the assailant as to propose, in a letter to Mr. GEORGE W. BLUNT, which was read before the New York Chamber of Commerce on Saturday of last week, a trial of speed between the *Eutaw*, one of the new navy-built double-enders, and the "fastest side-wheel steamer in the "country—foreign or American." The Chamber did not receive the proposition with favor, and gave no encouragement that the challenge would be accepted. But Mr. DICKERSON, of course, seized the opportunity to inflict another of his letters upon the public. He offered, if the owner should consent, to run against the *Eutaw*, the *Kin Kiang*, a fast boat, built for Messrs. OLIPHANT & Co., and whose engine he claimed was "made from his drawings where it differs "from other engines in common use." His stake he fixed at $10,000, and the Sanitary Commission was to receive the money. With some talk about his "cut-"off" his letter closed. Unfortunately, however, for this attempt to make capital out of the *Kin Kiang*—which is certainly a vessel of fine speed, built by Messrs. SECOR & ENGLIS—Mr. JOHN BAIRD, the superintendent of construction for the owners of the *Kin Kiang*, publishes a letter in which he says that the speed of the boat is due "to the happy accom-"modation of the various improvements in the engine "department and model of her hull;" that though she has the "SICKLES cut-off," the merit of speed does not attach to that, except in proportion to other things introduced; and that finally "Mr. DICKERSON never "made a drawing of any kind for the *Kin Kiang*." To this Mr. DICKERSON must reply, and explain that though he did not make the particular drawings, he did make the originals, which were reduced and from them a set of patterns made. His arrangement he claims saves the vessel one-quarter in the consumption of coal, and is the only improvement in the engine. The value of this claim the general public may not know; those who are acquainted with the engineering history of Mr. DICKERSON will not be misled by it.

Commodore CRAVEN appears in the controversy by the publication of a card, in which he defends the Navy steamers from the sweeping charge of entire deficiency of speed. He avers that there are many steamers belonging to the Navy which can steam eleven and twelve knots per hour with ease. The *Tuscarora*, recently commanded by him, would steam eleven knots with sixty revolutions, and could keep up that rate as long as he wished. Though he never had occasion to try her maximum speed, the Engineer believed she could make seventy-five revolutions. The *Kansas* could make thirteen knots, and so with a number of other ships of same class, which could be mentioned if necessary. He adds that in a race with a Spanish squadron of nine vessels, both side-wheel and screw, the *Tuscarora* beat all but the side-wheel frigate *Isabella II.*

A special agent of the Navy Department—Mr. E. A. RUTHERFORD—was sent to inquire of the owners of the *Kin Kiang* as to the construction of her engines and the probability of their allowing a trial of her speed with that of the *Eutaw*. He was told by them that Mr. DICKERSON had never at any time been entrusted with the getting-up of the drawings of any portion of the vessel's machinery; that Mr. DICKERSON had nothing whatever to do with superintending any portion of the engines of the ship; that he was merely the agent or present patentee of the "SICKLES cut-off," which was introduced by Mr. BAIRD without consultation with anybody; that they knew nothing of Mr. DICKERSON personally; and finally, that it would not be convenient to spare the vessel for the trial trip proposed.

Mr. DICKERSON had called the *Eutaw* and the other double-enders mere "ferry-boats." To this Mr. RUTHERFORD responds, "that they are very large "side-wheel steamers, 240 feet long, 35 feet wide, and "12 feet deep. The fact of their having a rudder at "each end seems to me to be the only attribute of a "ferry-boat possessed exclusively by them."

And here the matter rests, and we hope it will go no further. Let the Navy Department build its vessels on the best models it can find, thoroughly and honestly test the different theories of construction, and then leave the actual performance of the steamers at sea to be their judge and vindication.

COMMANDER SCOTT, of the British Navy, denounces the principle on which armor is applied to ships, contending that the plates should be affixed to the inside, and not outside, of the vessel. He claims that by this arrangement the task, which now forms the backing, would serve to check the impulse of the projectile, and avoid the splinters which are so destructive at present. Mr. SCOTT advocates a very plausible theory, but late experiments in this country do not sustain his position. A system of armor-plating ships like that proposed by Mr. SCOTT, invented by Mr. HEATON, of Illicois, has been tested by the Government, and the report is unfavorable. A single shot striking wooden planking would undoubtedly carry a splinter before it, and prevent penetration into the iron plate behind; but in a contest of some duration, outside wooden planking, we judge, would be torn off by shells, leaving the plate behind completely exposed. The British armor ships are all double-plated; the thick plates are outside, then comes a backing of teak wood, and lastly a plating of 1-inch iron. It has also been found, by experiment, that with a backing of 18 inches of teak, with plates of 4½-inch iron, greater resistance is effered to shot than with plates 5½ inches in thickness, with 9 inches of teak behind. The wooden backing acts as a cushion in resisting the impact of heavy shot. The question of armor-plating, however, is one respecting which much has yet to be learned.

THE speed attained by navy-built vessels has been contrasted unfavorably with that reached by those of private construction. In some cases there may be ground for the charge, but it cannot with truth be asserted against all navy-built vessels. Official reports show that the *Sassacus* has attained a maximum speed of fifteen knots an hour, at a time when she had on board a full battery, was full of coal, and had over two months' provisions; that the *Eutaw* has made the same time against the tide; and that the *Agawam*, under unfavorable circumstances, has attained a speed of twelve knots; and that the *Wateree* averaged ten knots when passing through ice several inches thick, and constantly obstructing her passage in large fields.

ENGLISH AND AMERICAN GUNS.

WHEN our present war commenced, three years ago, there was not a single rifled cannon in the American service, and with the exception of a very limited number of bronze field pieces, all the others were cast-iron smooth-bore guns, the largest for the Navy being of 11-inch calibre and chiefly designed for shells. They were cast solid and afterwards bored out in the lathe. The only change lately made in the fabrication of such ordnance has been to increase their size and give them a bore of fifteen inches; making their length fifteen feet, and weight twenty tons. Instead of being cast solid, however, they are made with a core, and cooled from the interior with a current of water, upon ROMMEL'S principle. It would scarcely be possible to obtain a sound casting of all a size, unless thus cooled in its interior. Such guns are certainly the largest modern cast-iron ordnance in the world; but as to their being the best and most destructive cannon for practical warfare, is not pretended. One object sought to be secured in constructing them was to allow a large area of projectile to be exposed to the expansive force of the powder; but as the weight of spherical projectiles increases according to the cube, the 15-inch guns are comparatively weaker than our eleven, ten, nine and eight inch cast-iron smoothbores; hence proportionately smaller charges of powder must be used in them. For shell firing at short ranges and against wooden vessels, however, they are most destructive engines of war, while they are not so effective against fortifications and armored vessels.

The only other American guns now requiring special notice are the rifled Parrott, because the smooth-bores and these are almost exclusively used in the Army and Navy. This gun is well known, and scarcely needs description. It consists of a cast-iron tube or barrel, having a wrought-iron band shrunk on it for the reinforce, and a solid wrought-iron plug at the rear. The cast-iron body or cylinder is bored through, and while the band is being shrunk on, the body is rotated and cooled within by a current of water. This mode of constructing banded guns is according to two patents granted to Capt. R. PARROTT in 1861 and 1862, and the system is undoubtedly excellent. Such banded guns are very strong in proportion to their weight, and for range and accuracy they far surpass the smooth-bores. A 10-pounder of 2.9 inches bore has a range of 600 yards at an elevation of one degree; a 100-pounder of 6.4 inches bore has a range of about 1,450 yards at an elevation of three and a quarter degrees. The 200-pounder Parrott is an 8-inch bore, and the 300-pounder a 10-inch bore. The 150 and 200-pounder Parrotts constitute very superior siege guns, as their ranges exceed three miles, and they are made of 42 calibres.

As in our Army and Navy, so in the British, there are only two classes of guns generally used. These consist of cast-iron smooth-bores, ranging from twelve pounders up to ten inch cannon, but the 8-inch or 64-pounders have hitherto been considered the very best in the British Navy, and it is generally admitted that British cast-iron ordnance is much inferior to the American. The Armstrong guns is the other class now to be noticed, because these and the smooth-bore cast-iron guns only are used in the British Army and Navy. Each Armstrong is constructed with coils of wrought iron formed into cylinders and built upon an interior tube, and each has a moveable breech piece for charging at the rear. More than two million pounds sterling have been expended by the British Government in the manufacture of these guns, and they have been extensively introduced into the Army and Navy. But after a thorough trial, they have lost their former reputation, as their breech pieces blow out; and as regards penetrating power, they are inferior to the smoothbore 68-pounder. As for rapid use as it relates to the two classes of guns that are used almost exclusively in the English navies of both countries, there can be no question of the fact that the American guns are superior to the British.

Quite recently SIR WILLIAM ARMSTRONG has constructed a 131-inch gun, which has been called "Big Will," but it is a muzzle-loader, and not a genuine Armstrong. It appears to be very strong, as it has been fired with 70 lb. charges of powder and 600 lb. elongated projectiles. At a distance of 1,000 yards it smashed the *Warrior*, a target of 4½ inch plates and a thick backing of teak, as if it had been pasteboard, and there can be no question about its destructive power, but as to its endurance, this has yet to be tested. It undoubtedly far excels our 15-inch cast-iron ordnance, but a gun constructed upon the banded principle of the Parrott pattern, of the same calibre and weight, would, in our opinion, equal if not surpass it in destructive energy, range and endurance.

In England there are several manufacturers of cannon, who have not had the good fortune to receive Government patronage, and consequently their guns have not been introduced into the British service. Mr. WHITWORTH, of Manchester, has lately adopted the Parrott system, in forming his guns with a screw plug on the breech, and a tube bored from end to end for the barrel; but these require no further notice. CAPTAIN BLAKELEY is the most distinguished private manufacturer of rifled guns in Europe. In almost every respect his guns resemble the Parrott pattern, each being formed with a strong banded reinforce. In some respects his guns are superior to all others. The tube of each is formed of soft steel, as also is the band, and the tube is much stronger than those of any other large bonged guns. Wrought iron does not possess the strength or ballistic quality of steel; hence it is liable to stretch and take a permanent set when exposed to severe pressure. The Brooke gun of the Confederates is made upon the Blakeley pattern, with inferior materials.

In constructing guns, the strongest metal should be employed, and as steel surpasses iron, it is certainly the best material for the purpose. A manufacturer of small arms would be considered insane who would use cast-iron for his musket or rifle barrels. In Prussia, H. KRUPP has lately made a number of rifled guns for the Russian and the Prussian Governments. We understand that they are first cast hollow, then each is placed upon a mandril and subjected to the action of a powerful steam hammer. This mode of construction will make very superior steel guns, especially if they are tempered in oil. But the Blakeley guns appear to be equally as good, and as several 600 and 700-pounders have been made, it is reasonable to conclude, without a trial, that they would smash the *Warrior* target as effectively as SIR WILLIAM ARMSTRONG'S new 131-inch shunt rifle.

We have thus described all the prominent American and English guns, and there can be no doubt but our Army and Navy are at present furnished with the greatest number of the best ordnance. At the same time, it appears to us that as good guns are made in England as here, but Captain BLAKELEY is not in the Government ring.

A GLANCE ABROAD.

To judge from the threatening aspect of affairs in almost every part of the world, it would seem as if mankind had come to the conclusion that all the petty hostile national difficulties was to fight them out. In Europe, the peaceful methods of conferences and congresses appear to have become entirely obsolete. This is the popular, and not the royal view, and may have been caught from our own example, as the first French revolution was from the American. Glancing at Germany, we behold the singular spectacle of peoples harassing their monarchs into wars, which those monarchs are striving by every expedient to avoid. Take, for instance, the Schleswig-Holstein question, which appears to be in fact a question of race, and not of popular interference, it could have been amicably adjusted by the parties to the treaty of 1852, and the affairs of the turbulent little Duchies could have jogged along in the old monotonous way, and nobody would have been any the worse. But the fatal marriage, as we have already said, gave rise to subtle and so powerfully awakened by the prospect of the completo union of the Duchies with the German Federation, that their rulers became alarmed for their own safety, and resolved to fall in with the movement, in order to control it for their own advantage, as well as to prevent the peace of the rest of Europe. To satisfy the popular desire for national unity, Austria and Prussia consented to the Federal occupation in Holstein, but placed the troops sent into the Duchy under the control of their own Generals, with strict injunctions to act in the name of the King of Denmark. The volunteer bands which had collected at Hamburg and other places near the border, for the purpose of assisting a revolutionary movement in the Duchies, received a significant warning that no such interference would be tolerated. The Emperor of Austria and the King of Prussia, so far from sharing in the popular enthusiasm for the Duchies, have probably deferred to the general unanimity only to prevent a popular outbreak, which might result in a complete revolution, and the formation of a great German Empire or Republic. In all that affects their subjects and their rights, yet prove unavailing, for Germany is in that feverish, unsettled state which has always been the premonition of a popular outbreak.

Hungary, also, appears to be upon the verge of revolution. Bad harvests, heavy taxes, and the oppressive administration of an unpopular government, have contributed to swell the national discontent and prepare the people for revolt. KOSSUTH has issued one of his eloquent proclamations —at a safe distance from the scene of probable danger—in which he urges the Hungarians to rise and shake off the detested yoke of German domination. More than this, a National Committee has been formed in Hungary, similar in character to the secret government in Poland, and this committee has already caused a national manifesto to be circulated in the Banat and Transylvania, by the Emperor. It has produced an immense sensation in Austria, as well as in Hungary, and stringent measures are being taken by the EMPEROR to avert the threatened calamity. But with all his energy and all his ample means for the repression of a revolutionary movement, the situation of his Empire is grave. The *Presse* of Vienna admits that Austria is threatened by the storm from every side. In the east it is an insurrection; in the west a conqueror under a peaceful mask; in the south, Italy, her longing eyes fixed on Venice; in the north, Russia and in the midst of Germany an extraordinary popular ferment.

If we cast our eyes towards India, we shall find that English rule in that country is again seriously threatened, this time by an insurrection among the warlike mountain tribes of the North-western provinces. The English accounts state that the British troops have lost heavily in several engagements with the insurgents, and that the insurrection continues to spread with alarming activity. Though these accounts are too meagre to justify speculation as to the extent to which the movement may spread, we may safely assume that it will be eventually put down as marvellously and as effectually as was the Sepoy rebellion. The English never handle rebels with gloved hands.

We need only allude to the civil war in Japan, which the Daimios, who represent the popular hostility to foreigners, are waging against the TYCOON, who is willing to cultivate friendly relations with the outside world; to the sanguinary strife which desolates the vast Empire of China, the ferocious character of which appears to increase with every year; or to the petty but fierce contest in New Zealand.

In Mexico, we can as yet discern no signs of the approaching reign of peace and good will which was promised by the French as soon as they obtained possession of the country. On the contrary, the Mexicans appear to resist with as much bravery as at first the attempt of the invaders to trample their independence in the dust. Even the ecclesiastical party are behaving unhandsomely towards their deliverers, and the Archbishop has placed the French army under the ban. On one Sunday, says a correspondent of the *London Times*, he ordered the principal entrance of the Cathedral to be closed against the French soldiers, and the French commandant only obtained the keys by threatening to burst in the doors with cannon shot!

Thus, wherever we turn, we hear the din of battle, and behold the progress of hostile preparation. The spirit of war appears to be as prevalent now among the nations as at any previous time in the history of the world.

THE MILITARY EXHAUSTION OF THE SOUTH.

The Richmond correspondent of the London *Times*, in a recent letter, derided the idea that the military and other resources of the Confederate States are becoming exhausted, and asserted with great confidence that as far as material was concerned, they were in a condition to resist for years. But the Richmond papers tell a different story. Their comments on the situation of affairs in the South tend to confirm the impression, which has been received through other sources, that in the approaching campaign the rebels will not only have to contend with the replenished armies of the North, but also with domestic embarrassments of a very serious and perplexing nature. By their own confession they are beset with dangers from which there seems to be no way of escape except by expedients which threaten to end in worse evils than those from which they seek to fly. One of the most serious dangers is the want of food. Confederates are exposed to the failure of the supply of shoes and clothing. The reinstatement of our veterans excited as much alarm throughout the South, that the cry was universal for larger armies, and it was proposed to force the conscription into the ranks, with the exception of those detailed for civil and industrial duties. But the Richmond *Whig* of January 1st shows that it is with the utmost difficulty that the present armies can be even scantily clothed. Three thousand men in LONGSTREET'S corps alone are shoeless; and there is the united distress in the armies of LEE and JOHNSTON resulting from the lack of blankets and socks. The stringency of the Wilmington blockade, reluctantly acknowledged, precludes the hope of obtaining supplies from abroad, and domestic resources are rapidly decreasing. Cattle-raising are slaughtered every year, and it is feared that they will have to kill back upon their cows. As the supply of cattle diminishes, more mutton will be used, and hence wool as well as leather will continue to become scarce.

The food question is not less threatening. Besides losing East Tennessee, on which they relied mainly for supplies, the South has feared to compel the slaves to labor. The discipline of the plantations, entrusted to boys and aged men, has become so lax that production has steadily diminished during the past year. As the *Whig* continues, the prospect of feeding the army already in the field, much less one twice or thrice the size, is not encouraging.

More than this, there is an enormous deficiency in *material*. With great difficulty a sufficient number of horses to barely serve the existing armies is obtained. GRANGER'S enormous loss of guns at Vicksburg, added to BRAGG'S at Chattanooga, and LEE'S loss of muskets at Gettysburgh, must have left a bare sufficiency of both to supply present needs, and to make good the annual wear and tear. There has never been a superabundance of ammunition at the South; and since the effective blockade of Charleston and Wilmington, and the loss of the nitre beds of Tennessee, it is not likely that the rebels will ever have more than a sufficient supply for their present armies.

The present condition of the railroads in the South is a further source of alarm. Subjected, without repairs, to con-

stant and heavy service ever since the war commenced, these great arteries of communication are giving indisputable signs of decay. The rate of speed has been reduced to five or eight miles an hour, and their condition is so precarious, that nothing but prompt action will save them from becoming worthless.

In view of all these facts, we are not surprised that the proposition to increase the army to three times its present size should create alarm in the rebel States. The Richmond *Whig* concludes a most sombre view of the situation, with reflections which find an echo in every considerate mind at the South:

"Thus, in the last analysis, we find we have an unemployed wealth, scantily fed, indifferently equipped, badly mounted, with insufficient teams, and with barely enough ammunition. Against the evil, we have a small but doubtless, as if possible, quadruple the number of men and horses,—taking away every efficient master from the agricultural districts, and leave the laborers, as a rule, poorly fed and horses ripped for existence, a prey to natural idleness, and with every inducement to revolt. If this be not judicial madness, the history of desperate measures afford by feeble and afflicted councils does not present an example."

But, notwithstanding these evidences of exhaustion, we are not to expect that the South will make a weak defence. Her leaders are preparing with all the energy of despair for the approaching campaign, on which, there is every reason to believe, they have resolved to stake the fortunes of the Confederacy. Whatever may be the amount of distress among the people, the rebel army will be clothed and fed, and its diminished ranks will be filled up by a merciless conscription. Late advices from Richmond bring us intelligence of the repeal of the substitute clause,—an act which renders every man in the States now under rebel control, capable of military service, liable to draft; and, though thousands will in various ways avoid the demands of this act, yet it cannot fail to increase the rebel armies in an effective manner. The disaffected portion of the insurgent populace will not be able to resist successfully the military arm of the Government. We must expect, therefore, that the spring campaign will find the South, as a military power, no less united and formidable than she was when she made his first advance into Maryland; but with this great difference in circumstances, that the resources of the South have so near reached the point of exhaustion that a decisive Union victory over Lee or Johnston would present more obstacles to the rebel cause than any defeat which they have hitherto sustained; and it might prove to be its overthrow.

CORRESPONDENCE.

THE ROBERTS' SHOT AND SHELL.

To the Editor of the Army and Navy Journal:

SIR:—A pamphlet, descriptive of this so-called invention, is now before me, and with it, through your columns, is again how far the claims of this inventor have been substantiated by experiment.

As I understand the claim for improvement, it consists in a compound shot, the after part being composed of lead and antimony, and adapted to fit with the expansion on the rifling face of the cast iron head, securing adhesion to it by the shape of the parts, and presenting an elongated surface to the opposing grooves of the rifling of the gun, which is effected through the expansive action of the gas after on the rear of the shot.

Whereas this differs from other patented shot, SAWYER'S, for instance, I cannot see. In the latter, a soft metal for the whole length of the cylindrical portion of the shot, takes the grooves of the gun, precisely as this does, to prevent windling motion, centre-distinguished from the PARROTT and other shot, which rely on the friction of the grooves alone, to the rear and holding to the cast head, it appears to me no more certainly effected by this than by other plans. If experiments have established its superiority, that is another matter, but without the result of experiment to sustain this claim, there is nothing so new in the forms as shall beyond all question prevent windling motion, and so fulfil one of the claims in course. They are:

"First—A more perfect check on windage." This is by no means the fact. The HOTCHKISS and SAWYER shot have not failed in this respect, and the methods used by these inventors are certainly superior to the Roberts' shot.

"Second—A more effective hold in the grooves of the gun, securing with unerring certainty rotary motion." This claim is not new, nor to the point. The PARROTT shot, as that was first used with lead alone, subsequently a composition of greater tenacity.

"Third—Greater precision of fire, effected by the more perfect check on windage, and the avoidance of any wabbling motion, as the shot flies, from its proper contact with the axis of the centre. This jacket takes the grooves the whole length of the cylindrical portion of the shot which it covers, so that it is impossible for the shot to get out of coincidence with the axis of the gun, and rotates around its own long axis." This is a claim for improvement in the regularity that can cause drift or deflection of the shot in the line of flight.

There is nothing new in this. The PARROTT shot and those forms of SAWYER'S projectile, rifle only at the end, and may be liable, theoretically, to this objection of a wabbling motion, but if so, it is inappreciable in practice; and to the claim that there can be no horizontal drift, or deviation from the plane of fire, General ROBERTS should be better read than to make such a claim. He well knows that all cylindrical projectiles, by the action of the rifling principle, have what is called *drift* in the direction of the twist of the grooves in the gun, and irrespective of any imperfection in the rifling, or stoppage to the windage. The more perfect the rifling and accuracy of the fit to bore of the gun, the more certain the horizontal *drift* or deviation.

"Fourth—No portion of this shot except the leaden jacket comes in contact with the bands and grooves of the gun, or its chase, and of course causes them little or no wear and tear."

This is also true of the HOTCHKISS and SAWYER shot.

"Fifth—It can be used in guns of the softest composition, and avoids the necessity of cast steel or wrought iron material, a consideration of great importance in the economy of the manufacture and cost of rifled guns."

General ROBERTS must know that the necessity for the use of cast steel or wrought iron in the manufacture of guns, has no reference whatever to the wear of the guns, but is wholly with a view of their strength against the explosive force, with either the same or a less weight of gun. As SIR WILLIAM ARMSTRONG'S construction fixes that, in enabling the Government to use our guns more reinforced and rifled, but whereon the advantage is confined to such as may be fired with heavy charges.

"Seventh—This shot effectively ranges as long distances as projectiles can be made to fly, *because* it does projectile duty in the air, and is not retarded in its flight through the gun as the strength of the piece will bear without danger of bursting, by the compression of the gases before they overcome the inertia of the leaden jacket in the grooves."

It would appear from this, that General ROBERTS is of the opinion that the windage may be reduced to such a degree as to endanger the bursting of the gun. If this be so, the shot ingenuity of the present age must soon—may be—become jammed in the gun, and be productive of more mischief than it is designed to obviate.

"Eighth—Greater accuracy." This is of no consequence unless it has other advantages.

The shot of ROBERTS may *be* as efficacious as others, which use alone can determine, but it has nothing, as before remarked, to recommend it beyond many others now in use.

THE ROBERTS shell is open to the same objection as the general proportions and arrangements, but it is provided with a steel point or cone, communicating with the charge, and shaped after it is in the gun, by the rear gas; this latter fact forming the basis for a claim in its favor over all others. More than five years ago, I saw precisely this arrangement in a shell that was fired from a rifle practice: it is found of any value whatever. The percussion shell is no longer in favor, from the fact that not one shell in twenty will penetrate to fire the charge before being be so perfect as possible. The *concentric* shell has taken its place, and an improvement upon it, ROBERTS' may possibly give the precision necessary for the absolute efficiency of percussion shell; and as to the security of steamers, magazines, &c., in the Government service, a shell can be exploded by the striking of a solid shot on any part of its surface? This is the fact, however, and his shell uncapped will be just as liable to explode by the concussion of boxes from the shocks of a shot, as if it were capped. All the advantages of this shell are due to its peculiar adaptation to the destruction of iron-clads and defensive works of masonry: amount to nothing whatever; the peculiarities claimed consist in points in common with other projectiles now in use.

ROBERTS' CUPPED CYLINDRO SPHEROIDAL BULLET for firing in smooth-bore muskets. This bullet consists of the head of a spherical ball placed upon a thimble, whose length appears to be about half the calibre of the piece. The thimble affords room for the powder charge, and so far as it furnishes a back and ball cartridge, is all well enough for that kind of fire at short range; but what is there that the expansive action of the gas, from the inside of the thimble, forcing it out, and closing the windage of the piece, will injure so little as the spherical head, with its greater range and precision of fire than in a rifle, owing to the fact that its centre of gravity is in the head of the bullet, and as he scientifically explains, this claims what all experiments in the use of smooth-bores, falsifies.

The range of the bullet will be greater than in ordinary bullet in smooth-bore muskets on occasion, but that it will preserve its point forward with more certainty and precision, is, as before remarked, a fallacy, which established principles of projectiles, both theoretical and practical. If General ROBERTS' claim be a sound one, and as he says "in the case of a round ball, the centre of gravity of his shot is "and shell, to multiply the projectile power to any desired "degree," and another centre of gravity being placed in the "head of the bullet, the ball will be driven from the barrel "point foremost, and its range and accuracy of fire, why does he not dispense with rifling his cannon? If the principle be correct in the one case, why not in the other? Even the King General ROBERTS appears to have lost sight of in this smooth-bore bullet. The spherical head of a ball is the worst form projectiles in its flight, occasioned by the varied density and solidity of different parts of the ball, which no accuracy in the manufacture can obviate, and which none any ball which does not rotate around the axis of the line of flight is *liable* to acquire some other rotation, by reason of its varying resistance to the air, and which is the cause of its inaccuracy. Precision of fire cannot be depended upon in any such shaped bullet, and General ROBERTS has made no invention in the construction of a single fact in connection with his bullet not well known before.

INQUIRER.

MR. GRIMES' PAY BILL.

To the Editor of the Army and Navy Journal:

SIR:—Do defend us against Mr. GRIMES—not the good old man who is supposed to be dead, but he who proposes an increase of pay to the Army, from the commutation fund of fuel and quarters, and making a distinction in rates of pay for different kinds of duty. Such distinction is certainly unfair. Officers are needed for Bureau duty, some corps are specially created for such duties, and it is rarely the case that these officers are required to serve with troops or in the field. But GRIMES would give the Commanding-General of our armies, all heads of Bureaus, most Engineer and Ordnance officers, and all officers of Staff Departments with their necessary expenses, those officers of similar grades, whose duties require them to serve with troops in the field.

It is certainly an officer's duty to serve wherever the Government sees fit to place him. Certainly when *on duty*, no distinction should be made against him, whether in the Army or the Navy. The expenses of an officer are largely increased when he is stationed in a city, and for this reason we have heretofore been allowed a commutation for fuel and quarters, the first being governed by the market price of fuel and the last by rates fixed by the Secretary of War, according to rates of rent at different stations. Neither this allowance is sufficient to provide an officer with the necessary means of fuel in any city of the Union, and yet it is deliberately proposed to reduce us of it. If officers be kept from the field unnecessarily, it is the fault of the Government and not of the law.

We have not asked to have our compensation increased, and it would seem that a patriotic silence on this subject has been taken as a sign that we are willing to serve. Laborers, mechanics and clerks have received an advance of wages that was ordered absolutely necessary by advancing prices; and yet it is proposed that we, whose compensation stayed allowed the only bulwarks between armed treason and civil liberty, in the British Army, the pay is so much absolutely men of independent means can afford to hold commissions. If our Government desires that the Army shall be officered by a moneyed aristocracy, they need only increase our pay, so that men whose only fortune is their brains will be obliged to seek other employment affording more suitable compensation for their talent.

Officers of the Army have been rendering noble service in the field and on field, whether duty called them, and while they do not ask increase of pay, they have a right to hope that Congress will not reduce a compensation barely sufficient for their support.

ARMY.

SUGGESTIONS AS TO THE MEDICAL DEPARTMENT.

To the Editor of the Army and Navy Journal:

SIR:—The abuses which have characterized some features of the Medical Department of our Army induce me to offer through your columns the following suggestions for the consolidation and better management of that Department.

1. Army Surgeons cannot be *improvised*, neither can any system of education, or years of service compensate for the absence of certain qualities of mind and heart. In war the Army Surgeon is constantly called upon to exercise all the functions and perform all the duties of Generals, Quartermasters, Commissaries, Staff officers and company commanders. A familiarity with the principles of these multiform duties depend the health, comfort and efficiency of his men. His practice as a Surgeon is often only incidental, but the procuring of proper food, medicine and clothing, the proper payment, and in a word, the entire well being of the patients under his charge, which properly should be deemed are more difficult, delicate and arduous than are those of any subordinate General in the service.

2d. The Army Surgeon has daily more being different classes of medical officers in the service, than

1st. The Regular Army Surgeon is jealous of the Volunteer, because in some instances he is outranked by the latter, and also because that his long service of years at frontier posts, which entitles him to some claims upon our consideration, has not fitted him for the exigencies of this present time.

2d. The Surgeon of the U. S. Volunteers is constantly annoyed by the class-feeling of the Regular Army, and by the fact that in many instances his junior in rank is, by virtue of the Act of Congress, promoted over his head. He also feels that every year he now remains in the Army is detrimental to his future prospects in civil practice by "non-action" at home, and unsettling his whole life. He wishes some *certainty, some permanence.*

3d. The Surgeon of Volunteers' enters the service only for so long as it pleases him. He can at any time throw up his contract, and is entirely irresponsible. He is usually a very young man, and is frequently prone to be trying experiments in surgery upon the life and limb of our soldiers, or he is an old, broken-down man, choosing this method of a respectable livelihood, or he is a Quack that is drawn to the army at his call.

4th. The Regimental Surgeon has the rank of the Staff Surgeon, without his privileges. However, his higher rank, only confine them strictly to their regiments, requiring them to wear regimental uniform, to distinguish them from the Staff Surgeons.

III. You can harmonize these classes thus:

1st. Consolidate the corps of Surgeons of the Regular Army and the corps of Surgeons of the U. S. Volunteers in one, by commissioning as Surgeons of the Regular Army those Surgeons of U. S. Volunteers and all Assistant Surgeons who have served or may have served in service two years, letting them take rank after those now Surgeons of the Army, but before all those of the line service more than five years. The date of the commission should be decided by a board of three Surgeons of the Regular Army, and three of the Volunteer Army, and they should rank wholly according to merit.

2d. The system of employing contract surgeons should be abandoned entirely. Those now on duty can pass a severe examination should be employed, and they should be commissioned as assistant surgeons of the Regular Army, of the rank of Second Assistant. Placed thus, weeding could be effectually done, and idleness, incompetency, drunkenness and immorality could be checked by military courts-martial. Promotions should be made from this rank as merit deserved them and the service demanded, and all should be required to pass through this grade.

Finally, give us for Surgeon-General a progressive man, one who has a strong, well-balanced mind and a humane heart.

NOTE.—1st. I am doubtful whether a man of ordinary abilities does not do more harm than good during his *first six months* of service in the Army.

2d. Those of the Regular Army and of U. S. Volunteers who have been proved incompetent and inefficient, should be at once mustered out. Unfavorable reports should not be made to the circumstances of each particular case. Illness contracted while in the line of duty should retire on half pay.

3d. One hundred surgeons of the Army should be em-

ployed to examine for the draft. Then the *efficiency of the draft* would be clear. It has thus far failed only because of the worthlessness of the examining surgeons.

4th. The surgeons of the Regular Army, after making all the additions I recommend, would only amount to one hundred and fifty in number, while there are now employed near fifteen hundred contract surgeons. One surgeon of two years' experience in the Army, is entirely equivalent to, and would do his work much better than any four (5) contract men. Which is the best course for the United States, and which is the most humane?

Rely no longer on such temporary make-shifts.

MAJOR-GENERAL McLELLAN'S REPORT.

THE SEVEN DAYS' BATTLES.

Up to the 26th of June, the operations against Richmond had been conducted along the route leading to it from the east and northeast. The change of President's military advisers, and the withdrawal of Fredericksburg, Rappahannock peninsular co-operation, partial advance, and immediate withdrawal) whilst completing the choice of this line of approach, and our continuance upon it, have been alluded to above.

PREPARATIONS TO CHANGE BASE.

The superiority of the James River route, as a line of attack and supply, at once became to most experienced officers apparent, and the fact has been early given, and need not be repeated here. The disadvantages of an hypothesis of the operations by land of General McDowell's forces, assumed to be occupied in the defense of Washington, their inability to afford any effective support, the difficulty of forcing a new base and a new danger up my right, and to the long lines of supplies from the Watts Bluff to the Chickahominy, and the necessity of protecting them by my serious transportation to extend Ingalls, quartermaster, to the White House.

Run the cars to the last moment and load them with provisions and munitions for the army. Every wagon, as it arrives, must be loaded and then to storage station, by way of Bottom's bridge, if you are afraid to cannon White House, leave everything and come to the front. Have must throw all our supplies up the James River. I will be of vast importance to me to have the cars running to the front. Have all the wagons you can bring loaded with forage and subsistence, and send them to White House. I will keep you advised of every movement, so that you can be ready. Let me hear from you frequently, and tell me the worst.

After these commands were closed. So excellent were the disposition of the different officers in command of the troops, depots, and gunboats, and the quickness of seeing of the operations, that the movement of everything was secret, not but a small amount of stores destroyed to prevent their falling into the hands of the enemy. The most important communications with the main army being cut off, no field been upon the Richmond and York River Railroad, which, by the 28th, was evacuated. On the 26th orders were sent to all the corps commanders on the right bank of the Chickahominy to withdraw their sick and their troops as they could spare on the following day to the left bank of the river, as well as to withdraw their pickets and outposts. Similar and explicit instructions to hold General Stoneman's division in readiness by daybreak of the 27th, and if heavy firing should be heard in the direction of General Porter, to move it at once to his assistance, without waiting for orders. At noon on the 26th General Porter, who had crossed above Mechanicsville, was discovered by the advanced pickets at Ellerson's Mill, on the Chickahominy, about 12 miles from Richmond. At the pickets were called in, and the regiment and battery at Mechanicsville withdrawn.

THE BATTLE AT MECHANICSVILLE.

Meade's brigade, supported by a battery on the west of the line, and shortly after Martindale's and Griffin's brigades, of Morell's division, were brought up, and disposed so as to cover the bridge and ford. They were shortly severe church, to cover that flank. Number of these three brigades, formed in echelon, supported by Sykes's division of regulars, remain renewed a portion of Reynolds' line just at the close of the action.

The position of our troops was a remarkably strong one. The creek, back of Beaver Dam creek, the left resting on the Chickahominy, and the right on Little Powhite creek, which empties into the Chickahominy a short distance below the bridge. The ground in front of the position was completely commanded by the troops on the right bank of the river, who controlled the approaches to the bridge and ford by their artillery fire. His supposition soon after the close of this action, convinced me that Jackson's corps had crossed by the bridge at Meadow. The position on Beaver Dam creek, although so successfully defended, had the right flank too much in the air, and was too far from the bridge, before we could be available to retain it longer. I therefore determined to send the heavy guns at Mechanicsville, and my wagon trains, across the bridge at once, with as many wagons of the Fifth corps as possible, and to withdraw the corps of General Porter to a position extending from Gaines' house. The flanks would be reasonably secure, and it would be within supporting distance of the bridge, should the enemy attempt to force it, in spite of that effort. It was not advisable at that time, even had it been practicable, to withdraw the left corps to the left bank of the Chickahominy. Such a movement would have exposed the rear of the army, pursue us from Richmond, and would have given the enemy the bridges the movement to James river, by crossing the Chickahominy in the vicinity of Bottom's bridge, before we could withdraw the left of our troops. I determined then to retain Jackson with the Fifth corps reinforced by all our effective troops, and to fight the battle near the bridge house, in order to cover the withdrawal of the trains and the left corps. The latter to be withdrawn to the south side of the position of the Beaver Dam creek, in case of success, in rear of the Powhite creek, in case of the battle being unfavorable to us.

Orders were sent to the left corps to withdraw its troops as soon as they could be spared from the front, and to march to the bridge at Gaines' house, and there to form line of battle, facing to the front, with its left resting on the Chickahominy, and its right on Little Powhite creek, to cover the withdrawal of the troops on the right bank of the river. Orders were sent to the corps commanders on the right bank to withdraw their troops as they could be spared from the trenches as they could spare on the following day to the left bank of the river, as well as to withdraw their pickets and outposts. Similar and explicit instructions to hold General Stoneman's division in readiness by daybreak of the 27th, and if heavy firing should be heard in the direction of General Porter, to move it at once to his assistance, without waiting for orders. At noon on the 26th General Porter, who had crossed above Meadow bridge, was discovered by the advanced pickets at Ellerson's Mill, on the Chickahominy, about 12 miles from Richmond. At the pickets were called in, and the regiment and battery at Mechanicsville withdrawn.

THE BATTLE AT MECHANICSVILLE.

Meade's brigade, supported by a battery on the west of the line, and shortly after Martindale's and Griffin's brigades, of Morell's division, were brought up, and disposed so as to cover the bridge and ford. They were shortly severe church, to cover that flank. Number of these three brigades, formed in echelon, supported by Sykes's division of regulars remained

LETTER TO SECRETARY STANTON.

On the night of the 29th I sent the following to the Secretary of War, in answer to a request for my opinion as to the future movements of the Army of the Potomac:

HEADQUARTERS ARMY OF THE POTOMAC,
June 29, 1862—10 P. M.

I have read the first history of the day. On this side of the river—the south side—we encountered strong attacks. On the left bank our right held—we repulsed and beat off all that could be brought against us. We gave all that was required by vastly superior numbers, even after I had given my instructions to retire. The loss on both sides is heavy, probably greater on the side of the enemy, but I cannot say. The battle will be renewed to-morrow. We have not the necessary force to follow up our success, and are still in the best order. The regulars have behaved well, and the volunteers have done all that could be expected of them with their gallant comrades of the volunteers. But I merely command the Army of the Potomac, and I feel that it is my duty to say to you plainly that, in my opinion, this army must have reinforcements, or it will be lost. I could take Richmond; but I have not a man in reserve, and shall be forced to use my retreat and the troops that cover it to save the remnant of the army. If we have had the day, we have yet preserve it, and to-morrow we must do the best we can. I do not think that the battle because my force was too small. I again repeat that I do not think it, but I feel that the Government must understand that I speak from a full knowledge of my command and its capacity for resistance, when I say that, in my opinion, a reinforcement of at least 20,000 men should be immediately sent to this point if practicable. If it cannot be sent, I fear that the result will be very disastrous to our cause. I say this much because I shall be blamed by the country for the result, whatever it may be. I feel that no one can censure my army for the part it has taken in the battles of the past week. I know that it has fought as few armies have fought, and that it has endured privations without a murmur which have never been surpassed. Its conduct has been beyond all praise. If, at this instant, I could dispose of (10,000) ten thousand fresh troops, I could gain the victory to-morrow; but, situated as I am, I cannot even say that I can hold my present position. I say this because I feel that the Government has a right to know my true situation, and I will not be responsible for the result. I feel too earnestly to-night—I have not the time to express myself properly—but I know that I shall be misunderstood if I do not say plainly what I think and feel. I have no communication with the Government, and cannot tell what is intended. I shall draw back to this edge of the Chickahominy, and there I think I can hold my own, and thus cover the capital, if it is the wish of the Government to cover it. I have lost no material, and have gained much ground. I have lost heavily in men, but the enemy must have lost more heavily still. I shall not decide hastily upon the course to be pursued, but will examine well the ground, and shall then act for the best. I will not conceal from you that my force has been greatly reduced by the separation of Franklin's division and Sumner's corps, and that the Army of the Potomac is not now in a condition to meet the enemy in the open field. I will do my best to fight him wherever he may attack me, but I cannot guarantee that the result will be favorable to us. I shall not be disheartened by what has occurred, but shall do my best to repair damages and to fight battles successfully. I have lost no guns, except those rendered useless by the breaking down of the carriages, and have gained as many as I have lost. I have lost no material of any description, and have gained a large amount. I have gained the battle-field for the past week, and shall not relinquish it except for a good reason, and will not do so without informing you of the fact. I shall be glad to hear from you frequently, and to receive any suggestions you may have to make. I shall do my best to carry out your views. I am, General, very respectfully, your obedient servant,

GEO. B. MCCLELLAN.

To Hon. E. M. Stanton.

The battle commenced at Savage's station was known as the engagement of the 29th, and moved across the White Oak Swamps. As the morning of the 30th dawned, the enemy pressed on our rear guard in the White Oak swamp and their protection against attack from the direction across which our army was moving, and to cover and secure our rear. Some of our commissioners with the guidebook, I passed the night in the woods, discussing the situation, and in the morning, during the uninterrupted movement of the trains. In the afternoon I received General McClellan's order to proceed to the front and to occupy a defensive position near Malvern Hill, to secure our extreme left and to cover the flank of the army during the passage of the trains to the rear. The troops were to be pushed on toward Malvern Hill as they arrived, and I was to form my line of battle on the gunboats as they arrived. A sharp skirmish with the enemy's cavalry under Stuart, in which the Fifth Cavalry was the first to engage, were about to be directed toward impeding our progress to the river, and received my orders to meet the enemy.

BATTLE OF ALLEN'S FARM.

General Sumner vacated his works at Fair Oaks on June 29, at day-light, and marched to the support of General Keyes, who was in full retreat, between Orchard and Savage's station. The division of Richardson and the troops of Keyes were on the right of the railroad, and Sedgwick behind Richardson holding the right, and Sedgwick joining the right of Richardson. Sedgwick's division, the Second corps, was also sent by General French, General Colwell supporting in the second. A skirmish line of Richardson's division, composed of the Second Brooks with one regiment (Fifty-third Pennsylvania volunteers), with Hazard's battery, moved to the front, and relieved the troops of General Brooks' command. At 9, A. M., the enemy commenced a heavy attack upon Richardson's division, and the Second Brooks, on the left of General Richardson was next attacked, the enemy attempting in vain to carry the position. The Second Brooks, under Colonel Cross, was, not Captain Pettit's battery, which afterwards replaced it, were served with ammunition by Fifty-third Pennsylvania volunteers, and nearly fell on the advancing enemy, compelling them at last to retire in disorder. The enemy made several attempts, but in vain, to drive us from the position.

BATTLE OF SAVAGE'S STATION.

General Sumner arrived at Savage's station at an early hour on the 29th, and was met with the information that the enemy had cut our line of supply. As soon as General Keyes was thus relieved, he moved rearward, and the enemy reached a position on the left of the railroad and in front of Savage's station on the morning of the 30th, and took up a position behind the railroad embankment, and in the woods on the right of the railroad and in front of Savage's station. Sedgwick's division, the Second corps, after having repulsed the bridges, was crossing the Chickahominy. After the passage of the trains had been completed, he commenced the information to General Sumner, at Allen's farm, and General Sedgwick's command was ordered to the front, and General Sumner united his forces with those of General Franklin, and massed command. Sedgwick's division, General Richardson's, and the troops of the Williamsburg road until dark, at a point where were several fordable roads, and a bridge, which General Sumner ordered to be burned on the left back before night, and crossed White Oak Swamp at Brooklyn's farm, and joined the rear guard in the vicinity of Savage's station the next day.

"When the enemy appeared on the Williamsburg road, I could not imagine why General Heintzelman did not attack him, and on visiting the front, found that he had left Richardson's division, the First corps, to hold, and retreated with his whole corps (about fifteen thousand men) before the enemy had appeared in force, and consequently he was attacked with the most disastrous consequences, and although we beat off the enemy in the most gallant manner, yet the loss of Richardson's division gave him a more crushing blow if General Heintzelman had been with it. I was ordered to the command of Richardson's division on the morning of the 30th.

"On the morning of the 30th of June I received orders to withdraw the troops of my command from the advanced position they had taken on the 29th of June, and to march to the support of General Keyes, who, at that time was said was closing the position of General Sumner's and General Franklin's corps, which had crossed the Chickahominy by the only bridge standing in the neighborhood, connecting the two portions of the army, which had been separated by the destruction of the bridges. From these orders I received further information that a more advanced position than was indicated on the map had been taken up by the troops in front of Savage's station, and that the left of my line was to rest on the left of General Sedgwick's division of General Franklin's corps.

"At 11, A. M., on the 29th, the enemy commenced an attack on General Sumner's position, which is falling back from Allen's farm. Our information reports reached me that the rebels were in possession of Dr. Trent's house, which is at the junction of the Williamsburg road with several cavalry reconnoissances, and finally was satisfied of the fact. General Franklin's division had been ordered to the support of General Sumner, had been set and General Sumner's right, in which space Dr. Trent's house is. Also, that the rebels had crossed one of the bridges across the Chickahominy, and were advancing.

"I sent a force forward to General Sumner, and two troops falling back on the Williamsburg road, through my lines. General Sumner informed me that he was falling back to the rear of Savage's station, and for me to join him, to determine his position.

"The enemy's movements rendered it necessary for me to fall back, and it became necessary for me to at once withdraw my troops.

"I took them to the General Sumner. After some delay, from the mass of troops being thrown on the road, I succeeded in getting my command into position, and reported to the senior commander the necessary orders to be given to the retiring troops.

"The whole open space near Savage's station was crowded with troops, and a more disciplined command could be formed to resist the attack. Major-General Sumner, commanding general, in the morning, reported to me to point out a defensive line, which I did, and which was occupied by the left of General Franklin's army's position, and leading by Brooklyn's farm."

The advance of the army, under General Keyes, reached and crossed the rear on 30 P. M., without accident.

The troops under General Heintzelman, General Richardson's division were to hold the positions assigned them until dark. As stated by General Heintzelman, General Sumner did not occupy the designated position; but as he was the senior officer present, on that side of the White Oak swamp, he may have thought that the movements of the enemy justified a deviation from the line of battle as first established.

Upon receipt of the latter, I assumed command of all the troops near Savage's station, and determined to withdraw my line of battle, and had no more General Heintzelman order to hold the position assigned him. I had not seen him, and had not received any information from him, and was not aware that he had left the position assigned him, or that any other had been assigned him. On reaching Savage's station, Sumner's and Franklin's commands were drawn up in line of battle, on the large open field to the left of the railroad, the left resting on the edge of the woods, and the right extending toward the railroad. General Brooks, with his brigade, held the woods to the left of the field, where his old entrenchments had been constructed by the rebels. General Hazard's battery of Richardson's brigade was thrown into the woods on the right and front. At 4, P. M., the enemy commenced the attack on the left of the Williamsburg road. It was gallantly met by General Burns's brigade, supported by the Fifty-second New York, Fifty-seventh New York, and the New York Sixty-ninth. Hazard's and Pettit's batteries again doing good service. The attack was repulsed, and the enemy driven back into the woods in position, which was continued with great obstinacy until between 6 and 7 P. M., when Brooks and Richardson drove the rebels from the woods. After the battle, orders were repeated for all the troops to fall back and cross the White Oak swamp, and to take position on the hills on the other side. By midnight all the troops were on the road to White Oak swamp, and at 3 A. M., on the 30th, all had crossed, and the bridges were destroyed.

OPERATIONS ON THE 30TH.

On the afternoon of the 29th, the corps commanders there instructions for the operations of the following day. As stated before, Sumner's corps, with Sedgwick's division, was to form the rear guard of General Keyes, to occupy a position at or near Turkey bend, in a line perpendicular to the Williamsburg road, and extending toward the right, and, opening communication with the gunboats, and covering the passage of the trains to the rear. This was to be done as rapidly as possible upon Heintzelman's position. The remaining corps were posted on the road to Savage's station, Franklin's and Richardson's, as well as the crossings of White Oak swamp, over which the army had to pass, and the bridges were to be destroyed by fire. Both sides of the White Oak swamp bridge, and cover the withdrawal of the trains from the front. Richardson's division, General Hooker's brigade, General Meagher's division, and General Naglee's brigade, placed under his orders by General Heintzelman, were posted on the left of the road to the White Oak swamp bridge.

The morning of the 30th I again gave the corps commanders the necessary orders for the day, and directed the movements of the army, withstanding all the efforts of my personal staff and other officers, I had no time to eat, and was obliged to swallow a cup of coffee, and keeping the brain in motion. The engineer officers whom I had sent to examine the line to be occupied by the troops, returned, and reported, and delayed reports of guides, and General Keyes and Porter had been delayed, and I was anxious for information, and was obliged to wait for the arrival of the guides with any information. We then knew of all our road for the movement of the troops to the James river, and the line of communication, and post the troops in advance of this road as well as our limited knowledge of the country would allow. The enemy were known to be in force on the road. On the morning of the 29

Bridges were sent with their brigades as soon as it was considered prudent to withdraw any portion of Sumner's and Hooker's troops to the southern that part of the line, and to the pontoons. Burnside had refused such portions of Porter's corps and Couch's division as were expended their ammunition, and batteries from the reserves pushed forward to replace them unless horses were empty. Until then the enemy persisted in his efforts to break our lines, and apparently re-formed, but despite his vast numbers, his repeated and desperate attacks were repulsed with fearful loss. It was about the latter of Maryers hill, though it was not until after nightfall that the artillery ceased firing. Gen. Sumner's and Gen. Hamilton's divisions of Sumner's corps also participated in the engagement on the extreme right, and rendered valuable assistance. As the army, in its movement from the battle-field to Falmouth, was obliged to march in columns of fours in marching by night and fighting by day, its commanders found no opportunity for collecting data which would enable them to give correct returns of casualties in each engagement. The aggregate of our entire losses from the battle of the 13th of July, 1862, to the 20th of August, is stated after our arrival at Harrison's Landing, to be as follows:

List of killed, wounded and missing in the army of the Potomac, from 13th of June, 1862, to the 1st of July, 1862, inclusive.

	Killed.	Wounded.	Missing.	Aggr.
1. McClellan's division	253	1,240	1,381	2,874
2. Sumner's	157	1,016	1,045	2,211
3. Richardson's	109	1,051	675	2,075
4. Keyes'	26	257	77	360
5. Porter's	623	2,460	1,101	4,274
6. Franklin's	276	1,593	1,016	2,885
7. Reynolds'	5	24	22	51
8. Couch's	19	69	59	147
Total	1,552	7,760	5,356	15,349

THE SUPPLY QUESTION.

Although the result of the battles of Malvern was a complete victory, it was nevertheless necessary to fall back still further, in order to reach a point where our supplies could be protected by our gunboats. As before stated, in the opinion of Captain Rodgers, commanding the gunboat flotilla, the James river was navigable for the fleet. Concurring in his opinion, I selected Harrison's bar as the new position for the army. Accordingly, the necessary transports of food, forage, and ammunition, made it imperative to reach the transports immediately. The rear guard, consisting of the remainder of the army having been started for Harrison's landing during the night of the 30th of June and the 1st of July, the road was literally crowded with troops and at one issued upon the final repulse of the enemy at Malvern Hill. The entire pursuit was commanded in person by Gen. McClellan, Keyes' corps to cover the movement. It was not carried out as rapidly as required to enable us to reach the left, the roads were completely blocked by the rear of our trains. Porter and Couch were not disposed to push on as early as it was necessary to do so, and the enemy was able to press on a rear guard between his command and the rear of our trains. Gen. McClellan's headquarters were at the front with this delicate duty. He had under his command the two corps of the army, Sumner's and Richardson's divisions of Heintzelman's corps and our battery. By a judicious use of the artillery in the rear guard, the enemy was held in check until the withdrawal of the left wing without being attacked, as no troops of the enemy could move on roads which were covered by the fire of our artillery. On the 2d of July, Malvern General Keyes, having received his orders, commenced the movement of withdrawing the right wing of the army and protecting the trains. It being evident that the immense trains of wagons and artillery could not reach Harrison's in the army could not move with celerity along a single road, General Keyes took advantage of the roads to the left of the James river, and moved on to facilitate the movement. He made preparations for obstructing the roads and fords by felling trees, and by the use of artillery and by destroying effectually Turkey bridge on the main road, and rendering other roads and approaches impassable for the enemy's troops from across them. He kept the trains well closed up and directed the march so that the troops could not move on each road in order to protect the baggage, but being in good position to repel an attack from any quarter. On the morning of the 3d of July, Keyes' corps was the rear guard. "I do not think more vehicles or more public property were abandoned on the march than was unavoidable. Many have been left in the same state of the roads, if the army had been moving from camp to camp in time of peace. The trains were to be understood that the carriages and teams belonging to the army, marched on the left, which covered the rear. Every effort was made to destroy everything necessary for their safe withdrawal from the presence of an enemy vastly superior in numbers and in the field. The last of the wagons did not reach the ties selected at Harrison's bar until about noon of the 3d of July, and even then were not in such order into their camp until everything was secure. The enemy followed up with a small force on the 3d of July, but fell back on the 4th of July, and men of the First Connecticut Cavalry, Col. Pratt, were the last to leave the field, and with the heavy guns during the night. Thus ended the seven days' fighting. During the entire movement of the army, the roads could be brought within a couple of miles of the position; but there always remained a certain amount of stores which that distance during unloading.

THE ARMY AT HARRISON'S LANDING.

On the 1st of July I received the following from the President:

WASHINGTON, July 1, 1862.—10 P. M.

Major-General Geo. B. McClellan:

It is impossible to reinforce you for your present movement. If we had a million of men we could not get them to you in time. We have not the men to get them with. You must be reinforced enough to fight the enemy with what you have of cavalry, work, rest, and repair. Maintain your ground if you can, but save the army. We will reinforce you as fast as we can. Have no fears. We still have strength enough in the country, and will bring it.

A. LINCOLN.

In the evening I received the President to me, on the 2d of July:

"If you think you are not strong enough to take Richmond just now, I do not wish you to move. If you have not sent off your sick, you had better send, and I will strengthen it for the offensive again as fast as I can. The Government at Washington [30] States that you have 86,000 men present this ground, which I accept."

On the 3d of July the following and dispatch was received from the President:

EXTRACT.

WASHINGTON, July 3, 1862.—5 P. M.

Major-General G. B. McClellan:

Yours of 5:30 yesterday is just received. I am satisfied that your sick, disabled, and worn men had better be sent off. Do not hesitate to do it. A better fighting will never done. You discount thanks for it.

A. LINCOLN.

FOURTH OF JULY LETTER TO THE PRESIDENT.

On the 4th I sent the following to the President:

HEADQUARTERS ARMY OF THE POTOMAC,
HARRISON BAR, JAMES RIVER, July 4, 1862.

To the President:

I have the honor to acknowledge the receipt of your dispatch of the 3d instant.

I shall make a stand at this place, and endeavor to give my men the repose they so much require.

After sending my communication on Tuesday, the enemy attacked me left of our front, and I was obliged to withdraw my right to the left. They were repulsed with great slaughter.

Had time been allowed, the disadvantages would have been discounted by the enemy. This closed the hard fighting which had continued and from the battle of the 26th June. The enemy's forces are apparently wholly unparalled on this continent for determination and slaughter on both sides. The actual loss of the enemy in killed must be double that of the enemy certainly greatest. On Tuesday morning, the 1st, our army presented a splendid appearance, and was in line of battle. The line of defense three being too extended to be maintained by our weakened forces, our true line was assumed on the 2d. The 3d was fought by a heavy storm of rain broken, which continued during the entire day and until the forenoon of yesterday. The roads become horrible. Troops, artillery and wagons moved up steadily, and our whole army, now concentrated, was drawn up in splendid order. Only the last of the wagons reached here at noon yesterday. The enemy, this time, was in force, and in order of battle, and confident that we would have repulsed any attack which the enemy was in condition to make. We have now a position on the left bank of the river from the James, a plain extending from there to the river. Our front is about two miles from the river. Our gunboats protect our left position, and must be maintained. The gunboats can render valuable support upon both flanks. If the enemy attack us in front, we must not engage ourselves in a general battle, but act whatever cost. Our position can be carried only by assault and slaughter. The spirit of the army is excellent; strangers are finding their regiments, and the soldiers exhibit the best results of discipline. Our position is by no means impregnable, especially as a means extends on the side of the high ground from our center to the James on our right. The enemy may attack in vast numbers, and, if so, our front will be the scene of a desperate battle, which, if lost, will be disastrous. We shall probably succeed, if not killed, wounded, and prisoners. I cannot now appreciate to any great extent all our losses, but we have not been in any conflict. Our losses may seem unable, by any efforts, to drive us from the field. Never did I witness a change of base more successfully conducted. Our artillery fire and attacks from a point determined and vastly more numerous than the enemy's. Our men are in excellent spirits, and confident of success. On the field of battle, twenty one of which were hot by the regiment with which I left the army, and the enemy's dead were left in our hands, unburied by the James river are not known. There are points where our enemy, the Rebels, have not been known to come or to observe, and the number of dead, and where it is not certain that our gunboats did not make very effort some of this, or to some extent. Our wounded are being sent to Fortress Monroe as fast as the transports arrive. Our troops will do all that their country can ask. Send such reinforcements as you can, and I will do the best I can with them. Keep your railroads and sick, and landing supplies. The Navy Department should give me all the aid in its power. The Navy Department should give me all the aid in its power. The Navy Department should give me all the aid in its power

and barred by means of a few ships. The enemy was resisted with great damage, and it was probably owing to his circumstance that "Fort Darling" was invented. It was necessary to find a plausible pretext for defeat. After the engagement several tons of projectiles were picked up. The Confederates have now, however, made of Drewry's Bluff a most formidable position, which is guarded by a naval encampment.

Richmond is now defended from assault by way of the James River by more than one iron-plated battery, and the plated steamer *Richmond* is supplemented by the new ram *Merrimac*—armed with Brooke guns, and manned by 150 sailors. Dr. GIRARD also mentions two other vessels, which were being constructed when he left the Confederacy, about three months ago, on the plan of the *Richmond*—the *Fredericksburg* and the *New Hampshire*, both of them sufficiently advanced to be able to take part in a naval combat. In all, six plated vessels are ready on the James to defend the capital, in case of need.

Dr. GIRARD gives the following estimate of losses on both sides, which we give as interesting, although the rebel losses are undoubtedly as much under-estimated proportionately, as the Union losses are over-estimated:—

Up to the 1st of January, 1863, 259 engagements, more or less important, had taken place, and of these about two-thirds had been favorable to the Confederates.

The losses were estimated, on the side of the Confederates, at 102,677, as follows:—

Killed	20,891
Wounded	59,616
Prisoners	22,169

On the side of the Federals, in all, 299,116:—

Killed	43,874
Wounded	97,920
Prisoners	57,322

It is calculated that the number who have fallen victims to disease, or their wounds, were 120,000 on the side of the Confederates, and 259,000 on that of the Federals.

ARMY AND NAVY PERSONAL.

General H. D. Terry, with his brigade of the 6th Corps from the Army of the Potomac, is now at Johnson's Island, Sandusky, guarding the rebel prisoners.

Captain J. D. Garrard, of Cincinnati, has been commissioned as Colonel of the First United States colored cavalry.

Lieutenant-Colonel Samuel McKelvy will shortly be relieved of the command of the Camp of instruction at Troy, and proceed to Columbus as Chief Commissary of the Northern Department.

Admiral Samuel P. Barclay has been ordered to command the U. S. steamer *Commodore Jones*, North Atlantic blockading squadron.

Major-General Abraham Ich Washington for Nashville on the 15th. He is ordered to report to Major-General Grant for duty.

The large cavalry depôt at Giesboro', Md., has been added to the command of Major-General Augur, Department of Washington.

Captain Frank W. Marston, of the Signal Corps of the Army of the Potomac, has been ordered to Fort Monroe, as the Chief Signal Officer of the Department of the South.

Mr. John Hay, Assistant Private Secretary to the President, has been appointed Assistant Adjutant-General, with the rank of Major, to report to General Gillmore.

Lieutenant-Colonel J. C. Easton has been announced by Major-General Thomas as Chief Quartermaster of the Army of the Cumberland.

Lieutenant-Colonel A. P. Porter, Commissary of Subsistence, U. S. Vols., has been announced by Major-General Thomas Chief Commissary of the Army of the Cumberland.

Captain John Cassels, 11th Pennsylvania Cavalry, is announced as Aide-de-Camp to Major-General Butler, and Provost-Marshal-General of the Department of the South.

Col. Joseph Gebhardt, Forty-sixth New York Volunteers, and Second-Lieut. John K. Tuffman, of the same regiment, have been dismissed the service.

Major Joseph M. Bell, having been seized with severe illness rendering him unable to sit as a member of the Military Commission of which he was a member, has been relieved from duty by order of General Butler.

William H. White, convicted by court-martial of fraud in forming horses, has been sentenced to pay a fine of $3,000, or be imprisoned in the Albany Penitentiary until the fine is paid, not exceeding two years.

Lieutenant-Colonel J. C. Ingalls, 1st Michigan Infantry Infantry, has been appointed Chief Quartermaster at Portland, Oregon, as acting Assistant Provost-Marshal-General for the District of Oregon and Washington.

The order from the Adjutant-General's office dismissing from the service Surgeon W. Fandenberg, 178th Pennsylvania Drafted Militia, has been rescinded, and he has been restored out and with full pay and rank.

Colonel Egan and the officers of the 40th (Mozart) Regiment, N. Y. Vols., attended a complimentary dinner at the Metropolitan Hotel, New York, last week, given by Mr. C. Rogers, the author of the regiment.

Colonel Peter C. Ellmaker of the One Hundred and Nineteenth Pennsylvania Volunteers, having resigned to resume his business in Philadelphia, Lieutenant-Colonel Clarke succeeds to the command.

Lieutenant Frank S. Livingston, 16th N. Y. Engineers, has been detached as aide-de-camp on the staff of General Benham, commanding Engineer Brigade, Army of the Potomac.

Captain C. H. Potter, A. A. G., and Major G. E. Johnson and Captains Henry Norton and C. P. Horton, aide-de-camps, accompanied Major-General Heintzelman to his new command, on the 18th instant.

Lieutenant-Colonel C. G. Sawtelle, late Chief Quartermaster of the Cavalry Bureau, will probably be assigned to a like position in the Northern Department, under Major-General Heintzelman.

A Court of Inquiry has been ordered by the Secretary of the Navy to inquire into the manner in which the publication of Commodore Wilkes' letter to Secretary Welles was effected. The board consists of Com. Du Pont.

Capt. W. W. White, Provost Marshal of the Eighteenth Pennsylvania District, Williamsport, has been dismissed the service, and arrested, and sent to the Capital Prison, for alleged frauds in the business of his office.

Second-Lieut. Charles Frazier, Fifth New York cavalry, by order of Brigadier-General Lockwood, commanding the Middle Department, has been removed from the service for misconduct conduct and violation of military discipline.

Lieutenant-Colonel C. C. Suydam, of the cavalry corps of the Army of the Potomac, has been added to Pleasonton's staff, has resigned his position, and accepted the lieutenant-colonelcy of the 22nd New Jersey cavalry, commanded by Colonel A. J. Morrison.

Colonel John A. Nelson, 10th U. S. Colored Troops, has been dismissed the service for having authorized and permitted the impressment of negroes into his regiment, thereby hindering recruiting and spreading distrust and alarm among the negroes.

Lieutenant-Colonel James O. Broadhead, 3d Missouri State Militia, has been relieved, at his own request, from duty as Provost-Marshal-General of the Department of Missouri. Lieutenant-Colonel C. W. Marsh, A. A. G., has been appointed in his place.

The following military positions have been made in Ohio Infantry—Second Cavalry, Lieutenant-Colonel Chas. B. Sidel to Colonel; Major Horace Howland to Lieutenant-Colonel; Captain Robert L. McClellan, Major; Infantry, Sergeant-Major B. J. Fay to First Lieutenant.

Brigadier-General Saxton of the Department of the South, and on New York's Day presented with a handsome sword by the negro troops of the Department, "as a testimonial of the gratitude of the freedmen for his sacrifices and labors to procure their freedom and elevation."

The Naval Retiring Board have passed resolutions of sympathy and condolence with the bereaved family of the late Rear-Admiral Foote, and expressive of their respect and esteem for an officer "blending the amenities of the gentleman with whatever decision was necessary to maintain the dignity of the service."

Lieutenant H. W. Benton, formerly of Major-General Rosecrans' staff, now of the invalid corps, was married in St. Luke's church, Troy, on last Wednesday, to daughter of Anson Atwood, Esq., of that city, Rev. Dr. H. U. Potter officiating. The bride was given away by Major-General Allen E. Wood, also of Rosecrans' staff.

By order of Major-General Gillmore, First Lieutenant and Adjutant B. H. S. Robinson, Independent Battalion, N. Y. Vols., has been dismissed the service for having publicly exposed himself in a state of gross intoxication on the cabin floor of the U. S. transport *Ben Deford*, while passing New Orleans on the 14th inst., on his way to the 10th army, and again on the same day upon the pier at Hilton Head.

Maj.-Gen. Grant had a hard journey over the Cumberland mountains from Nashville to Knoxville, returned to and understand the nature of the country. He arrived at Louisville, Ky., on the 11th and was cordially received, but refused to make any speeches. He told the Louisville Courier to say for him that he knew nothing about speech making and had no disposition to learn.

A General Order from the War Department under date of January 4th, calls the attention of Courts Martial and of reviewing officers to the impropriety and danger of associating with the finding the important duty of passing any idea of punishment or degradation. These remarks are called forth in disapproving the sentence of a Court Martial which sentenced a prisoner shall do guard duty every other day for a year.

Major-General Cadwalader having been detailed as a member of the Court of Inquiry to meet at Nashville, Tennessee, Brigadier-General O. S. Ferry assumes command of the city of Philadelphia during his absence. General Ferry assumes command of the additional staff officers:—Captain Henry L. Johnson, Assistant Adjutant-General; Captain Charles E. Ripley, Tenth Regiment Connecticut Volunteers, Aid-de-Camp.

Major-General Curtis arrived at Leavenworth on Saturday last to take command of the new Department of Kansas. The Department of Kansas includes Colorado, Nebraska and the Indian Territory; all taken from the Department of the Missouri, and comprises all the latter only Missouri and a portion of Arkansas. The appointment of General Curtis to this post indicates, of course, his entire reconciliation from the disfavor of Gen. Halleck.

Major-General Dix has made the following detail for Military Commission to examine and investigate the cases of persons arrested and detained at Fort Lafayette, New York Harbor, and Fort Warren, Boston Harbor, other than prisoners of war and convicts:—Colonel Marshal S. Howe, Third United States Infantry; Major F. B. Reed, Fourth United States Infantry; Captain Royal S. Frank, Eighth United States Infantry; Judge Advocate, Captain A. P. C. Ketchum. The Commission was ordered to meet at Fort Lafayette, New York Harbor, at 10 o'clock A. M., on Tuesday, January 19, and to proceed thereafter as practicable, taking up the cases of those confined at that post.

The Examining Board now in session at the headquarters of the Marine Corps have examined and passed three candidates for appointment, leaving five more to come before it. Among those recommended by the Board to the Secretary of the Navy we notice the name of Mr. G. Gabaudan, the late private secretary to Rear-Admiral Farragut, and of Mr. Israel H. Washburne, of Maine, son of the Ex-Governor, and a brother-in-law of Admiral Farragut's son Percival. They will be nominated to the Senate in a few days. Lieutenant Cochrane has been detached from the Board and ordered to Cairo, Ill., as Deputy Paymaster of Marine in the Mississippi squadron. Captain John C. Grayson, U. S. M. C., has been detached from the sloop-of-war *Brooklyn*. Lieutenant J. C. Harris has reported for duty in Philadelphia. Lieutenants F. G. Huston and Monroe are on leave of absence.

A letter to us from New Orleans, dated Jan. 9th, says:—General Banks is organizing a large force of cavalry to operate in Texas; several infantry regiments have already been mounted. The 1st battalion, 1st Rhode Island H. A. (colored), Major J. J. Comstock, jr., commanding, arrived here last week. The 12th Connecticut Volunteers has mustered out and will leave in a few days next week. Brigadier-General H. W. Birge goes North to-morrow. (He has arrived in New York.) The officers and men of his old regiment, the 13th Connecticut, presented him with an elegant sword, sash and belt on New Year's. I understand that Brigadier-General Weitzel, so long and favorably known in the Department, has been assigned a position on the staff of Major-General Butler. Mrs. General Banks' reception on Saturday was largely attended, and was the most brilliant affair of the season. Among those present were: Major-General Franklin; Brigadier-Gen'l Brigadier-General Sherman, Wilson, Clarke, and others, with those of staff officers of all grades—and in short all the *beau ideal*, Major-General Reynolds has been assigned to the command of the defences of New Orleans.

By direction of the President, a General Court-Martial met in Washington on the 20th, for the trial of Brigadier-General W. A. Hammond, Surgeon-General U. S. Army, and such other prisoners as may be brought before it. Detail for the Court:—Brigadier-General S. Ogden, U. S. Vols.; Brigadier-General W. S. Harney, U. S. Army; Brigadier-General W. S. Ketchum, U. S. Vols.; Brigadier-General G. S. Greene, U. S. Vols.; Brigadier-General W. W. Morris, Colonel 3d U. S. Artillery; Brigadier-General R. Jones, U. S. Vols.; Brigadier-General J. C. Sloegh, U. S. Vols.; Brigadier-General H. E. Paine, U. S. Vols.; Brigadier-General J. C. Starkweather, U. S. Vols.; Major John A. Judge, Assistant Judge Advocate, Judge Advocate of the Court. All the members of the court were present but General Starkweather, who left Chattanooga on the 6th inst., for the purpose of attending at the Court, but not reached there. General Hammond was arraigned, and pleaded not guilty. He asked for a postponement for four weeks, for the purpose of procuring witnesses from the West. His request was not granted, and the trial will proceed.

ITEMS AND INCIDENTS.

A wood procession to supply soldiers' families in Springfield, Ill., numbered one hundred and forty-seven wagons.

The Richmond *Dispatch* remarks that the South is reduced to the following pregnant situation:—"If the people are fed, the army must suffer: if the army is fed, the people will starve; and, if the people starve, what's the use of the army?"

Orders have been issued to remove from the defences of Washington all the serviceable twenty-four and thirty-two pounder guns now mounted for the purpose of placing them on the James pattern, thereby rendering them as effective as any rifled guns of the same calibre. Eight-inch howitzers will be substituted for them in the fortifications.

The "Gettysburgh Battle-Field Memorial Association" has been organized in Pennsylvania. Its object is to purchase such portions of the battle ground as may be sold, that they may be preserved in their original condition. Already Mr. D. McConaughy, who is the author of the project, has secured the ground where the heights of Round Top, the granite spur of Round Top, with the stone defences constructed by the Pennsylvania Reserves; the timber breastworks on the right, extending for a mile along Wolf Hill and other important points.

The Naval Bill, as reported from the Committee of Ways and Means, appropriates for the ordinary expenses of the Navy proper, about $97,000,000, in addition to the usual appropriations for the several bureaus of the Navy Department, and for wrecks, docks and miscellaneous expenditures. The pay of officers, seamen and engineers requires $16,423,-000; for the naval establishment, $2,000,000. For armor-plated vessels, $3,600,000; hemp and other materials, $700,000; fuel, $3,440,000; equipment, $3,960,000; construction, $3,000,000; steam machinery, $1,000,000; machinery, $2,312,000; surgeon's appliances and necessaries, $8,500,000; navigation apparatus and supplies, $129,000.

On Tuesday, Jan. 12, a flag was raised upon the flagstaff of the Capitol, Washington, D. C., Wagner's Brigade, 3d Rhode Island, in command of the Fort, entertained a large party of ladies and gentlemen at a public collation. A collation was spread in the largest bomb-proof of the work. General Terry, in proposing the toast: "The Army and Navy of the United States," made appropriate terms to the joint action of both branches of the service, in enforcing the fortifications upon Morris Island. A naval officer from the Ironsides responded. General Saltin, Military Commissioner from the State of Connecticut; Mr. L. A. Stinson, of Adams' Express Company, and others, spoke pertinently.

What Party Appointments.—The report of Brigadier-General Totten, in answer to the Senate resolution of the 5th inst., relative to the cadets appointed to the Military Academy during the past year, shows that one hundred and four have received appointments, of whom fifty-six are appointed from the eleven seceded States resulting in the loyal states, seventeen are from the military service. One (Hasler) is a nephew of the lamented General Lyon; another (Butler of Columbia) a son of Captain Cuppy, killed in action; and another a son of Captain Ivens (88th Pennsylvania Regiment), killed in action. District of Columbia, 1; Massachusetts, 3; New York, 19; Virginia, 4; Michigan, 3; Tennessee, 4; Missouri, 2; Pennsylvania, 15; Connecticut, 2; Indiana, Iowa, 5; Vermont, 3; Illinois, 3; Kentucky, 4; Arkansas, 1; California, 1; Louisiana, 1; Ohio, 8; Maine, 1; Rhode Island, 1; Wisconsin, 1; Maryland, 4; New Jersey, 2; Tennessee, 1.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give us early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in true columns, to enquiries in regard to initial and other matters.

From gentlemen of professional merit we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of injuries.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or TWO AND A HALF for six months, invariably in advance. Remittances may be made in United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, JANUARY 23, 1864.

GENERAL McCLELLAN'S REPORT.

IT is perhaps fortunate that the publication of General McCLELLAN'S Report has been delayed to this late day. Enough of time has elapsed since their occurrence to enable men to review the events it details with more of judicial calmness and unpartisanship than was possible two years, or even one year ago. The passions which once swayed men's minds have been quieted under the experience and discipline of war, and there is at length sufficient remoteness for us to look at things in their juster relations. It would be premature to attempt now a full review of the campaigns of General McCLELLAN, for the fragmentary portions of his Report which have thus far appeared before us; but we have enough to understand his general strategic plans and to weigh the evidence they furnish of his merits as a military commander.

It has always been a mystery to those who have professed to see in this man nothing more than "the greatest military humbug of the age," that his merits and his plans should have commanded so very generally the respect of educated military men, and that those who understood his strategy best always estimated it most highly. The explanation of this is found in those portions of the Report where his grand strategic combinations as General-in-Chief are expounded. In reading them we must consider at how early a stage of the war they were adopted, and how far in advance of the current ideas of the tenacity of the rebel leaders, of their ability and of their possible operations they were. Looking at them now in the light of subsequent history, it will be hard to deny to their author an appreciation of sound military principles, a sagacity of perception and a breadth of observation entitling him to a high place among military strategists. We find him invariably counselling that unity and concentration in the operations of our armies, as essential to success, and so long disregarded, and, in opposition to ignorant impatience, urging due delay for the combination of movements, instead of those partial and ineffective operations with which it was sought to appease the popular clamor. His plan comprehended in its broad scope the operations of all the armies of the Union, as well as their each his especial charge, and evinced a careful and intelligent study of the field of war. It was the necessity of the success of the plan that its various parts should be carried into execution simultaneously, or nearly so, and in cooperation along the whole line. It contemplated nothing less than the gigantic work of crushing the rebellion at the blow, and the termination of the main work of the war in a single grand campaign. The main army he proposed to concentrate under his immediate command in Virginia for an advance upon Richmond. To diminish the resistance, and compel a scattering of the forces of rebellion, movements were to be undertaken simultaneously all along the extended line of operations. An expedition for the possession of New Orleans was planned; Natchez and Jackson, Miss., were to be taken and the Mississippi opened. The importance of East Tennessee was duly appreciated too, and Kentucky once cleared of rebels, a movement was to be made thence to assist the Union men of East Tennessee and to seize the railroads leading from Memphis to the East. The importance of the possession of these roads in determining the fate of the rebel army in Virginia, was thoroughly comprehended at a time when it by no means attracted that public attention which has since been concentrated upon it. Additional forces were proposed to securely guard all the passes into Western Virginia from the East—and Baltimore and Fortress Monroe were to be occupied by sufficient garrisons.

The organization of a naval force was recommended, to cooperate with the army in its efforts to seize important points on the coast and positions on the railways in the rear of the enemy's points of concentration. Another independent movement from Kansas and Nebraska through the Indian Territory upon Red River and Western Texas, for the purpose of protecting and developing the latent Union and free-state sentiment of that region, was also favorably considered.

The conception of this plan and its presentation in all of its details give evidence of a military sagacity which subsequent events are attesting. In its very extent and completeness, however, lay its chief danger, demanding as it did the use of innumerable bayonets and a degree of public faith and Governmental support hardly to be looked for in a country unfamiliar with war—self-willed and impatient. So General McCLELLAN found it. While busied with his plans and arranging his communications, he discovered "that excessive anxiety for an immediate movement of the Army of the Potomac had taken possession of the "minds of the Administration." A change had taken place in the War Department, and under the dispensation of Mr. STANTON the Army the Potomac was set in motion, and the time fixed by General McCLELLAN for his grand movement,—the 1st of April, —changed to the 22d of February. A difference of opinion arose with the PRESIDENT as to the proper line of operations for the Army of the Potomac, and though the Peninsula campaign was finally decided upon, the plans of General McCLELLAN suffered in their development by the failure to secure to him the supports he had counted upon. The Peninsula was abandoned contrary to his protest, and when, after Antietam, his movements failed to be as rapid as the Government thought necessary, he was removed at a critical period from the command of the Army of the Potomac.

We have not hesitated to speak in praise of General McCLELLAN'S abilities as a cabinet strategist. We think him entitled to the highest praise in this respect. But when we come to consider him as a commander in the field, it is more difficult to render him exact justice. With all his ability, which is unquestionable, we find him lacking, at the start, something of the dash of a successful fighting general. We detect in his early campaigns a certain hesitancy and a lack of self-confidence, and while his theoretical combinations and tactical movements evinced generalship, there was a deficiency of boldness and rapidity. But watching his career in the field it was easy for a close observer to see a growing confidence in himself and a greater ease in wielding large masses of troops without confusion, and to produce decisive results. The Seven Days' Battles were admirable in this respect, and at Antietam he evinced fine qualities as a fighting General. But it will be time enough to consider him in this light when the full official details of his campaign are before us.

As ingenious but visionary rebel claims to have invented a flying machine, which may be used with terrible effect against an enemy. He calls it the "Artisavis," or "Bird of Art," and he believes that by the use of a considerable number of them all of the Yankee armies now upon Confederate soil and all their bristling fleets may be driven off or destroyed. To effect this, he proposes to station a thousand of these machines at a distance of five miles from the hostile camp or fleet, and send them thence into the air, each armed with a 50-pound explosive shell, to be dropped from a safe elevation upon the enemy! The Birds are then to return for the purpose of re-loading. The inventor believes that in this manner an army or fleet could be destroyed in a very few hours. The rebel Congress, however, is blind to the merits of his scheme, and, after vainly waiting in the halls of greatness, he appeals to the "officers, soldiers and citizens of the Confederate States" for a more enlightened judgment and liberal contributions.

[Though some of the views expressed in the following article are divergent from those which were lately put forth in the JOURNAL, the sound military judgment and wide military experience of the author entitle whatever he may write to careful consideration, and warrant us in giving especial prominence to this article.—EDITOR.]

THE SPRING CAMPAIGN.

THERE is no duty more imperative upon those who aspire in any way to lead public opinion than that of checking those eager anticipations of easy victory which temporary success invariably produces, and of fixing the mind of the people on the task before them, rather than upon that which has already been accomplished; leading them, while finding encouragement in the past, and learning from it what to avoid, to consider nothing as accomplished so long as anything remains to be done. At no time was it necessary to insist upon this point more strongly than at the present. The signs of decay in both the military and political power of the Confederacy are too marked to be unnoticed; there is the more danger of their being exaggerated. It is the weak adherents of a cause who first give signs of its failing—it is the strong, when we have to meet in the field. The population may be starving, but a rebellion founded by a small but powerful aristocracy, holding all its high military positions, will not fail, even at this expense, to feed its army. Hardship and danger are the school of the soldier, and the greatest feats of arms have frequently been accomplished by armies destitute of the first necessaries of life. It is now that the acid must be sure for success in the spring, otherwise it will be useless then to expect the fruits. A careful review of the duty to be accomplished will be necessary, to know what means we must take to ensure success.

The force of events has been gradually compelling the rebel leaders to the occupation of military points of the greatest strategical value. It has forced them to leave the extremities, and guard the vital points alone,—thus enabling them to accomplish a maximum of resistance with the troops at their disposal. They have now practically but one vital point to guard, and that is contrary to the generally received opinion, we maintain to be Virginia, which, besides being the seat of rebel government, is the only point from which any useful aggressive campaign against any vital point of the Northern States can be made. Virginia abandoned or taken, the defence of the other States admits of no offensive returns, and without them effective defence is impossible.

We have in previous articles laid down the geographical necessities and strategic considerations which have controlled and must always control the operations of the Army of the Potomac upon Richmond, of the Army of Northern Virginia against Washington, and of the rival armies of JOE JOHNSTON and GRANT against one another. It has been also shown that the advance of GRANT on Northern Georgia rendered possible operations upon his flank from the army of LEE; and that the movement of LONGSTREET was to be considered in this light, and not as a movement in any way connected with or dependent upon the force at Dalton. His manœuvres since his repulse at KNOXVILLE have rendered it not improbable enforcement, the strong force which AVERILL'S raid discovered protecting his communications, all point to this part of the field as that in which decisive operations may be expected; while the very necessities of the enemy, together with the character of their previous military combinations, look clearly to an aggressive military campaign on their part.

GRANT, whatever may be the force placed at his dispesal, and with whatever skill it may be handled, cannot, even if entirely unopposed, penetrate further South than Atlanta; and it admits of very serious doubts whether, with the guerrilla warfare and invade the line of communications, &c., to which his communications would be exposed, he could advance beyond Rome. He dare not take one step forward until LONGSTREET is removed to a position much further from his flank than that which he now holds. It is not, therefore, improbable that, if the rebel necessities as regards men are as great as they are generally believed to be, the force now opposed to GRANT may be still further reduced just previous to the opening operations of the campaign.

In addition to operations against GRANT by way of KNOXVILLE—the Virginia armies being reduced to a

minimum, and placed upon the defensive—there is another aggressive movement possible for LEE, fraught with more serious danger to us, and capable of being carried on without its object being distinctly indicated, until it is very far advanced. We allude to an invasion of Ohio by Western Virginia, up the line of the Kanawha. If the cavalry covering LONGSTREET's communications, and EARLY's corps, and the cooperating forces now in the Southern part of the Shenandoah Valley, were thrown out farther, such a movement would be completely masked, until the mountains had been crossed, and the attacking force were well under way. The invading column would be composed of LONGSTREET's forces, and all that could be spared from LEE, reinforced, if necessary, from JOE JOHNSTON. The recent cavalry operations of the enemy have every appearance of a reconnoissance of the mountain ranges, for the purpose of ascertaining the difficulties attendant upon their passage.

The possession of the East Tennessee and Virginia railroad, from Gordonsville to Lynchburgh, is the geographical fact which renders these operations possible. The possession of one of these points at least is necessary. Gordonsville, being the only immediately accessible one, becomes, therefore, temporarily an objective strategical point of the most vital importance. Its possession, threatening Lynchburgh, would recall LONGSTREET, and permit of the reducing of GRANT's forces to a defensive *status*, while the Army of the Potomac was reinforced, to secure the possession of Virginia and North Carolina, which should be on our part the object of the Spring campaign.

The difficulty of attacking Gordonsville by the present line of operations, is very much increased by the elaborate defensive works which the rebels have been enabled to construct along the Rapidan. It is, however, a maxim of war that long lines of entrenchments can always be turned or broken by proper manœuvres. Almost the only instance of the successful defence of such a system of lines—that of Torres Vedras—owed its success entirely to the mountain range which bisected the territory occupied by the enemy, and prevented his manœuvring. The line of the Rapidan has its flanks on *Fair*, and there is nothing to prevent our moving with the necessary rapidity between Gordonsville and the Blue Ridge. To operate by this line, it is almost an essential of success that our force should exceed that of the enemy. The turning of his position, by a strong infantry column, down the Shenandoah valley to Port Republic, and along the Blue Ridge, would be more in accordance with correct principles than any other mode of forcing the passage of the Rapidan. This would throw LEE back upon Lynchburgh or Richmond. In either case, LONGSTREET would probably be recalled—his line of operations, 340 miles long from Lynchburgh, and 430 from Richmond, being then accessible at all points—and the aggressive campaigns would be prevented,—there being no base of operations of which an efficient security for an advance of such length as would be necessary to secure any decisive or even temporary advantage.

Without the possession of Gordonsville, it does not appear that any good result could be expected from an attack upon Richmond, by way of the James River, in the present combination of circumstances. The time when that line of operations was capable of producing the greatest results has passed.

In the event, however, of LEE being driven from Gordonsville, and LONGSTREET consequently withdrawn, GRANT's force could safely be reduced, and by this means an army obtained which could then operate with unexpected force against the rebel capital. If once LONGSTREET removed 400 miles from GRANT, the army attacking Richmond would become the main army of operations, and that holding Gordonsville, as well as that of GRANT, reduced to a defensive rôle. Further operations would, of course, take place from Richmond, or rather Petersburgh, as a base.

If these views be correct, we have to prepare in the ensuing spring operations on SHERMAN's flank by way of Knoxville in force, at a period earlier than that at which it has hitherto been possible to move in Virginia, or an invasion of Western Virginia and Ohio under cover of such an attack. To be safe against the first we must leave with GRANT a force quite equal to that which can be brought against him, until the cessation of the spring rains enables movements to be commenced in Virginia. To render both impossible, we must then attack and capture Gordonsville. This done, we are enabled to resume the aggress ive by a strong force upon Richmond, which should be done by the James River, so as to avoid wasting it, in occupying unnecessarily long lines of communications, all other columns being reduced to a defensive *status* so as to secure the possession of the rebel capital in the shortest possible time. Any other consideration of our forces will probably be fatal to immediate success, as it will enable the enemy to operate with nearly the whole of his available field force upon vital points in our system, while we are repeating over again the blunders of the past.

The newspapers have been giving great prominence to a paragraph quoted from a letter said to have been written, to a New Hampshire paper, we believe, by a Rev. Mr. HALL, who pretended to report a conversation with General MEADE, as to the cause of the failure of his last campaign, and made that General attribute it to the drunkenness of one of his corps commanders, the reverend letter-writer explaining that the officer referred to was General FRENCH. We did not give that letter notice in our columns; in the first place, because we put no faith in its statements; and secondly, because if it were true we would give no encouragement to this miserable habit of reporting confidential and private conversations with gentlemen in official positions. It will be time enough to consider such charges, when they are made officially by General MEADE, if he chooses to do so. We have no merit or censure and contempt too severe for such maligners of officers as this man who writes an ecclesiastical title before his name. We are glad to hear from Mr. STUART, the Secretary of the Christian Commission, that this HALL is not and has never been an agent of that excellent organization, to which it has been said he was attached; and we take pleasure in saying that General SEDGWICK has written to General FRENCH a letter in which he says that though he was with the latter during a considerable portion of the action, he saw nothing in his manner or management of affairs to give ground for the suspicion that he was not in the possession of his usual the influence of liquor. We of course cannot tell what General MEADE in his official report may have to say of General FRENCH, but we do know that he must ensure as much as any one this effort to prejudge an officer of such long and conspicuous services as General FRENCH.

GENERAL SCOTT is another of the victims of newspaper correspondents. We have scarcely taken up a paper for a week without finding a paragraph from the letter of an enterprising correspondent of a Boston paper, in which we are treated to the private views of the veteran commander upon the conduct of the war, and upon different officers. We know the careful reticence of General SCOTT upon these subjects, and his aversion to discussing, even with intimate friends, the events of the present war, could of course laugh at the presumption and impertinence of this scribbler; but doubtless many were deceived by the boldness of the assertions, and believed that General SCOTT had opened his mind to the man. The final clause of the following characteristic card is doubtless called out by the letter to which we have referred :—

LIEUTENANT GENERAL SCOTT, a third time, entreats the forbearance of correspondents. He still receives thrice the number of letters he can read, and a multitude more than he can acknowledge. To open applications for autographs alone he finds oppressive, though it is long since he has answered one, and he hopes to be pardoned for adding that his observations on men and events are often misrepresented by letter writers he has not seen.

WE learned with pleasure, the other day, that the civil administration of the Chinese Government was undergoing internal modification; and that the imperial authorities had, through the influence of our minister, ordered a translation of the great American work on "International Law," which they intended to adopt for the future as the basis of their intercourse with "outside barbarians." But the same letter which conveys this news of civil progress and reform, furnishes knowledge of a recent occurrence at Pekin, which may be thought, by some of our officers, to indicate that there is room also for improvement in the military customs and administration of the Celestial Empire. We quote from the letter, which is dated at Pekin :—"A few weeks ago, a general, who "had been unsuccessful against the Taeping rebels, "received from the Emperor the present of a white "scarf, with which he hanged himself, after thanking "His Majesty. By the rule of contraries, hanging is "honorable in China."

THE blockade runners continue to have a hard time of it. The list furnished by Admiral LEE to the Navy Department shows that since July 12th, eight have been captured off Wilmington, viz., the *Merrimac, Juno, Margaret and Jessie, Robert E. Lee, Ella and Anna, Ella, Cornubia*, and *Banshee*. Besides these, twelve others have been beached and destroyed—the *Kate, Hebe, Arabian, Phantom, Elizabeth, Dove, Vass, Ceres, Beauregard, Antonia, Bendigo* and *Rose*. Still, with all the vigilance exercised some continue to slip out, the arrival of four blockade runners from Wilmington being announced at Nassau from the 3d to the 6th instant. They report that the difficulty of escaping our cruisers is increased, but are confident of their ability to always succeed. Admiral LEE may have a word to say to them about this when they next attempt the passage. Their names are the *Syren, Fannie, Scotia* and *Hansa*.

A CORRESPONDENT with whom the suggestion for a monument to the officers and soldiers of the Regular Army, killed during the war, finds favor, thinks that some other place than the Cemetery at Gettysburgh, should be chosen for its erection. He suggests Washington or West Point, and says with some bitterness :

"I am led to this, from the fact, that not a single foot of ground in that cemetery was devoted to the burial of the fallen dead, belonging to the Regular Army—who fought on that fatal field; their bodies being thrown *en mass* into the plots, to the right and left of the State plots, among the unknown. State Governments are, and have been very liberal in their appropriations and bounties to volunteers, and in Congress the Regulars under their especial care it would be only just that they, before reducing our pay, which is now insufficient to support a family on, should appropriate a sum sufficient, not only to erect a monument, but, to provide a burial place, for those who have been less fortunate, than we who still live."

TEXAS presents a sad picture of the ravages of civil war. A Rebel secret society, called the "Sons of the South," are actively engaged in forcing out Union men, by fines, and they murder or drive into exile across the Rio Grande. Indian raids are of frequent occurrence in the border counties; but these excite less terror than the rebel conscription, to avoid which many of the German settlers have fled to the woods. Not fewer than seventy-five thousand Texans have been called to arms, of whom thirty-two thousand have been actually placed in the *combat*. Many lie in Southern or Northern hospitals, and some are prisoners. The advent of General HAMILTON is hailed by the Union men with a joy that only those can appreciate who have been made the victims of rebel persecution.

THE unusual pressure of important matter upon our columns compels us this week to abridge the space allotted to advertisers.

ONE of SATAN's peers in Pandemonium announced the aphorism—

"Fallen cherub, to be weak is to be miserable."

This is eminently true; but the weak, and therefore miserable, often attempt to conceal both the weakness and misery, and appear to the public view a cheerful face, as did the Spartan youth, under whose cloak the fox was gnawing at his vitals. One prominent reason why the rebels will not treat is, that no man in high station among them as yet dare propose it. They keep each other in countenance thus far by lying words which conceal their real agony. "Never "surrender;" "Die first;" "Cut their throats when the "crisis comes;" "The last ditch;"—such are hackneyed phrases by which they yet conceal their anxiety. But as times grow harder; as beg become more strictly beyond pay, and the possibility of success becomes even more manifest than now, a voice will be heard, like that which echoed like a trumpet-call through Old Jerusalem; a voice demanding submission, or peace on terms. Let but one such voice be heard; let it have but one echo, and we are sure that a thousand will catch the sound and make it ring from Virginia to Texas. The patriotic people of the great mass prevents them, in spite of their true sentiments, from uttering it, a *tribune* will spring up among the people; and our word for it, whenever a clear invitation is uttered by an authorative rebel voice to receive the amnesty, and submit to the Government, the great work will not only be begun, but speedily consummated. At present the magnates lie to each other and to the people in sonorous words, and they know that they are lying to each other. The moment one of them the mask will be thrown off, and the truth uttered, notwithstanding the shame and sorrow. Who will begin? Is JEFFERSON DAVIS man enough for this?

FOREIGN MILITARY AND NAVAL MATTERS.

A STATEMENT that the 9-inch KRUPP gun at St. Petersburgh had burst, is confirmed. A dispute has arisen as to whether it was the shot or the gun which was in fault. POOTLOFF'S shot has penetrated the two 4½-inch plates, nine inches in all, while Sir Wm. Armstrong's shot only 8.

In accordance with Admiralty instruction, the paddle steam-vessels *Banshee, Flying Fish, Spiteful* and *Rhadamanthus* have been docked and carefully examined as unfit for further service in the British Navy. The *Rhadamanthus*, which for many years has been employed in the conveyance of mails between Holyhead and the western yards, is ordered to be broken up forthwith, and the other vessels will be sold out of the service.

The French have introduced a new system of building sea-walls which promises satisfactory results. They form gigantic blocks of concrete, weighing about 20 tons each, which are deposited in the sea along the line of a breakwater, to afford protection to their seawalls. A new mole at Algiers consists of a breakwater 17 feet in height and 156 feet in width, and the concrete blocks are deposited in the sea until they rise to a height of 35 feet above the rubble, making a total height of 70 feet. A new harbor has been executed at Marseilles, surmounted by a sea-wall and protected by such concrete blocks.

A Mr. Liegard has invented a new composition for preserving the bottoms of iron ships from the accumulation of barnacles and seaweeds which clog and damage the ship's rate of speed. His plan is to give a thick coating of gutta-percha cement in a liquid state, and while it is hot to place over it sheets of glass, heat to the required heat, which are pressed on and firmly secured by iron bolts. The injurious contact of the iron and glass is prevented by an adhesive solution with which the hot-bolts are covered. The preservative properties of gutta percha have been so fully proved, and the smooth and hard surface of glass, it is claimed, renders it impossible for marine growths to adhere permanently to it under a ship's ordinary speed at sea. The new composition is now being tried on the iron steam store-ship of the British navy.

A new iron-clad, built at Baghadie for the SULTAN of Turkey, has lately had a very successful trial trip. Her speed was tried at the measured mile, with these results :—Mean tide, 19·25 knots; mean speed, 19·251 knots; giving an average of 17·75 knots, or 20½ miles an hour. The SULTAN may thus congratulate himself on possessing one of the fastest vessels afloat. Her length is over 1,100 tons. The engines, which are by PENN, have a double set of boilers; the nominal horse-power is 350, but that indicated is 900 in the trial trip. The whole object of the vessel is speed. Space is sacrificed to machinery, and she is built on the finest possible lines. On the return home built on the finest possible lines. On the return home she has been run 45 miles in Black-wall (45 miles) in two hours and five minutes, the tide being part of the way against her. Her speed is that of an average railway train, and it does not appear that she is in any case that it is not easy to keep to nat on, even in a calm.

The new regulations adopted by the French Minister of Marine for the height required of persons who may desire to volunteer for the navy at 4 feet 6 inches after 16 years of age, at 4 feet 10 inches after 18 years of age, and at 5 feet 1 inch after 20 years of age. Voluntary engagements for seamen are to be made for four years, and for apprentices seven years. They cannot be contracted, except by persons having completed their 15th year and under 21 years for apprentices, and under 23 years for seamen. Operative engineers, blacksmiths and coppersmiths are permitted to contract voluntary engagements for seven years as engineers and stokers in the Imperial navy from the age of 18 to 30, if they have never served on board a ship of war, and until 35 if they have served on board five years. The height of operatives must be at least four feet ten inches. The period for which leave of absence is to be granted to each conscript is also fixed and regulated according to the length of the voyage accomplished. The shortest is six months. The leave of absence may be extended beyond the full expiration of the period granted by an order from the Minister of Marine, and under the direction of the maritime prefects—the council for regulating the imperial fleet.

"A GUNNER" writes to a London paper that the 600-pounder ARMSTRONG gun is a failure, and only late target practice altogether victorious. He says:—"*Boy Will* certainly destroyed the *Warrior* target at 1,000 yards but only a little over 3 inches of the 9-inch armor-plating, for *Bill's* inside is now unmistakably strained, and the brass buttons in his reel have shunted the fastenings of his breast-plate. It seems correspondent reported that the smaller ARMSTRONG—the 300-pounder—had failed to hit the floating *Warrior* target, which was affirmed by the gunners to be owing to the reduction of the powder charge to 35 lbs. having impaired the accuracy. As, however, one of the shells burst in the gun, at the shunt nip, and the three other projectiles were said not to have been forced home, owing to the jamming of the studs, it may be considered fortunate that the full charges of 40 lbs. was not, from prudential motives, used, or the gun, instead of being damaged, might have been destroyed. The rapid decay of these massive breech-loading guns seems to warrant the suspicion that the nation has gained as little from encouraging the cold system to the detriment of the mild "steel manufactures, as it has from Sir WILLIAM ARMSTRONG'S latest complicated shunt-riffling and previous finely-grooved breech-loading artillery."

The Austrian screw steamer *Maria Pia* will leave Trieste on the 5th of March next, "on a voyage round the world." It has been calculated that a period of eight months will be amply sufficient for the purposes of the voyage, in the course of which thirty-five distant ports will be visited, or five more than called at in the famous NOVARA expedition. About two hundred days will necessarily be spent on the Asiatic coast, while fifty days to be availed of on land for the visiting and inspecting of various points of great interest in different parts of the globe. The Archduke HENRY, the prime which it is intended to visit during the expedition :—Algiers, Gibraltar, Madeira, Liberia, St. Helena, Cape of Good Hope, Mauritius, Singapore, Manilla, Hongkong, Hong Kong, Canton, Shanghai, Sandwich Islands, Acapulco, City of Mexico, Panama, Lima, Valparaiso, Falkland Islands, Rio Janeiro, Bahia, Pernambuco, Canary Isles, Ionian Isles, two Dalmatian and two Italian ports; thence home to Trieste, to arrive about the middle of November. The expedition, which is being formed under the auspices and superintendence of the Austrian Government, will be provided with influential letters of recommendation to the various consulates in different parts of the world.

AMERICAN AND ENGLISH ORDNANCE.

A correspondent of the London *Times* gives two tables, by which to compare the ordnance of the country and England. The first is a table of the heavy smooth-bore guns of the two nations; and, for the sake of readier comparison, guns of the same denomination are, where there are any similarity, placed in juxtaposition.

Denomination.	Guns.	Caliber.	Weight of Shot.	Charge.
		in. tons.	lbs.	lbs.
English.....	68-pounder	cast iron	8 4·½	16
American.....	8-in. gun	cast iron	8 4·½	16
American.....	8-in. gun	cast iron	8 4	12
English.....	10-in. gun	cast iron	10 8·½	40
American.....	10-in. gun	cast iron	10 8·½	32
English.....	95-pounder	cast iron	9 6·½	25
American.....	15-pounder	cast iron	10 8·½	30
American.....	15-in. Rodman	cast iron	15 20	100
English.....	10-pounder	built up	10·3 12	46
American.....	11-in. gun	cast iron	11 7·½	15
American.....	15-in. Rodman	cast iron	15 20	100
American.....	15-in. Rodman	cast iron	15 20	150

The second contains a list of the principal heavy rifled guns in use in the two countries :—

Denomination.	Guns.	Caliber.	Weight of Shot.	Charge.
		in.	lbs.	lbs.
English.....	110-pounder...	built up	7	14
American.....	100-pr. Parrott..	built up hoops	6½ 4·½	16

THE BATTLE OF LEIPSIC.

The *Oesterreichische Militärische Zeitschrift*, in a biographical notice of Prince CHARLES, of Schwarzenberg, publishes the following letter from the Field-Marshal to his wife on the eve of the memorable battle of Leipsic, which sealed the fate of NAPOLEON. It is not only interesting but important as an historical document :—

"PRAHA, 16th October, 1813.—I wished to have written to you yesterday, but I had no time to spare, and was worn out. A few hours' sleep have quite restored me; I stood in need of them, for I have been engaged with the men in an important day. The plains of Leipsic will be the scene of a fearful conflict. Napoleon is in Leipsic, and Bernadotte at Dessau. He will advance to-morrow from Merseburg and Halle on Leipsic; with him GYULAI, who is actually concentrated at Lutzen. He marches on the road which leads from Leipsic to Zwenkau towards Kanewitz, and will be supported by the Austrian *corps de reserve*. The corps of WITTGENSTEIN, BLUCHER and BERNADOTTE will march between the Pleisse and the Pratha, and the enemy opposed to them; the Russian grenadiers, cuirassiers, foot and horse guards, and Colonel GRENEVILLE's cuirassiers, to act as reserve. I have ordered BENNIGSEN to take up a position near Grimma, and to leave as small a force as possible in front of it, as the CROWN PRINCE will take the field or not is still an open question. If the Almighty will lend us His arm, for He is the God of battles, I will risk everything—God knows it; but a failure at the present moment would be fatal. This battle will last for some days, for the position is a peculiar one, and one of the greatest importance.

"As I look out of my window and see the countless watch-fires in the plains before me—more than a hundred—I feel opposed to the greatest commander of our times, the greatest of all times, a real 'battle-emperor,' I feel, my dear NANNI, as if I were entirely equal to the task, and that I shall succumb under the Herculean labor. But glancing upwards at the stars, I fancy that He who organized them has decreed my path. If it be His will that the just cause should conquer—and I believe that ours is the just cause—His wisdom will enlighten me and give me strength. If it should be the will of Providence that I should fall, my personal misfortune will be the smallest of the sad consequences. If I survive the day, dearest NANNI, that I shall not appear less worthy in your opinion. In case of success or of failure, I have beforehand cast aside all personal considerations, and the judgment of the world may praise me or condemn me. If all goes well I will join you and the children, and will tend our trees and flowers. I have this moment received your letter of the 9th, and in a few hours the thunder of cannon will inaugurate the auspicious day. One of brave BLUCHER's adjutants has just come in to say that according to agreement he is already on the move, and will be at the appointed place at the hour agreed upon. I must now bid you adieu. Pray to God for me, and I will do the same. Be thus conversed with you. Good night, then, dearest, I will put my trust in God, and I know that your prayers will meet mine there. CHARLES."

[AFTER THE BATTLE.]

"Rome, 30th October, 1813.—At thy feet, dearest NANNI, I lay the laurels which the Almighty has this day granted me. God has blessed our arms; the defeat of the enemy is complete; I never beheld so terrible a battle-field! COUNT ZICHY, Louis LICHTENSTEIN and the Prince of SAXE-WEIMAR fought like heroes. Our loss is very great, but the enemy may be said to have lost everything." We pursued him beyond Leipsic yesterday. Deign to attempt to make it stand at Leipsic, but was driven back on every point. The King of SAXONY, BERNADOTTE, BENNIGSEN, BLUCHER and many other Generals are prisoners, with more than 300 guns; and I returned here to-night from Leipsic to make further arrangements for the pursuit. My colleague, the Emperor, my master, has conferred upon me the Grand Cross of Theresa, the Emperor of Russia that of St. George, and the King of Prussia that of the Black Eagle. I might mention this as news, as you know, my dear NANNI, I am satisfied with having done my duty, more than with any congratulations or rewards that may come to me. Thy bright star has arisen in my horizon, and so, dearest beloved, I hope that it may continue to shine on thy life and destiny for your society at our beloved Worlik. NANNI, I have acted honorably and faithfully, and Heaven has given its blessing to our arms. Adieu, dearest one—another what—to remind me of the events in the plains of Leipsic.

Ever yours,

CHARLES."

INSIDE VIEW OF FORT SUMTER.

The Richmond correspondent of the London *Times* embodies in his last letter the following extract from a letter written by an English officer, giving a description of a visit to Fort Sumter. It was written November 13th :—

"I went yesterday evening to Fort Sumter. It was most interesting exploring it. Rebecca was very properly calcium light at Battery Gregg, with which they illuminate Sumter to such a degree that it is impossible for steamers to run in at night. We had to go in a small boat, as we had to land in row boats. They were shelling very rapidly, and it became most exciting when we neared the fort, especially as the tide was running out, and the calcium light, as they could see us. No accident befell us, however, as we came in, just about the time the Yankees in the bomb-proofs were perfectly safe. The bomb-proofs are lofty and spacious, and well ventilated. The last bombardment has not done much harm to the walls of the fort, though they say, if anything, really stronger than before, from the amount of *debris* knocked down upon them. Major RIPLEY, the commandant, was kind enough to show us over the works, and on to the parapet, to show me the effects of the bombardment—a courtesy, by the by, which, considering the lively time we were having, I thought rather a proof of confidence in very genuine politeness. We had not been half a minute on the arm rest when a shell burst about 20 feet from him within a hit of shell; and we had hardly got back, when another poor fellow was brought out, with two-thirds of his head carried away by a piece of shell. Luckily we did not stay long; still, I had time enough to take a good look around and see all I wished. The place is undoubtedly very much knocked about, and they are trying to do the walls any further damage. The sea front is almost entirely knocked into the area, and you can now walk up from the beach to the top of the walls by means of the *débris*. The wall which they battered so in August is now the best on it; it remains pretty much as it was then, and is the part of the building which originally contained the officers' quarters, and was made pretty solid between April and August by filling in with sandbags and earth. The other walls, though they are also, comparatively, suffered little. The casemates in the fort are seldom heavy, and arms from the men are always kept loaded ready for an alarm, since most of whom have to be posted at night, have mostly a shelter, into which they can dodge when they see a shell coming. The men are in excellent spirits, the Federals should try another assault. On our return from the fort we were again in the midst of a shower, the enemy were grape this time; and one of our boatmen got hit in the hand, and another in the back, though slightly. We were almost out of range when we commenced to pay some attention to visitors calling at Fort Sumter; it was only my particular luck that they should be so on the night in question."

Mr. DICKERSON'S Detroit Pump.—We alluded last week to Mr. E. N. DICKERSON's famous pumping-engine for the Detroit water-works. A late Detroit paper says of the matter, that "in July, 1856, he contracted to furnish our city water-works with a pumping engine of a new and novel construction capacity. The engine was ordered for acceptance until July, 1858. Before it entirely failed to "meet the specifications, was abandoned by the contractors and one of another kind substituted—a contract compelled us to take it down and order a new engine of an approved "pattern. This machine was constructed upon plans furnished, and was an entire failure." The facts about the business are as follows :—Mr. DICKERSON contracted to put up an engine which would exceed the working of any other engine by fifty per cent. His machinery, when finally completed, instead of producing the promised 150,000,000 gallons in 24 hours, only produced 100,000,000. Instead of the contract, yielded only 40,000,000—a rate of performance which fell so far below the programme that the Water Commissioners refused to accept it, and entered legal proceedings against Mr. DICKERSON to recover damages in the premises.

ARMY GAZETTE.

THE VOLUNTEER ARMY.

NOMINATIONS FOR PROMOTION AND APPOINTMENT.

The President has sent to the Senate the following list of nominations for promotion and appointment in the Volunteer Army of the United States:

Capt. Quincy A. Gillmore, of the Corps of Engineers, to be a Brigadier-General, April 15, 1862, for gallant and meritorious military services.

To be colonels of Fort Pickens, Barrancas Barrier, Georgia.

Lieut.-Col. Harvey Brown, 2d U. S. Artillery.

Brig.-Gen. Silas Casey, U. S. Vols., March 13, 1863.

Gen. Gouverneur K. Warren, U. S. Vols., May 2, 1863.

Brig.-Gen. Andrew A. Humphreys, U. S. Vols., May 26, 1863.

TO BE BRIGADIER-GENERALS.

Col. Joseph D. Cox, 23d Ohio, September 23, 1863.

Henry J. Hunt, U. S. Artillery, September 23, 1863.

Col. Henry S. Burton, of New York, October 4, 1862.

Col. Joshua T. Owen, of Pennsylvania, Nov. 29, 1862.

Col. Patrick F. Connor, 3d Cal. Vols., March 30, 1863.

Col. Samuel P. Heintzelman, Inspector-General, U. S. A., April 30, 1863, to command one of the new corps.

Col. Gabriel R. Paul, 6th Infantry, April 18, 1863.

Lieut.-Col. Edward E. Potter, 20th N. Y. Vols., to command colored troops.

Col. Edward F. Jones, formerly 9th N. Y. Vols., May 6, 1863.

Yost Louis, Adjutant-Gen. 9th Regiment Artillery, May 26, 1863.

Col. Samuel Thomas, 8th Kentucky Infantry, May 26, 1863, to command colored troops.

Col. Daniel H. Rucker, Additional Aide-de-Camp, May 27, 1863.

Col. Thomas M. Vincent, Additional Aide-de-Camp, May 28, 1863.

Lieut.-Col. Rufus Ingalls, Additional Aide-de-Camp, May 29, 1863.

Capt. Alexander McD. McCook, 2d Cavalry, May 30, 1863.

Capt. Alexander Shaler, 65th N. Y. Vols., May 30, 1863.

Lieut.-Edward Kirby, 1st Artillery, May 30, 1863. (Signs dead.)

Capt. Stephen G. Simpson, 6th Illinois Cavalry, June 5, 1863.

Capt. Stephen H. Weed, 5th Artillery, June 6, 1863. (Signs dead.)

Capt. Lewis Merrill, 4th Cavalry, June 6, 1863.

Lieut. Lewis Johnson, 1st Artillery, June 6, 1863. (Signs dead.)

Commander S. Wells, 15th Infantry, June 25, 1863.

Lieut.-Col. Alfred L. Lee, Adjutant-General, June 26, 1863.

Col. Walter C. Whitaker, 4th Kentucky Vols., June 26, 1863.

Col. Edward D. Baker, 71st N. Y. Vols., June 26, 1863. (Signs dead.)

Capt. Wesley Merritt, 2d Cavalry, June 26, 1863.

Col. Joseph Hayes, 23d Ohio Vols., June 29, 1863.

Capt. Lewis V. Caziarc, 1st Artillery, July 1, 1863. (Signs dead.)

Lieut. Vincent Hall, 2d Inf., July 1, 1863. (Signs dead.)

Capt. Col. William H. Wherry, 1st Ohio Cavalry, Aide-de-Camp, July 17, 1863.

Col. John C. Starkweather, 1st Wisconsin Vols., July 17, 1863.

Col. Joseph Karge, 82d Illinois Vols., July 17, 1863.

Col. Thomas Hamer, 7th Ohio Vols., July 17, 1863.

Col. John R. Sanborn, 4th Minnesota Vols., August 1, 1863.

Col. Giles Smith, 8th Missouri Vols., August 1, 1863.

Col. Samuel A. Rice, 33d Iowa Vols., August 4, 1863.

Col. Joseph R. Cockerill, 46th Ohio Vols., August 4, 1863.

Capt. Alexander Piper, 19th Indiana Battery, August 4, 1863.

Col. Samuel S. Smith, 54th Ohio Vols., August 11, 1863.

Col. Warren C. Kemper, 34th Indiana Vols., August 11, 1863.

Col. Manning F. Force, 20th Ohio Vols., August 11, 1863.

Col. Robert L. Kimball, 2d Missouri Cavalry, August 11, 1863.

Col. John M. Corse, 6th Iowa Vols., August 11, 1863.

Lieut.-Col. Charles S. Hamilton, 20th N. Y. Vols., August 11, 1863.

Capt. A. C. Gillem, 2d Tennessee Cavalry, Aide-de-Camp, August 17, 1863.

Col. James C. Rice, 40th N. Y. Vols., August 17, 1863.

Col. John W. Fuller, Additional Aide-de-Camp, August 17, 1863.

Lieut.-Col. Edward E. Potter, 20th N. Y. Vols., to command colored troops.

Col. Samuel Thomas, 8th Kentucky Vols., May 26, 1863.

Col. Henry C. Hasbrouck, 5th Mass. Vols., Sept. 12, 1863.

Col. Thomas W. Egan, 9th Minnesota Vols., Sept. 12, 1863.

Col. Henry W. Birge, 25th Conn. Vols., Sept. 18, 1863.

Col. Joseph Thoburn, 1st West Virginia Vols., 1863. (Since dead.)

Col. Stephen Miller, 7th Minnesota Vols., Oct. 26, 1863.

Col. James H. Ledlie, 1st N. Y. Mounted Rifles, Oct. 26, 1863.

Col. Isaac F. Shepard, 3d Mass. Vols., Oct. 27, 1863, to command colored troops.

Col. Samuel A. Duncan, 42d Mass. Vols., Oct. 27, 1863, to command colored troops.

Col. A. L. Chetlain, 12th Illinois, Dec. 18, 1863, to command colored troops.

MONTHLY PAY FOR STAFF OFFICERS.

TO BE BRIGADIER-GENERALS.

Col. C. C. Richter, 2d Missouri Volunteers, January 5, 1864.

Col. John F. Miller, 23d Indiana Volunteers, January 5, 1864.

Col. C. C. Andrews, 3d Minnesota Volunteers, January 5, 1864.

Col. Daniel Tyler, 1st Connecticut Heavy Artillery, January 5, 1864.

Col. John W. Sedgwick, 2d Connecticut Volunteers, January 6, 1864.

Col. Regis De Trobriand, 5th New York Volunteers, January 6, 1864.

TO BE AIDES-DE-CAMP WITH THE RANK OF MAJOR.

First Lieut. Lyman M. Kellogg, 2d Illinois Cavalry, April 28, 1863, for Major-General Grant.

Capt. G. E. Tremaine, 2d New York, April 25, 1863, for Major-General Sickles.

Charles A. Whittier, Mass., April 28, 1863, for Major-General Sedgwick.

Capt. Frederick T. Locke, 2d New York Cavalry, April 28, 1863, for Major-General Slocum.

John F. Anderson, Mass., June 3, 1863, for Major-General Foster.

First Lieut. William G. Mitchell, 49th Pennsylvania, June 26, 1863, for Major-General Meade.

Capt. James C. McKay, Aide-de-Camp, July 3, 1863, for Major-General Schenck.

Capt. Thomas B. Dawson, Additional Aide-de-Camp, August 4, 1863, for Major-General Gillmore.

Gil. Campbell, Kansas, Aide-de-Camp, August 14, 1863, for Major-General Burbridge.

Capt. Frederick A. Seward, additional Aide-de-Camp, Aug. 28, 1864, for Major-General Gillmore.

First Lieut. Thomas G. Benham, 24 Iowa Cavalry, Nov. 6, 1863, for Major-General Grant.

Peter Haggerty, Mass., Nov. 9, 1863, for Major-General Butler.

Capt. Charles A. Gray, 1st Connecticut Cavalry, Nov. 9, 1863, for Major-General Butler.

Albert F. Ellis, Mass., Nov. 9, 1863, for Major-General Butler.

First Lieut. Heath H. Gay, 4th Illinois Cavalry, April 18, 1863, for Major-General Hurlbut.

First Lieut. George H. Steele, 43d Illinois, April 18, 1863, for Major-General Hurlbut.

Mr. Andrew G. Mason, 5th Pennsylvania, April 28, 1863, for Major-General Hooker.

Capt. Charles Ewing, 4th New York, April 28, 1863, for Major-General Pleasonton.

First Lieut. Harry M. Shinnick, —, April 23, 1863, for Major-General Howard.

First Lieut. William W. Moseley, 16th New York, May 7, 1863, for Major-General Slocum.

Second Lieut. W. G. Tracy, 12th New York, May 7, 1863, for Major-General Slocum.

First Lieut. Eugene B. Beaumont, 4th U. S. Cavalry, May 13, 1863, for Major-General Sedgwick.

Gustavus Woodward, Georgia, May 13, 1863, for Major-General Sedgwick.

Graves Moale, George Mendo, 6th Penn. Cavalry, May 22, 1863, for Major-General Meade.

Alexander Hays, Penn., May 22, 1863, for Major-General Meade.

2d Sergeant Crosby, New York, June 3, 1863, for Major-General Banks.

Capt. Charles Ewing, 4th Regiment New York Cavalry, June 3, 1863, for Major-General Pleasonton.

First Lieut. Peter S. Parker 49th Pennsylvania, June 22, 1863, for Major-General Hooker.

First Lieut. William D. W. Miller, 66th New York, June 25, 1863, for Major-General Slocum.

First Lieut. Henry M. Bragg, 150th New York, August 17, 1863, for Major-General Sedgwick.

Geo. Cuyler, 1st Regt. Artillery, Massachusetts Militia, August 17, 1863, for Major-General Hamilton.

Capt. Adjutant-General Assistant-General of Vols., August 24, 1863, for Major-General Hamilton.

Capt. Charles Ewing, 4th New York, August 24, 1863, for Major-General Pleasonton.

Alexander S. Shorpe, Penn., August 26, 1863, for Major-General Grant.

First Lieut. Joseph C. Audenried, 4th U. S. Cavalry, Oct. 26, 1863, for Major-General Sheridan.

William L. Candee, Mass., Nov. 9, 1863, for Major-General Butler.

Capt. Jeremiah G. Taylor, 11th Ohio, Nov. 6, 1863, for Major-General Granger.

First Lieut. David M. Cross, 5th New Hampshire, Nov. 6, 1863, for Major-General Sheridan.

Capt. Charles Ewing, 4th New York, Oct. 26, 1863, for Major-General Sheridan.

Howard C. Clarke, Mass., Nov. 9, 1863, for Major-General Butler.

Capt. Joseph Lewis, Michigan, 23d Regiment, Nov. 17, 1863, for Major-General Sheridan.

ADJUTANT-GENERALS' DEPARTMENT.

TO BE ASSISTANT ADJUTANT-GENERAL WITH RANK OF MAJOR.

Frank J. White, New York, Nov. 9, 1863.

Sterling Bullock, 1st N. Y. Vols., Nov. 9, 1863.

Wm. John Hancock, Asst. Adj.-Gen. of Vols., March 3, 1863.

Capt. Robert Ransom, Jr., 1st U. S. Artillery, Apr. 28, 1863.

Capt. Robert Ransom, 1st U. S. Artillery, April 28, 1863.

Capt. Robert Ransom, 1st U. S. Artillery, April 28, 1863.

Major Charles Whittier, Mass., April 28, 1863.

Capt. W. Steven, of Ohio, May 8, 1863.

Capt. Robert Ransom, 1st U. S. Artillery, April 28, 1863.

Capt. Alexander Piper, Ordnance Department, May 7, 1863.

Col. William H. Morgan, Asst. Adj.-Gen. of Vols., May 9, 1863.

Lieut. James A. Howard, Asst. Adj.-Gen. of Vols., May 15, 1863.

Capt. Charles Ewing, 4th New York, May 15, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Robert Ransom, 1st U. S. Artillery, May 27, 1863.

Charles A. Bowne, of New York, June 1, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Livingston R. Hayward, 7th N. Y. Vols., June 23, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Col. Charles W. Foster, Asst. Adj.-Gen. of Vols., August 24, 1863.

Capt. Abraham Hoffman, Asst. Adj.-Gen., of Vols., August 26, 1863.

Capt. James B. Muhlman, Asst. Adj.-Gen. of Vols., Sept. 4, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., Sept. 4, 1863.

Capt. Philander Bent, Asst. Adj.-Gen. of Vols., Sept. 10, 1863.

Capt. William B. Conyer, Asst. Adj.-Gen. of Vols., Sept. 15, 1863.

Capt. Edward C. Baird, Asst. Adj.-Gen. of Vols., Sept. 16, 1863.

Joseph M. Bell, of Massachusetts, November 7, 1863.

Capt. Robert Allen, Aide-de-Camp, November 9, 1863.

Capt. Charles Ewing, 4th New York, November 9, 1863.

TO BE ASSISTANT ADJUTANT-GENERALS WITH THE RANK OF CAPTAIN.

Thomas Cranston, Asst. Adj.-Gen. of Vols., August 3, 1863.

Second Lieut. Henry Stone, 1st Wisconsin Vols., April 4, 1863.

Second Lieut. Henry Stone, 1st Wisconsin Vols., April 4, 1863.

Capt. Gordon Leland, 36th Ohio Vols., April 23, 1863.

Capt. Thomas Cranston, May 19, 1863.

First Lieut. Frederick Cavada, 13th Missouri Vols., May 1, 1864.

First Lieut. Cyrus G. Dickey, 14th Illinois Vols., May 2, 1863.

First Lieut. C. Cadle, 1st U. S. Vols., May 7, 1863.

Maj. Joseph H. Lloyd, 15th Indiana Vols., May 9, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Chauncey McKeever, Asst. Adj.-Gen. of Vols., May 19, 1863.

Lieut. George P. Cuyler, 6th Pa. Vols., May 9, 1863.

Thomas Sorrell, 49th Penn., May 9, 1863.

Capt. John F. R. Gray, 5th N. Y. Vols., May 13, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Private Clement G. Lansing, 9th U. S. Cavalry, May 16, 1863.

Capt. Charles H. Morgan, 1st U. S. Artillery, May 16, 1863.

Lieut. Joseph P. Bennett, 1st California Vols., May 15, 1863.

First Lieut. William E. Doster, 4th N. Y. Vols., May 19, 1863.

Lieut. Charles H. Whittier, 1st Cav., Artillery, May 19, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Wilhelmus Mynderse, 7th Pa. Cav., May 19, 1863.

Lieut. John Whitman, 13th Kansas Vols., May 22, 1863.

First Lieut. Henry C. Tiwis, 40th Illinois Vols., May 22, 1863.

Lieut. Samuel E. Plumer, 1st Michigan Vols., May 22, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. Leonidas Willcox, 1st N. Y. Mtd. Rifles, May 27, 1863.

Lieut. William S. Wilson, 1st Nebraska Vols., May 29, 1863.

Ely S. Parker, 7th Regt. N. Y. Vols., May 29, 1863.

Lieut. Hudson Beer, 8th Illinois Vols., May 29, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Capt. J. E. Wilson, 4th Regiment U. S. Artillery, May 29, 1863.

Capt. Adrian C. Ford, 2d Kentucky Vols., June 1, 1863.

First Lieut. Lewis Merrill, 4th U. S. Cavalry, June 1, 1863.

First Lieut. Lewis S. McIlvaine, 4th Pa. Vols., June 1, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

First Lieut. Lewis H. Exerte, 2d Illinois Vols., June 1, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Arnold H. Hanna, 2d Indiana Cavalry, June 12, 1863.

Samuel Wright, Pennsylvania, June 1, 1863.

Private Henry H. Bennett, 1st Missouri Cavalry, June 6, 1863.

Robert Le Roy, New York, June 6, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Lieut. Lewis Johnson, 1st Artillery, June 12, 1863.

Charles A. Booth, New York, June 25, 1863.

Lieut. Joseph C. Poe, 20th Ohio Vols., June 22, 1863.

Lieut. John C. Douglas, 20th Ohio Vols., June 22, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Lieut. Edward Kirby, 1st Artillery, June 25, 1863.

Lieut. John M. Brown, 39th Maine Vols., June 28, 1863.

Lieut. Seneca H. Lee, 20th Ohio Vols., June 28, 1863.

Capt. William Frat, 7th Mass. Vols., June 26, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 7, 1863.

George R. Franklin, Pennsylvania, July 10, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Lieut. Asa C. Robbins, 2d U. S. Artillery, July 21, 1863.

Lieut. Samuel L. Woodward, 4th Illinois Cavalry, July 23, 1863.

Charles A. Craig, Pennsylvania, July 23, 1863.

First Lieut. Joseph H. Mescall, 4th Maine Vols., Sept. 4, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Lieut. Henry C. Wood, 1st U. S. Artillery, Sept. 4, 1863.

Lieut. Charles T. Greene, ——, September 4, 1863.

Capt. L. G. Estes, 3d Kentucky Cavalry, September 4, 1863.

Jacob L. Green, Michigan, September 5, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., September 4, 1863.

Daniel H. Slocum, Maine, September 4, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Minnesota Vols., Sept. 4, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., September 4, 1863.

Sergeant Samuel L. Taggart, Co. E, 2d Iowa Vols., September 4, 1863.

Sergeant Henry Seaver, Company A, 2d Iowa Vols., September 4, 1863.

First Lieut. Will Kennedy, 1st N. Y. Artillery, September 12, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Charles A. Craig, Pennsylvania, September 16, 1863.

First Lieutenant A. P. Rockwell, N. Y. Cheasseurs, September 15, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

William H. Wilcox, Maryland, September 17, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., September 19, 1863.

Lieut. Samuel Hunt, 1st Connecticut Cavalry, September 21, 1863.

Samuel B. Beardsley, 24th N. Y. Vols., September 28, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

First Lieut. James Walker, 20th Conn. Vols., September 29, 1863.

Edward Hutchinson, Jr., Mass., September 29, 1863.

Private George K. Lord, Chicago Mercantile Battery, Oct. 3, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., May 19, 1863.

Wilbur Fisk, Jr., 6th Michigan Cavalry, October 6, 1863.

William A. La Motte, Delaware, November 9, 1863.

Capt. Thomas Cranston, Asst. Adj.-Gen. of Vols., November 11, 1863.

Total monthly pay of staff, $1,171. Generals, $8,340; total monthly pay of Brigadier-Generals, $14,071-50; total monthly pay of staff, $1,171; total monthly pay of Colonels, 3; Lieutenant-Colonels, 2; total monthly pay of Majors, $1,604; total monthly pay of Captains, $1,171; total monthly pay of Lieutenants, $1,072-50. Total, $9,349 16. Grand total, $27,191.

Number of Brigadier-Generals on duty. Commanding Departments, Districts and Posts.

Departments—Major-Generals, 4; Brigadier-Generals, 4. Districts —Major-Generals, 2; Brigadier-Generals, 7. Posts—Major-Generals, 1; Brigadier-Generals, 2. Total Major-Generals, 7; Brigadier-Generals, 13.

It is proper to the question whether it is necessary to assign officers of such high rank, with their numerous staff, to such duties. Seventy Generals are on duty. The Department of Washington, the Ohio in the East, the Southwest, the Ohio, etc., involve great responsibility, and require the undivided attention of a general officer and large numbers of military jurisdiction. General—The Generals assigned to temporary duties, as commanders of Districts, Depots, Boards, Courts-Martial, etc., are generally disabled by wounds or sickness incurred in the field, and their services here are valuable, and frequently employed at the depots as Commissaries, Quartermasters, Adjutants, etc., and supersede the necessity of additional officers.

NOTICE TO DELINQUENTS.

The following named officers, having been reported at the headquarters of the Army for the officers hereinafter specified, are hereby notified that they will be dismissed from the service of the United States unless within fifteen (15) days from January 18, 1864, they appear before the Military Commission, in session at Washington, D. C., or explain, to the satisfaction of the President, the absence of the officers named:

Surgeon Matthew McEwin, 26 West Virginia Cavalry.

Assistant Surgeon Simon C. Swager, 8th New York Cavalry.

Chaplain Andrew Nelson, 15th Penn. Vols.

The order which erroneously mustered out of service Surgeon George W. Avery, 13th New York Artillery, has been revoked, and he is honorably discharged, to date from the cancellation of his muster out, and his services will be continued.

SENTENCES OF COURTS-MARTIAL

Second Lieutenant Charles Frazier, 8th New York Cavalry, to be dismissed the service for conduct prejudicial to good order and military discipline, and conduct unbecoming an officer and a gentleman. Sentence approved by Major-General Dix, Commanding.

V., now on duty at the General Hospital, Annapolis, Md., has been ordered to report to the General commanding the Department of the Ohio, to relieve Assistant Surgeon Charles Page, U. S. A., who will report to Washington, on being relieved, to report to the Medical Director at Cincinnati, Ohio, for duty.

Hospital Steward John E. Sterphy has been relieved from duty at Fort Monroe, Va., and ordered to report to the Commanding General of the Department of the Ohio, to relieve Hospital Steward Wm. Buck, who will report to Washington, D. C., on being relieved, to report in person without delay to Surgeon A. B. Alexander, U. S. A., Medical Director at New Orleans, La., for duty.

RESTORED.

Surgeon Matthew McEwen, 26 West Virginia Cavalry, dismissed the service May 30, 1863, by Special Order, Headquarters of the Army, has been restored to his command, with pay from the date he was ordered to join his regiment for duty, provided the vacancy has not been filled.

REVOKED.

So much of special orders No. 426 of the War Department, series of 1863, as dishonorably discharged Lieut.-Col. Andrew Burgess Gray of Avery, 11th New York Artillery, have been revoked, and he has been honorably discharged the service of the United States, to date from the muster out of his regiment, and the disability for his appointment has been removed.

APPOINTED.

H. Vincent, of Lapeer, Michigan, Surgeon of the 1st Michigan Cavalry, vice —.

Thomas Howley, of Brooklyn, N. Y., Surgeon of the 20th U. S. Infantry, vice —.

G. S. Gibbons, of New Jersey, and David Stevens, of New York, Assistant Surgeons of the 20th U. S. Colored Troops.

NAVY GAZETTE.

DISMISSED FOR DISORDERLY CONDUCT.

NAVY DEPARTMENT, January 4, 1864.

General Order No. 77.

The Department has received a dispatch from Rear-Admiral Dupont, stating that Acting Master's Mate Xavier Cornu was dismissed the service from which it appears that three officers and twelve men were killed and wounded in the explosion of the Keokuk on the 9th of December.

The Secretary of the Navy directs that this untoward occurrence as the result of the disobedience of his instructions by Acting Master's Mate Xavier Cornu, who was in charge of the steamer Keokuk as a tender from the Ferret, and who was one of the officers captured. Mr. Cornu had been specially ordered not to remain his name in the boats, with the exception of two or three, to be sent cautiously on board the Keokuk to ascertain the condition of the vessel, and the use of the crew of the first cutter, who were immediately surrounded by the enemy's boats and captured.

For this flagrant disobedience of orders, attended by such results to the service, Mr. Cornu is dismissed from the service of the navy.

The Department has no wish to discourage enterprise or acts of gallantry, but it requires that they shall be performed with due care, and for a senseless disregard of danger and of warning, without motive or purpose and resulting in disaster, such as that of the Keokuk, will be punished.

GIDEON WELLES, Secretary of the Navy.

COURT-MARTIAL

NAVY DEPARTMENT, January 7, 1864

General Order No. 78.

At a Naval General Court-Martial, assembled at the Navy Yard, Philadelphia, Pa., on the 4th instant, by order of the Navy Dept., and recently tried upon the following charges preferred against him by Engineer-in-Chief

Charge 1.—Not doing his utmost to capture or destroy a vessel which it was his duty to engage.

Specification—In this; that on or about the first day of January, in the year eighteen hundred and sixty-three, the said Lieut.-Commander Richard L. Law being in command of the U. S. steamer *Clifton*, stationed in the waters of the Gulf of Mexico, and engaged in the blockade of the insurgent *Harriet Lane*, then in the possession of the rebels at Galveston,

Charge 2.—Failure to do his utmost when engaging the enemy.

Specification—In this; that on or about the first day of January, in the year eighteen hundred and sixty-three the said Lieut.-Commander Richard L. Law being in command of the U. S. steamer *Clifton*, stationed in the waters of the Gulf of Mexico, and engaged in the blockade of the insurgent *Harriet Lane*, then in the possession of the rebels at Galveston,

Charge 3.—Neglect of duty, to the prejudice of good order.

Specification—In this; that on or about the first day of January, in the year eighteen hundred and sixty-three the said Lieut.-Commander Richard L. Law being in command of the U. S. steamer *Clifton*, stationed in the waters of the Gulf of Mexico, and engaged in the blockade of the insurgent *Harriet Lane*, then in the possession of the rebels at Galveston,

All of which charges and specifications the finding and sentence of the Court were as follows—

The Court finds the accused, the first charge, proven. Of the first charge, guilty. Of the specification at the second charge, proven. Of the second charge, guilty. And the Court does therefore sentence the said accused Lieut.-Commander Richard L. Law, of the United States Navy, to be suspended from rank for one year.

Having passed this sentence, the Court adopted and entered upon the following recommendation to the clemency of the Court:

It appearing from the evidence that Lieut.-Commander R. B. Lee was the executive officer of the *Clifton* during the time of the Navy Yard and the batteries of the town, and, from the testimony of Rear-Admiral Dupont, that the accused has performed his duty without a reproach during the whole course of his professional career, up to the time of the *Clifton* affair, the Court recommends him to the favorable consideration of the reviewing power.

GIDEON WELLES, Secretary of the Navy.

REGULAR NAVAL SERVICE.

ORDERED.

Paymaster J. George Breed, U. S. N., Taylor, to obtain a substitute and report to the examination of candidates for appointment as Assistant Paymasters in the U. S. Navy, now in session at the New York Navy Yard.

Paymaster Edward Dugan, to the Philadelphia Navy Yard.

Paymaster Rufus Parker, to the Atlantic Squadron.

Gunner Wm. Cope, to the Philadelphia Navy Yard.

Acting Ensign Frederick Pearce, to the *Arcadia*.

Gunner George Fogo, to the *Arcas*.

Acting Ensign Peter K. Ingersoll, to the *Sacramento*.

Third Assistant Engineer Wm. A. Wheeler, to duty as Assistant to Chief Engineer E. P. De Lano, at the New York Navy Yard.

DISMISSED.

Midshipman Frederick Haines, of Newport, R. I., Naval Academy.

Assistant Surgeon C. B. DeGraw, U. S. A., has been relieved from duty in the Campbell General Hospital, Washington, D. C., and ordered to report to the Commanding General of the Army of the Potomac at the Tennessee for assignment to duty to the 1st Battalion, 14th U. S. Infantry.

Assistant Surgeon William Carroll, U. S. V., now on duty at the Cumberland Hospital, Nashville, Tenn., has been ordered to report to the Commanding General of the Army of the Potomac, to relieve Assistant Surgeon Benedict B. Breed, U. S. V., who will report to Buck, on being relieved, to report to the Medical Director at Cincinnati, Ohio, for duty.

Assistant Surgeon W. W. Wether, U. S. V., now on duty at the General Hospital, Annapolis, Md., has been ordered to report to the General commanding the Department of the Ohio, to relieve Assistant Surgeon Charles Page, U. S. A., who will report to Washington, on being relieved, to report to the Medical Director at Cincinnati, Ohio, for duty.

Hospital Steward John E. Sterphy has been relieved from duty at Fort Monroe, Va., and ordered to report to the Commanding General of the Department of the Ohio, to relieve Hospital Steward Wm. Buck, who will report to Washington, D. C., on being relieved, to report in person without delay to Surgeon A. B. Alexander, U. S. A., Medical Director at New Orleans, La., for duty.

RESTORED.

Surgeon Matthew McEwen, 26 West Virginia Cavalry, dismissed the service May 30, 1863, by Special Order, Headquarters of the Army, has been restored to his command, with pay from the date he was ordered to join his regiment for duty, provided the vacancy has not been filled.

REVOKED.

So much of special orders No. 426 of the War Department, series of 1863, as dishonorably discharged Lieut.-Col. Andrew Burgess Gray of Avery, 11th New York Artillery, have been revoked, and he has been honorably discharged the service of the United States, to date from the muster out of his regiment, and the disability for his appointment has been removed.

APPOINTED.

H. Vincent, of Lapeer, Michigan, Surgeon of the 1st Michigan Cavalry, vice —.

Thomas Howley, of Brooklyn, N. Y., Surgeon of the 20th U. S. Infantry, vice —.

G. S. Gibbons, of New Jersey, and David Stevens, of New York, Assistant Surgeons of the 20th U. S. Colored Troops.

NAVY GAZETTE.

DISMISSED FOR DISORDERLY CONDUCT.

NAVY DEPARTMENT, January 4, 1864.

General Order No. 77.

The Department has received a dispatch from Rear-Admiral Dupont, stating that Acting Master's Mate Xavier Cornu was dismissed the service from which it appears that three officers and twelve men were killed and wounded in the explosion of the Keokuk on the 9th of December.

The Secretary of the Navy directs that this untoward occurrence as the result of the disobedience of his instructions by Acting Master's Mate Xavier Cornu, who was in charge of the steamer Keokuk as a tender from the *Ferret*, and who was one of the officers captured. Mr. Cornu had been specially ordered not to remain his name in the boats, with the exception of two or three, to be sent cautiously on board the Keokuk to ascertain the condition of the vessel, and the use of the crew of the first cutter, who were immediately surrounded by the enemy's boats and captured.

For this flagrant disobedience of orders, attended by such results to the service, Mr. Cornu is dismissed from the service of the navy.

The Department has no wish to discourage enterprise or acts of gallantry, but it requires that they shall be performed with due care, and for a senseless disregard of danger and of warning, without motive or purpose and resulting in disaster, such as that of the Keokuk, will be punished.

GIDEON WELLES, Secretary of the Navy.

COURT-MARTIAL

NAVY DEPARTMENT, January 7, 1864

General Order No. 78.

At a Naval General Court-Martial, assembled at the Navy Yard, Philadelphia, Pa., on the 4th instant, by order of the Navy Dept., and recently tried upon the following charges preferred against him by Engineer-in-Chief

Charge 1.—Not doing his utmost to capture or destroy a vessel which it was his duty to engage.

Specification—In this; that on or about the first day of January, in the year eighteen hundred and sixty-three the said Lieut.-Commander Richard L. Law being in command of the U. S. steamer *Clifton*, stationed in the waters of the Gulf of Mexico, and engaged in the blockade of the insurgent *Harriet Lane*, then in the possession of the rebels at Galveston,

Charge 2.—Failure to do his utmost when engaging the enemy.

Specification—In this; that on or about the first day of January, in the year eighteen hundred and sixty-three the said Lieut.-Commander Richard L. Law being in command of the U. S. steamer *Clifton*, stationed in the waters of the Gulf of Mexico, and engaged in the blockade of the insurgent *Harriet Lane*, then in the possession of the rebels at Galveston,

Charge 3.—Neglect of duty, to the prejudice of good order.

Specification—In this; that on or about the first day of January, in the year eighteen hundred and sixty-three the said Lieut.-Commander Richard L. Law being in command of the U. S. steamer *Clifton*, stationed in the waters of the Gulf of Mexico, and engaged in the blockade of the insurgent *Harriet Lane*, then in the possession of the rebels at Galveston,

All of which charges and specifications the finding and sentence of the Court were as follows—

The Court finds the accused, the first charge, proven. Of the first charge, guilty. Of the specification at the second charge, proven. Of the second charge, guilty. And the Court does therefore sentence the said accused Lieut.-Commander Richard L. Law, of the United States Navy, to be suspended from rank for one year.

Having passed this sentence, the Court adopted and entered upon the following recommendation to the clemency of the Court:

It appearing from the evidence that Lieut.-Commander R. B. Lee was the executive officer of the *Clifton* during the time of the Navy Yard and the batteries of the town, and, from the testimony of Rear-Admiral Dupont, that the accused has performed his duty without a reproach during the whole course of his professional career, up to the time of the *Clifton* affair, the Court recommends him to the favorable consideration of the reviewing power.

GIDEON WELLES, Secretary of the Navy.

Wright's orders to the *Chippewa* have been revoked, and he has been granted permission to appear before the Examiner at the Philadelphia Naval Asylum, for examination as to his qualifications for promotion, and Assistant Surgeon D. E. Wheeler ordered to relieve him.
Acting Assistant Surgeon F. E. Martindale's orders to the *Chippewa* have been revoked, and ordered back to the *Valley City*.

DEATHS

Reported to the Navy Department for the Week ending January 16, 1864.

David V. Porter, Acting Master's Mate, gunboat, Dec. 29, 1863, Mississippi Squadron.
George W. Rivers, Rear-Admiral, Jan. 3, 1864, Portsmouth, N. H.
Ed. Williams, second class boy, typhoid fever, Dec. 31, 1863, U. S. steamer *Monticello*.
James Miller, landsman, typhoid fever, Dec. 29, 1863, Point Lookout, Md.
John Chanter, remittent fever, Dec. 22, 1863, hospital, Memphis.
Wm. Burnside, ordinary seaman, consumption, Dec. 23, 1863, U. S. steamer *Niagara*.
Henry Rucker, marine, dysentery, Jan. 7, 1864, Naval Asylum, Philadelphia.
George Whitney, landsman, intermittent fever, Dec. 30, 1863, hospital, Memphis.
George Childs, ordinary seaman, consumption, Dec. 30, 1863, hospital, Memphis.
Thomas Jenkins, marine, pneumonia, Jan. 9, Naval Asylum, Phila.
Charles Stone, landsman, landsman, Jan. 7, Naval Hospital, N. Y.
John Thomas, landsman, born, Ire., N. Y. Naval Hospital, N. Y.
Robert Brown, captain forecastle, gunshot wound, Dec. 25, 1863, Steamer Rose, S. C.
Joseph Phillips, ordinary seaman, gunshot wound, Dec. 25, 1863, Steamer Rose, S. C.
Wm. Hall, ordinary seaman, gunshot wound, Dec. 25, 1863, Steamer Rose, S. C.
John Dempsey, landsman, typhoid fever, Jan. 6, U. S. steamer *Pelochot*.
C. P. Stimpe, acting 3d master's mate, disease of kidneys, Jan. 2, U. S. steamer *Rescued*.
Robert Newbauk, ordinary seaman, January 6, Naval Hospital, Washington.
Kenneth Reed, ordinary seaman, acute gastritis, Dec. 28, 1863, Naval Hospital, New Orleans.
Michael McGlaughlin, landsman, yellow fever, Oct. 19, 1863, Naval Hospital, N. O.
William Brown Second Assistant Engineer, yellow fever, Oct. 17, 1863, Naval Hospital, N. O.
John Doyle, ordinary seaman, yellow fever, Oct. 8, 1863, Naval Hospital, Pensacola.
A. Morrigston, seaman, yellow fever, Oct. 5, 1863, Naval Hospital, Pensacola.
Hugh McGuire, marine, yellow fever, Oct. 8, 1863, Naval Hospital, Pensacola.
Thomas Brown, marine, yellow fever, Oct. 7, 1863, Naval Hospital, Pensacola.
John Dulney, marine, yellow fever, Oct. 8, 1863, Naval Hospital, Pensacola.
George Manning, marine, yellow fever, Oct. 11, 1863, Naval Hospital, Pensacola.
George E. Smith, marine, yellow fever, Oct. 11, 1863, Naval Hospital, Pensacola.
Thomas Walsh, marine, yellow fever, Oct. 15, 1863, Naval Hospital, Pensacola.
John Donovan, marine, yellow fever, Oct. 12, 1863, Naval Hospital, Pensacola.
Ephraim Wiley, marine, yellow fever, Oct. 15, 1863, Naval Hospital, Pensacola.
John C. Sigsford, marine, yellow fever, Oct. 15, 1863, Naval Hospital, Pensacola.
Frank Bailey, marine, gunshot wound, Oct. 15, Black Water River Fla.
Martin Fisher, carpenter's mate, yellow fever, Oct. 24, 1863, Naval Hospital, Pensacola.
Henry Furman, paymaster's clerk, yellow fever, Oct. 24, 1863, Naval Hospital, Pensacola.
John Dennis, coal-heaver, yellow fever, Nov. 5, 1863, Naval Hospital, Pensacola.
Wm. Hall, ordinary seaman, yellow fever, Nov. 3, 1863, Naval Hospital, Pensacola.
Wm. Forster, marine, yellow fever, Nov. 8, 1863, Naval Hospital, Pensacola.
Michael Hourey, marine, yellow fever, Nov. 16, 1863, Naval Hospital, Pensacola.
C. F. Brown, surgeon's steward, dysentery, Sept. 25, 1863, Naval Hospital, Pensacola.
Wm. Thompson, ordinary seaman, yellow fever, Sept. 29, 1863, Santa Rosa Island.
Wm. Hall, ordinary seaman, acting master's mate, yellow fever, October 7, 1863, Naval Hospital, Pensacola.
George Hamilton, ordinary seaman, yellow fever, Oct. 8, 1863, Naval Hospital, Pensacola.
Wm. Brown, ordinary seaman, yellow fever, Oct. 8, 1863, Naval Hospital, Pensacola.
Henry C. Benson, acting ensign, yellow fever, Oct. 9, 1863, Naval Hospital, Pensacola.
Wm. Clark, ordinary seaman, yellow fever, Oct. 15, 1863, Naval Hospital, Pensacola.
Wm. Clark, ordinary seaman, yellow fever, Sept. 15, 1863, U. S. steamer *Scout Benton*.
Wm. Clark, ordinary seaman, yellow fever, Sept. 19, 1863, U. S. steamer *Hovey Benton*.
George Hamilton, seaman, yellow fever, Sept. 12, 1863, U. S. steamer *Scout Benton*.
John McManus, landsman, yellow fever, Sept. 1, 1863, U. S. steamer *Hovey*.
Geo. Russell, boy, drowned, Dec. 17, 1863, U. S. steamer *Genesee*.
Wm. Brown, ordinary seaman, drowned, Dec. 17, 1863, U. S. steamer *Clover*.
Wm. Clark, seaman, drowned, Dec. 17, 1863, U. S. steamer *Clover*.
L. Steele, ordinary seaman, drowned, Dec. 17, 1863, U. S. steamer *Clover*.
Frank Brown, landsman, drowned, Dec. 17, 1863, U. S. steamer *Genesee*.
Benj. Brown, landsman, drowned, Dec. 17, 1863, U. S. steamer *Genesee*.
James Sugh, acting master's mate, Dec. 25, 1863, Naval Hospital, Beaufort.
H. P. Carr, acting master's mate, consumption, Dec. 25, 1863, Naval Hospital, Beaufort.
Norris Stepton, first class boy, inflammation of brain, Jan. 12, 1864, Naval Hospital, New York.
Frank Lascobine, seaman, drowned, Jan. 6, U. S. steamer *Nansemond*.

NAVY YARDS.

BROOKLYN NAVY YARD.

The supply steamer *Rachel Seaman* sailed from this Yard January 16. The *Thames* *v. Scott*, Captain O'Brien, from Port Royal on the 15th, arrived at this port January 19. The *Norcross* and the *Scout Bronx* have been brought from Pulley's wharf, Williamsburgh, to the Yard. The *Admiral* and the *Hermione* are expected daily at the Yard, also the *Patapsco* and the *Kearsarge*. The *Vanderbilt* arrived at this port January 19, after a cruise of over a year, cruising after rebel privateers; first to Fayal, then to the Western Ocean; back to Fortress Monroe, thence to the East of Africa, west of Brazil, and finally returning to this port. She has been coaling aboard the barge of the *Conrad*, captured by the *Florida*, and has seized 400 tons of coal left on one of the small islands off the African coast for the privateers. She brings 81 bales of cotton thrown overboard by a blockade runner which she chased without success, owing to the bad state of her boilers. She returns for repairs to her boilers, machinery, &c., which are in a very bad condition. No death or serious case of sickness occurred during her cruise.

On Thursday last about 200 Seamen and sea-hawsers left the Yard for Baltimore, under command of Lieut.-Commander Pendleton. The Steamers sails next Wednesday for the North Atlantic Squadron. Letters, &c., will be forwarded by her. She has arrived on the 17th from the North Atlantic Squadron. The work at this Yard is now progressing with the utmost vigor, and it is hoped that the vessels ordered at the last meeting of the Board will be ready for service in a short time. Rear-Admiral Gregory has appointed a board of officers to convene for the purpose of investigating the justice of the claims made by iron-clad contractors for extra work and altering several vessels.

OTHER NAVY YARDS.

Our space compels us to dismiss the other Navy Yards, with a brief mention of the fact that there is little to report from them this week. At Philadelphia, the vessels in the Navy Yard have been completely lee-boomed as to greatly interfere with work on them. The ironplating on the *Tennessee* has been begun. The *Tuscarora* is thought, will not be launched before next spring. The screw steamer *Pequot* sailed on the 7th from the Charlestown Yard on her trial trip. At Portsmouth, N. H., the old line of battle-ship *Franklin* has been launched. At *Kittery*, the work of altering the *Kearsarge* to a steamer is being been completed at a cost of some $200,000. She is now preparing for sea, and is expected to be fit for active service on the 10th of February.

CONGRESS.

SENATE.

On Friday, the 15th, the House bill, appropriating $300,000 for the payment of the officers and men of the Western Department of Missouri, was passed. The consideration of the Enrollment bill was resumed, and an amendment, providing that persons furnished substitutes, except in regiments belonging to the State from which they first enlisted, and also one increasing the compensation to five hundred dollars, were adopted. On Saturday the 16th, further amendments to the Enrollment bill were agreed to, one of which provides that persons credited to the districts from which they originally joined the service; that the commutation money shall be applied in settling that, and if the whole of the fund is paid, and that colored troops shall be credited to the States from which they enlist. On Monday, the 18th, several other amendments were agreed, and the bill was then passed. Mr. Wilson (Mass.) on the 20th reported the bill for the establishment of a uniform ambulance. Mr. Morgan (N. Y.) introduced a bill to fix the compensation of members of assembly, and other judicial proceedings in the courts of New York. This comprises the Metropolitan Police Districts, Queens, Suffolk, and Richmond Counties, and constitutes a new district, to be called the Eastern District of New York.

HOUSE.

On Friday, the 15th, a bill was passed, providing that sellers of clothing manufactured of wool, cotton, or flax, and compressed within limits not exceeding two pounds in weight, being addressed to any non-commissioned officer or private in the army, may pass the same, without duty. A resolution was introduced, and referred to the Committee on Military Affairs, giving to army chaplains the rank of captains of cavalry. The Confiscation bill amendment bill was tabled, withdrawing the negotiations for an exchange of prisoners from the hands of General Butler. On Wednesday, the 20th a bill was introduced to amend the act establishing and equalizing the grades of line officers of the Navy. Referred to Committee on Naval Affairs.

An order has been promulgated from the Headquarters of the Department of the East, confirming the finding of the Court-martial, of which Brig.-Gen. Geo. J. Fiveth United States Infantry, was President, relative to Assistant Surgeon Wanzer Wheeler, U. S. A., who was charged with refusing to visit the wife of Private Hall, for which he had charge, to an officer bearing an order for his arrest, from General Brown. He was sentenced by the Court to be ordered to the limits of his Post for six months, and to be reprimanded by General Orders, by the General commanding the Department. In consideration, however, of his high standing, and his reputation for subordination attentive to the events which led to his trial, the Major-General commanding the Department only days ago ordered him to the limits of his Post. Dr. Wheeler's offence would seem to be due more to an error of judgment than any attempt at insubordination. He was mistaken enough to assume a control over his hospital which his rank and position did not give him.

The report of Captain Crawford on his operations in conducting an expedition for the protection of emigrants overland to the Pacific States and territories, says:—The settlements have extended so far up the Snake River, on the Western slope of the Rocky Mountains, that the journey between the Eastern and Western settlements is materially shortened, and the recent establishment of military posts and camps at many favorable points has rendered it safe for emigrants to travel unprotected. There was only one interruption to the travel, and that was the recent unwarranted stance of molestation by Indians last summer. Between the settlements on the Boise River, Captain Crawford is satisfied they are fully equal in richness to any ever discovered in California, and he has no doubt that by next year there will be within the limits of Idaho Territory a population of ten thousand souls.

Major-General Burnside made a flying visit to Albany, New York, Saturday last, attended by a single aide-de-camp. He had a brief interview with the Governor and State military authorities relative to the troops recently ordered, he having been authorized by the Government to recruit the Ninth Army Corps to the number of 60,000 men, for detached service.

ART AND THE WAR.

AMONG the reports presented to the New York Historical Society at its recent annual meeting was one by the Committee on the Fine Arts, which felicitously describes the progress of art in the United States during the war. It was read on behalf of the committee by WILLIAM J. HOPPIN. After some preliminary observations relating to ordinary subjects, the committee reported as follows:—

Before closing their report the committee desire to say a word upon the relations between art and the war. They have to some extent in charge, and the great war in which the nation is engaged. So far, the arts of design have very inadequately expressed the heroism, patriotic devotion, the noble charities of the North, or—what, alas! must in numberless cases perish from the remembrance of the survivors—the unrecorded unmerciful sufferings and the glorious martyrdoms of the loyalists of the South. The pencil and the chisel have done something for the first, but are hesitating all there things. Indeed, no war which was ever waged has been so thoroughly described in a literary way as will be this gigantic struggle. No war ever existed wherein the soldiers so many men who are skilled in the art of composition. The vast numbers of private letters, official communications to newspapers, official reports, pamphlets, apologies of this or that general, besides the more ponderous and formal histories, will make the literature of this revolution more copious and affluent than that of any war that was ever waged. A distinguished gentleman of a neighboring State has already completed more than forty and forty thick fine volumes entirely filled with clippings from newspapers alone, and many other persons are making similar collections.

But the pictorial method of preserving memorials of this war has been either neglected or misused. It is true that the illustrated newspapers are full of sketches, purporting to be pictures of important scenes; but the testimony of parties engaged shows that these representations are rarely, if ever, are not taken from photographs, not always reliable. The desire of producing striking effects sometimes overcomes all other considerations, and the truth is sacrificed. It has not sanctified to the demand for dramatic action or a pleasing play of light and shadow. Many of these sketches are of little value, excepting as studies of costume. Some of them are positively lying and fallacious. If all the terrific hand-to-hand encounters which we have seen in the form of pictures displayed in the pages of our popular weeklies had actually occurred, the combatants on each side would long ago have mutually annihilated each other, to the exclusion of all military history.

The photographers have made by far the most important additions to the pictorial history of the war. They have prosecuted their undertakings under circumstances of great difficulty, and have frequently had their cameras and their delicate chambers converted into ambulances, or destroyed by hostile shells. But the caution and deliberation required for successful views of this sort are extremely important. Even in the confusion of a battle, and, therefore, it is not surprising that what we have hitherto obtained in this way has been little better than a confused and blurred "still life" which the plain shows after the conflict is over.

We hope that more attention will be paid by the higher artists to subjects of this sort in future. It is well known that HORACE VERNET, who has given the most valuable pictures of the campaigns in the plains of Chantenoup, by visiting the spot and seeing with his own eyes the remarkable natural features of the scenery, made a mode that conflict not only one of the boldest, but also the most pictorial in the history of the war.

But so far, as we have already said, but little has been done in this way. With the exception of LEUTZE's clear portrait of BURNSIDE, a few excellent groups in plaster by RINEHART, and two or three pictures by HUNTINGTON and EASTMAN JOHNSON, scarcely anything has been produced of an enduring character illustrating the war.

SURGEON-GENERAL HAMMOND.

THE *North American Review*, in an able article on the Sanitary Commission, thus alludes to Surgeon-General HAMMOND:—

"From the date of a prosperous reform, they had to witness the most unconscientious attempts to foist an inquiry who the man was in the whole Medical Staff who united in himself the largest share of ability, military, administrative, and general qualifications for the office of Surgeon-General? Without personal acquaintance, much less personal friendship, with Dr. A. HAMMOND, then an assistant surgeon on the Medical Staff, all the inquiries they made ended in concentrating their preference upon him. They found him a man in the prime of life, who had already risen very far in the medical service of the United States Army, and was thoroughly acquainted with the routine of its administration. He scientific pursuits had not slumbered or slept while on the Medical Staff, though a life there is eminently unfavorable, in time or space, to professional or medical study. He had distinguished himself abroad and at home by his original investigations,—was known as no other man on the Medical Staff was known in the scientific world abroad, throughout Europe and the United States. Quitting the Army to take a professorship in the University of Maryland, he had, in addition to the loss of professional advancement, his professorship and returned to the Medical Staff when the war broke out. From the beginning of the war, in the hospitals at Baltimore, Wheeling, and Cumberland, and in his various communications to the public journals, he had commended himself to the Sanitary Commission inspectors as the ablest and most enlightened medical officer with whom they met. First induced by their representations to think of him for the important medical position of surgeon his task; his pretensions thoroughly explored; his views and purposes carefully inquired into, and a solid and settled conviction arrived at, into which no grain of personal predilection or bargain, or mutual understanding entered, that this was the man for Surgeon-General, and of course the man to be urged upon the Secretary of War.

"Notwithstanding a late Commission of Inquiry, composed in part of prejudiced enemies, sent by the War Department to scrutinize the conduct of the Medical Bureau, and notwithstanding newspaper rumors to the prejudice of Dr. HAMMOND's honor, the Sanitary Commission, whose opportunities are equal to anybody's for observing and judging the conduct of affairs, regard Dr. HAMMOND's administration with the most perfect confidence and admiration, believing him to be a personally incorruptible man, a man of high administrative capacity, of great and great beneficence in his department to medical and sanitary science, to the homes of the land, the soldiers themselves, and the National cause."

RECENT PRIZE CASES.

AMONG the recent prize cases sent by the Navy Department to the Solicitor of the Treasury for the distribution of the prize money according to the capture, is that of the steamer *Rob Roy*, captured on the 14th of July last, by the U. S. steamship *R. R. Cuyler*.

This case was condemned in the Prize Court at Philadelphia on the 25th of September last, and a decree of distribution entered December 30th, decreeing that the *R. R. Cuyler* was the only vessel entitled to share in the said prize, and that the vessel was distributed as follows: 55,5/8ths to be distributed between the United States and the Naval captors. Each seaman in this case will receive \$1,776 71; 1st class firemen, each \$1,147 93; 2d class firemen, \$989 94; coal heavers, each \$712 77; landsmen, \$475 18, and 1st class boys, each \$593 97.

The large amount of prize money which is being paid to the officers and men of our Navy, presents one of the greatest encouragements to enlistments in the Naval branch of the service. Nothing is left undone by the Navy Department which will tend to facilitate the adjudication of the cases which are brought before it, or that will insure a prompt distribution of the money decreed to be distributed among the captors. The Department has caused to be sent up the prize lists of the capturing vessels, which the commanding officers have neglected to send to the Navy Department. The Secretary of the Navy has also ordered the payment of all prize money that would otherwise accrue to them as commanding officers. Final decrees of distribution have been entered in the case of the blockade runners captured by the U. S. steamer *Kittetanny*, and in the case of the steamer *Calypso*, captured by the U. S. steamer *Fox*. These cases were adjudicated in the Philadelphia court, and will soon be ready for payment by the Fourth Auditor of the Treasury. Similar decrees have been entered in important cases before Judge SPRAGUE of Boston, in reference to the rights of vessels to share as joint captors, in the case of the prize steamer *Governor Buckingham*, captured on the 16th of May last by the U. S. steamer *Canandaigua*, and sent to Boston for adjudication, this, together with some other large cases pending in that court, will soon be ready for distribution.

GENERAL MEADE AT PHILADELPHIA.—Major-General MEADE was serenaded at Philadelphia last week by the excellent musical soldiers belonging to Broad and Cherry streets Hospital, and in response to calls spoke a few words. He said:

"I am glad to see that you are all so well, and able to leave your quarters to-night. I hope to find you soon in the active ranks of the army again. We are making every effort to improve the present, and as soon as the weather moderates and the season will allow, active operations will be commenced on all the armies. We want you all to be there. We want you all to return, and bring all you can with you. We want to have an end to the present struggle brought to a speedy and glorious end. It is a question of numbers and of time. You all know what is to be done, and I hope you will be ended speedily. I have nothing further to say, except that I return you my thanks for the welcome you have this night extended me."

He was serenaded later in the evening by the Union League, and said:

"What we need is men. I want you here, all of you, every man of you, however small may be his influence, to use that influence in procuring men for the army. Unless we get the better will it be for that Army, and the quicker will the war be ended. The war must be ended by hard fighting, and it devolves upon you, gentlemen and me to work for the increase of our armies in the field, and when that is done I trust that summer will come to us with peace restored to the land, with happiness, contentment and prosperity pervading the entire country."

THE WORTH OF VETERAN SOLDIERS.—During a recent discussion in Congress as to the best method of giving power and efficiency to our armies by the enlistment of veterans, Senator CRESWELL, of Maryland, said:

"The General-in-Chief, in a conference to which I was a party, and to which I believe the honorable Chairman of the Committee on Military Affairs was also, stated that they are having reports from the commanders in the field constantly touching the condition of the troops in the field, their efficiency, and so on, and that those commanders have in some instances stated in communications to the headquarters, to the General-in-Chief, that one veteran he was worth two recruits—two new men; others that they were worth three; and some estimate a veteran as worth ten raw recruits, and that is the estimate of the most experienced officers. They would sooner have one veteran trained soldier who was inured to camp life, who had been under fire again and again, than ten new men in carrying on this war."

SPECIAL orders from the War Department, dated Jan. 12th, assign Major-General Hancock to recruit and fill up the Second Corps, of which he is commander, to the number of fifty thousand men, for each duty as may be specially assigned to such duty by the War Department. General Hancock has accordingly established his headquarters at Washington, D. C., whence he has issued a general order for the enlistment of veterans, to aid him in the work of recruiting. The following regiments and batteries of General Hancock's corps are from Pennsylvania:—81st, 140th, 116th (Battalion), 148th, 45d, 145th, 71st, 72d, 69th and 106th, Regiments of Infantry, and batteries F and G, First Pennsylvania Artillery, and C and F, Independent Pennsylvania Artillery.

By Special Orders of the same date, Major-General Burnside is assigned to recruit and fill up the Ninth Army Corps, of which he is commander, to the number of fifty thousand men. General Burnside is actively engaged in the work designated.

PRIZE MONEY.—The Secretary of the Navy, in answer to a resolution of the House of Representatives of the 6th inst., asking a reason for delays in distribution of prize money, replies as follows:

"The action of this Department in matters of prize, is merely ministerial. When no exception is made, the officer in command sends his prize to the court for adjudication, and the vessel and cargo pass from the prize master and naval control, and become the care of the court and officers. The delays incident to judicial proceedings arising from contesting claimants, the interposition of foreign officials in behalf of such of their subjects as may be interested or implicated, appeals to the higher judicial tribunals for revision of final judgments, are matters which necessarily cause long prolonged delay. The avails derived from the sales of condemned prize property on final decrees are deposited in the Treasury for the officers of the captors, and are not received into the possession of the Navy Department, though passed to its credit.

He further says that in a few exceptional cases delays have resulted from the negligence of captors in not forwarding prize lists to this Department, but these have been promptly admonished and required to do their duty. Upon receipt of decrees of courts for final distribution prize lists have been immediately forwarded to the Fourth Auditor of the Treasury, by whom the awards and payments have been made. It is suggested that if the resolution is intended to reach the delays from the causes mentioned in the last answer, the information must come from the judicial authorities, over whom the Navy Department has no control.

DR. JOSH CRAPMAN, editor of the *Westminster Review*, well known by scientific and literary gentlemen in this country, is reported to have been made Fourth Auditor of the Treasury—namely, the cure of epilepsy, and other diseases hitherto deemed incurable, by means of the external application of zinc and copper to the spine and the opposite parts of the body,—acting thus upon the sympathetic nerve, and through it upon the most important and vital organs of the body. This remedy has been used in more than 60 cases, and had three fits (on an average) daily; a girl who had two from the ages of fourteen to seventeen, had entirely ceased to have a fit for a year, and had been the cure of paralysis. Many of the worst and most inveterate diseases have yielded to it. Dr. CRAPMAN has been made an origin, as he is grand. Any one who is troubled by the pressure of blood on the brain will find that, by holding a bag of ice on the back part of the head, an equally good effect of blood can be secured. Those who are troubled with habitual cold feet may find relief by applying ice to the small of the back and the pit of the stomach.

THE superiority of the Union over the rebel cavalry has been frequently acknowledged of late by the Southern press. The following extract from the Richmond *Examiner* of December 31st, is a remarkable confession of the reputation of this important branch of the rebel service:—

"We hear one invariable story of the bad management and demoralization of our cavalry in the West. Many of the cavalrymen are rather freebooters and speculators than soldiers. It is said to be not unusual to see, in Tennessee, a cavalryman leading his horse, and driving before him a sumpter mule, and flanked with sides of leather, &c. A reorganization of our entire cavalry force, so as to open the fields fought over upon those days, and for the remains of such as may hereafter give up their lives in that region is a leading feature in the proposed plan of legislation.

The ground selected for the Cemetery is the hill lying beyond the Western and Atlantic Railroad, in a southerly direction from the town. The ground covers a monument upon the summit of a hill of such materials as are to be obtained in that vicinity. When the ground is arranged another will be given, and all interments of soldiers will there after be made in the Cemetery, and all now buried in and around the town removed to that place.

AN examining board has been appointed to examine all officers now on duty in the Army, with reference to their morality, officer-like conduct, and service in the field. Those who may prove deficient in tactics will be afforded an opportunity to prepare themselves for examination at a future period. It is the design of the War Department to admit none to the Corps who have not been regularly appointed, and those who have now authority from civil authority arising from other causes will be transferred back to their regiments for discharge,—thereby reducing the expenditures of home for meritorious conduct in battle. The following officers constitute the court:—Colonel Wessells, Colonel Rank, Colonel Sewell, Colonel Worthington, Colonel Stevens, Colonel Sweet, Colonel Provost, Lieutenant Morris, recorder.

GENERAL ORDERS, No. 12, from the War Department, dated Jan. 6th, say:—In the settlement of the claims of officers who have resigned after they may have been less than one year, they will be entitled to the following ratios of pay for different periods of service, viz.: Three months' service, \$23,33; six months' service, \$35,32; and nine months' service, \$40,34.

SWINTON—WORK!

GOVERNMENT SALE BY AUCTION, AT THE UNITED STATES NAVY YARD, GOSPORT, VIRGINIA.
On Monday, the 25th day of January, the 8th of FEBRUARY, 1864, the property recovered from the channel in the vicinity of the Navy Yard, consisting of the wrecks of the sloops-of-war Germantown and Plymouth, lots of old iron, old wood, and other articles formerly used as a man-of-war, with all the contents belonging to the same, will be offered for sale by at sale.
Also, the following lots of recovered property :—
3,564 pounds (more or less) Copper, (Sales).
4,000 pounds (more or less) Copper, (Sheets).
A small quantity of Composition.
Old Brass Guns.
326 sheets Rolled Iron, (various sizes) weighing about 50 pounds each.
20 tons (more or less) old Wrought Iron, principally Bolts.
1 ton (more or less) Iron Cast Iron.
A quantity of Iron Cables, various sizes, estimated at —— pounds.
Twelve (12) Cast Iron Guns, various calibers, estimated at ——tons.
Also, 1 anchor, averaging about 4 tons.
16 small do.
6 Wood Capstans.
1 old Launch.
1 old Steam Boat and Conical Shell.
All sums of one hundred dollars and under shall be collected at the examination previous to the day of sale. Each recovered article will be examined and sold separately, and, where practicable, the racial will be sold by the lot.
Thirty days will be allowed the purchaser to remove the articles from the Navy Yard leach, and fifteen days for the removal of all other property purchased at the above sale.
The sum of 10 per cent of the amount of sale must be deposited with the Commandant of the Yard at the time of sale, as a guaranty that the articles will be removed within the time limited, or the deposit will be forfeited to the Government.
Payment to be made in Government funds before any articles can be removed.
For further information, or permission to examine the property, apply to the Commandant of the Gosport Navy Yard.

$2,000,000 LOAN OF THE COUNTY
OF NEW YORK.
Subscriptions are hereby invited to a loan of Two Millions Dollars, authorized by an ordinance of the Board of Supervisors, approved by the Mayor, October 24, 1863, entitled, "An Ordinance for the procure ment of funds for the relief of families of soldiers for the service of the Union, provided the same can be counted and obtained on the quota of the said county of New York in any future draft.
The terms of the loan are such subscriptions will be received at the County Treasurer's office, on after Tuesday, the 17th day of November instead, and interest upon the whole sum shall begin then.
Subscribers will be required to deposit with the County Treasurer, at the time of taking, within five days after entering their subscriptions, the amounts subscribed for, less twenty-five per cent, and signing his receipts for the money to the Comptroller, they will be entitled to receive the loan at the county, for equal amounts, redeemable on or before June 1, 1864, with interest from the date of payment, at the rate of six per cent per annum.
MATTHEW T. BRENNAN, Comptroller.
CITY OF NEW YORK, DEPARTMENT OF FINANCE, COMPTROLLER'S OFFICE, Nov. 16, 1863.

The largest stock in the city of Chicago, and at lowest prices.

P. O. address, Box 886.

THE SOLDIER'S GIFT TO THE

LOVED ONES AT HOME.

We will deliver free of freight charges, at any Express Office on and west of Chicago, Mo., a beautiful Album of the value of $5 or more, that may be ordered by members of the Army or Navy of the United States as presents to friends at home. We manufacture elegant styles at all prices, to $25 and higher.

E. & H. T. ANTHONY,

Manufacturers and Importers,

501 Broadway, N. Y.

ERIE RAILWAY.

Passenger Trains leave, via Pavonia Ferry, foot of Chambers street, as follows, viz:

7:00 A. M., Express, for Elmira and principal intermediate Stations.

8:30 A. M., Mail, daily, for Otisville, and intermediate Stations.

10:00 A. M., Way, for Port Jervis and Newburgh.

5:00 P. M., Night Express, daily, for Dunkirk, Buffalo, Rochester, Niagara Falls, &c. This Train on Saturdays runs through to Buffalo, but does not run to Dunkirk on Sundays.

7:00 P. M., Emigrant, for Dunkirk and intermediate Stations.

CHAS MINOT, Gen'l Sup't.

SEEBASS BROTHERS,

204 Broadway, near Reade St.,

NEW YORK,

Manufacturers and Importers of

MILITARY AND NAVAL GOODS.

The cheapest place for

SWORDS, BELTS, SASHES AND EMBROIDERY.

Metal Goods of every description.

We manufacture our own goods and fill orders promptly.

SCRANTON & CO.,

No. 130 Atlantic street (cor. Henry),

FINE GROCERIES, WINES, LIQUORS AND CIGARS.

Also Officers' Mess Chests put up for the Navy, to the best style and at the lowest prices.

Sole Agents in this city for Gentlemen' Celebrated Demijn Pusher. Also, William Younger & Co.'s Scotch Ales.

THE DERRINGER PISTOL

TIFFANY & CO.,

550 and 552 Broadway, New York,

SOLE AGENTS FOR NEW YORK AND THE EASTERN STATES.

By a recent arrangement with Mr. Derringer, the subscribers have undertaken the exclusive agency, for New York and Eastern States, of the Derringer pocket arm of which he is the inventor and only manufacturer. They propose keeping constantly in store a full assortment, comprising all sizes and finishes of the above pistol, and will be at all times able to fill Trade Orders with promptness, at manufacturers prices. The arrangement has been made necessary on the part of Mr. Derringer, in order to protect the public from spurious articles assuming to be his wares, and that purchaser may, wholesale or retail, will be sure to appreciate the

TIFFANY & CO.

Dec. 16, 1863.

CANFIELD, BROTHER & CO.—229 Baltimore st., corner of Charles st., Baltimore,

Have a full stock of MILITARY GOODS, to which they invite the attention of Officers of the Army and Navy, such as Swords, Belts, Sashes, Epaulets, Shoulder Knots, Hats, Caps, Chapeaux, Feathers, Embroideries, Army and Navy Lace, Sword Knots, &c.

PRESENTATION SWORDS, of fine designs, on hand, or furnished to order, such as Staff Officers' Swords, Cape Holsters, &c. Camp Chests, Camp Stools, Folding Bedsteads, Mattresses, and all articles for use and comfort, on favorable terms.

MILITARY & NAVAL AGENCY.

J. LOEWENTHAL & CO.,

297 Pennsylvania-ave.,

WASHINGTON, D. C.,

Authorized Agents for prosecuting Bounty Money, Back Pay, Pensions, Pension Money and collecting all kinds of Claims against the Government.

RESPONSIBLE CORRESPONDING AGENTS THROUGHOUT THE UNION WANTED.

BROWN'S A Neglected Cough, Cold, or Bronchial Affection of the Throat EASILY CURED by BROWN'S BRONCHIAL TROCHES

COUGHS and COLDS.

These troches have become celebrated for their wonderful virtues in relieving Bronchial Affections, Coughs, Colds, Hoarseness and Sore Throat. Public Speakers and Singers are liable to all these disorders, and will find the Troches a simple remedy, which will relieve the irritation of the throat, and thereby prevent the cough or hoarseness. Obtain only the genuine. "Brown's Bronchial Troches" having been introduced into the best of many years, are highly recommended and prescribed by physicians in the United States and Europe, and have received testimonials from many eminent men.

Sold by all Druggists and Dealers in Medicines in the United States and most Foreign countries at 25 cents per box.

TOMES, SON & MELVAIN,

No. 6 Maiden Lane, New York.

Dealers in everything necessary for the Uniform of the ARMY AND NAVY—Swords, Belts, Sashes, Shoulder-straps, Epaulettes, Laces, Buttons, Patriotic ages, &c., &c., also a large and complete assortment of Firearms, Cutlery, Dundee and Sheffield Shot Guns, and Sporting Ammunition of every description. Sole agents for Hoffler's celebrated Army Revolver. Colonels Officers' Swords, Pistols and Rifles, Eley's Percussion Caps for breechers, &c.—Publishers of Gen. Upton's U. S. Tactics.

SCHUYLER, HARTLEY

AND GRAHAM,

14 James and 22 John Street, New York,

Manufacturers of Military, Naval and Sash Sword, Birmingham, England.

Dealers in Arms, Pistols, and Military Goods, Importers of Foreign Swords for Staff Officers, Swords, Belts, Sashes, Sashes, Sashes, Sword Knots, Gold Embroidered Belts, Solid Silver Spurs, Aiguillettes, Whistles, and Embroideries.

Presentation Swords of original designs constantly on hand, and made to order.

A full assortment of Flags and Guidons. Horse equipments of every description.

E. BALL, BLACK & COMPANY,

No. 565 and 567 Broadway, New York,

Manufacturers and Importers of

MILITARY GOODS.

FINE PRESENTATION SWORDS constantly on hand, and made to order, in the best style of finish and elegance of design, are unsurpassed.

Staff and Regimental Swords for Army and Navy, Epaulettes, Sashes, Belts, Sash Ribbons, Navy Buttons, Shoulder Knots, Aiguillettes, Whistles, Spurs, Gauntlets, Chapeaux, Feathers, Cords and Tassels, Sword Knots, Gold Embroidered Belts, Solid Silver Spurs

PROCLAMATION BY THE PRESIDENT.

EXECUTIVE MANSION,
WASHINGTON, February 1, }

Ordered, That a draft for five hundred thousand men to serve for three years or during the war be made on the tenth day of March next, for the military service of the United States, crediting and deducting therefrom so many as may have been enlisted or drafted into the service prior to the first day of March, and not heretofore credited.

(Signed,) ABRAHAM LINCOLN.

THE MILITARY SITUATION.

IN the lull which "winter and rough weather" have produced in land military operations, several coast and river expeditions have been organized, from which speedy and important results may be confidently anticipated. Without prematurely violating the secrecy which the Government has prudently maintained as to the destination and object of these expeditions, we may say that their operations will not be confined to the Atlantic seaboard. A newspaper correspondent in Memphis has already, and perhaps indiscreetly, apprised the public that a large force of Union troops have been collected in that city, and organized for a special service in the Southwest; but the precise quarter where the blow will fall could not be disclosed at present without exposing the object of the expedition to failure. Our private advices from the Department of the South tend to confirm the rumors of newspaper correspondents that the rebel apprehensions of expeditionary movements from that quarter are not entirely without foundation. But we will not follow the example of the daily press in making premature disclosures. It will content us to record the accomplished facts. In the meantime the rebels are employed in strengthening the fortifications of Wilmington, which they have chosen to consider a point aimed at, the possession of which is of equal importance to them and to us. As the most accessible Confederate port for blockade-runners, connected, by two lines of railway, with the two military centres of the rebel States, it is for their interest to hold it at all hazards and at almost any sacrifice of life against an attack by our forces. Well aware of its importance, they have spared no pains to render its fortifications as formidable as a naturally defensive position and the ingenuity of military science could make them. Within a few weeks they have erected numerous batteries along the river, and at last accounts were employed in adding to the number, as well as strengthening those already built.

THE retreat of the rebels under JOHNSTON from Ringgold and Dalton is still involved in some obscurity. It is surmised that a part of their forces have been sent to LONGSTREET, while a large force was hurried to Mobile in view of the demonstrations made against that city from New Orleans. An important rumor from Ship Island would make it appear that their presence was necessary to prevent the city from being surrendered to the Union forces by its own garrison. It is stated that the troops in Fort Morgan revolted, and fired upon the rebel gunboats which were sent to reduce them. But though they succeeded in driving off the gunboats, they allowed themselves to be surprised and captured during the night. Seventy of the mutineers were condemned to be shot. This important information was brought to Ship Island by one of the mutineers, who managed to make his escape in a sail-boat. It is also reported, on the doubtful authority of deserters, that the rebel army in and around Mobile have organized secret societies, and determined to fight no longer. We leave the reader to put his own estimate upon these reports.

A TRAIN of about eighty wagons, accompanied by an escort of nearly eight hundred men, under command of Colonel J. W. SNYDER, was on Friday, the 29th, attacked near Williamsport, Va., by a rebel force, estimated at two thousand, and after a stubborn resistance our men were compelled to retreat, leaving most of the train in the hands of the enemy. The disaster is attributed to the panic of some of the drivers, by which the train was thrown into disorder.

THE Baltimore and Ohio railroad was attacked on the 24, at Patterson's Creek bridge, by about 500 rebel cavalry under Colonel ROSSER. They captured the greater part of the guard, and after setting fire to the bridge, retreated with their prisoners. The employees of the railroad succeeded in staying the fire before the bridge had sustained serious damage. The next day General AVERILL with his command overtook the rebels near Springfield, and a severe engagement ensued. The rebels were driven through Springfield and thence to and south of Burlington. Many of the rebels were killed and wounded, and our captures are large, including the recovery of our own men taken at Patterson's Creek and many horses. The attempted raid has thus happily ended in the discomfiture and rout of the rebels.

THE report, apparently well authenticated, of an advance upon KNOXVILLE by LONGSTREET, is followed this week by a counter report of his retreat. His advance guard was signally defeated on the 27th ult., by our cavalry under General STURGIS, near the Fair Gardens, ten miles east of Sevierville. The fight was stubborn, lasting from daylight until 4 P. M., and ending in the retreat of the rebels, who left two steel rifled guns and over 100 prisoners in our hands.

At a previous skirmish near Strawberry Plains, instead of making a stand at that position, our forces made a rapid retreat to KNOXVILLE, and permitted the rebel cavalry to cross the river and capture 400 head of cattle and 7,000 hogs, within four miles of the city.

GENERAL RHODDY's raid in Tennessee has come to grief. On the 24th ult., our forces under Colonel PHILLIPS drove the rebel General to the south side of the Tennessee River, captured all his trains, consisting of over twenty mule teams, 300 head of cattle, 600 head of sheep, and about 100 head of horses and mules, and destroyed a factory and mill which had largely supplied him.

THERE is nothing new from Charleston. The firing on the city still continues at short intervals.

WE chronicle the success of a small expedition sent out by General PALMER on the 26th ult., from Newbern, to capture a force of rebel cavalry in Jones and Onslow counties. They succeeded in routing the enemy, captured twenty-three men, with their horses and equipments, destroyed one hundred and fifty thousand to two hundred thousand pounds of pork, seventy bushels of salt, ten thousand pounds of tobacco, thirty-two barrels of beef; also captured several mules, horses, &c.

THE most important news of the week comes from the Old North State. General PALMER reports to General BUTLER that our outposts at Bachelor's Creek were attacked early on the morning of the 1st inst., by the enemy in force, represented to be about 15,000 strong, consisting of HOKE's brigade and PICKER's entire division. It being impossible to make a successful defence, our forces fell back in good order, destroying their camps and abandoning only a few stores. They lost from fifty to one hundred men, and a section of light artillery, which, as it did not fall into the hands of the enemy, may yet be recovered. Almost simultaneously with this attack, the enemy advanced on the south side of the Trent and was gallantly repulsed. The enemy threatened to cut the communications with Morehead City, whence a large portion of General PALMER's supplies are drawn; but at last advices the railroad was still unobstructed, and the commander at Beaufort would see every effort to keep it open. Although seriously threatened, General PALMER is confident of making a successful resistance.

THE NEW CALL FOR TROOPS.

THE Proclamation of the President, calling out half a million of men, and ordering the draft to take place on the tenth of March, was a measure of obvious military necessity. There are many urgent reasons for the immediate reinforcement of all our armies. The rebels, exhausted as they must be by three years of war, which have drawn more heavily upon their resources than upon ours, will still be able to take the field on the opening of the spring campaign with armies considerably augmented by means of a merciless conscription. Conscious of the rapid exhaustion of their military resources, they will undoubtedly strike a sudden and powerful blow for the recovery of the important territory which has been wrested from their grasp. They cannot afford to wait; either can we. Unless we desire to see the war prolonged into another year, we must furnish the Government with a sufficient number of men to enable our generals to cope successfully with the rebel combinations. To secure the permanence of our conquests in Tennessee, the army under General GRANT should be doubled, and General MEADE should have a largely augmented force to enable him vigorously to assume the offensive against LEE and Richmond in the spring.

Such being the imperative necessity for a rapid augmentation of our armies, the only course open to the Government was not only to call for more men, but to order a draft. Although volunteering has been very brisk for a few weeks past, this method was entirely inadequate to the requirements of the hour. Should we depend solely upon it, the spring would find our armies not many thousands stronger than they are at present.

Our views on the subject of conscription have been so recently set forth, that it is hardly necessary to repeat them here. We would only say to those who are opposed to the draft, that it is not yet too late to volunteer. By proper management, a goodly share of the five hundred thousand men may be enlisted before the tenth of March, and the draft rendered proportionately less onerous.

THE Senate in executive session has confirmed the following nominations: Commodore D. D. PORTER, Rear-Admiral of the Navy from July 4, 1863; Captain JOHN ROGERS, Commodore in the Navy from June 17, 1863; Captain STEPHEN C. ROWAN, Commodore in the Navy from July 16, 1863.

THE NAVAL SCHOOL AT NEWPORT.[1]

In directing public attention to the subject of proper professional education for those to whom is committed the National defence, consideration has very naturally been given almost exclusively to our Military Academy at West Point. The associations that have gathered about it since the days of the Revolution, the influence it has exerted upon the conduct of this and of previous wars, as well as the high character of the institution itself, have made it a peculiar object of National thought and care. But while we look to West Point what is so justly its due, we should not overlook the claims of the kindred institution for the education of our Naval officers. Even more than West Point, the Naval Academy, now located at Newport, R. I., has had to contend with popular prejudice and National indifference in owing its very existence to the far-sighted foresight of the Navy Department, and not to the favor of Congress or its constituents.

A "School of the Navy" was included in the plan for a Military school drawn up by ALEXANDER HAMILTON, when Adjutant-General of the Army, and out of which grew the institution at West Point. But it was not until long after that institution had made a history for itself that the idea of a Naval Academy took definite form. The war of 1812 indeed awakened attention to the need of more thorough and systematic education of our Naval officers, and under the act of Congress to increase the Navy, passed January, 1815, some provision was made for the education of midshipmen by the employment of Naval schoolmasters. But with the return of peace, public interest in the Navy rapidly subsided, and through a long course of years no advance was made upon the imperfect provision for supplying our Navy with educated officers. Appointments of midshipmen were made by the Secretary of the Navy in answer, for the most part, to personal or political influence. Their entrance upon the service commenced "at sea or in a foreign port, amidst the noise and distraction of a crowded ship, and the interruptions of various calls of duty. Having been five years in the service, three of which must have been passed in active duty at sea, and having reached the age of twenty years, the midshipman might be examined for promotion. To prepare for this examination, he spent a few months at the Naval Asylum in Philadelphia, where a school was established for that purpose. This meagre course of instruction included only the most elementary branches. Such were the provisions for the training of this "important branch of officers" (*vide Report of Hon.* RICHARD H. BAYARD).

Various unsuccessful attempts were made to arouse Congress to action in the matter, their attention being called to the subject by recommendations from the Navy Department in 1816, 1824, 1827, and 1841. Nothing definite was accomplished, however, until the administration of Hon. GEORGE BANCROFT, who fortunately discovered that he had the power to establish a Naval School without action of Congress. At his request Fort Severn at Annapolis, was transferred for this purpose from the War Department to the Navy Department, with the consent of the PRESIDENT, and the present Naval Academy was formally inaugurated on the 10th of October, 1845, under the superintendence of Commodore FRANKLIN BUCHANAN, a native of Maryland. The School was opened with fifty-six students, thirty-six of whom were midshipmen of 1840, who were preparing for examination; thirteen of 1841, who were to pursue their studies and attend lectures until drafted for service at sea, and seven acting midshipmen, appointments of that year.

The laws of the United States did not at that time sanction a preliminary school for the Navy, providing only for the instruction of officers already in the Navy. The location of the Naval School being therefore officers in the public service, were liable at all times to be called from their studies and sent on public duty. This necessarily interfered with the thorough organization of the school, and made the arrangement of studies difficult at first. The course of study for a midshipman was two years at school, then three at sea, and two years again at school. Experience revealing the deficiencies of this plan, a board was appointed in October, 1849, to reorganize the school, conforming its organization as nearly possible, to that of the Military Academy at West Point. In July, 1850, the new system was reported went into effect; the course of study was extended to four years, with no interruption except a summer cruise of three months; the corps of professors was enlarged, and a practice-ship, the *Preble*, a sloop-of-war of the third class, was attached to the school. From this date the school was dignified in official documents with the title of "the Naval Academy." The pay of the Superintendent was now fixed by Congress at the same rate as that allowed to an officer of the same rank in sea service. A board of examiners was also appointed to visit the Academy annually and report upon its condition.

The first cruise of the pupils was made in the summer of 1856 under the command of Midshipman-Lieutenant THOMAS T. CRAVEN. They embarked in the *Preble* after the June examination, and sailed to our northeastern boundary, touching at the principal ports between Portland and Virginia on their return. Since then cruises have been made during the successive summer vacations, to Fayal, Madeira, Santa Cruz, the Canaries, and St. Thomas, West Indies; Fayal again, to Gaunon on the west coast of Spain, and Funchal; to Portsmouth, Cherbourg, and Brest; to Eastport, Maine, the Bay of Fundy, and Boston; to Boston again, Portland and Newport; to Cherbourg, Cadiz, and Madeira to the Azores, Fayal, and Cadiz; to Madeira and the Island of Teneriffe. The cruises of the last three years were made in the *Plymouth*, a sloop-of-war of the first class, which had been added to the school for the accommodation of the pupils of the fourth class. It was subsequently superseded by the venerable *Constitution*. During the several voyages the pupils were drilled in all the branches of practical seamanship, from reefing, to lead, arming, reefing, and furling, making and taking in sail, up to the most intricate evolution, exhibiting a proficiency which was the best commentary on the thoroughness of their instruction.

Commencing with but fifty-six midshipmen, the Academy had increased the number of pupils to ninety in 1847, one hundred and sixty in 1854, one hundred and seventy-six in 1857, one hundred and eighty-nine in 1858, and two hundred and eighty-one in 1860. From its narrow quarters in Fort Severn and the barracks which it had rapidly extended itself until the Academy grounds included some forty-seven acres, surrounded by a brick wall enclosing the buildings occupied by the institution. These comprised the Laboratory, Armory, Recitation Hall, Mess Hall, Chapel, Observatory, Boat House, Hospital, and the new building recently erected by the midshipmen cadets and the Superintendent, Professors and officers. A library of some 10,000 volumes, besides maps, charts, manuscripts and engravings, had been added to the institution, which was also in possession of a very good chemical laboratory, and a valuable philosophical instruments and apparatus, and a fine equatorial telescope and other astronomical instruments. A variety of historical relics and trophies of naval victories had also been transferred from Washington to the Lyceum, which contained likewise models of the principal ships of the United States Navy.

At the commencement of the rebellion, the Naval Academy became an object of excited interest. Of some 300 students, nearly one hundred from the southern States resigned, as did a number of the commissioned officers. After the capture of Norfolk and the breaking of communication with the North, its safety was for a time a matter of great question. It was known that plots were on foot to seize the *Constitution*, as well as the steamers of the Coast Survey, including the two howitzer battery, and a considerable quantity of arms and ammunition. "*Old Ironsides*" was an especial object of covetous regard on the part of therebels, who believed that a great moral advantage would accrue to their cause from the possession of this vessel, so identified with our naval history and its early glory. It was fortunate for the country that the Academy was in the hands of as true-hearted and loyal a man as any in our Navy. Shut out from his friends and surrounded by watchful enemies; without adequate means of defence, and scarcely knowing whom he might trust, Commodore BLAKE, the Superintendent, determined to defend his trust to the last extremity. The *Constitution* was put in fighting order. A close watch was kept on the movements of the secessionists on shore, and notification was given that the first movement of a hostile would meet with a quick response from the batteries of the *Constitution*. "Large parties of secessionists," as the officers of the ship afterwards testified, "were round the ship every day, noting her unshipped spars. The militia of the country were drilled in sight of the ship, in the day-time; during the night signals were exchanged along the banks and across the river, but the character of the preparation, and the danger to the town, in case of an attack, as one of the batteries of the ship was pointed directly upon it, deterred them from carrying out their plans. * * * The *Constitution* drawing more water than there was on bar, the secessionists thought she would be in their power whenever they would be in sufficient force to take her." But their hopes were disappointed by the opportune arrival of General BUTLER with the Massachusetts troops, whose help she would rather was gotten over the bar. The arrival of General BUTLER with his regiment is thus described by his biographer:[2]

> Rockets that up into the sky. Swiftly moving lights were seen on shore, and all the batteries in sight were lighted up. The midshipmen of the Naval Academy were fighted. There was every appearance of a town in extreme excitement. Guards had been placed at the bridges to hold strictly within the city limits, and to prevent the entrance of the troops, when a locomotive was seen rapidly approaching. Nothing there signs of disturbance, but cool anxiety, and determination to delay no hasting till day-light.
>
> The sound of oars was heard, and a boat was descried approaching the steamer. A voice from the boat hailed:
>
> "What steamer is that?"
>
> The steamer was as silent as though it were filled with dead men.
>
> "What steamer is that? I repeated the voice.
>
> No answer. The boat resumed to be make a stir.
>
> "Come on board, I am General GEORGE BUTLER.
>
> No reply from the boat.
>
> "Come on board, or I'll fire into you," said the General.
>
> The boat approached, and came alongside. It was manned by four men, and in the stern sat an officer in the uniform of the United States Navy. The officer stepped on board, and was followed by the General and his staff, when the boat being cleared, a cursory inquiry ensued.
>
> "Who are you?" asked the lieutenant.
>
> "Who are you?" said the General.
>
> He replied that he was LIEUTENANT MATTHEWS, attached to the Naval Academy, and was sent by Captain BLAKE, commandant of the station, to watch the boats of secessionists, and to prevent their crossing over to the mainland. He had, also, an order from Governor HICKS to the same effect. The General replied that his instructions were to be communicated to none but Lieutenant-General SCOTT, that there were no means of communication at Annapolis.
>
> General BUTLER was still uncommunicative. Both gentlemen were in the dark as to each other's intentions.
>
> The truth was, that Captain BLAKE had been, for forty-eight hours, in possession of positive news of the approach of the troops, but of the nature, either by sea or land. He was nevertheless in a position to defend himself against any force, but sent the treacherous Governor word that the new-comers were enemies, before beginning the attack, in order to prevent the passage of the troops.
>
> General BUTLER and the lieutenant continued for some time to question one another, without coming to any further information on the clearance as to the loyalty of the either. The general, at length, determined to act boldly, and declared his intention of marching by way of Annapolis to the relief of Washington.

Though the arrival of General BUTLER, with his timely aid, had defeated the secession plots against the Academy, it was not considered safe to keep it there. Situated in a locality, where the midshipmen could pursue their studies undisturbed by civil commotion, or the seductive influences of secession society. The Academy buildings were turned over to the War Department, to be devoted to hospital purposes, and the school was removed to Newport, Rhode Island. In three days the extensive library, philosophical apparatus, and other property of the institution were packed and shipped on board the *Baltic*, in which the officers and professors took passage. The *Constitution*, with the midshipmen on board, was ordered to sail from Annapolis for the Academy was at first located in Fort Adams, the use of which had been tendered by the War Department. The Atlantic Hotel was subsequently rented, and the midshipmen quartered there, and on board of the *Constitution* and *Santee*. As rapidly as these ships could be arranged for rank occupy the hotel,—the remainder, 253 in all, being on board ship.

The *Constitution* and *Santee* are anchored off Goat Island, with which they are connected by a temporary wooden pier. Shanties are thrown up on the island for the midship mess, and there are also located bath-rooms, and the steam engine by which the school ships are heated. The whole school is divided into three crews, for practice on the *Marion*, which is very well suited to the purpose, owing to her light rig. The midshipmen are also divided into four companies and platoons, each numbering about eighteen each, under the command of captains chosen from their own number. The captains are required to report all infractions of the regulations among their respective crews, and all the movements of the crews are made under their lead and in midshipmen order. On board the school-ships the midshipmen are required to turn out at *reveille*, lash up their hammocks, and march with them to the place allotted for them; after which they march, under the lead of the captains of their respective crews, to breakfast. The routine follows the morning drill; after which they march to breakfast, and, from breakfast to the gun-deck for prayers. A similar routine is followed among the pupils on shore. All movements are made with military order and precision, and at the word of command. Throughout the institution, from hour of o'clock in the morning to one o'clock, and from about two to four o'clock, P. M., are devoted to study and recitation. The gun crews are then assembled for exercise at the "great guns," for one hour or one hour and a half; the exercise in infantry drill, practical seamanship, including exercise with boats, the lead, log, &c. Evening parade intervenes; and after supper the classes are called to "their studies again, at a few minutes before eight o'clock." Tattoo follows at 9,30, P. M.; taps, 9,55, P. M.; 4 bells, 10 P. M. At tattoo on board the school-ships, the midshipmen are required to turn in their hammocks. At muster themselves, but at "taps" they must all turn in, and all noise must cease at four bells.

Breaches of discipline on the part of the midshipmen are punished by demerits, by confinement to limits, private restraints, confinement in the reprimand and on punishment, confinement in guard-room, dismissal with privileges of resigning, and public dismissal. A student who receives more than two hundred demerits during the academic year is dropped from the Navy. The breaches of discipline are comparatively few, though many of the midshipmen are from that class of unruly youths over whom family government has no power.

The principal officers of the Academy, as at present organized, are the Superintendent, of rank not lower than that of a Commander, and a Commandant of Midshipmen, whose rank must be at least that of Lieutenant-Commander. The latter is the chief executive officer of the institution, and has

---

[2] History of the Administration of the Department of the Gulf, by JAMES PARTON. HARPER BROS., NEW YORK.

the immediate direction of the instruction and exercises in seamanship, naval gunnery, boat howitzers, naval and military tactics, and defence, and boat armament. He is assisted by such number of assistants as the Secretary of the Navy may deem necessary, each of whom is to rank next below a master. To the Superintendent is committed the command and general direction of the institution, and he is held responsible for its discipline and good management. He is assisted in the direction of the institution by the Academic Board, consisting of the Commandant of Midshipmen, and the heads of the different departments of instruction. Of this Board the Superintendent is the presiding officer, and its assembling is governed by such rules for its action as he may prescribe. It is committed with matters relating to the examination and examination of pupils, the system of instruction, and the selection of text-books, models, and apparatus. Every candidate for admission to the Academy is required to pass a satisfactory examination before the Board, and to produce evidence of the possession of a sound and well-formed person, and a constitution sufficiently robust to endure the ordinary duties and exposure of the Service.

The system for the selection of candidates is the same as is pursued at West Point,—two being nominated by each member and delegate of the House of Representatives, two for the District of Columbia, ten at large, ten from the sons of officers of the Army or Navy, and three from boys enlisted in the Navy. Candidates must be between the ages of fifteen, six months of which shall have been sea service.

CORRESPONDENCE.

THE SECOND ARMY CORPS.

To the Editor of the Army and Navy Journal:

SIR,—The attention of the public has been specially directed to this Corps of late, by the publication of the order authorizing it to be filled to the 80,000 men required by law, under Major-General HANCOCK.

This Corps has, from its first organization as that of any organization which has ever borne arms. It was formed in the winter of '61–'62 of the divisions of SEDGWICK and RICHARDSON, and of the Excelsior brigade of Sickles's old division, the late Major-General SUMNER. SEDGWICK's division had been for a long time under the command of General GEORGE STEVENS, of the 7th New York, and to him to this day the respect and affection of what is left of his old command. The unfortunate battle at Bull's Run put to the proval of fire and blood, and General SEDGWICK, now commanding the Sixth corps, was assigned to the command of RICHARDSON's division, succeeded to the command of General SUMNER's division on the formation of the Corps. General BLENKER's division for a short time was attached to the Corps, but did not go to the Peninsula with it.

On the Peninsula the Corps took a prominent part in the bloodless siege of Yorktown, and was the second encountered with the enemy, after Bell's Bluff, was at Fair Oaks. On the afternoon of the 31st of June, the Second was the centre rush at the Chickahominy. Hearing the heavy firing at Seven Pines, where CAREY was engaged, General SUMNER formed his division in line of battle, and, with colors in true instinct of a soldier, waited impatiently for the order to cross the river to the succor of the Fourth corps. When it came, with the order to delay, the men were marched across the bridge, and marched toward the sound of the enemy's guns. The unprecedented rise of the Chickahominy and swamping of the bridges by the force of the valley was drawn over only by the most tremendous exertions. A battle was fought in the darkness and rain, among the scrub of the forest, and the enemy signally failed to drive in the Corps at the point of the defensive line near Fair Oaks, engaged daily in skirmishing with the enemy, until the 25th of June, when the battle of Oak Grove, SEDGWICK's and MEAGHER's brigades were sent to the assistance of General PORTER. They arrived on the ground too late to take part in the fight; but the next day, when the enemy's big mouth toward destroying the enemy from pursuing his advantage. On the 27th the Corps was in the battle of Gaines's Mill at Peach Orchard, where the enemy signally failed to make an impression on the line held by the same Corps.

In all the subsequent operations of the army on the James River's Landing, the Corps bore a conspicuous part. At Malvern Hill was strengthened by the addition of the fine brigade of Western troops under General CALDWELL.

General SUMNER arrived at Centreville with his command, only in time to see the disastrous close of POPE's campaign. The battle of Antietam found the Second Corps under the command when HOOKER's command was for all offensive purposes a cipher. Whatever may be said of the disposition made of the Corps on that day, the heroism of officers and men cannot be denied. Over five thousand dead and wounded gave testimony to the severity and valor of the struggle. General SEDGWICK, twice wounded, stood like a rock on the field, and saw, in the shortness of half an hour, over two thousand of his brave followers fall around him. General FRENCH's gallant command added new laurels to those won on other fields. The brave General RICHARDSON was mortally wounded on the ground his division had wrested from the enemy, and held against all odds. Immediately after he was wounded, General HANCOCK, then commanding a brigade in the Sixth corps, was assigned to the division.

Shortly after the battle of Antietam, the Second Corps was sent to Harper's Ferry; and the month of October was spent in the pursuit of LEE across Virginia. A division was formed and placed under the command of General FRENCH, while HOWARD assumed the command of SEDGWICK's division.

During the latter part of October, a portion of the Corps under General HANCOCK, made the reconnoissance to Charlestown. A few days previous to this General SUMNER having availed himself of a leave of absence, General COUCH was assigned to the command of the Corps.

A quiet and unassuming man, he was very popularly known. But in his old command, a division of the Sixth corps, his reputation for cautious strategy was in no way inferior to that of General SUMNER in the Second Corps. At Fair Oaks and Seven Pines he had established his reputation as at the head of affairs, and the order that made that apparently insignificant actor on the field wore without blushing. On COUCH's division fell the brunt of the fight. Here, as at Antietam, the Second Corps was entirely engaged. He is the true hero of that fight, let official gazetteers say what they may.

At the first Fredericksburgh, the Second Corps again gave evidence of the heroism and tenacity of its material by the number of its wounded and dead strewed on the little plain in front of Marye's Height. The dead of HANCOCK's division, and of KIMBALL's brigade of FRENCH's division, are the most conspicuous that will hold by the enemy. More determined but unavailing courage has never been shown than exhibited by the Second Corps that day; and though they retired from the field unsuccessful, they were not beaten.

In the memorable march General HOWARD was transferred to the Eleventh corps, and General GIBBON, then commanding a division of the First Corps, was assigned to his division.

At Chancellorsville, the First and Third divisions only of the Corps were present, the Second, under General GIBBON, having been left upon the Rappahannock to relieve the Corps born a most distinguished part, losing over two thousand men. The Third division, which was the opposite near the Chancellorsville house until the second line was formed near the Chandler house, and retired in perfect order, the last regiment of the Brigade, Berdan's sharp-shooters, guarding the rear of LEPINE's battery. General COUCH had his horse killed and was twice struck by pieces of shell. General HANCOCK had his horse shot.

On the invasion of Pennsylvania General COUCH was ordered to the Department of the Susquehanna, and General HANCOCK was again assigned to the command of the Second Corps. During the march of the army from Fredericksburgh to Gettysburg it was the rear guard of the army.

At Gettysburgh it again was the lot of this Corps to meet the enemy's most impetuous attack. It was indeed rumored that the Corps was broken, but the loyal veterans to the ranks received this intelligence with the remark, "Yes, reserved for the hard fighting."

All justice has never been done this Corps for the part it took in that memorable engagement. Going into action with barely 10,000 muskets, it lost over 4,300 in killed and wounded, a greater proportion than any other Corps in the army sustained. Behind the rudest temporary defence of field and fence, it successfully met the shock of LONGSTREET's corps on the 3d, and captured from it over thirty colors, and several thousand prisoners. The individual heroism of the private soldier, the back-bone of the army, has seldom dealt upon the battle. Commanding and subaltern officers did their duty nobly, but the men fought with an individual courage worthy of Greeks.

The losses among officers were great and irreparable. General HANCOCK and STEVENS were severely wounded, and General WEBB and GIBBON were slightly wounded. Colonels CROSS, HEINZE, O'KANE, SHERRILL, WILLARD, REVERE, ROBERTS, MORRIS and HALL, of the infantry, CRAWFORD and MCCARTNEY, and WOODRUFF, of the artillery, were killed, and so many field officers wounded as to leave nearly every regiment under command of a Captain.

From Gettysburgh, until some time in August, the Corps was commanded by General WM. HAYS, who was relieved by General WARREN, and returned to Virginia.

At Bristoe's Station, in October last, while acting as rear guard to the army, General CAUSEY, of Indianapolis, the Corps was again attacked by a part of HILL's corps. It was a brief and decisive affair. Skillfully posted by General HAZARD PERRY and Colonel CHAMBERLAIN, and in the end, our men waited the advance of the enemy. They came, gallantly enough, but soon abandoned the field in confusion, leaving over 1,200 killed, wounded, and missing to account for a battle of five guns and two stand of colors.

It has not been possible to give a detailed account of the various engagements of the Corps. Enough has been written, however, to show that it has performed well its part, at least. It has not always been in the front, but the dead of many other corps in the army, reaching the large number of 25,000. Its trophies of guns and colors captured on the field are greater than those captured by any other organization, while it still has the proud satisfaction of knowing that the enemy has never wrested from it a token of victory.

It is not contended that this Corps is superior in fighting qualities to others in the army, but simply, that it has emerged through the fiery furnace than any other corps, and has always emerged with its honor brightened by the trial.

THE AFFAIR AT LEGAREVILLE, S. C.

To the Editor of the Army and Navy Journal:

SIR,—Injustice has been done the United States steamer *Pawnee*, inadvertently, I believe, by your correspondent in your issue of January 9th, 1864; much greater injustice by an insignificant paragraph in the Charleston *Courier* of the *Mercklebird*, whose fabulous and frightful pictures from "private letters" were published in the Baltimore *Sun* of January 6th, in relating the part taken by the *Pawnee* in the action with the rebels on Stono River, December 28th, 1863. I beg, therefore, to correct the inaccuracy of your correspondent, not that the action was of paramount importance, but that the fair record of this ship during this rebellion may not be subject to misrepresentation or misconception, "now and slow speed." At 8.20 A.M., the rebel batteries opened upon the *Mercklebird*, her position as stated in the *Courier*, and slightly given in your paper of the 9th. At 6.35 A.M., the *Pawnee* opened fire upon the batteries from the position in the Rhawah River, at which time it was reported that the rebels had not in the slightest degree abated their fire. Fifteen minutes is by no means a lengthened period to get up steam, get under way and assume a position full three-quarters of a mile from the one occupied when the firing commenced, and the fight would not have been "nearly over" had not the brushing guns of the *Pawnee* flanked and driven the rebels with sway and rapidity upon the enemy.

To the imaginative "engineer" and the other officer, I beg to suggest a careful perusal of the selections from the public and private correspondence of Vice-Admiral Lord COCHRANE, which will find excellent examples of truth and modesty in writing.

To the combined fire of the three vessels, *Pawnee*, *Mercklebird*, and C. P. HUNTINGTON, ordinarily handled by the commander, S. W. FREEMAN, Acting-Master, is due therefore the credit of silencing the guns of the enemy.

Pawnee, January 21st, 1864.

THE CLEANLINESS OF TROOPS.

To the Editor of the Army and Navy Journal:

SIR,—Would you please call the attention of Headquarters to the necessity of a general order on the matter of personal cleanliness in the Army. Every correspondent of London journals has commented on this subject. One of the first essentials to this is a compulsory order that the hair should be cropped short, at least every two months. The long hair is not worn in our Army, it detracts from the military aspect of the men, as well as from cleanliness. In one month-hence-forward, let the hair in all cases have a liability than for cleanly purposes. Look at even the sailors of Russia: the close-cut hair and the military-shaped whiskers show how soldierly a man looks as a private. The English army soldiers are never allowed to wear whiskers on the chin without leaving a space at least an inch bare between them. The Russian soldiers are not so. They are ordered to shave clean off the face. It is only since the introduction of the Crimean fashion that officers allowed to wear moustaches. Gentees are entirely too much of the "shoemaker" to be allowed in the army. It cannot be expected that our soldiers can be filled with equal cleanliness as our Invalid Corps, quartered as European soldiers, do not come up to the mark in point of proper and general cleanliness—our veterans rejoicing in the long hair of the shop-boys and "counter-jumpers," and soldom polishing their boots. I observe that the Russians secreting razors to be used by the other day, and they seemed to be only a burlesque of the English soldier. One word more: let the hair retain a peak, or visor,—the latter, I presume, to display his hair, which was soap-locked in the Ionic style; another spotted cigar in the mouth of every one was deemed as an effeminacy, so far as head-gear went,—wearing the "bonnet" slouched, with the number of his regiment *behind*, the position of the number in front being a matter of choice, while a flashy neck-tie was suspended from his neck.

Trusting that you will pardon me, I remain yours, &c.

LAMBE has determined to experiment that a beleaguered garrison can hold out and subsist longer by half whenever its men habitually shave.

In the English army the soldiers wear the cap-strap always under the upper lip or chin, and it, with the leather stock, adds to the uncleanliness. But it can easily be considered necessary for our Army to use a stock, or to wear the cap strapped all the time, under the pan-ches. Both should be abolished, and company and cavalry officers should see that their men do not wear dirty looks and long wisps of hair. Let the Army Regulations thereat from appearance, injure the health, breed vermin, and are a loss of time and money to the wearer, in combing and cleaning and oiling.

MILES.

STEEL FOR HEAVY ORDNANCE.

To the Editor of the Army and Navy Journal:

SIR,—In the late number of the *Artillerist*, a very readable article on "English and American Guns" contains several valuable suggestions on the manufacture of cannon, and indicates that considerable progress in improvement has been had to believe (and not, perhaps, without good reasons) that our Parrotts and Rodmans are perfect, and superior to any thing of foreign manufacture, and that Armstrongs and Whitworths are failures, we must not lose sight of the fact that Armstrong and Whitworth's experiments are directed upon imperfect scientific facts connected with gun manufacture and iron-clads that are boyond our reach and profit.

Our Army and Navy are now supplied by practical ordinary men as the most scientific gunmaker in Europe, and a very dangerous competition, in experimenting with steel. Our Army and Navy officers of these departments cannot be proved. That a stronger gun can be made from steel than iron, is beyond a doubt. Steel is tougher, and will stand more strain than the disposition of material is of almost as much importance as its strength, we find it easier to suggest improvements in theory than to put them practically in use. At present our gunmakers are expected to understand the scientific principles on which heavy ordnance is constructed, many will suppose that Sir WILLIAM ARMSTRONG, or Lord LIEUTENANT, is able a cannon it is only necessary "to take a hole and put some" iron around it." Other a more imposing plan would be to have a sharpshooter builds his cannon by piecemeal, or why PARROTT puts on the iron bands, or why HOOKER spoke only of the number of hoops, and not of the size of the metal used. This we will endeavor to explain.

Iron is not capable of receiving a tensile strain without stretching, or elongation, without being compressed. According to the best authority, we may consider that the elastic power of good iron is equal to about one per cent., and that that force varies from eight to ten tons in indifferent and bad iron. It appears, also, that a bar of iron is extended one-ten-thousandth part of its length by every ton of direct strain per square inch of section; and, consequently, that its elasticity will be fully excited when stretched to the amount of the one-thousandth part of its length. It is a property of fluids, not possessed by metals, that when confined, as in the cylinder of a high-pressure steam engine, a pressure of one pound per square inch of its surface, that power is multiplied and distributed to every square inch of the surface.

cylinder. Not so with metals. The strain or power exerted at the circumference of the bore of a 10-inch gun is ten times as great as at the external circumference of the gun. Thus, a gun may be fractured near the circumference of the bore before the exterior of the gun has received a tenth part of the strain producing the fracture.

The resistance to compression in good cast-iron is four times as great as its elastic power. In a gun constructed on a combined strain of compression and tension, various methods of construction are sought to diminish the tension, and thereby increase the compression on the weakest part of the gun which is nearest the bore. This is effected more or less in various ways by advantageous disposition of the metal, relatively into the several parts of the mass of the gun. Captain Parrott's plan is to place on the breech, where nearly all the strain takes place, a wrought-iron coil, which is known by peculiar construction, which is shrunk on by heating in such a manner that it takes a great tensile strain upon itself, thus decreasing the tension and increasing the compression of the iron surrounding the bore, which being cast, it is better able to bear. Captain Rodman, by his process, constructs a gun of enormous strength entirely of cast-iron. He pours cold water into the bore while it is in a melting state, the iron immediately surrounding it becomes cold and forms a science on which the adjoining parts progressively collect themselves, exerting a tension greater and greater as the circumference increases. The effect of this is to throw the particles of metal around the bore more into compression and the outer or idle parts more into a state of tension, thus accomplishing the desired object, which Captain Rodman makes the strongest cast-iron gun in the world.

Wrought-iron is the material for heavy guns?

The cohesive or tensile capacity of steel, is greater than the compressive capacity of cast-iron. It resists a much greater strain as great, and nearly twice as great as wrought-iron. If our ordnance engineers do not use it, the English Government, Captain Blakely, of England, and H. Kaupp, of Prussia, do; and when they have constructed steel guns that will prove themselves more safe than the brass-like steel, a thing not at all impossible, we may prefer guns that will throw smaller balls with greater velocity.

J. C. B.

A PLAN OF HARBOR DEFENCE.

To the Editor of the Army and Navy Journal:

Sir—The importance and necessity of an efficient system of harbor defence are universally admitted. The great improvements that have within the past few years been made in heavy artillery, together with iron-clad vessels of war, have left many of our forts in a state of decay. Lest the fortifications on which the safety of our sea-coast towns depend, should in case of war with foreign nations prove inadequate to their protection, it seems a matter of policability, that the course pursued by foreign nations in regard to the building and repairing of iron-clads and steam rams will sooner or later embroil us in a war that might prove extremely disastrous. It is therefore prudent that we provide ourselves at least with a part of the necessary means of averting this danger. But the expenses attending the building and keeping up of such fortifications, while all the money that can be spared is required by others to maintain the armies now in the field, is a temptation to postpone such enterprises. If however, a means of defence could be provided that would be self-sustaining, one of the greatest objections to their immediate erection would at once be removed. The subject can be left to the people, and as a strong fort by private enterprise, assisted by appropriations from the City, State and National authorities—such fort to be used as an independent fort, and thereafter the young men from all parts of the Union may be afforded unsurpassed facilities for acquiring a thorough military, scientific and engineering education, at a cost to the State not exceeding that of our first-class institutions, would provide an investment so good to pay all expenses.

The necessity and utility of military academies have been taught us by dear experience, and are now admitted by all. Should it be determined to erect such a fort as is suggested, the buildings in which the students are to be quartered, and the facilities for study and recitation should be provided for before the permanent fortifications are begun, so as to enable the students to obtain a practical as well as theoretical knowledge of them, and when the fort is completed, may, day by day, from the laying of the foundation stone to the mounting of the last Parrott. The instruction thus obtained would be most highly appreciated by students, and would text books and lectures of the ablest authors. It would make the students familiar with the latest improvements in the tools, machinery and appliances of the workmanship and equipment of forts. The students might be sworn in for a certain length of time, and would make an efficient force for manning the guns and defending the fort in case of danger, thus saving the expense of regulars for that purpose only. The system of admission, course of study and rules and regulations for the government of the academy can be laid down after the erection of such an institution shall have been determined upon.

The advantages of this plan are therefore: A cheap and reliable means of Harbor Defence requiring no large annual appropriations for its maintenance after being once built and finished; a lasting benefit to all the students by qualifying them for positions of trust and usefulness in their country's service, and a benefit to the city and State by insuring its safety.

J. R. S.

The Thirty-sixth Ohio regiment has presented a sword, costing seven hundred dollars, to Brigadier-General George Crook, now commanding a division of cavalry.

GENERAL POPE'S CAMPAIGN IN VIRGINIA.

To the Editor of the Army and Navy Journal:

Sir—A communication in your issue of January 24, discussing the case of operations against Richmond, refers in disparaging terms to the generalship of Pope, in what the writer terms his "short and unfortunate campaign 2" clauses that campaign as an offensive one against Richmond which was a failure, and that this failure is "fully explained," because "the line of the Orange and Alexandria Railroad is a defensive one," and Pope "endeavored to make it an offensive one, and failed disastrously."

Following the full official records of the campaign, it is unnecessary for at least us to be necessary to correct the assumption, the real object of the campaign was to capture Richmond, and that there is for so saying that General Pope failed.

The Army of Virginia, to which Pope was assigned as command-ing General, June 26, 1862, was made up of and succeeded to the former Department commands, of the Mountain (Fremont), the Shenandoah (Banks), and the Rappahannock (McDowell). Subsequently the office of the Army of the Department of the Rappahannock was to cover and defend the front of Washington; that of the two others to hold the Shenandoah Valley and protect the right flank. Instead of these three armies, after the failure of the Peninsula campaign, was effective namely. To the office of these three the Army of Virginia succeeded. It was organized in three corps, and a reserve consisting of a corps formed by uniting the three armies in a new position. Its accordingly assembled three disjointed forces, and placed them on the eastern side of the Blue Ridge, northwest of Culpeper, so as to cover and guard the passes leading through the Ridge into the Shenandoah Valley. His entire force was thus in hand to cover Washington, and at the same time to move on Richmond, or to act against the enemy's line in the valley," as that, should any of their troops penetrate it, he could "occupy a position on the Orange and Alexandria Railroad or those three armies, after the failure of the Peninsula campaign, was effective namely. To the office of these three the Army of Virginia succeeded. It was organized in three corps, and a reserve consisting of a corps formed by uniting the three armies in a new position. He

it was not the course for a soldier fighting to save the capital of his country, and suddenly made unanswerable by either the forces that had come to Grant or from Sigel, to sit idly by and allow the enemy to recruit, and even assembled at his ease in sufficient force to defend his capital.

It was asserted that the interruption was no more than that, but the work of a heavy column of infantry, Pope's cavalry said, and the enemy's cavalry, the enemy at Manassas, Stuart's men and Longstreet's, who beyond Waterloo and by Orleans, by three days' march behind, on the flank, since the force which was to have encountered him, was withdrawn. While Pope with 25,000 men, or Porter with 30,000 men, could have driven back the enemy, Longstreet and Alexander's Railroad, McDowell, with an equal force, be confirmed in every position he had occupied before Pope.

These two routes, beginning with an interval of some twelve miles between, converged upon Centreville, and the force which occupied the centre, they were in a direct line, less than five miles apart. The two columns were to be "pushed" with "vigor" against the enemy, and after, for the country was so practicable that most of their march was in general off the roads.

How not being to our purpose to follow in detail the tactical movements of the enemy in the interval between the 28th of August and the 1st of September, that combinations to envelope and destroy Jackson were not issued and executed, that Pope, with Porter on his left, and in communication issued at only failed because of flagrant disobedience of orders, and because of the fact that Porter's corps was not in the direction of Gainesville, but in the direction of Manassas, and that Pope, after they convicted disobedience failed to make needful dispositions against "the enemy" in the direction of Gainesville, and that on the morning of the 29th, Hooker, the head of Pope's assailing column, was attacked by Longstreet, and that the battle of Manassas commenced incidentally, that it was on the same foreseen that Jackson pressed Porter to battle, that Porter's corps, numbering about 30,000 of the 37th, Hooker encountered Kearlat Bristoe, and after a sharp action, gave him the best of it, Jackson leaving the field and retiring to Gainesville.

Before day Jackson drew off his entire force from the railroad, leaving nothing but his dead and the dying in the hands of the enemy, and moved primrose token. Late in the afternoon of the 28th, King's force, of McDowell's command, encountered the retreat of Jackson on the 29th, at a point on the Warrenton and Centreville turnpike, near Gainesville. A severe engagement ensued, which lasted till 9 o'clock at each rate. Night closed the fight, and Jackson was left encumbered with wounded and prisoners, and his retreat was not to be bought except the great battle of the two succeeding days. The result of the fight on the 28th was to delay Jackson for the day, and to enable, though not decisive, because of Porter's defection. By the afternoon of the 29th, Lee had got his whole army in front of Pope, and with a superior force, by whom not came none of the expected reinforcements from Alexandria, Washington, Fredericksburg, or Harper's Ferry. The main attack was made by Longstreet's fresh troops on the left. The last half of the day was spent in the effort to turn our right flank, but was repulsed, but vain assaults. The Union troops, however, were gained lost, and had not Porter's corps been withdrawn from the field, the disparity of numbers was too great to be any longer remedied by Franklin, whose arrival on the field was announced by the sound of his guns at dark. Pope withdrew without molestation to Centreville—a heavy loss, when the numbers of the two armies are considered, but in accordance with an army less than half his force, that he was unable to allow up to retrieve the fortune of the day, and that he was not to be overcome but been gathered in front of the capital. After his feeble assault on Centreville, he fell back behind Fairfax Court House, and on the army which covered it, and moved to the upper Potomac by the 5th of September, with the loss of his trains, and the loss of his artillery, and the loss of his army, and the loss of his army, and the loss of his army

THE FUTURE OF OUR NAVY.

The permanent prosperity of this country, and the rank and position which it is to hold amongst other nations, depends much more upon the efficiency of our Navy than upon that of our Army. For temporary purposes, and with certain specific objects alone in view, we have created a Navy with which we have been enabled to secure the blockade of a coast line longer, more difficult to hold, and more dangerous to navigate than any ever before blockaded by a naval power. We have sent naval expeditions of greater strength than any that have ever been equipped by any other power, and they have been attended with almost invariable success. We have opened up thousands of miles of river navigation, and by means of the large steamers which intercept them we have carried terror into the heart of the rebel territory, protected our armies when overpowered and driven back, secured them their necessary subsistence and supplies, and enabled them to operate at distances from their original *points de depart* hitherto deemed impossible. In doing this we have drawn largely upon the inventive powers and extreme adaptability of our people. We have employed with great success every material which came to our hands. We have acted, perhaps unknowingly, upon a few clearly-defined principles which must regulate the future of all navies, and which we now propose to point out. We have created nothing essentially new except the Monitors, designed to accomplish certain duties; and when employed within these defined limits they have been entirely successful.

The battle of Sinope first developed in its full power, and made evident in a way not to be disputed, the results which PAIXHANS, SIR HOWARD DOUGLAS and DARGOUGE had long predicted would be the issue of the use of heavy shell firing from ship-of-war. Realizing this problem in its entirety with a theoretical knowledge no whit inferior to his French rival, and a much greater practical ability, DAHLGREN led, previous to the breaking out of this war, annual the fine large special steam frigate of the United States Navy, of which the *Niagara* and *Merrimac* were samples, with shell guns which European powers have not yet been able to equal, and which would necessarily ensure the destruction of any wooden vessel opposed to them in a few minutes. As a matter of last little importance what the nature of the wooden vessel is, whether a double-ended ferry boat, a fast but slight blockade runner, or a strongbuilt man-of-war, if exposed to a heavy fire of shells at close quarters it must inevitably be destroyed. In fact, next to preventing a projectile from entering a vessel altogether, the best thing is to let the projectile pass through as easily as possible; a half protection, which only retards the projectile, is the worst alternative. The degree in which the engines and steering apparatus are exposed or protected is the only point of importance; it is, however, a very vital one.

The strength of an unprotected vessel must depend entirely upon her aggressive power and her speed. She must be safe, not by being made partially strong, but by carrying an armament much superior to that of her opponent, or by presenting a small and rapidly-moving target. Between such a vessel and one capable of completely resisting any shot that may be thrown against it there would seem to be no useful medium.

A really good sea-going iron-clad has not yet been constructed by any nation. But even if the *Warrior* and *Normandes* of England and France are sea-going vessels, it is absolutely certain that not one of them carries a target capable of resisting the impact of a 15-inch shot or a 200-pounder of the Armstrong Parrott bolt. The shot of such a projectile upon their targets would be even greater than upon a simple wooden vessel; in the latter case it would make a hole and pass through; in the former, as in the *Atlanta*, it would break in the side, driving the imperfect defensive armor in pieces through the ship, and converting its sole weapons more destructive than any shell. Vessels of this class are enormously expensive; the construction of a large number of them must tax the resources of any nation. We hope, therefore, that our Navy Department will abstain from any attempt to build a sea-going iron-clad until it is clearly established that a vessel can be constructed combining an efficient battery, and good-speed and sea-going qualities with real protection. Whether or no such a vessel can be constructed at all we are not prepared to say; but in the face of recent developments of guns we do not believe that it cannot be constructed by an adherence to the present type. It would seem that the weight of metal necessary to give a vessel protection, not only above but below water must be—for both are now necessary—cannot be carried in such a manner and at such a speed as to give an efficient war vessel.

For harbor defence the Monitor leaves little to be desired above water. Recent experiments in England and in this country have, however, shown that cannon can be fired under water as well as above, and, within certain limited ranges, with considerable effect. Such cannon could be easily carried in sea-going vessels. This is, therefore, one of the main points to which attention should be given as affording a prospect of developments which may very much modify existing naval types.

In the defence of Cronstadt by the Russians, of the James River and Charleston by the Confederates, great use has been made of subaqueous explosions. They have never, however, been so directed as to produce an effect commensurate with the means expended. But it does not follow that they cannot be so directed. The *Alabama* is but a vessel well-known to civil engineers. There is one, we believe, in this country. The mole of the naval harbor of Cherbourg was partially if not entirely constructed by means of one. In its essential features it is simply a vessel capable of being sunk in deep water at a depth which can be regulated from the vessel itself. Rumor says that the EMPEROR of the French, the first constructor of an iron-clad battery, has ordered a vessel of this class to be built, so arranged that from it torpedoes can be attached to any vessel and fired. In this direction we anticipate great results. The probability that the successful defence of harbors and shallow waters will mainly depend upon a proper system of subaqueous explosions must be of great importance to the future of our Navy.

Having rejected the application of sea-going ironclads as useless, in the present state of our knowledge of artillery and the means of protection against it, and pointed to subaqueous explosions as the probable future means of successful harbor defence, there remains to be considered one type of vessel which will form future naval solid fare,—vessels to protect our extended commerce, and prey upon that of our enemies. Such vessels should, above all be *fast*. To this all other considerations must be sacrificed To this end, it is essential that the armament they carry do not exceed in weight the express of the merchant vessels they are to protect or to capture. A few long-range, powerful guns are all the armament which such vessels should have. The essential points in their construction are, a minimum of top hamper, very economic engines, so as to enable coal to be carried for a large number of days; the engines and steering apparatus to be as little exposed as possible, perhaps to be protected, if consistent with the speed of the vessel.

Within these limits and in these directions, we believe that all progress will be real progress. Without them, we think everything is too uncertain to justify the expenditure of much public money. Nor do we anticipate at any time any developments which will render it advisable to construct vessels to rival the iron-clad fleets of European powers. The day is gone by when it is possible, by great naval actions, to destroy who shall control the seas. The commerce of the world flows in too many channels to be protected by any iron-clad fleets, however numerous. The ocean possesses no decisive strategical points, the possession of which would secure that of the surrounding seas. Such vessels as the Iron-clads of France and England would be of value only to cover great naval expeditions. The power of the defensive Monitors, especially if assisted by subaqueous explosive vessels, is such that we need fear nothing from the aggression of our naval rivals, separate or combined. Nor would it be possible for a navy force upon these shores which could do any permanent injury. We have no desire to obtain a foothold upon foreign soil. Our country suffices for us. Let other nations, then, build their sea-going iron-clads if they choose, and fill their hardearned wealth in prodigious but useless constructions. Our wisdom, our policy, and our safety lie in avoiding their extravagant and expensive example; in depending, for security at home, upon vessels designed purely for harbor defence,—combining efficient protection with great aggressive powers; and for attack upon the foreign fleets upon well-designed ocean guerrillas. We shall thus, with small expenditure, achieve great results, and, without rushing headlong into the extravagancies of our neighbors, know how to make ourselves safe at home and respected abroad.

LATE INVENTIONS.

MR. W. K. STEVENS, of Worcester, MASS., has lately patented a certain novel construction, and mode of applying the movable breech-block, and certain means of operating the same, whereby he claims the construction of the breech-loading fire-arm is simplified, and the use of a large number of small pieces, such as screws and pins, which are liable to be lost or get out of order, is enabled to be taken apart enough to clean all the working parts without the removal of a single screw. It also consists in certain means whereby gas-escape is avoided at the muzzle, when the supply of ammunition suitable for loading at the breech has been exhausted. And it further consists in certain improved means of withdrawing the discharged metallic shells of the ammunition used for breech loading.

Captain JOHN ERICSSON has patented an improvement in ordnance. It relates to the manufacture of ordnance of a central core or barrel containing the bore and a system of annular hoops or rings of wrought iron, surrounding the said core from end to end, and from the breech to the face of the muzzle; and it consists in a certain novel construction of and mode of combining the several parts, whereby the fibrous character of the wrought-iron is preserved, and the union of the several parts is rendered such that the proper relation will also be disturbed by the firing of the piece, or by the heating and cooling to which it is subject in use, and, in short, to so construct ordnance as to obtain the necessary strength, with the least weight of metal.

Messrs. JEFFERSON BROWN, of New York, and S. B. BROOKS, of St. Louis, Mo., are the inventors of a new ejector for steam vessels. The invention consists in the employment of a receiver provided with a valve, arranged as to admit of a communication being formed between the receiver and the boiler, or the boiler and the vessel, and to admit of said communication being cut off when desired; a pump or steam pressure, one or both, being used in connection with the receiver, and all arranged in such a manner as to effect the desired end.

A BATTLE MONUMENT AT WEST POINT.

The propriety of erecting a monument to the officers and soldiers of the Regular Army who have fallen in battle during the present war, was some time ago suggested in these columns. The subject has been for months under consideration; and the following Circular explains the plan which has been matured for securing the necessary contributions for the memorial, and the place which has been selected for its erection. It is not necessary that we should commend such an object to the interest of soldiers. When the plan has been made known among the officers it is found sympathy, and has appeal for contributions a ready response. We may add that the Battle Monument is designed to be commemorative of the enlisted men as well as the officers of the Regular Army:

CIRCULAR.

WEST POINT, N. Y., JAN. 18th, 1864.

SIR:—In response to what is believed to be the wish of all who have an interest in the subject, the officers associated at West Point have effected an organization for the purpose of erecting on that point a monument, to be called the Battle Monument, upon which shall be inscribed the names of all officers of the Regular Army, who, during the present war, shall have been killed, or died of wounds received, in the field.

It is not deemed necessary that any elaborate argument should set forth the propriety of earnest action in behalf of this object. It is an admitted fact, that while in civic countries and during times of peace, the pride of the historic mausoleum of the Nation's illustrious dead for those who have fallen for the public good, the soldiers of the American Army are left to repose in the ground among the battle-field, while their names find no place in the annals of the stone erected in which public gratitude to the departed seeks, as it is not fit, therefore, that at West Point, the great cathedral ground which cluster some of the richest associations of the Regular Army, there should not gradually rear all who wish to pay a tribute to the gallant dead—under the shadow of the Academy which at last receives her son and all who fight, in the midst of the noble, the sacred monument which shall supply the want that now exists? To the dead, it would be the grateful homage of friends; to survivors the living, still another incentive to brave virtues and sublime self-devotion.

The plan of which this proposal has been carefully sought out, and it is trusted that, with a favorable response a sufficient sum may be raised to make the Battle Monument, in design and execution, worthy of its high purpose. It seems unnecessary that those who have undertaken to initiate this project should disavow any undue assumption in regard to the time since they have been the senior brother officers in the field, or elsewhere, such instructions or suggestions as may tend to forward the purpose that is held in view.

For the purpose of indicating a standard of subscription, the following rates are proposed; every officer, however, will feel at liberty to offer a greater or less sum, as circumstances permit:—Major-General, $27; Brigadier-General, $18; Colonel, $12; Lieutenant-Colonel, $10; Major, $10; Captain, $8; Lieutenant, $7. (Approximating to six per cent of monthly pay, for one month).

Besides your personal subscription, your co-operation with your associates in the field is also solicited, since this circular has been forwarded to them, on account of the difficulty of obtaining correct address.

Should subscriptions be forwarded in aggregate, the officer so forwarding them will be entitled to receive the names of subscribers. Subscriptions may be remitted to the Treasurer.

Prof. A. E. CHURCH, West Point, N. Y.
A. H. BOWMAN, Colonel Engineers, President.
A. E. CHURCH, Prof. Math. U. S. M. A., Treasurer.
WM. C. PALMER, 1st Lieut., 4th Art., Secretary.

EXECUTIVE COMMITTEE.—H. B. CLITZ, Lieutenant-Colonel commandant of Cadets; W. P. Elmendorf, Captain of Cavalry; S. V. Benet, Captain Ordnance Corps; H. B. Noble, 1st Lieutenant 8th Infantry; M. D. McKenzie, Captain Engineers; D. Leavitt, Captain of Artillery; A. T. Smith, Captain 8th Infantry; W. A. Elderkin, 1st Lieutenant, 1st Artillery.

Subscriptions to this circular have been received from Major-Generals MCCLELLAN, WOOL, GRANT, THOMAS, BUELL, MEADE, HOOKER, and many others.

THE BUREAU of Ordnance desires to impress upon all officers who may be placed in charge of Naval Batteries on shore, whether cooperating with the Army or otherwise, the importance of exercising great care to prevent sand or dirt from being blown into the muzzles of rifled guns, and the exposure of rifled projectiles to sand or dirt before loading. To guard against the drifting or whirling of sand into the bore, after the piece has been sponged and cleaned, a mask of cloth or canvas should immediately be placed over the face of the muzzle. Until this protection is introduced, the same course should be adopted until the word "ready" is given, when the mask is to be withdrawn.

ARMY AND NAVY PERSONAL.

CAPTAIN C. E. Baldwin, Company B., unassigned Pennsylvania Volunteers is dismissed.

MAJOR-General Herron arrived in Washington this week from Arkansas.

BRIGADIER-General Robert B. Potter, of the Ninth army corps, arrived in New York last week, on a short leave.

MAJOR-General McDowell was in Boston on Monday, and called on Governor Andrew.

ASSISTANT-Secretary of War Watson has resigned to revisit his health.

MAJOR-General Hunter was at Vicksburg, at last accounts, accompanied by Generals McPherson and Leggett.

MAJOR-General B. Drake has been assigned to duty as Assistant-Adjutant-General, by Major-General Banks.

MAJOR-General Pope has issued instructions to General Sibley and Colonel Sully for campaign against the frontier.

BRIGADIER-General Corse, of Iowa, has been placed in charge of the depot for drafted men at Springfield, Illinois.

LIEUTENANT-Colonel John L. Elwell has been relieved from duty as Quartermaster of Tenth Army Corps.

COLONEL A. V. Kautz, Second Ohio Cavy., has been assigned to duty in the Cavalry Bureau, Washington.

GENERAL Bartlett, Fifth United States Artillery, has been temporarily assigned to the command of the artillery reserve, Army of the Potomac.

LIEUTENANT S. C. Williamson, Eighteenth U. S. Infy., and Lieutenant James Davidson, Fifth U. S. Artillery, have been retired.

BY direction of the President, Major-General George Stoneman has been assigned to the command of the Twenty-third Army Corps.

COLONEL C. C. Bowman, of Major-General Casey's Reorganizing Board, has been sent to inspect the colored recruits at Haywaton, Maryland.

CAPTAIN Gilbert E. Haller, A. Q. M. Volunteers, has been appointed Chief Quartermaster of the Tenth Army Corps, with the rank of Lieutenant-Colonel.

ENSIGN Henry Walters, of the gunboat *Release* when she was captured in the Rappahannock, has been promptly exchanged.

MAJOR-General McClernand, of Illinois, has not been assigned to any new command, but may soon come since, it is at Washington arranging to settle his accounts.

MAJOR-General Foster has changed the numbers of enlisted men allowed to be absent at one time on furlough, from General Hardee's to ten per cent.

MAJOR G. P. Thurston, Assistant-Adjutant-General, has been assigned to duty in the Department of the Cumberland as Judge Advocate.

LIEUTENANT Samuel J. Bechtell, Acting Signal Officer, has been announced by Major-Gen. Thomas as Inspector for the Signal Corps of the Army of Georgia.

MAJOR-General Thomas has rescinded so much of the General Order, date of Nov. 6, 1863, from his headquarters, as dismisses Captain Samuel J. Mattler, Company B, eighty-sixth Indiana Volunteers.

MAJOR C. H. Raymond, Assistant Adjutant-General, has been relieved from duty at the Headquarters of Cavalry and assigned temporarily to Headquarters Department of Washington.

LIEUTENANT-Colonel Conrad, additional A. D. C., has been mustered out as aide-de-camp, and ordered to his regiment, second United States Infantry now with the Army of Potomac, in which he is Captain.

IN a personal quarrel lately between Colonel Vincent and Major Bradley, both of the seventh Kentucky regiment, the latter was shot in the leg. The quarrel was concerning returns made by Colonel Vincent.

BRIGADIER-General Geary, of the Twelve Corps, who was in Washington for a few days early in January, has now left that eleven of the regiments in his command have re-enlisted, and are being recruited up to the maximum.

THE leading citizens of Cincinnati, Ohio, gave a dinner in honor of Brigadier-General W. W. Averill on the 28th ult. General Averill is a native of Steuben County, and was for a long time a resident of Bath.

BRIGADIER-General Wright, of the Sixth Army Corps has been called to Washington on special duty. Brigadier-General Russell commanding the division during his absence.

CAPTAIN E. L. Hartz, Assistant-Quartermaster United States Army, has been ordered to proceed at once to Chattanooga, and report to Lieutenant-Colonel L. C. Easton, Chief Quartermaster, for service in the field.

CAPTAIN C. Hapt, Assistant-Quartermaster volunteers, having, in compliance with Special Order No. 80, Headquarters First Division Second Army Corps, reported in person to the Quartermaster-General, has been assigned to temporary duty in the Quartermaster, General's office.

BRIGADIER-General Getty has been appointed Inspector-General, (and not chief of artillery, as reported) on Major-General Meade's staff. Major Siddle, of Pennsylvania, has been appointed Commandant at headquarters, vice Major Lowber, ordered to his regiment.

CAPTAIN T. M. Saunders, of the Regular Army, and a resident of Virginia, died at St. Paul, Minnesota, on the 26th ultimo. Captain Saunders was an officer educated a Pittsburgh and joined a British regiment. He was twice wounded in the battle of Inkerman, and afterwards appointed to various posts and duties in the army.

BRIGADIER-General Stephen G. Champlin died at Grand Rapids, Michigan, last week. He entered the service as Major of the Third Michigan, was severely wounded at Fair Oaks, participated in the battles of Bull Run, Antietam and Fredericksburgh, and was made a Brigadier Nov. 29, 1862. He was commanded of the Grand Rapids camp of conscripts at the time of his death.

MAJOR-General Burnside has written a letter to Major-General Granger, commanding the Fourth army Corps, in which he says: "Permit me to express to you and to the officers and men of the Fourth Corps, my sincere thanks and gratitude for the hearty willingness with which you hastened to our assistance while we were menaced by a powerful force of the enemy."

BY General orders No. 34, from the War Department, Adjutant-General's office, Major-General J. G. Foster is, at his own request, placed on account of his disability for service in the field arising from wounds, on duty in the command of the Department of the Ohio. Major-General J. M. Schofield, is assigned to the command of the Department of the Ohio.

AN enthusiastic reception was given to Rear-Admiral Farragut, on his arrival in Washington, on the 23d of January. As the *Hartford* rounded the bend in the river, and moved gracefully up to her former anchorage, opposite the heart of the city, receiving the Rear-Admiral's salute from the *Pensacola*, a large crowd collected on the levee and welcomed the Admiral with cheer after cheer. In the evening at Major-General Banks' residence the Admiral received his friends.

GENERAL Wright, Commanding the Department of the Pacific, has appointed the following Boards of Assistant Commissaries of Musters: Captain J. Ives Fitch, fourth Colorado Volunteers, for the District of Southern California, comprising the following counties: Dona Barcarlos, New San Pedro, Forts Mojave, Yuma and Tejon, and Camp Babbitt, Washoe, Nevada Territory, and counties of Nevada within the limits of that District. Captain Edward H. Thelber, second Colorado Volunteers, for the District of Humboldt.

MAJOR-General Howard, in an address at a meeting held in Philadelphia, in behalf of the Christian Commission, said he was a pensioner of the Lord, and the war broke out. He was educated not by a State, but by the United States. He didn't claim to represent a single little State, but to be a citizen of the United States. He intended to enter the ministry; but when this war broke out he said it was no time for a man, who has been educated by his country, to see that country perish for lack of help.

A COURT of Inquiry is in session to investigate the case of Colonel A. A. Gibson, of the Second Pennsylvania cavalry, charged with refusing to obey an order to accept a flag presented to his regiment by the State of Pennsylvania, assigning as a reason therefor that his regiment "was not fighting for the flag of Pennsylvania, but for the United States." The court is composed of Brigadier-General Dr. Gassey, Brigadier-General Couch, Captain Larkin's staff, Recorder; Colonel Abbott, First Connecticut Volunteers; and Colonel Welling, Ninth New York Volunteers.

THE whole number of examinations before the board of which Major-General Casey is President, to date, is 4,847, of which number 707 have been recommended, and 642 rejected. The number of applicants last week amounted to 62, 37 of whom were recommended, and 25 rejected. The recommendations were as follows: Lieutenant Colonel—1 of the 2d class. Majors—1 of the 1st class, 2 of the 2d class, and 1 of the 3d class. First Lieutenants, 11—7 of the 1st class, 1 of the 2d class, and 3 of the 3d class. Second Lieutenants, 24—4 of the 1st class, 3 of the 2d class, and 1 of the 3d class.

MAJOR-General Thomas has ordered commanding officers of regiments in the Department to report upon application of Chaplain Thomas B. Van Horn, thirteenth Ohio Volunteers, in charge of the mortuary Record of the National Cemetery at Chattanooga, Tennessee, for information in regard to the full name, rank, company, native State, date, age, marital state, date of enlistment, address of nearest friends, date and place of death, whether killed in action, and whatever else is worthy of their history or record, of all soldiers who may be interred therein.

W. C. DODGE, acting examiner at the patent office, has addressed a pamphlet memorial to the Secretary of War in favor of arming the troops with breech loading or repeating rifles. He argues that the efficiency of our armies would thus be improved, and a great saving made in the expenses of the war, because fewer men would be needed.

THE Count of Paris, a young nobleman very favorably known among our officers, is now at Seville, and is engaged in the laudable occupation of studying the tactics of Hernandez, the Infanta Isabel. My next is stated as the period fixed for the wedding; but in the meantime the Duke and Duchess Montpensier have gone to Madrid to seek the consent of the Queen.

THE President has accepted the resignations of the following officers:

Brigadier-General J. T. Boyle, U. S. Vols.; Brigadier-General John Beatty, U. S. Vols.; Brigadier-General J. M. Brannan, U. S. Vols.; Colonel Stephen Moniher, U. S. Vols.; Colonel Joseph R. McKibben, A. D. C.; Major Joseph Dickinson, A. A. G. Vols.; Captain J. E. Reynolds, U. S. Infy.; Lieutenant S. H. Brown, Sixth U. S. Cavalry; Captain E. G. Parker, A. A. G.

GENERAL Pleasonton, of the cavalry corps of the Army of the Potomac, has issued an order to the effect that no excuse will hereafter be accepted for surprise or capture under plea that the enemy is in our uniforms, as no persons will be allowed to approach within rifle shot until their character is ascertained. Officers surrendering, recommended for dismissal, and privates will be tried by court-martial, should they prove responsible. Rebels wearing our uniform, caught in the act of behaving war against our forces, are ordered to be hung on the spot.

THE ARMIES OF EUROPE.

THE *Armaries Energy Eclipse* for 1863 publishes the following table, showing the military force of the different States of Europe, and the consequent expenses:—

Countries.	Army.	Popula'n.	Expenses.	Cost per Man.	Cost to each Inhabitant.	Proportion per cent. of Expenses to Revenue.
			francs.	francs.	francs.	
Germany	124,820	16,000,512	84,000,687	663	05	28
Austria	417,281	35,000,000	310,844,000	744	08	31
Belgium	40,112	4,071,183	25,250,000	584	117	33
Russia	820,000	65,000,000	125,000,000	152	01	15
Roman States	8,585	684,096	4,450,230	500	77	33
France	435,000	37,382,225	650,000,000	1,494	17	33
Greece	10,000	1,000,000	8,422,000	400	108	72
Holland	54,451	3,309,454	46,000,000	844	14	33
Italy	314,282	21,920,269	320,071,144	1040	79	37
Prussia	244,284	16,000,000	146,000,000	597	09	31
Great Britain	208,852	29,305,310	177,429,375	850	07	09
Sweden	1,000,000	4,000,000	20,000,000	20	05	20
Denmark	50,000	2,784,324	17,538,613	357	065	27
Portugal	30,000	3,915,000	12,000,000	400	03	20
Norway	18,153	1,450,744	8,447,700	465	58	42
Spain	100,000	15,673,846	70,000,000	700	04	20
Switzerland	20,000	2,000,000	11,000,000	550	55	20
Turkey	2,000	35,000,000	40,000,000	20	004	
	3,875,847	269,105,163	2,221,459,649	844	70	33

The British soldier costs the most. After England comes France with her enormous army, paying more than half the sum paid by Great Britain. Italy is next on the list, and then Spain. All the other Powers pay less than $20 per man. Sweden, it will be seen, pays most when in comparison to the number of inhabitants than any other country—1 in 6. The United states pay 1 in 65 of each. Between France and England a considerable difference exists, France taking 1 man out of 73 inhabitants, England but 1 out of 87.

IRON-CLAD VESSELS.—On this important subject Admiral Paris, of the French Navy, addressed the Royal Society of Sciences a paper, in which he shows that iron-clad vessels have succeeded perfectly in still waters, but not so in a heavy sea, and in the latter case the ratio to which they are exposed, which causes them to roll more than vessels built on the old model. In consequence of this, instead of having their upper tiers at a safe distance from the surface of the waves, their main force is situated at a very small elevation from the water line, and at the extreme. Hence the need not require a very heavy sea to render the closing of the port-holes necessary; and, what is worse, every five or six seconds the roll carries the ports which are not protected by armor. It is therefore not surprising that these serious drawbacks should recur to mind the old models which were less subject to the rolling and pitching than the present models. The old ones, instead of presenting circular vertical sections cut horizontally by a rectangular plane, usually presented the same curves below water that they had above. A roll assumes a horizontal position of its own accord, but the iron-clad vessel is kept in a perpendicular, and therefore longer way for regaining with three small sails. An iron-clad vessel carries little working room. The crew of 1000 horse-power boarding a vessel becomes impossible, and three light masts may be easily kept. But it is most important that the rigging should be little in quantity. To arrive at this desirable result, Admiral PARIS, after a mature examination of the form and dimensions of all the old models, has selected the *Royal Louis*, built by GELUVEN in 1749, for his type, but with some modifications, increasing the weight of the vessel from 4720 tons to 6000, which extends the weight of the iron-clad frigate *Gauroise* by 1200 tons. The keel he has made horizontal, like those of the best packet-boats, instead of rising aft, as in the old ships, in the most mon-of-war. He adopts twin screw-propellers, whereby he diminishes the effects of each, and secures the advantage of steering by means, in case the other should chance to become unserviceable.

MR. JOSEPH S. TOWNSEND, the Superintendent of the National Cemetery at Gettysburgh, writes that he is in which the soldiers of the Regular Army were to be interred, was set apart at the time the cemetery was laid out, and that upon the day it was dedicated a number had already been buried therein. The belief that the Regulars had been forgotten, he says, is entirely erroneous. The block of the ground made before the design was completed, and published as a correct representation. "It is lamentable," adds Mr. Townsend, "that so many of our brave men—some dead (about one-fourth of the whole), but that was owing to the fact that those who fell in the first day's fight were stripped by the enemy." An authentic map of the cemetery will soon be published, which will correct the misapprehensions in regard to it."

A PUBLIC dinner was given to Major-General GRANT, on the occasion of his recent visit to St. LOUIS, to see his son, who was considered dangerously ill, but soon become convalescent. About two hundred guests were present at the dinner, including Generals SCHOFIELD, ROSECRANS, OSTERHAUS, TUTTEN, MCNEIL, and other military gentlemen. The first toast, "To the President of the United States," was responded to at length by Judge DUNN; but in answer to the second, which was—"Our distinguished guest, Major-General GRANT,"—the General said only: "In response, it will be impossible for me to do more than to thank you." Speeches by SCHOFIELD and OSTERHAUS and by other gentlemen followed.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the service, correspondence and general communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communications, not for publication, but as a guarantee of good faith.

Officers are especially requested to give as early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, as at all times, be pleased to respond, in these columns, to enquiries in regard to tactical and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, etc., and reports of notable operations and local forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL IS FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made by Post Office Money Order, or Bank Check, Draft, Postmaster's, or other drafts, which should be made payable to the order of the Proprietor, W. C. Church.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers ordering the address of their paper to be changed, should be careful to give their previous address.

The Editor does not hold himself responsible for individual expressions of opinion, in communications addressed to the JOURNAL.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

ANSWERS TO CORRESPONDENTS.

T. D. C. T.—A cruitical solutes an officer below the rank of *Major*, by standing faced to the front at *shoulder arms*. Corporals out of the ranks, and privates not *acting* salute as sergeants, by bringing the left hand across the body and touching the basket near the right shoulder. Blood Par. 235, 237, 420 and 421, Revised Regulations.

PILOT.—The purchase of gloves would be a legitimate charge against a Company Fund. This fund is solely for the benefit of the enlisted men of the company. See page 26, Revised Regulations.

K—L.—Any officer or battalion is entitled to a copy of the *Tactics* when the guide is right. Your question betrays your ignorance of tactics. II. No answer necessary. Read Par. 424, Revised Regulations. III. It has been customary for a scaffold to stand at *arms-port* when receiving instruction.

SUBALTERN.—Regimental Field and Staff Officers at inspection, are formed from right to left, in order of rank, and not by date of commission in the service; and date of regimental appointment is immaterial. At review the regimental Staff are posted on the same principle.

NEW YORK.—It is not possible for an inferior to place his superior before a Board of Examination. If a superior is tyrannical or capricious your proper course is to appeal to his superior officer, through the prescribed channels. If he is incompetent, you could report him or prefer charges; but it is a delicate matter for a junior to pronounce judgment on the capacity of his commanding officer. His superior may be more competent to judge in such matters than yourself.

T. W. B.—The First Sergeant of any company ranks all other sergeants of the company, irrespective of date of appointment. The other sergeants rank according to date of appointment.

Answers to a large number of questions are necessarily held over.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, FEBRUARY 6, 1864.

COMPARATIVE STRENGTH OF THE NORTH AND SOUTH.

NO subject possesses greater practical importance in connection with the recent call for half a million of men than the comparative ability of the North and South to reinforce their respective armies. In 1860, according to the figures given in the forthcoming volume of the eighth census report, the aggregate number of white males in the United States between the ages of 18 and 45 was 5,624,065. Subtracting from this aggregate 80,000 men as the number recruited by the Confederates in Kentucky, Tennessee, Maryland and Missouri, and the white males between the ages named in Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Virginia and Texas—a total of 984,890—and there will remain as the number of arms-bearing men in the loyal States who are subject to the draft 4,719,175. Our armies, however, control one-half of Virginia and of Arkansas, at least one-fourth of Louisiana, and one-sixth of Mississippi and of Texas. Deduct only those proportions of the white population of these States named, throwing out of the account entirely the whites recruited for our armies in Alahama and North Carolina, and there will remain to the Confederates as the capital they had upon which to start the war 3,911,000 men between the ages of 18 and 45. Competent judges estimate that they have had in the field during the campaigns of 1862 and 1863 at least 750,000 men. During that time they have undoubtedly suffered heavier losses than our forces. In nearly all, if not in all, the great battles of the war their charges upon our batteries have been made in column, and the lives of the soldiers have been sacrificed with a reckless prodigality which has made their greatest victories fruitless. The scarcity, if not the absolute want, of the most necessary medicines which we have had in abundance, has cost the Confederates thousands of valuable lives; and defective sanitary regulations have run up their camp mortality to extraordinary figures. At present, moreover, the balance of prisoners in our favor is at least 40,000; and it must be remembered not only that immigration, which has given us thousands of recruits, has been entirely closed to the Confederates, but that by the immense exodus of aliens and refugees from the conscription, they have lost more than they have gained by the accessions of white males to the military age since 1860.

The difference between the aggregate military strength of the South, which was estimated at 817,000, and 750,000—the number who have been in the service—is but 67,000. After making the deductions named, there will be left as the present total of effective aliens and refugees from the conscription, a number which we have already included in the enumeration

inforced, this call for five hundred thousand men would be the last that the PRESIDENT would be compelled to make; for the complete overthrow of the Confederate military power could not, in that event, be postponed beyond the next campaign.

ARBITRARY DISMISSALS.

On the 28th ult., Hon. H. WINTER DAVIS introduced into the House of Representatives the following bill, which after being twice read was referred to the Committee on Military Affairs:

A BILL to regulate the dismission of officers in the Military and Naval Service.

Be it enacted, &c., That the PRESIDENT shall dismiss no officer in the Military or Naval Service of the United States, unless upon the finding of a Court-Martial convened according to law.

2. Any officer who shall be rejected by his commanding officer shall retain his leave for twenty days, if on leave of absence or furlough, may be dropped from the Military or Naval service by the PRESIDENT for that cause assigned by proclamation; but on the application of the officer so rejected and dropped, stating a sufficient defence under oath against such charge during the whole absence till the day of application, the PRESIDENT shall convene a Court-Martial to try him on that charge; and if it again him, on appeal of the sentence, he shall stand *ipso facto* reinstated; and if the sentence to be approved by a final court, another Court shall be ordered for his trial, by the order disapproving the former finding.

3. The PRESIDENT may suspend any officer in the Military and Naval Service without pay or emoluments, in case of wrong or neglect of duties, who shall be reported by his commanding officer or the Secretary of War for any flagrant offence for which under the Articles of War, dismissal or death is a legal punishment, and in the opinion of the PRESIDENT ought to be so punished; but the order of suspension shall specify the charges and convene a Court-Martial for the trial of the officer thereon within ten days from the date of the suspension: and if the court shall not assign dismission or death as the punishment, the officer shall stand restored to his rank, pay and emoluments from the date of the suspension.

Officers in both branches of the Service will appreciate the full importance of the legislation here contemplated. We trust it may engage the immediate attention of Congress, and that the act of justice it aims at may be incorporated in the revision of the Rules and Articles of War—now in progress before a special Board in Washington.

The power of summarily dismissing from the Service officers of the Army and Navy, though nominally belonging to the PRESIDENT, has really throughout the war rested in the hands of the Secretary of War, who has not scrupled to make a very extensive use of it. We are convinced that in many instances substantial justice has been done in the exercise of this arbitrary authority; but it is notorious that in many other instances it has been used hastily and injuriously, while in still other cases it has been grossly abused. We conceive this could hardly be otherwise, even in the hands of one of the most judicial cabinets of any per than Mr. STANTON. But we believe justice compels us to go farther, and say that such sweeping power cannot safely be entrusted to any one man, be he Secretary, or be he PRESIDENT. A very few considerations will, we think, serve to place this in as clear a light as could be desired.

And in the first place there is no *necessity* for such arbitrary proceedings, if *justice* be the end desired. It is beyond a doubt a matter of vital moment that means should exist of promptly putting misbehaving officers out of the power of doing mischief; for otherwise cession might arise where the Service would suffer severe detriment. But full provision is already made for such contingencies as this. Not only has the PRESIDENT, but so also have commanders in the field the power to *suspend* officers by placing them under arrest. This perfectly satisfies the exigency of the moment. But beyond this, in the question of an officer's guilt, and involving a measure so severe to any man of honor as his dismissal from the service, we say it is unjust to go; and we submit it to the judgment of any right-minded person whether it is just that, because a man is in the service of his country, he should therefore be denied a fair trial. The course essential are the proper judicature before which all military offences are to be brought, and ample provision exists by law for bringing offenders to a speedy trial. A summary dismissal by the Executive, on his own decision, or, as it more frequently happens, arbitrary dismissal by the PRESIDENT'S subordinates, acting in his name but without his knowledge, is a gross abuse of power, and tends to lower the tone of the Army by depreciating the value of a commission.

Perhaps there could be no more striking proof of the unjust practical action which this power too often induces than is presented by the frequency with which we read of such as one who is officially restored to his commission, *provided the vacancy caused by his dismissal was not filled.* This is justice with a vengeance! A more beautiful bit of *reductio ad absurdum* it would be impossible to find. It is admitted that an officer has been hastily and wrongfully deprived of his commission; but if another man has not been put in his place, as is the case ninety-nine times out of a hundred, he must still suffer all the ill effects of such a trial. Trying a man after he is hanged is mild treatment in comparison. We trust Congress will speedily see to it that this great official abuse is "reformed altogether."

THE House of Representatives has passed and sent to the Senate a Bill which greatly simplifies the necessary proof to enable a wounded soldier or the heirs of one deceased to obtain his bounty or arrears of pay. The Bill, which was drawn at the suggestion of the proper accounting officers, requires his commanding officer, upon the death of an enlisted man, immediately to make out triplicate statements thereof, specifying the date, place, and cause of death, embracing the full military history of the deceased; one of these statements to be forwarded to the Adjutant-General, one to the Surgeon-General, and one to the Second Auditor of the Treasury. The latter officer will cause the statement to be filed and entered in alphabetical order books covering all the data contained in such statements. Upon the death of an officer the commanding officer is to make similar statements. Upon proper proofs the Second Auditor of the Treasury is to issue immediately a certificate of the sum found to be due to the deceased for bounties, arrears of pay, clothing, &c., which certificate will be paid by any paymaster of the Army. Where the death takes place in a hospital, away from the command of the deceased, the surgeon in charge is to make the triplicate statement, and also notify the command to which deceased belonged. The second section makes it the duty of the commanding officer, on pain of dismissal, to furnish a full descriptive list to the officer or soldier detached from his command, furloughed, or sent to hospital sick or wounded. The third section makes it the duty of the Commissioner of Pensions to adjust all claims for bounty, under rules and upon proofs, as required in cases of invalid pensions, and to issue certificates therefor, payable by any paymaster of the Army.

WE give place this week to an interesting account of the history and present condition of our Naval Academy at Newport—a subject whose importance is not now, as it has not hitherto been, sufficiently understood; its history bearing testimony to that indifference to the subject of military education against which all such institutions have heretofore had to contend in the United States. Denied an existence by Congress, and owing its establishment to the Navy Department, it has vindicated its title to the care and consideration of the country. Its hasty removal from its former situation at Annapolis to the present extemporized quarters, has subjected it, for the past three years, to the disadvantages of insufficient accommodation, and uncertainty as to its location. It should not be left in its present unsettled state one hour longer than is absolutely necessary. Whether or no a return to Annapolis is advisable, is not yet clear. That situation possesses a decided advantage in the fact that it is so identified with the history of the Academy thus far, and that provision has already been made there for the accommodation of the school. The neighborhood of a quiet city, like Annapolis, is preferable also to that of a watering-place, like Newport, though the secession influences of the former are by no means an advantage. Whether there be any advantage of climate, in favor of the more Southern city, seems to be disputed; and the politic and characteristic of Maryland is not perhaps, yet sufficiently settled to make a return expedient.

But this question we leave to those whose province it is to determine it,—contenting ourselves with directing public attention to the importance of the institution, to which is committed the education of our naval officers. The necessity of a thorough professional education in this branch of the service forces itself upon our attention as never before. Its necessity should be as well understood by Congress and the country, as, we are glad to know, it has been from the first, by the Navy Department under the present administration. Every encouragement has been given by Secretary WELLES to the Academy, and the requirements of its officers have in all cases received the most prompt consideration. It is fortunate, too, that, in this trying period of its history, it has been under the charge of men thoroughly devoted to its interests, and conscientious in the discharge of duties presenting few attractions to naval officers in these days of active sea service, promotions, and prize-money.

RECENT English papers refer in very serious terms to the trifling and now almost forgotten disturbances among the negro troops at Fort Jackson. The *Times* and the *Index*, the rebel organ published in London, magnify the occurrence into an ominous sign of widespread disaffection among the colored soldiers. The details of the affair are curiously misrepresented. A Rebel correspondent of the *Index* states that the negroes not only revolted, but with a truly barbarity taste for ghastly spectacles hung thirty of their white officers over the walls of the Fort. Two white regiments, which were sent down to suppress the mutiny, were repulsed, and as last accounts a fleet of gunboats was preparing to reduce the Fort by a regular bombardment! On these statements the *Index* founds the theory "that another great wall of defence will rise up "between the South and its assailants," and that the "negroes are rapidly catching the wild enthusiasm of "the white population in defence of their country." These statements require no refutation, and it would be cruel to deprive disheartened secession sympathizers in England the comfort they appear to find in them.

THE House has passed by a large majority, and sent to the Senate, the Bill reviving the grade of lieutenant-general, and authorizing the PRESIDENT, with the Senate's concurrence, to appoint, whenever he shall see fit, a Commander of the Army, "to be selected "during the war from among those officers in the "military service of the United States, not below the "grade of major-general, most distinguished for cour- "age, skill, and ability, and who, being commissioned "as lieutenant-general, shall be authorized, under the "direction of the PRESIDENT, to command the armies "of the United States." Major-General GRANT is especially recommended in the Bill for the appointment. The pay and allowances and staff of the lieutenant-general are made the same as those fixed by the Acts of May 28, 1798, and August 22, 1842, with the provision that nothing in the Bill is to be construed in any way to affect the rank, pay, or allowances of Brevet Lieutenant-General SCOTT. We understand that the Bill will encounter strong opposition in the Senate.

THE plan for a race between the United States steamer *Eutaw* and the *Kiu Kiang* has been definitely abandoned, and the *Kiu Kiang* has sailed from this port on a voyage. We were misled last week by the telegraphic report in the daily papers as to the amount required by the owners of the *Kiu Kiang* for her expenses while waiting for the race. It should have been stated at $12,000 for the first two weeks, and $500 a day for every day's detention after that. But even this amount proved to be more than the merchants of New York were willing to contribute to satisfy themselves as to the speed of our Navy. Meantime the *Eutaw* had a trial trip on the Potomac, showing an average speed of seventeen and a half miles an hour.

WE publish this week an elaborate defence of the Virginia campaign of General POPE. It is written by one thoroughly conversant with the plans and purposes of the General, in justice to whom its statements should be impartially considered. Though the letter is long and elaborate, and however some readers may dissent from its conclusions, it cannot fail to be of interest; while, at the same time, it is a document which must be of great historical importance, as throwing additional light on one of the gravest chapters in the history of this war.

We must caution our subscribers against paying subscriptions for the ARMY AND NAVY JOURNAL to unauthorized persons. Receipts have been brought to us with the signature of C. W. HUBBELL. HUBBELL is not connected with this journal, and has no authority to receive subscriptions for us. We shall be obliged to any one who will inform us as to his whereabouts, that we may proceed against him as the law allows.

FOREIGN MILITARY AND NAVAL MATTERS.

THE work of demolishing the fortifications of Corfu was commenced on the 28th of December. It will result in the ruin of the fort, and the natives are terribly exasperated in consequence.

THE expenses of Colonel CRAWLEY at his trial amounted to between fifteen and twenty thousand dollars. His friends have subscribed about ten thousand towards paying them, and the purpose to make up the whole amount.

AT last accounts troops were still leaving France for Mexico, and this number will be largely increased, as the disposal of Prince BONAPARTE to convey him, in his capacity of captain in the foreign legion, to the Gran Chac. The Prince was to embark from Algeria. M. MERCIER had just arrived from Washington.

THE ships launched last year at Cherbourg were the *Revolte* frigate and the iron tug *Patient*. The ships in contemplation are the *Le Bruix* frigate, 900-horse power; *Lamyron*, stable-transport, 500-horse power; *Le Cher*, screw transport, 150-horse power, and the *Cassini*, screw tug, 20-horse power.

A TURKISH military journal is about to be established at Constantinople, under the title *Dejeuti Askeriê*. It will be devoted exclusively to the military affairs of Turkey, and will be placed under the direction of MAHOUD-PACHA, chief of the imperial staff.

THERE is a proposition in England to erect a monument to commemorate the long and most distinguished career as a soldier, of Field-Marshal Viscount GOUGH, who died in Ireland. He was ninety-first year, and has served three-quarters of a century in the British Army.

IT is said that the cheery signals and ejaculations common among sailors, and generally held to be their peculiar property, are, in fact, borrowed from the Italians—the Genoese more especially. Thus "Yo-ho" is declared to be a corruption of "o-ho" ("I have it"), and only imitated from the Mediterranean mariners of the Middle Ages.

ON a recent Sunday there was a military banquet at the Tuileries. Several marshals, and other officers of rank, dined with the EMPEROR. This dinner has of course given rise to wide conjectures. There is a report that General CANROBERT, who commands one of the divisions of the Guard, who is seventy years old, and who has served 53 years, is about to resign, and that General VINOY will succeed.

IN the JOURNAL of December 26th, 1863, we alluded to a colossal submarine vessel which was reported to be in process of construction in Greenock. It was to be largely of iron; to have engines worked by compressed air; a powerful spar, and provisions for attaching to the bottom of vessels to be destroyed thereby with powder, to be fired by electricity. We now hear a report that a similar vessel is building at Cherbourg by the French Emperor.

WE alluded a week or two since to a steamship of novel construction proposed by Mr. GILES, of London. The inventor claimed for his craft a speed of 30 to 40 miles an hour. It appears that it is to be entirely new. Some years ago a Mr. LIPSCOMBE, in England, built a vessel, schooner-rigged, similar in form to that of Mr. GILES, the ordinary form of which was only about four miles an hour. It is therefore highly probable that Mr. GILES' "idea" will remain an idea.

THE *Moniteur de la Flotte* states that a rifled steel cannon has been cast in one of the Imperial foundries which is superior to anything yet produced by Sir WILLIAM ARMSTRONG. It was fired on board the ship of Gavro, near L'Orient, and the ball passed through a target as strongly plated as any frigate about us a distance of 1,000 yards. The superiority over Sir WILLIAM ARMSTRONG'S gun is said to consist in its comparative lightness and in the facility with which it can be manœuvred.

THE German Bund, comprising thirty-five German States, has at its disposal a military contingent of 303,482 men, organized into nine corps, this does not represent the entire military strength of the German States, as Austria and Prussia alone can each bring into the field almost double that number, while about 200,000 trained soldiers. Bavaria maintains an army of 125,000 men, and the other States a force in proportion to their population. In case of a general war arising from the Schleswig-Holstein complication, Germany could enter the field with not less than a million of men, and a reserve of half a million.

IT is urged upon Parliament to increase the pay of the executive officers of the British Navy, and the officers, from the junior lieutenant to the senior captain, are each to keep them in the position of a gentlemanly action. It is declared that some of the best officers of the service cannot take commands, because their pay will not keep them in the position in which they would be bound to appear. The expense of the separate mess which the custom of the service requires a commander of a ship to keep of his entertainments to his fellow and foreign officers, and other necessities draw heavily on his purse, which he thinks should, in consequence, be filled fuller by the government.

BY direction of the Lords of the Admiralty the officers belonging to the several branches of the British naval service are in future to be distinguished from each other by the following distinctive marks:—Three gold lace stripes at present worn on the sleeves of uniform coats, as follows:—The military branches are to remain as at present, except that the staff captains, staff commanders and masters are to wear stripes of light blue velvet alternate with the gold lace now worn. Officers of the medical department to wear alternate stripes of scarlet velvet, those of the paymasters' department to wear white velvet, and those of the engineers' department stripes of purple velvet. The QUEEN'S naval aide-de-camp are in future to be distinguished by gold lace on their shoulder-straps.

IN the French and Russian Navies the expenses incidental to acts of courtesy and hospitality shown to foreigners are defrayed, not by the state, by the government, but in the English Navy, as in the American, they fall on the captains, who must be prepared for them when they accept the command. The average full pay of captains in the English Navy is about $2,900; of commanders, $1,600. At present officers are not entertained, but it is the desired intelligence of sea-service—the juster ground of preference—should regulate the pay. It is proposed to give captains of first-class steamers, annually, $4,000 a year; to fifteen years and less than eighteen, $3,500; of fifteen years, $3,000; commanders of less than nine years, $1,750; of more than nine and less than twelve, $1,500; of more than twelve, $2,000.

REAR-ADMIRAL HALSTEAD, of the British Navy, in a letter to the London *Daily News*, condemns the action of the Admiralty in continuing to construct the fleet, more especially the new iron-clads, with smooth-bores of six tons, to be used with a service charge of 12 lbs. of powder and a round shot. It appears from the Admiral's letter that the Committee have not only rejected the rifle principle, but have introduced into the new ships a bore which has not been tested by firing from any distance at a representative target of any species of iron-clad whatever, and which is smaller than the 68-pounder even in the old 95-pounder. The Admiral fears that the same infatuating influences that forced into the navy the guns which produced such fatal results at Sagosima, have produced the forger Mr. WITWORTH'S wolves in work in the manufacture of cannon which will prove to be worthless on the first trial.

THE Indian Government has resolved to leave the port of Genoa to the use of merchant vessels, and to place the great station for the navy of Italy at Spezzia, with an arsenal and dock-yard there. A glance at the map will show that the locality is admirably fitted by nature for such a purpose. The gulf, ten miles long and seven miles broad, is deep through its entire length, good anchorage for ships, and secluded under the adjacent hills. At the upper end of the bay, near the head of the gulf, the works now in progress will form a harbor wherein the largest vessels may ride safely close to the shore. The sand is being removed so as to deepen the water, and at the same time, large mole and docks are being formed, and lined with fine cut stone. It is calculated that the cost of the whole, when completed, will be about £5,500,000. A civil war having broken out, Spezzia was a few years ago leased as a naval station to Russia, but was abandoned by that Power after having been held only a few months.

THE Ordnance Select Committee have recommended that the grip at the muzzle of the ARMSTRONG breech-loading gun should be abolished. In the recent action at Kagosima has confirmed the experience gained by the experiments at Newhaven, of this being the principal cause of the frequent explosions of the ARMSTRONG shells at the muzzles of the 110-pounders. This objection will greatly lessen the severe jar which is thrown upon these guns through the projectiles being detained by the grip at their muzzles. In the case of the 12-pounders, the damage caused by the grip has been obviated by cutting off the muzzle. The trials of the rifled 12-pounders at Newhaven and of WHITWORTH have been delayed by the failure of one of these gunlicenses to have his guns ready. Mr. WHITWORTH'S rifled guns are made of solid blocks of steel. ARMSTRONG'S six 12-pounders, viz., three muzzle-loading shunt-rifled, and three breech-loading polygrooved-rifled, are made of steel, but finished with a thin trunnion and breech coil.

SOME curious experiments were recently carried on at Shoeburyness, to test the power of steel shot over those of iron. Targets, with a backing of wood for the purpose of enabling Sir WILLIAM ARMSTRONG and Mr. WHITWORTH to prove the destructive powers of their respective guns and projectiles, and as they were not yet ready to take the ground, it was decided to try a few heavy steel balls against one portion of the iron-clad target. Messrs. FIRTH & Co., of the Atlas Works, Sheffield, were requested to send some of their carefully manufactured shot, and at a distance of 200 yards, with a charge of 12 pounds of powder, a 68-pounder smooth-bore was fired. The shot were 42-inches thick. The first shot (a little over 68 lbs. in weight) fairly battered itself about on inch, but penetrated the plate to within a quarter of an inch's thickness. The next shot, of the same size, struck the first one, which it dislodged, and then went completely through the iron and lodged itself in the 18-inch backing of teak. The result was that all present were convinced that, in order to ensure a penetration of armor-plates as at present in use, steel shot will have to be employed.

THE varieties of articles required for clothing and equipping the British navy are nearly 9,000 in number. Of every one of these articles there are sealed patterns, which are the accepted standard of comparison of the goods furnished, and there is a distinct and separate specification required for each article before it is supplied and delivered. There are 600 varieties and patterns of buttons for the British army. No two regiments have a similar button, and for many of the regiments there are several varieties of these useful and ornamental appendages. The varieties of patterns of lace and embroidery are over 600 in number, and each of these has to be as carefully matched in shade and colors of a regiment. To give to the soldier a coat which had not the braid or lace of exactly the same width, color and pattern as he had been accustomed to, would be a grievance as great as that of supplying pressed cartridges to the Sepoys. The history of the formation of the British army could be traced from the buttons and lace of the different regiments. Each regiment was raised in early times by some nobleman or person of influence, principally landed, and clothed the men whom he thus raised for the service of his country with his own livery or colors, and they still retain those distinguishing marks of their origin.

THE following experiments have been made in England on the penetration of projectiles under water:—A 32-pounder shot (5¼ inches) after passing through 20 feet of water at an angle of deflection of 8° 25 penetrated eight inches of oak three feet under water. These projectiles do not deflect on striking water. An ARMSTRONG 10-pounder shell under six feet of water. It passed completely through 18 inches of solid timber at 25 feet. It was fired as the fashioned timber rose on the crest of a wave, the side forming a horizontal angle of 42°. Solid shot penetrated both sides. Shell penetrated the first and built. The projectile of solid shot pierced 18 inches of the timber, shook the ship's side to a considerable extent, and made a round hole through which the water poured with some violence, filling the ship immediately. After the ship was sunk, a percussion shell was fired at it, which burst on passing through, and spread the timber for a space of 4 feet by three feet five inches, making an open fracture three feet by two feet. The outer planking was torn away, more started in the inside, and the lower part for a large portion of the deck immediately above the fracture blown up, the planks shivered and the beams broken. The three shots fired at the side of six hulled iron plates bolted together and fastened to the ship's side was broken by every shot, and the fragments driven into and sometimes through the vessel.

A 5½-INCH plate manufactured by the Mersey Company, was recently tried at Portsmouth on the target-ship *Monarch*. Three 16-pound cast-iron shots were fired with the 68-pounder gun, with battering charges on the plates, but the shot flying into a thousand oranges. Two 113 pound and 114 pound steel shots, ARMSTRONG, were fired with the 68-pounder Fraser ARMSTRONG smooth-bore, with a charge of 25 pounds of powder. Both these struck on the lower edge of the plate, and broke it in two places, the shot cutting through the plate's outer surface, broke away its back in large irregular pieces, driving the whole of the fragments inside the hull. The inside of the ship was covered with wrecks and fragments. The corresponding shot was directed at the same plate from the same gun, with a similar charge of powder, but the shot was somewhat differently constructed. This shot had been supplied by Messrs. FIRTH & Co., of Sheffield, and weighed about 1 pound more than the Bolton Company's shot, and was of solid steel, but not ARMSTRONG manufacture. This shot struck the plate fairly, and buried itself below the plate's outer surface in a hole with a diameter of 18 inches, exposing a semi-circular fissure round the hole which extended right through the plate to its upper edge, and evidently tore away a large slab from the back of the plate. This was the most mischievous-looking shot of the whole, and it was a matter of wonder, on being first examined from the inside of the ship, that it had not gone right through the ship's side.

THE ENGLISH NAVY.

THE official annual statement of the numbers, name, tonnage, station, &c., of the steamers and sailing vessels composing the British Navy, has been published in the 54 ult. The total strength of the effective ships of the navy was 274 of which number 62 are building, leaving 212 in the various harbors at home and abroad, the value of which would be speedily converted into block ships for the defense of the coast. There is also a numerous fleet of iron and wooden mortar boats, laid up at Chatham. Of this number there are 72 vessels ranking as line-of-battle ships, each mounting from 74 guns to 121 guns, and of from 60 to 74 guns each; 94 steamers and other ships, carrying an armament of from 23 to 46 guns each, and the majority of which are of a size adapted to form one of the line-of-battle ships; 35 screw corvettes, each carrying 21 guns, and the vessels of this class are generally of 2,000 tons' register and tonnage, carrying an armament from 4 guns to 21 guns each. Exclusive of the above, there is a squadron of 13 screw gunboats, each carrying 4 guns and tonnage. The total number of ships of all classes in commission and serving in nearly every part of the world is upward of 300, the remainder being attached to the reserve squadrons at various naval ports, and partially equipped in readiness to proceed to sea whenever their services may be required. During the past year the following vessels have been launched:—The *Achilles*, iron-clad, 35, 6,083 tons, and the *Salamis*, 1,625 tons, at Chatham; the *Guns*, 35, 6,083 tons, armor-plated frigate, at Devonport; the *Research*, iron-cased ship, 4 guns, 1,253 tons, at Pembroke; the *Monitor*, iron-cased, 60, 6,621 tons, at Blackwall; the *Hector*, 34, iron-clad,

4,063 tons, at Glasgow; the *Valiant*, 34, iron-clad, 4,063 tons, and the *Tenacity*, 3, 2,812 tons, iron troop-ships, at Millwall; and the *Wolverine*, 21, screw-corvette, 1,702 tons, at Woolwich. During the same period the following vessels, the whole of which are either of iron, or iron-cased, have been commenced at the several dock-yards:—viz: the *Lord Warden*, 36, 4,067 tons, and the *Bellerophon*, at Chatham; the *Lord Clyde*, 36, 4,067 tons, at Pembroke; and the *Pelter*, 6, 2,406 tons, at Keyham. The iron-clad ram now building for the Admiralty, in addition to those above enumerated, are the *Northumberland*, 50, 6,621 tons, at Millwall; the *Agincourt*, 50, 6,621 tons, at Chatham; and the *Lord Alfred*, 36, 4,045 tons, at Portsmouth; the *Zealous*, 36, 3,716 tons, at Pembroke, and the *Favorite*, 8, iron-clad gunvite, 1,912 tons, at Deptford, together with the iron-clad shield ship *Enterprise*, 4, 950 tons, building at Deptford, and the *Research*, 6, 2,963 tons, is being converted into an iron-clad ram, at Portsmouth. The vessels now on the stock at the various Royal dock-yards, exclusive of those iron-cased ships, are as follows:—Iron-clad ram, 1 ; tug, 1; the *Belvidera*, 31, 3,627 tons; the *Mersey*, 6,035 tons; the *Endymion*, 51, 3,811 tons, and the *Myrmidon*, 6,035 tons, at Chatham; the *Urgent*, 31, 3,627 tons, the *Phaeton*, 6, 950 tons, and the *Iphigenia*, 4, 836 tons, at Portsmouth; the *Immortalité*, 6, 2,406 tons, the *Pallas*, 6, 2,406 tons, and the *Sphinx*, 4, 656 tons, at Woolwich; the *Inkerman*, 51, 3,716 tons; the *Inter* 38, 3,627 tons, and the *Sphinx*, 4, 950 tons, at Devonport; the *Hotspur*, 31, 3,627 tons, at Deptford; the *North Star*, 22, 1,623 tons, at Sheerness; the *Tweed*, 31, 3,627 tons; the *Trent*, 6, 950 tons; the *Nereid*, 6, 1,359 tons; the *Orontes*, 6, 2,406 tons, and the *Tortoise*, 6, 695 tons, at Pembroke; and the *Prince Albert*, 5, 2,019 tons, screw-steam yacht, at Millwall. In addition to the above vessels there is a number of screw propellers in course of construction at Portsmouth dock-yard. The number of screw-vessels in ship and boat service, and surveying gunboats, which compose the East India and China squadron, is 81; the North America and West India squadron consists of 24 vessels; the navy squadron in the Mediterranean, 59 ships and gunboats; squadron on the West Coast of Africa to aid in the suppressing of the slave trade is 22; the Pacific squadron, 15 vessels; and that on the southeast coast of America, 11 ships. There are 8 line-of-battle and other vessels employed on the Cape of Good Hope. Vessels compose the squadron in Australia. The following vessels compose the Channel squadron, viz: the *Edgar*, 71, 3,864 tons; the *Ocean*, 40, 3,616 tons; the *Revenge*, 51, 3,656 tons; the *Black Prince*, 51, 6,109 tons; the *Defence*, 16, 3,720 tons; and the *Triumph*, 2, screw gunboat.

TRIAL TRIP OF THE FRENCH IRON-CLADS.

The *Revue des Deux Mondes* for Jan. 1st, contains an interesting and ably written account of an experimental cruise of the *Turenne* iron-clad, on the part of the French fleet, from whose ways upon artillery and iron-clad ships have attracted much attention among military and naval men. Though not an official report, the publication is charged with considerable truthful and intelligent record of the results of the cruise. It is, indeed, probable that the French Government would be more likely to be, as being free from those influences which ordinary color Admiralty reports. We will, therefore, give a careful analysis of the article in question, as follows:

The iron-clad squadron returned to Cherbourg on the 8th of November, 1863, after a cruise of two months, during which the ships were subjected to every test of which necessary to establish their merits as sea-going as well as fighting engines. They encountered almost every kind of weather at sea, from a dead calm to the most violent gale; at every hour of the day, they were compared with each other, and with other models of the fleet, and their general behavior was witnessed by some three or four thousand seamen, and by one hundred and fifty officers. The commission appointed by the Minister to report upon the trial, and the names of those especially interested in the success of the iron-clads, as well as of those who were not prepossessed in their favor. The Vice-Admiral Count Chasseloup-Laubat, President of the Council of Works (*i. e.* Surveyor and Controller) in the Imperial Navy, was President and commander-in-chief of the experimental division; M. Dupuy de Lome, Chief Constructor of the Navy (Director du Matériel de la Marine); Vice-Admiral Rigault de Genouilly, Bourdon, Chevalier, and Leefevre, MM. Marrel and Bourey, naval engineers of the first class. Thus far each ship there was a full corps of experts to turn their attention from one ship to another, no ship being at any time without one, in order that the methods and results might to thoroughly compared by all.

The five iron-clads were accompanied by the old steam line-of-battle ship *Napoleon*, and by the screw iron-clad screw corvette *Tolanaon*. The *Napoleon*, when ten years ago was the pride of the French navy, and was admitted to be the most powerful ship of her class afloat, was found to be a useful line-of battle ship that had ever figured in any squadron, is a two-decker, carrying 90 guns, a full complement of 900 men, has a length of 252 feet between perpendiculars, a carcass of 2,950 *metres*,* and engines of 900 horse-power, precisely similar to those of the iron-clads. Her length is 11 *metres*, breadth 16 *metres* 30 centimetres, her load draught of water 7 *metres* 86 centimetres. She carried 600 tons of coal, provisions for three months, and water for one. The *Tourville*, though not as fast as the *Napoleon*, has less tendency to roll, and is manœuvred with great ease.

The five iron-clads were the *Solferino*, *Couronne*, *Surveillante*, and *Magenta*. The first two are reproductions of the *Gloire*, though the *Invincible* is more heavily plated, and has a greater displacement, and the *Magenta* has retained the Admiral. Since her return the "block-house" on deck has been reduced from 30 to 20 feet, and her armament has been modified, so as to lower the centre of gravity by placing the heavier weight below.

The *Couronne*, is a 90-gun frigate of a peculiar model. She is much rounded at both ends than the *Gloire*, and more shapely to the eye. But what distinguishes the *Couronne* is that her hull is of iron, constructed of plates two *centimetres* thick. The armor-plating is fastened on the side by ribs and angle-plates, the spaces between being filled up with teak of 28 *centimetres*, upon which rests a thickness of iron of 34 *millimetres*, itself separated by a teak backing of 16 *centimetres* from the armor plates, which have a thickness of 10 *centimetres* at the water-line, and at the top. The defensive armor thus consists of a double thickness of wood of 28 *centimetres*, and a triple thickness of iron at the waterline of 131 *centimetres*, including the skin of the ship. This system of protection was tried at Vincennes in 1857, and was then considered to be the best. Its solidity : the only thing against it is the cost, the *Couronne* having cost from 20 to 30 per cent. more than the *Gloire*.

The *Solferino* and *Magenta* are also built on iron lines. They have wooden hulls, plated, like the *Gloire*, with armor varying from 4 to 44 inches in thickness. Their length, 80 feet; breadth, 58 feet 6 inches; draught, 26 feet 3 inches; power, nominal. Their armament consists of 52 rifle breech-loading guns, 30 pounders, breech-loaders (corresponding to the Armstrong 100-pounder), furnished with 300 rounds each. Though styled frigates they are really two-deckers, carrying their principal guns on the lower deck. Their canopy, besides two chase guns on the upper deck. The upper tier of guns, behind sides being available in a sea which might prevent the use of the lower tier. They are also capable of playing a plunging fire. These ships are armored at the water-line and over the lower deck to the quarter-deck, but beyond this only their guns are protected, and both are pierced for nine guns on the lower and upper tier there are parts not more protected than the rest of the ships, and which are exposed to the incendiary projectiles of an enemy. They differ from the *Gloire*, in the form of the stern, which projects under water from the line of the keel, and in the form of the bow. It is made of steel, weighs 12,000 kilogrammes, and projects about six *metres* (nearly 20 feet) in the form of a hollow cone, with no large plate at the end, but a series of small ones, which fit the bows. No part of this spur-like prow is less than 12 inches thick. The object of this is, when attempting to run down an adversary, would play the part of the projectile weighing 7,000 tons, and so great is her speed that few vessels could withstand the shock. The chief drawback against effect of the prow is that in tacking at a low rate of speed it sensibly impedes the evolution.

The squadron left Brest during on the 27th of September on a search of the equinoctial gales. On the 30th, a hard northwest wind blowing, they sighted the Isbart lights, and accommodating stood away past the Scilly Isles, and, leaving their course so as to meet the full force of the gale, they were out of sight of land from the 2d to the 5th of Oct., so as to enter Brest on the 3d and repair any losses caused by the storm. The trial was all that could be wished. An Atlantic gale of unusual violence and long duration ensued. After the most minute examination the hulls of all the iron ships were found to have suffered no straining whatever, while the *Solferino* was driven above in, and was obliged to go into port to refit. The *Solferino* was found to be the most unseaworthy of the fleet, and was obliged to run into Brest to repair the damage which her screw had received. The iron-clads thus stood the test in the weather line, and the trial was successful.

Other important results were obtained. The objection made to iron-clad ships, that they do not keep the guns as high from the water as do wood ships, is shown to be unfounded, the heights being for

WOODEN SHIPS.		IRON-CLADS.	
Napoleon	7 metres 50 cent.	Normandie	7 metres 82 cents.
Tourville	7 " 50 "	Invincible	7 " 82 "
		Couronne	7 " 82 "
		Solferino	7 " 82 "
		Magenta	7 " 82 "

The guns were fired nearly every day, and in states of the sea when fighting would have been all but impossible. With the exception of the *Solferino* and iron-clads, the testimony shows that they have a movement more easy than wood ships, and that, when rolling, they roll over moderately. The trial has demonstrated that the stiffest ship is not that which rolls the least, but that which rolls with a full and quickest and heaviest. A ship may be considered as a pendulum which, according as it is weighted, has a constant number of oscillations given to it, so that the force and rapidity of the waves has no influence upon the number but only upon the extent (amplitude) of the rolling. The question is reduced to the size of the ship and the position of the general centre of gravity of the ship, hull and cargo included. Experiments following in the report of the rolling of the squadron in a heavy sea, made after many observations under equal conditions, and indicating the maximum observed in each case:—

	INCLINATIONS.		
	Starboard.	Port.	Total.
Solferino	16·43	17·3	33·43
Magenta	18·42	17·93	36·09
Napoleon	18·43	19·13	37·13
Couronne	17·96	19·73	37·68
Tourville	18·43	19·57	38·07
Invincible	19·91	21·54	41·45
Normandie	20·93	22·96	43·89

As to the rapidity of the rolling, the *Solferino* rolled 31 per minute, the *Magenta* 10, the *Tolanaon* 15, and the other ships from 10 to 12 times.

The trial of the sea-going qualities of iron-clad ships it seems to be proved without doubt that it is a certain protection to the hull, and that the ship's stability is increased, they are improved and their power increased. In sailing, it has hitherto been considered that iron-clad ships would be unable to sail in a heavy sea without the screw was disabled, but to the astonishment of every one no one them sailing for days and nights together in squalls at the greatest ease, more slowly with the wind aft, but yet with certainty, all without the aid of their engines.

In the combat between the Arcres and the Cuincy Isles, in the midst of dangers, the Admiral ordered the ships to be sailed in two lines, at distances of from 600 to 800 *metres*, tacking night and day without any accident whatever. It was remarked that the *Tourville* repeatedly missed stays, when the iron-clads executed the manœuvre without any difficulty.

The rate of sailing was in favor of the *Napoleon* and the *Tourville*; but under steam the former was beaten by the *Magenta* and *Solferino*. In all the trials these two ships took the lead, whether with two, four, six, or eight boilers. Experience seems to show that the two-funnel arrangement, while giving great speed, are also the cheapest in practice, consuming less coal in proportion. The *Tourville*, of 650-horse power, and 4,650 displacement, was constantly compelled to have more boilers going than the other ships, and put into Lorient for coal on the return voyage, while the rest of the squadron had sufficient coal on board, with her eight boilers going, obtained a mean speed of 13·9 knots, consuming 138 tons of coal in twenty-four hours. At this rate she could steam for 1,200 miles, and a distance of 2,953 nautical miles. At a full head of steam she sustained for more than an hour a speed of fourteen knots, the engines giving fifty-seven revolutions of the screw per minute. As to steering, the *Gloire* has given the helm in the most satisfactory manner. The shortest radius of the 100-pounder, which was 360 *mètres*, made by the *Couronne*. The *Solferino* and *Magenta* described a shorter radius of 340 *mètres*, and it was surprising to see that these ships with the projecting spur did not differ much from the others.

M. Audenet seems to believe that the gun-firing the armament of the French iron-clads are superior to those of all other navies. He reports that little progress has been made for the last two years in the naval artillery. It is true that a course leading to practical results will be abandoned for experimental guns of a massive and weighty nature, but engineer would dream of making, unless as instruments of study, devoid of all practical value. He refers with pride to the 12-centimetre breech-loading 100-pounder, which have stood 20,000 rounds without accident, except one caused by ordinary carelessness, and another gun with which the iron-clad squadron fired 1,000 rounds in 1,000 hours, visibly at 1,600 *mètres*. Of English and American gunnery he speaks in a somewhat contemptuous tone; and in comparing the Monitors with the French iron-clads, he concludes that the former are not a model to be imitated.

THE UNITED STATES GOVERNMENT LABORATORY at Philadelphia, at which are manufactured all the compounded preparations used in the armies of the United States, is under the charge of Dr. J. R. Coxe, and U. S. A. The work conducted gives employment to about 225 hands, male and female. The drugs are purchased in a crude state, and undergo specimen by chemical analysis. The chemical and manufacturing apparatus, stills, &c., are all of the first order of excellence and completeness. So great are the resources of the laboratory that the glass stoppers of the bottles are ground upon the premises, and the bandages for wounded men are also established upon a plan first provided for the purpose. The cellar is devoted to the storage and bottling of wines and liquors for medicinal purposes. Whisky is received in barrels, and not in glass carboys. Now but the best are procured. The last purchase of whisky was selected from twenty-four samples, of which the rest were rejected. The first floor contains the analytical laboratory, the mill-rooms, and the packing-room. A long one-story building, in the rear, contains the stills for the distillation of tinctures and extracts. Of these the production is enormous. The record door is a vast pill manufactory, where huge masses of compounds are made into globules by the delicate manipulation of soldiers' wives, and children. Plasters are also made here by the thousand, and about ten thousand bandages are rolled daily. The gutting of glass stoppers for bottles is here also performed. Nothing is wasted by leakage or evaporation, and corks are selected in favor of ground glass. The third floor is the filling department, where all the fluid medicines and powders are bottled. The former conveys them to the packing-room below. Each bottle is packed in a separate paper box, surrounded by saw-dust. A fire-proof building in the yard, is appropriated to the distillation of ether and chloroform. Another long one-story building, in five apartments, is devoted to the examination of articles liable to heat. Every where else throughout the establishment the most

A MIMIC BATTLE IN PASTRY.—Robert May, a gentleman who was brought up in his youth to the study of the culinary education at the Court of France, in his "Accomplished Cook," published in 1654, gives a curious account of a mimic battle at Paris, in the year of Christ 1645. After giving directions for "a preparation in paste of an artificial fort, with assailants and defendants," he proceeds thus:—"Make, with guns, and a train of gunpowder to communicate with them, he says, a paste stag is to be made, and placed on the fort next to the enemy, to be shot at, and surrounded with flags, &c.; his body is to be filled with claret wine, and a broad arrow stuck in it; and on each side of the stag two pies are to be placed, filled with carefully-dried live frogs, and the other with live birds; the whole to be garnished round with egg shells deprived of their yolk, and filled with rose-water. The trains are to be let of, and the ship and castle are similarly to fire at each other in mimic battle; but the stag is not to be ordered before the arrow of the ladies may pluck the arrow out of the stag, and then will the claret wine follow as blood running out of a wound: Sir Dare, with his sword, is to shrink at the pastel. But the ladies take the egg shells full of sweet water, and throw them at each other. All danger being accomplished; by the time you may suppose they will desire to see what is in the pies; when, lifting first the lid off one pie, out flie some frogs: which makes the ladies to skip and shriek: next after, the other pie; whence come out the birds, who, by a natural instinct flying at the light, will put out the candles; and thus, when they have done their mischief, namely, the one above, the other beneath, will cause much delight and pleasure to the whole company!' At last the trumpets and fifes, and the whole assembly sing in; the music sounds; and every one, with much delight and content, rehearses his actions in the former passages."

A SPECIAL order from Major-General Butler, dated Jan. 24th, 1864, says: "Mrs. Jeanie Graves, of Norfolk, having a husband in the rebel States, and having taken the oath of allegiance on the 2d, as she says, to save her property, and she having left her property and gone to meet him in the South still, and that she hopes they will be successful, is "to be sent through the lines and landed at City Point, so that she may be where her hopes and sympathies are."

* The reader will bear in mind that the French *mètre* is 39 inches and a-little; the centimetre is of course the tenth of a *mètre*; the millimetre is the tenth of a *mètre*.

NAVY YARDS.

BROOKLYN NAVY YARD.

The tug-boat *Narcissus* sailed from the Yard Feb. 2, for New Orleans: the *Neptune* sailed the same day to join the West India Squadron, under command of Acting Rear-Admiral James S. Lardner. The side-wheel steamer *Conestoga* sailed Feb. 3, to join the Mosquito Fleet, under Admiral Farragut. The *Sonoma* will be sailed Feb. 6. The *Sonoma*, which sank in the stream opposite the Yard, has been raised. The *Courier* has left for Boston. The *Admiral*, Acting Volunteer Lieutenant W. B. Ennis, late of the *Monticello*, commanding, was announced to leave on Thursday last, with the mails, supplies and passengers for the East and West Gulf Squadrons, but owing to some shifts in her water tanks she was detained, and it is not known when she will sail. The *Admiral* is a new steamer recently purchased by the Navy Department and converted into a supply steamer to take the place of the *Circassian*, who is now out of commission, and undergoing repairs at Boston. The *Admiral* is a screw steamer of about 1,000 tons burthen, 36 feet beam, and 12 feet depth of hold. Her model is exceedingly fine and she will be a fine sea boat. She is fitted up with berths for the Dahlgren Iron Works, and are comfortable and quite powerful. Her internal fittings and accommodations are equal to our first-class passenger steamers, and officers who will from time to time take passage in her for their respective stations will find her most comfortable. She probably will prefer to some vessels now engaged in similar service. On deck she has houses which contain large and airy staterooms for the accommodation of the officers of the vessel, while the lower ones are intended for invalid passengers. The accommodations below decks, in the ward-room and steerage, are first-class, and every modern improvement and comfort can be found there.

The U. S. supply steamer *Union*, Acting Volunteer Lieutenant Edward Conway commanding, arrived at the Navy Yard from the West Gulf Squadron. She reports on Jan. 31, while off Charleston, heard heavy firing. Weather very foggy. Feb. 2, off Cape Henry, passed United States ship *Iroquois*, bound South. She has one hundred and fifty refugees and a number of deserters from Bragg's army. On Jan. 24 the *Union* cut out and captured the rebel steamer *Magdalena*, off the lighthouse at Mobile, bailer bound for Nassau. The steamer *Manhattan*, from Baltimore, put into Tampa Bay, Jan. 28, in good order. The *Union* brought North the bodies of Commander Newman, U. S. N.; Lieutenant Colonel Cunningham, United U.S.N.; Acting Master Folger, U.S.N., and Captain's Clerk T. Talley, U.S.N. She has also the following passengers:—Acting Master Gerald Simpson, Acting Master's Mate Wm. Hall, Assistant Surgeon J. Stevens, Acting First Assistant Engineer Perry Sleen, Acting Ensign Geo. Dunne, one hundred and fifty discharged seamen and a number of invalids.

The *Galatea* is waiting for a crew, when she will sail for the West Gulf Blockading Squadron has on board the mails for the Navy Department to proceed to Charleston, and her commander, Acting Volunteer Lieutenant W. Flye, has been instructed to report to Admiral Dahlgren for further orders. Acting Volunteer Lieutenant Chas. H. E. Caldwell, goes into commission next Monday. The plating of the iron-clad *Monadnock* (the only one of the Navy Yard vessels unfinished) is going forward rapidly. The new double iron-clad battery *Onondaga*, which arrived at the Yard Jan. 20, to be docked, was examined Jan. 29 to ascertain the amount of damage caused by the accident. She is to go out on a trial trip soon, and will then make her trial trip. The most striking peculiarity of the *Onondaga* is her armor, which, unlike that of every other iron-clad vessel, consists of a combination of wood, cotton and sheet armor of iron, four and a half inches thick—equal to the entire protection of the sides of the *Passaic* class. Outside the wood is a light covering of iron, for the purpose of preventing the timber from falling out when it is perforated by projectiles.

Acting Assistant Paymaster Meade has been detached from the *North Carolina* and ordered to the receiving ship *Vermont*. Master H. Parker, U. S. Marine Corps, has been detached from the *Vanderbilt*, and ordered to the Marine Barracks at this Yard.

A marine general court-martial convened at the Brooklyn Marine Barracks, Jan. 22, for the trial of Captain John G. Grayson, U.S. Marines. The following are the members:—Major John G. Reynolds, President; Major Jacob Zeilin, Major Isaac T. Doughty, Major Samuel S. Nicholson, Captain A. N. Brevoort, Captain James H. Jones, Captain Lloyd J. Beall.

The U. S. steam-transport *Fronteless*, from Port Royal, arrived at New York with dates to Jan. 27, on Jan. 31. The U. S. transport *Atlantic*, Captain Victor Eldridge, arrived at New York Feb. 2. She made the trip from Port Royal in 55 hours and 30 minutes.

BOSTON NAVY YARD.

A detachment of nearly three hundred rebel prisoners recently arrived at this Yard from the West, and were placed on board the U.S. Receiving Ship *Ohio* to undergo the preliminary preparations for entering the service of the United States. The men generally are well pleased with their new quarters, and appear grateful enough at the prospect of warm clothing and an abundance of regular fare. They were landed at their late destination in boats which were cast recklessly into the stream, and after being treated to a generous bath, they were supplied with the blue uniforms of the Union Army. The average non-citizen of the party is Irish, Germans, Irish and Germans predominating, and they are chiefly from Tennessee, Virginia, Georgia and Alabama.

The screw steamer *Sacramento*, Lieut. Commander Percy Walker, which has been lying at the Yard for some time past, went to sea on the 30. Her complement is 190 men, 30 marines, and 26 officers. The lead-and *Canonicus*, is now on a blockading station off Charleston, and returned in a few hours. She made about eight miles an hour. Commodore Wm. D. Porter of the Naval Ordnance Bureau, visited the Yard on the same day, and was received with the customary salute of thirteen guns.

WASHINGTON NAVY YARD.

On Monday, the prize schooners *Matthew Vassar* and *Wm. Rowe* were towed around to Philadelphia by the *Key Philip*. The repairs on the *Rebecca Simms* have been completed, and she is now shipping her crew preparatory to going into active service. A number of steamers have been transferred to her from this Yard. The gunboat *Commodore Read* left for the Potomac flotilla on Wednesday. The gunboats *Tuscar* and *Resolute* arrived on Thursday from the Potomac flotilla for coal, and left again for their station on Friday.

On Saturday, twenty-five landsmen and fifty first-class boys were transmitted from the New York Navy Yard to the Potomac flotilla. The gunboat *Mount Washington*, of the Potomac flotilla, arrived on Monday for coal, and left again on Tuesday.

The new gunboat *Wateree*, Commander F. E. Murray, arrived at the Yard on Monday, from Chester, to receive her outfit. The *Wateree* is an iron vessel of 974 tons, and carries fourteen guns. She is evidently intended for ocean service. Her officers and crew, all told, number 110 men.

The *Wateree* is the only vessel of her class afloat, and was built at Chester, Pa., by Reanie & Archbold. On her trip from Chester to Washington she made thirteen knots an hour. Her officers claim that she can make fifteen knots an hour. She is furnished with twenty-inch engines of the Winans pattern.

It appears from the log-book of the *Eutaw*, that in her trip down the river, last Saturday, she averaged about fourteen and a half knots, a circumstance which is highly creditable to her engine developed between hundred horse power. She is commanded by Commander H. C. Blake, and was to leave on Thursday to join the blockading fleet off Wilmington, N. C.

ARMY GAZETTE.

THE DEPARTMENT OF MISSOURI.

ORDER OF MAJOR-GENERAL SCHOFIELD.

HEADQUARTERS DEPARTMENT OF MISSOURI, ST. LOUIS, MO., January 30, 1864.

General Orders No. 12.

In compliance with orders from the War Department, I hereby relinquish the command of the Department of the Missouri to Major-General W. S. Rosecrans, U. S. Vols. In doing so, I desire to express my thanks for the support I have met with, and the ready obedience my orders, and also to the loyal citizens within the limits of the Department, who have so generally responded to the calls for troops to the measures instituted for their protection and the peace of the community. In relinquishing the command, I feel sure that the honor of having as a successor the General whose brilliant deeds in command of the Army of the Cumberland have won for him the confidence

J. M. SCHOFIELD, Major-General.

ORDER OF MAJOR-GENERAL ROSECRANS.

HEADQUARTERS DEPARTMENT OF MISSOURI, ST. LOUIS, MO., January 30, 1864.

General Orders No. 18.

I. The following extract from General Orders No. 21, War Department, relative to the organization of the Staff of Generals Officers, is announced:—

By direction of the President of the United States, Major-General W. S. Rosecrans, United States Volunteers, is appointed to the command of the Department of Missouri.

II. In compliance with the above order, I assume command of the Department.

III. The officers of the Department Staff, except General Schofield's personal staff, will report to Brig.-Gen. A. A. G. Wm. A. Hall for instructions as heretofore until further orders.

IV. The general rules and regulations now in force will continue to govern until altered or revoked.

By order of Major-General W. S. Rosecrans.

Brig.-Gen. A. A. G. Wm. A. Hall, A. D. C.; Captain D. Drouillard, Aide-de-Camp; Captain Wm. Rosecrans, A. D. C., are announced as Aides to the General commanding.

VI. In relieving Major-General Schofield, in assuming the responsibilities connected with this command, relinquished high prospects of military command in the field, I am sustained by the hope that in thus opening campaign of the Army of the Cumberland, I tender to that gallant army the best reinforcement in which I have drawn the official business and archives of this Department, and my best wishes as well as hopes, for the success of that army, can be only equal to that success which its solid merits, good sense and honest devotion to the cause of the country deserve.

VII. While commander here I sincerely trust I shall receive the warm, firm and united support of the loyal men and women of the States of the Department, without regard to politics, creed or party, in my endeavors to maintain the Union cause in its purity, honor and prosperity throughout its limits. The past should be remembered only for the lessons it teaches, and the energies of the present directed to the problem of securing our future, based, firmly on the grandeur of our position, and the strength, prosperity and progress of every universal freedom, secured by just laws.

W. S. ROSECRANS, Major-General Commanding.

TO SOLDIERS AND POSTMASTERS.

As set to and the law prescribing the articles to be admitted too

POST OFFICE DEPARTMENT, Jan. 25, 1864.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That articles of clothing, being manufactured of wool, cotton, or linen, and contained in a package not exceeding four pounds in weight, addressed to any non-commissioned officer or private serving in the armies of the United States, may be forwarded by mail to any part of the United States at the rate of eight cents, to be in all cases prepaid, for every such package, and shall be subject to such regulations as the Postmaster-General may prescribe.

Approved, January 23, 1864.

POST OFFICE DEPARTMENT, Jan. 25, 1864.

The foregoing law is published for the information of the public, and especially for the guidance of postmasters, who are hereby charged to be so full and plain that no one can mistake its meaning. Postmasters will, however, bear in mind that packages addressed to soldiers or sent in the mails—*right cannot be four ounces*—must be manufactured from cotton, wool, or linen, or some combination of them, in weight, and must be addressed to a non-commissioned officer or private serving in the armies of the United States. Packages sent in violation of this law will be charged with letter rates, viz.: three cents for every half ounce or fraction thereof.

M. BLAIR, Postmaster-General.

DISMISSALS.

During the week ending Saturday, January 30, 1864.

Major R. W. Caldwell, 1st Regt. Heavy Artillery, to date January 25, 1864, with loss of all pay and allowances, for fraudulent conduct in procuring his appointment by false representations to Governors, and then making out his accounts and presenting the same for payment.

Captain George A. Armstrong, 7th Michigan Cavalry, to date January 25, 1864, for absence without leave.

Captain Thomas Hall, 1st Regt. Heavy Artillery, to date January 30, 1864, with loss of all pay and allowances, for fraudulent conduct in procuring his appointment by false representations to Governors, and then making out his accounts and presenting the same for payment.

First Lieutenant John Van Stan, Michigan Provost Guard, to date January 27, 1864, for habitual drunkenness, for habitual drunkenness.

First Lieutenant J. A. Greeley, 17th Massachusetts Volunteers, to date January 4, 1864, for absence without leave.

First Lieutenant John F. Trumbull, 7th Connecticut Volunteers, to date January 29, 1864, for habitual drunkenness.

First Lieutenant George Fletcher, 4th Missouri Cavalry, to date January 27, 1864, for habitual drunkenness.

Second Lieutenant Wm. Hall, 1st Regt. 2d Massachusetts Heavy Artillery, to date January 29, 1864, with loss of all pay and allowances, for drunkenness, conduct unbecoming an officer and disobedience of orders.

Second Lieutenant Wm. Hall, 1st Regt. 2d Massachusetts Heavy Artillery, to date January 29, 1864, with loss of all pay and allowances, for drunkenness, conduct unbecoming an officer and disobedience of orders, and for habitually frequenting a farm-house and robbing the corporation.

The following officers, to date January 4, 1864, for the causes mentioned, having been published officially and failed to appear before the Commission:

Absence without leave, as officially reported on the rolls of the regiments, and otherwise.

Surgeon J. R. Lozi, 146th New York Volunteers.
Captain W. A. Conti, 8th Pennsylvania Cavalry.
Captain W. W. Mayne, 4th New Hampshire Volunteers.
Lieutenant Surgeon E. W. Bonda, 1st New York Volunteers.
First Lieutenant W. R. Jones, 16th Pennsylvania Cavalry.
First Lieutenant J. E. Cox, 1st Michigan Sharpshooters.
First Lieutenant W. W. Gibson, 10th Pennsylvania Volunteers.

Absence without proper Authority.

First Lieutenant William B. Johnson, 6th New York Volunteers.
First Lieutenant Edward C. Kilgore, 16th Illinois Volunteers.

Absence without proper Authority.

Second Lieutenant John W. Kelkord, 4th Maryland Volunteers.
Second Lieutenant Wm. Hall, 2d Massachusetts Heavy Artillery.

DISMISSALS REVOKED.

The orders of dismissal in the following cases have been revoked:—Captain W. G. Goff, Assistant Quartermaster of Volunteers, to date January 30, 1864. He will report to Brig.-Gen. Ingalls, and be discharged by resignation, as of the date of the order of dismissal.

NOTICE TO DELINQUENTS.

The following named officers are reported at the headquarters of the Army for the offences hereinafter specified, and having failed to appear before the Commission appointed for their trial by the order issued from the War Department, dated 19th days from February 1, 1864, they will be dismissed the Military Service, in accordance with the following, of which Brigadier-General Ricketts, United States Volunteers, is President, and a sufficient number of officers to constitute the detail have been ordered:

Disobedience of orders, failing to rejoin his regiment, as ordered September 7, 1863, from Camp Parole, Annapolis, Md.

Lieutenant J. J. J. Kleutsel, 45th New York Volunteers.

Fraudulent enrolment in voluntary certain recruits for 3d Rhode Island Cavalry.

Major George B. Davis, 2d Rhode Island Cavalry.
First Lieutenant Benjamin Wilcox, 2d Massachusetts Heavy Artillery.

Violation of General Orders No. 48, of 1863, from War Department, in taking up as the muster rolls of the regiment the name of an enlisted man as a commissioned officer, when said enlisted man had never been mustered into service as a commissioned officer.

Colonel Henry L. Potter, 21st New York Volunteers.
Major Edward M. Nolan, Co. A, 21st New York Volunteers.

Absence without leave, as officially reported on the rolls of the regiments, and otherwise.

First Lieutenant P. F. Wylie, 10th Pennsylvania Volunteers.
First Lieutenant W. E. Foster, 1st Regiment United States Colored Troops.
Second Lieutenant A. E. Sayiers, 1st Regiment Kansas Colored Volunteers.
Second Lieutenant Ezekiel A. Johnson, 1st Regiment Kansas Colored Volunteers.
Major Thomas E. Patterson, 1st New York Volunteers.
Major James B. Marsh, 44th Ohio Volunteers.
First Lieutenant Wm. Nolan, 1st Regt. Michigan Volunteers.
Second Lieutenant Almon Bradford, 64th Ohio Volunteers.
Captain Hugh Ewing, 30th Indiana Volunteers.
Captain D. C. Holdridge, 22d Wisconsin Volunteers.
Captain Wm. Hamilton, 30th Indiana Volunteers.
Captain Benjamin Warren, 5th Massachusetts Volunteers.
Captain W. H. Brown, 59th Illinois Volunteers.
Lieutenant H. J. Webber, 59th Indiana Volunteers.
Lieutenant E. L. Bowen, 59th Indiana Volunteers.
Adjutant G. R. Davis, 39th Massachusetts Volunteers.
Captain T. H. Hedrick, 15th Iowa Volunteers.
Captain T. H. Hedrick, 15th Iowa Volunteers.
Captain Wm. Hamilton, 30th Indiana Volunteers.
Lieutenant S. C. Colins, 21d Indiana Volunteers.
Lieutenant R. Dye, 44th Ohio Volunteers.
Lieutenant E. F. Hill, 1st Illinois Artillery.
Lieutenant J. H. Wilson, 44th Ohio Volunteers.
Captain F. Lenzie, 10th Illinois Volunteers.
Captain J. F. Kelly, 1st Illinois Cavalry.

SENTENCES OF COURTS-MARTIAL.

Medical Cadet Joseph Welch, charged with conduct to the prejudice of good order and military discipline, in having left the hospital tent provided to procure soldier's discharges, to be dishonorably dismissed the service.

Andrew Lapoint, alias Isadore Lapoint, charged with being a spy, to be hung. Lieutenant Colonel Wm. Hoffman, Commissary-General, ordered the case for the action of the President.

First Lieutenant Eugene Underhill, 1st New York Veteran Vols., to be cashiered, for threatening to shoot a citizen and breach of arrest.

Second Lieutenant Wm. A. Wilkins, 1st U. S. Vols., 1st New York Vols., to be cashiered for drunkenness, conduct unbecoming an officer and gentleman, and neglect of duty. The proceedings and findings approved and confirmed by Major-General Augur.

First Lieutenant Joseph Schaub, 1st U. S. Mill Infantry Vols., has been acquitted upon the charge of shooting at with attempt to kill Lieutenant Joseph Arbeit, of the same regiment.

Corporal F. W. Lauderwick, Co. D, 106th Ohio Vols., to be shot to death with musketry, on Friday, February 5, between the hours and confirmed by Major-General Thomas.

Second Lieutenant Frederick Smith, 1st Veteran Vols., to be dismissed the service for neglect of duty to the prejudice of good order and military discipline, drunkenness, lewd and lascivious conduct of a superior officer and conduct to the prejudice of good order and military discipline.

Second Lieutenant John Dreutzer, 1st regiment Missouri State Militia Cavalry, to be dismissed the service for neglect of duty and drunkenness. Sentences in both cases approved and confirmed by Major-General Augur.

Captain George L. Turner, Co. E, 192th New York Vols., to be dismissed the service for conduct unbecoming an officer and a gentleman. General Augur has confirmed the proceedings and findings in this case, but under the circumstances developed by the record he deems it best not to enforce the sentence, and has ordered Captain Turner to duty.

First Lieutenant Thomas Dunbar, Co. B, 185th New York Vols., to be dismissed the service for neglect of duty to the prejudice of good order and military discipline, disobedience of orders and conduct unbecoming an officer and a gentleman.

Second Lieutenant Baldwin, Co. E, unassigned Penn. Vols., to be dismissed the service with loss of all pay and allowances now due or to become due, for absence without leave, conduct unbecoming an officer and a gentleman, and disobedience of orders. Sentences in both cases approved and confirmed by Major-General Augur.

MEDICAL DEPARTMENT.

ORDERED.

Surgeon A. E. Smith, U. S. A., has been ordered to return to Philadelphia and resume his duties there while not actually engaged as witness before the Richmond Court-Martial now in session at Washington. Acting Volunteer Lieutenant H. A. Glassford, commanding the *Rodolph*.
Acting Ensign Joseph H. Jackson, commanding the *Primrose*, ten days.

CONGRESS.

SENATE.

FRIDAY and Saturday, the 29th and 30th ult., the Senate was not in session. Monday, the 1st inst., Mr. WILSON (Mass.) introduced a bill to provide for the examination of quartermasters and their assistants, commissaries and their assistants, and paymasters and their assistants. Referred to the Committee on Military Affairs. On Thursday, the 2d, Mr. WILSON offered a resolution, which was agreed to, instructing the Committee on the subject of the war to inquire into the military administration of affairs in Arkansas. The joint resolutions complimentary to Commodore Rowan, Rodgers and others, and the officers and men of his command, and also the joint resolution of thanks to General Grosvenor and Thomas and the officers and men of his command, were taken up and passed. Mr. HARLAN (Iowa) introduced a bill providing for the mustering of the Sioux Indian soldiers into the service. On the 3d, Mr. POMEROY (Kansas) presented memorials from the military storekeepers asking Congress to pass a bill defining their rank. Referred to the Committee on Military Affairs. Mr. WILSON (Mass.) reported back a bill providing for the examination of certain officers in the army. On motion of the same, the bill to establish a uniform system of ambulance was taken and passed, with an additional section providing for horse and mule litters. Mr. WILSON (Mass.) introduced a resolution directing the Senate to consider a joint resolution equalizing the pay of soldiers in the United States service. An objection was made, and the resolution was laid over.

On Monday, the 4th, the joint resolution equalizing the pay of soldiers in the United States Army was taken up and debated, Messrs. HARRIS and CLARK opposing, and the retrospective legislation in behalf of the colored troops. Mr. COWAN introduced an amendment placing the colored troops on a similar footing with the white troops after the passage of this act.

HOUSE.

On Friday, Jan. 29th, Mr. FARNSWORTH (Ill.) offered a resolution which was adopted, requesting the PRESIDENT, if not incompatible with the public interest, to inform the House whether provet rank has been conferred in the volunteer forces, in pursuance of the provisions of the Act of March, 1863, and if so, when and to what officers, and why it has not been done. On Saturday, the 30th, the House was not in session. On Monday, the 1st, Mr. ARNOLD (N. H.) offered a joint resolution, which was referred, providing that when soldiers are placed on short rations there shall be given to them by the Government a commutation therefor. On motion of Mr. ROSS (Ill.) it was resolved that the Committee on invalid pensions inquire into the expediency of increasing the pensions granted so that, owing to the increased expense of living. The Committee on Military Affairs was instructed to inquire what legislation is required to enable enrolment to be made under the direction of Governors of States, and report by bill or otherwise. The same Committee was also instructed to inquire into the expediency of giving the same pay and allowances to those who have rendered military service, but who were not regularly mustered into the Army. A short Committee was ordered, on motion of Mr. KELLOGG (Mich.) on the subject of a national armory west of the Alleghany mountains. A resolution offered by Mr. ARNOLD (R. I.) declaring a suspension of the draft, as a measure opposed to the principle of self-government, was laid on the table by a decisive vote.

The House resumed the consideration of the bill reviving the grade of lieutenant-general. Mr. GARFIELD (Ohio) opposed the bill on the ground that there would be ground that there was nothing for a lieutenant-general to do which would not be performed by the general-in-chief, and that the bill would be void until the war was over and then so what general towers above the rest. Mr. FARNSWORTH (Ill.) would vote for the bill because the general for whom the bill was framed had displayed great and valuable skill at the other generals in the Army. He supposed that General GRANT would still command the Army in person, and would hasten to position where his presence was required. Mr. STARLING (Ohio) said Mr. BOYD (Mo.) would vote for the bill because the passage of the measure would probably actually take command and replace the general-in-chief.

Mr. SCHENCK (Ohio) favored the passage of the bill, chiefly on the ground that it was considered necessary for the organization of the army that the grade of lieutenant-general should exist. Mr. WASHBURNE (Ill.) professed himself unable to see the necessity for the proposed law, but warmly eulogized the distinguished general to whom the bill distinctly referred. In reply to Mr. WASHBURNE, Mr. HUBBARD (Conn.) that the war was not yet ended, he said that it never would be brought to a close until we had a fighting general-in-chief, and he would vote for the passage of the bill was opposed by Mr. STEVENS (Penn.) on the ground that it was unnecessary; and by Mr. BOTWELL (Mass.) because he thought it would tend to create unnecessary divisions in the Army. A resolution to lay the bill on the table was lost. An amendment, proposed by Major-General BANKS, in the position of lieutenant-general, was then adopted, and the bill was passed.

On Tuesday, the 2d, a bill was adopted, calling upon the Secretary of the Navy for information in regard to the purchase of supplies. A bill was reported making appropriations for the support of the Army for the year ending June, 1865. It was made the special order for Tuesday next. The enrollment bill was then debated, until the House adjourned.

On Wednesday, the 3d, the amendment repealing so much of the old enrollment act as authorizes the payment of commutation military service on payment of $300, was rejected, and an amendment was adopted striking out the $400 clause, thus leaving the commutation at $300, as before. The House also struck out the amendment providing that the payment of the commutation fee shall only operate to relieve a drafted person from liability during the period for which he was drawn, and that his name shall be retained on the roll for future calls.

On Thursday, the 4th, Mr. STEVENS reported a bill making appropriations for the construction, preservation and repair of fortifications and defences for the year ending June, 1865.

THE marvellous rapidity of the growth of the science of photography, and the great service it has done in familiarizing the people with the finest works of art, are strikingly manifested in the bulky catalogue of photographic and stereographic pictures issued by Messrs. E. & H. T. ANTHONY & Co., of this city. We have in these series of pictures of celebrated authors, actors, soldiers, sailors, divines; with instantaneous views of battle-fields, city and country scenery, and copies of the finest works of ancient and modern art; pleasant interiors; and domestic groups; with comic and tragic and dramatic scenes in miniature. The stereoscopic and magic views would enable those who can only indulge in "fireside travels" to become acquainted with the scenery of every country in either hemisphere, with the appearance of its cities and the character and occupations of their inhabitants. The books of views are also of great value, carefully and eloquently as these pictures, in which, as by enchantment, scenes and occurrences have been caught and fixed forever. Those of the latter class record the history of the war, and the battered walls of Pulaski and Sumter disclose the progress which has been made towards bringing siege-artillery to its present state of efficiency.

So much of General Orders, No. 163, of 1863, and of all subsequent orders, as authorizes the payment of a premium of $2 to or for accepted recruits for volunteer organizations, or of $2 to or for general orders from the War Department, dated Jan. 11, 1864; and no payments of this premium to Veteran Volunteers or to recruits for volunteer organizations will in future be made.

[ADVERTISEMENT.]

We call attention to the advertisement of Mr. JAMES BERRY, in another column, and commend him to those who desire the services of a reliable and efficient Photographic Operator.

THE SAFE DEPOSIT COMPANY
OF
NEW YORK.
UNDER SPECIAL CHARTER FROM THE STATE OF NEW YORK.

At a meeting of Gentlemen for the establishment of "THE SAFE DEPOSIT COMPANY OF NEW YORK," David Ogden having been called to the chair, and Francis H. Jenks appointed Secretary, the following resolutions were unanimously adopted:

Resolved, That the purpose of "The Safe Deposit Company of New York," the sole keeping of valuables, for which a special charter has been obtained by the State, and which will be supervised by a board of public want, and that, in the opinion of this meeting, the Company, well managed, will pay a remunerative dividend upon a capital amply sufficient to command the confidence of the community.

DAVID OGDEN, Chairman.
FRANCIS H. JENKS, Secretary.

The undersigned, being present at the meeting for the establishment of "the Safe Deposit Company of New York," cordially approve the above resolutions passed thereat.

JOHN CRYDER,	GEO. D. LYMAN,
C. BARSTOW,	DANIEL BURTNETT,
WM. HURRY,	JOSEPH BUTTELL,
COURTLANDT PALMER.	

The undersigned cordially add their names to the above approval:

ALEX. BELMONT & CO.,	JNO. J. CISCO,
SHEPHERD KNAPP,	T. TILESTON,
WM. WOOD,	R. WITHERS,
JOSEPH WALKER,	WILSON & HUNT,
W. A. BOOTH,	E. D. MORGAN & CO.,
DAVID HADLEY,	THOS. JERREMAH,
JAS. P. DE PEYSTER,	J. J. CRANE,
F. J. HAVEMEYER,	BENJ. H. FIELD,
W. H. HACKETT,	A. M. FREEMAN,
P. S. WINSTON,	JNO. ELLIOTT.

THE BOOKS FOR SUBSCRIPTION TO THE CAPITAL STOCK of the above company, under special charter from the State of New York, will be opened at the BANK OF AMERICA, on Monday, the first day of February next.

The purpose is to receive for safe keeping, in Burglar-proof Safes, than absolutely Fire-proof Building, valuables of every saleable description.

All deposits of Cash Boxes or Trunks, contents unknown to the Company, will be received under Depositor's "Guarded Section" by Deposit, and evaluation; the risk of the Company confined to the return of the package, seal unbroken.

When desired by Depositor, the company will schedule the contents, and assume the risk of each package at a separate valuation, charging a percentage compensation.

The company will also rent to others small Burglar-proof Safes, for the deposit of Bonds, Specie, or Cash Box, or of any size desired; the Safe to be locked by the Renter, the "Combination" being then known only to himself, the Company having the Safe in their Building, and for their safety the Company will be responsible.

Among the DEPOSITORS OF BONDS are the "Cash-Boxes" or Trunks of Retired Capitalists, Merchants' Cashiers, Bankers, Merchants, and other business and professional men, as well as of families, widow's, and single women, and of a large class of thrifty mechanics and laborers, whose surroundings invite attention to the safe keeping of valuables. A place for reference to the collectors of trunks will be provided. Family Plate will also be received for safe keeping during the absence of the owner from the city in summer, or while abroad.

The Company offers a place of absolute security for the deposit of Valuable Papers, all evidences of Indebtedness, Deeds, Mortgages, Lawyers and their clients, Officers of the Army and Navy, Bondsmen and others much from home; Holders of Government Securities, or other evidences of Indebtedness, Executors, both in the city and throughout the country, especially holders of the Coupon Bonds, and Interest bearing Certificates of Indebtedness, and of Railroad Stock; Border State Bankers during the war; Residents of this city or other places going abroad; or to California, or temporarily from home; Investors in shares transiently in the city; Trustees of Deceased, Guardians of Minors, Assignees of Insolvent or Absent Debtors, Powers of Attorney, Articles of Copartnership, Dissolution, or Assignments, Releases of Indebtedness, Deeds, Leases, Agreements of Sale, Policies of Life and other Insurance, or Evidences of Marriage, Birth or Death; Makers of Wills, during the life of the Testator; Private Business of Members of Firms, etc., etc.

Besides the simple business that will press at once upon the Company, it is believed the supply will create a new and continually increasing demand for such a security, as the public becomes educated to its appreciation.

For further particulars apply to or address

FRANCIS H. JENKS,
Room No. 32, Bonnewitz Building,
Corner Wall and William streets.

METROPOLITAN HOTEL,
(LATE BROWN'S),

PHILADELPHIA.

The best business man's house in the city, being in the immediate vicinity of the principal Banks, Banking Houses, Custom House, Post Office, and the Jobbing Business.

HENRY NEIL.

TAYLOR'S SALOON.

This elegant establishment, at the corner of Broadway and Fulton streets, is one of the outfeathers of New York, and visitors to the city, who have occasion to pass within its interior magnificence, and experience the exquisite flavor of its cuisine, will be surprised themselves of a rare treat. It has very appropriately been called the "Delmonico" of Brooklyn. If we presume, there is scarcely a delicacy that the market affords that the saloon is not to be found there, if it be possible to obtain it.

1864. FURLOUGHS. 1864.

Officers and soldiers, visiting the city on furlough, will find

SWORDS

and other MILITARY EQUIPMENTS are invited to the very extensive MANUFACTURING Establishment of

Class No. 4, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 5, white oak timber and plank; No. 11, white pine timber; No. 41, tie and iron.

Class No. 6, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 7, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 8, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 9, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 10, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 11, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 12, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 13, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 14, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 15, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 16, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 17, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 18, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 19, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 20, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 21, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 22, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 23, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 24, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 25, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 26, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 27, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 28, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 29, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 30, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 31, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 32, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 33, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 34, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 35, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 36, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 37, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 38, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 39, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 40, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 41, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 42, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 43, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 44, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 45, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 46, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 47, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 48, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 49, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 50, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 51, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 52, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 53, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 54, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 55, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 56, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 57, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 58, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 59, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 60, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 61, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 62, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 63, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 64, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 65, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 66, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 67, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 68, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 69, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 70, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 71, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 72, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 73, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 74, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 75, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 76, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 77, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 78, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 79, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 80, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 81, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 82, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 83, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 84, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 85, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 86, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 87, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 88, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

Class No. 89, white oak timber and plank; No. 5, white oak knees; No. 11, white pine; No. 41, tie and iron.

GOVERNMENT SALE BY AUCTION AT THE UNITED STATES NAVY YARD, KITTERY, MAINE, COMMENCING

WILL be Sold at Auction on the 9th of FEBRUARY, 1864, the property recovered from the steamer the vessels and small craft condemned, the old works of the sloops-of-war Germantown and Plymouth, two floating docks, and a small quantity of old, formerly used as a water-boat, with all the contents belonging to the same, now lying at the Navy Yard, for sale.

Also, the following lots of recovered property:—
4,184 pounds (more or less) Copper, (bolts).
4,264 pounds (more or less) Copper, (sheets).
A small quantity of Composition.
600 pounds of Lead.
226 sheets Boiler Iron, (various sizes) weighing about 5,647 pounds.
30 tons (more or less) old Wrought Iron, principally bolts.
3 tons (more or less) Iron Cuttings.
1 lot of Spikes, (various sizes, estimated at about 2 tons.
1 lot Boiler Iron Cuttings, weighing about 4 tons.
8 Water Tanks.
1 old Pinnace.
A lot of Round Shot and Conical Shells.

And other articles not enumerated will be collected ready for examination previous to the day of sale.

Each lot or small and lots of articles shown will be sold separately, and, where practicable, the metal will be ready to be packed.

Thirty days will be allowed the purchaser to remove the articles from the Navy Yard Wharf, and fifteen days for the removal of all other property purchased in the above sale.

The sum of 25 per cent of the amount of sale must be deposited with the Commandant of the Yard at the time of sale, as a guaranty that the articles will be promptly removed; and in default of such delivery, will be forfeited to the Government.

Payment for the above-mentioned funds before any article can be removed.

For further information or permission to examine the property, apply to the Commandant of the Navy Yard Navy Yard.

$2,000,000 LOAN OF THE COUNTY OF NEW YORK.
Subscriptions are hereby invited to a loan of Two Million Dollars, authorized by an ordinance of the Board of Supervisors, approved by the Mayor, October 21, 1863, entitled, "An Ordinance for the procure ment of bounties for the volunteer soldiers for the service of the Union, provided the same can be received and allowed on the quota of the original county of New York in any future draft."

The Bonds for which such subscriptions will be opened at the Comptroller's office, on and after Tuesday, the 17th day of November next, and will remain open until the whole are issued or taken.

The Bonds will be issued in coupons, payable with the Comptroller at the Broadway Office, within five years from the date thereof, with interest at seven per centum, payable semi-annually, and no premium on the receipts for the same. The Bonds will be issued in sums of not less than $100 each, and will be payable, for equal amounts, redeemable on or before June 1, 1864, with interest from the date of payment, at the rate of six per cent per annum.

MAYNARD TILLINGHAST, Comptroller.
CITY OF NEW YORK, DEPARTMENT OF FINANCE, COMPTROLLER'S OFFICE, Nov. 16, 1863.

SAMUEL WILDE,
(Late of the General Land Office.)
MILITARY, NAVAL, AND
GENERAL AGENCY.
(Established in 1853.)
OFFICE AND RESIDENCE, 302 14 St., with 4 feet st., Washington, D. C.

Having had the exclusive charge of the "Recollection, and Map" 1855, Bounty Land Bureau, in the General Land Office, for several years, and being familiar with the Laws, Rules and Regulations, has become a large Department and of the Bureau of the "Commissioner of Pensions." Has his services to the Army and Navy Secretary and Solicitor in the adjustment and collection of

DEMANDS AND CLAIMS AGAINST THE GOVERNMENT,
in all departments, especially claims growing out of the present war.

Particular attention given to Pensions due to Officers and Soldiers, Widows and Heirs of the Army and Navy of the United States, and the widows, children and heirs of Officers and Soldiers who have been killed, died from wounds and sickness contracted in the service.

Claims for Bounty promptly for prosecuted for Persons of Contractors, Quartermasters, and for extra Pay, Commutation, and for Horses killed, died, or killed in the service, and for the Bounty, Arrears of Pay, and Back Pay, to Officers, Soldiers, and Seamen of the United States, or their heirs at law.

Any business before the General Land Office, Indian Office, Pension Office, Accounts, Congress, or Executive Offices, requiring the services of an Attorney, will meet with prompt attention.

FOOTE'S PATENT UMBRELLA STANDS,
No. 805 Broadway, N. Y.

PUBLIC SALE OF LANDS IN THE PARISH OF ST. HELENA, BEAUFORT DISTRICT, SOUTH CAROLINA.
Under the direction and authority of the President of the United States, issued at the date of September 11, 1863, in pursuance of the Act of Congress of July 16 of the same year, entitled, "An act for the Collection of Direct Taxes and Internal Duties in the States within the United States, and for other purposes," approved July 16, 1862, and the Acts amendatory of the said Act, I, the undersigned, Commissioner, duly appointed, William P. Wending, and William Reynolds, Assistant Commissioners, for the purpose of carrying into effect in South Carolina, on the tenth day of February, 1864, at the Court House, in the city of Beaufort, in the said district of the following tracts or parcels of land, to wit:

SAY AT 10 O'CLOCK A. M.

The Marion Chaplin Place, the late Pope Place, the Pope Farm, the Pope Factory, the Hermitage Island, the Gabriel Capers Place, the Lawrence Fripp Place, the Robert Fripp Place, the Fripp Point, Wood Island, the Dathaw Point, and Dathaw Point.

LADIES' ISLAND.

Bluff Farm, Pinckney Island, the Wiley Place, the Jos. Johnston Place, the Pinckney Wood Land, the Fair Lawn, Bickyard, the Pine Land Place, Laurel Grove North, the Laurel Grove South, the Harwood Pine Land, the Beach Pine Land, and the Jenkins' Island Place. Each and every tract of land to be sold is subject to the right of the United States to cut and remove timber therefrom for the use of the Government.

TERMS OF SALE.

ON FORT ROYAL ISLAND.

The Brown Cottage, the Barracks, Orchette, the William Fernyhead Place, Gumgabbo, the Ann Fripp Place, the Fripp Cottage, the Fripp Point Field, Hurdle Bush, the Retreat, the Ellis Creek Place, the Fripp Point Place, the Fripp Creek Place, Prospect Hill, Grove Hill, Burlington, Wescoatsville, Lucas Point, Lucas Point Field, and the Pine Land tract, except two hundred acres of the same reserved for sale hereafter, to be sold by proclamation to the owner.

The land to be sold comprehend in all about twenty-three thousand acres. They are to be sold in parcels to suit purchasers, and will be sold in one and twenty acres to any one purchaser. Each one hundred and twenty acres to be put into a single plan on the commencement of the survey.

The plots of land to be sold known and declare that each one will be sold as set apart and set out dollar and twenty-five acres to each one hundred and twenty-five acres, and unless the dollar is paid down at the time appointed when.

Given under our hands, at the town of Beaufort aforesaid, this 4th day of December, A. D. 1863.

WM. P. WENDING,
WM. REYNOLDS,
U. S. Direct Tax Commissioners for the District of South Carolina.

CAUTION FROM THE AMERICAN WATCH COMPANY.

It having come to our knowledge that imitations of the American Watch are being offered for sale in the market in great numbers, calculated, by their utter worthlessness, to bring the fine grades of our manufacture into disrepute,—to protect our own interests and the public from imposition, we have adopted certain marks by which our Watches may invariably be known.

Each movement bears the name of the Watch.

The case has the name

"AMERICAN WATCH CO., Waltham, Mass."

engraved on the inside plate.

The name "E. P. Barton, Waltham, Mass." engraved on the inside plate.

All the above styles have the name "American Watch Co., Waltham, Mass." on the dial, and are warranted in every respect.

The cases bear the name

"WM. ELLERY, Boston, Mass." engraved on the inner plate, and also on the dial.

All the above described Watches are made of various grades, and are sold at prices to suit every one, as may be required.

It is hardly possible for us to accurately describe the numerous imitations to which we have alluded. Suffice it to say, that in every instance where we are approaching our own as to escape the observation of the unexperienced, they are stamped as dials and movements by the "Union Watch Co. of Boston, Mass."—no such company existing, or the "Waltham Watch Co. Slade's Watch," to be sold as our Fourth or Wm. Ellery, &c., &c., usually engraved on the "Soldier's Watch." Others are named the "Appleton Watch Co." others the "Howard Watch Co." and the "E. P. Barton," besides many which are named in such a manner as to convey the idea that they are the genuine American Watch Co.'s Watches. Beware of Counterfeits.

A little attention on the part of purchasers will protect them from imposition.

GENERAL McLELLAN'S REPORT.

In response to numerous requests, and to meet the very general demand for it, we have decided to reprint Major-General McClellan's Report entire, from the official copy just presented to Congress. In order to do this without depriving the JOURNAL of its usual variety of reading, we shall issue the Report next week in a triple number. The Report will be printed on an extra sheet of 32 pages, uniform with the JOURNAL. As this publication involves an additional expense of nearly one thousand dollars, we shall be obliged to charge extra for the sheet containing the Report, leaving it optional with each subscriber to take the extra with his JOURNAL or not. To those of our subscribers who desire it, we will send the extra number on receipt of twenty cents. Those who purchase of newsdealers can obtain the Report with their weekly copy of the JOURNAL, by paying twenty cents for the extra.

For copies of the extra sheet containing the Report, we have established the following rates:—

For 12 copies	.....	$2
" 25 "	.....	4
" 33 "	.....	5
" 50 "	.....	7
" 100 "	.....	13

All above this at the same rate.

When ordered by mail, two cents a copy should be added for postage. Where the regular issue of the JOURNAL is desired with the extra containing the Report, ten cents in additional to the above rates will be charged, including a double charge for postage.

It is proper that we should state that we publish this Report simply as a military document, relating to a most important period in the history of the war. As such there is very naturally a wide demand for it, which we purpose to supply. It has not yet appeared in any form placing it within the reach of all. The edition ordered by Congress can be obtained by but few, and the copy-right edition of Messrs. Sheldon & Co. is put at a price—two dollars and a half—quite beyond what most persons are willing to pay for but one of the many official reports resulting from this war. As an ARMY AND NAVY JOURNAL, it may be obtained for a comparatively insignificant sum.

Orders should be addressed to the ARMY AND NAVY JOURNAL, New York. Dealers will be supplied by the American News Co., No. 121 Nassau street, New York.

THE MILITARY SITUATION.

We chronicle this week another serious attempt to capture Richmond, and, we sorry to add, another failure. General BUTLER is the author of this last effort, which has certainly the merit of boldness in conception, if not in execution. The movement was intended to take advantage of the temporarily defenceless condition of Richmond consequent upon the withdrawal of a large portion of its garrison to reinforce General Pemberton, of North Carolina, who is reported quite an army at Kinston to march on Newbern. It was while General PICKETT was in the midst of his campaign, and when the Rebel Government would naturally suppose General BUTLER had as much as he could do to hold the eastern coast of North Carolina, that the latter put his scheme into operation. The plan, taken in connection with the movement of the Army of the Potomac, seems to have been to induce LEE to draw in his reserves from Richmond by a feint against him, and then swoop down on the Rebel capital, while it was bare of troops, with a cavalry raid from New Kent Court House.

For a time everything promised success. The weather had been so pleasant and the roads in such good condition, that General LEE seemed to be really deceived by the movement of General SEDGWICK, and ordered up his reserves from Richmond and other points, to await the shock of battle. But the final movement was a failure. The cavalry force arrived at Bottom's Bridge, ten miles from Richmond, only to find the road to that city obstructed and guarded. The Richmond *Examiner* of the 8th inst. says the rebel authorities were forewarned by Yankee deserters and took timely precautions. From other sources we learn that a midnight panic prevailed in the city, when news was received that the dreaded Yankees were within a couple of hours' ride. This, so far as it goes, is evidence that there was good reason to suppose that the city was so inadequately protected as to promise success to a bold movement against it. But we find no proof of the necessary dash in the officer to whom the execution of General BUTLER's plan was entrusted.

From the particulars we receive, it appears that the force of cavalry and mounted infantry which marched up the Peninsula was under the command of Brigadier-General WISTAR. The force left New Kent Court House on Friday, the 5th inst., and reached Bottom's Bridge on Saturday morning, the 6th inst., at half-past 2 o'clock, having marched forty-seven miles in sixteen and a half hours. The obstructions and forces was such at the bridge that, after waiting until 12 o'clock on Saturday, General WISTAR concluded to return, which he did. In the meantime a heavy infantry force had come up to support him. On his way back his rear was attacked, but the enemy were easily beaten back. The force used on the Peninsula are reported to have come from General GILLMORE's department.

The movement across the Rapidan also took place on the morning of Saturday, the 6th inst. It was not unexpected to the troops, and it found them prepared and in good spirits. No doubt the news of the movement had been made public so that it would get to the ears of the enemy.

General KILPATRICK's division of cavalry, supported by battery C, 3d U. S. Artillery (BRAXTON BRAGG's old battery), advanced on the extreme left and crossed the Rapidan at Ely's Ford; after which the cavalry was divided into squads to scour the country in the direction of Richardson's tavern and Fredericksburgh, on the left. The duty was thoroughly performed, but no enemy was discovered in force. The cavalry re-crossed the Rapidan on Sunday.

The Second and Third divisions of the Second Army Corps were ordered to cross at Stevensburgh early on Saturday morning, but as the pontoons, which were ordered, had failed to arrive, the Second division boldly forded the deep stream in the face of the enemy's fire. The enemy held his ground, and the fight continued all day. The two divisions were withdrawn on Sunday, after having lost two hundred men in killed and wounded, most of whom were in the Second corps.

General MERRITT's division of cavalry advanced on the right, and crossed at Barnett's Ford. They had a brisk skirmish with some of STUART's cavalry, but drove them. After scouring the country, they also re-crossed on Sunday, the 7th inst. The conduct of all the troops was splendid. They were eager for a fight. The result of the reconnoissance does not, however, bear out the theory that LEE's army is partly demoralized or very much depleted.

It is reported from Washington that the War Department is not at all satisfied with the result of the raid on the Peninsula, and that it is to be investigated by a Court of Inquiry.

The Rebel forces threatening Newbern, N. C., retired to Kinston on the 2d, and General PALMER's troops were relieved from further danger. Telegraphic communication with Beaufort was soon renewed.

Acting-Master William R. Browne, commanding the bark *Restless*, who some time ago destroyed extensive Rebel salt works in the vicinity of St Andrew's Bay, Fla., has since completed the work so handsomely begun, by destroying, at a point ten miles above St. Andrew's, ninety additional works. The Rebels of their own accord destroyed two hundred more.

The blockade runners fare rather indifferently of late. On the 14th ult., the U. S. supply steamer *Union*, captured the Rebel steamer *Mayflower*, south of Tampa Bay. She was loaded with cotton, and bound for Havana. On the 28th of December, the *Stars and Stripes*, captured the Rebel schooner *Caroline Gertrude*, loaded with cotton, while she was aground in St. Mark's Bay, Fla. Only part of her cargo was saved, as our men were compelled to destroy the schooner to prevent her from falling into the enemy's hands. On the 18th ult., the *Stars and Stripes* captured in the same locality the steamer *Laura*, loaded with merchandize and cigars.

The Union forces under Colonel MULLIGAN on the 4th inst. had a severe fight, lasting six hours, with General EARLY, at Moorefield, and compelled him to retreat towards the Shenandah Valley.

General FOSTER telegraphs from Knoxville, under date of February 7th, that an expedition sent against THOMAS and his band of Indians and whites at Qualatown, has returned completely successful. They surprised the town, killed and wounded two hundred and fifteen, took fifty prisoners, and dispersed the remainder of the gang in the mountains. Our loss was two killed and six wounded.

Affairs of Charleston are still in *statu quo*. General GILLMORE keeps up a slow but regular bombardment, the firing averaging three shells every five minutes. Fort Sumter is still tenable, and five guns have recently been erected among the ruins. The Rebel garrison are prevented from working much, by the steady surveillance of General GILLMORE.

Maj.-Gen. Thomas has allowed for transportations of medical and hospital stores one additional pack mule for each regiment, the same to be selected with special reference to adaptability for the service, and not to be changed unless broken down or otherwise becoming unserviceable, and not to be used for any other purpose than that of carrying the medicine panniers, which are not to exceed three hundred pounds in weight. The allowance of camp equipage for the Chattanooga hospital in each brigade to be as follows, viz:—One wall tent, one common tent, hospital tents in the proportion of one to every three hundred and fifty men present, and the camp kettles, axes and spades that are absolutely necessary.

In General orders, Odated February 2d, 1864, Major-General Rosecrans commanding Department of the Missouri, announces the decease of his Excellency Hamilton R. Gamble, late Governor of the State of Missouri, and Commander-in-Chief of the State forces, who expired at his residence in St. Louis at twelve o'clock, M., on the 31st ultimo. To the family of the deceased the Major-General commanding tenders his sincere sympathy in their great affliction and orders the usual marks of respect to the memory of the deceased.

THE CONDITION OF THE SOUTH

MAKING a virtue of stern necessity, the Rebel soldiers avoid conscription by reinlisting for the war. The Rebel papers would make us believe that the movement was spontaneous and enthusiastic; and the Richmond *Examiner*, which has received the gratifying intelligence that "reenlistments progress slowly in the Yankee camps," discovers in the contrast a good augury for the success of the South in the approaching campaign. It is said that two entire brigades in Lee's army, and two in JOHNSTON's, have already reenlisted for the war, and that their example will be eagerly followed by others.

The same papers which spread this intelligence before their readers, contain numerous accounts of desertions from the Rebel armies. The Richmond *Whig* says that the country is overrun with deserters and stragglers, who hide in the swamps and mountains, and, in some instances, have formed an with bands of negro marauders in committing depredations upon the planters. The whole energy of the Confederacy, says the Richmond *Examiner*, "should be devoted to "bringing to the army the absentees and stragglers. Nearly half our military force is scattered over the country." The popular opposition to the conscription act still continues, but the Government pays little heed to its clamors. Every Southern paper which comes to us contains a remonstrance or warning against the folly and crime of stripping the country of its able-bodied men. The Richmond *Whig* predicts that if the planters are removed the country will become an "easy prey to demoralized soldiers and stragglers," and to the negroes, who will rapidly become rebellionaries "of it." The same paper, in a later issue, says that the South is not to be saved by the mere display of military its sord corn, or looking to the aged fathers of the land to save it from subjugation.

But the Confederate Congress, probably basing its action upon more accurate knowledge of *facts*, appears to place no reliance upon the military enthusiasm of its soldiers or the people. If the Richmond *Examiner* of the 8th inst. was correctly informed, the Confederate House of Representatives has already passed its military bill. This bill, says the *Examiner*, "is described as void and impracticable to the "point of insanity. After much discussion and many conditions, they were all striken out, with the exception, we suppose, of the members. Such a law as this means one of "two things, the destruction of society, or its subjection to "the holders of Executive offices. Either horn is sufficient "to deal its death-blow to the cause of Southern Rights. Now, "the only hope of the country is in the Senate."

An attempt was made in the Rebel Congress, and seconded by nearly all the Southern newspapers, to exempt planters and farmers from the operation of the draft. It was earnestly urged, that to send all the able-bodied men into the army without reserving sufficient numbers to furnish the means of supplying them with food, was to send them out to starve. On the other hand Mr. CHAMBLISS, of Virginia, declared that he would not give a grant for all the hills that ever existed unless it was accompanied by men to the field. He said it was a melancholy fact that the South has never regained an inch of territory from the North, simply from the want of men, not because the agricultural interests had not been properly attended to.

The Senate has passed a bill to establish a volunteer Navy. In the House a bill to conscript free negroes and impress slaves for various uses in the Army, was almost unanimously passed. Both Houses have passed a bill which forbids the purchase and sale of the "paper currency" of the United States except within the country's lines. Postage stamps are not included in the provisions of this bill, and it does not apply to special agents of the Government.

The Richmond *Whig* ventures the prediction that a more disgraceful than the "Bull Run stampede" awaits the Northern soldiers in more than one of the conflicts likely to occur during the next campaign. It says:

They will have to enter upon it with the disadvantages of misfortune, and will have to fight a battle without, against the gallant veterans of Lee and Johnston, and within, with the hangings of the three "grand juries" now sitting in service, if we should have another defeat. Failure and disaster will not only dishearten the army, but will destroy the last vestige of military discipline to the new organizations. The Bull Run regiments were virtually disbanded by the panic, a material which will compose the new army. We do not desire to undervalue in the least degree the fighting qualities of the Yankees. We know they have done well—much better, indeed, than we ever thought them capable of doing. Our predictions are not to be taken as those of a coward between the two armies are justified upon the plainest principles of military science. We therefore reiterate our conviction that the Bull Run scene will be reënacted with increased disgrace unless, in this one conflict, we are doing the utmost we can.

Mobile is excited by rumors and apprehensions that the city is to be attacked immediately by Union troops. The Mobile *Tribune* says that it has received information that extensive operations are on foot at Ship Island. Heavy transports have passed southward down the Atlantic coast for some unascertained destination, but it was supposed to be Mobile. The Confederates await the result of the attack with considerable anxiety, as Admiral FARRAGUT is reported to be in command of the Union fleet.

Mr. DAVIS has transmitted to the House of Representatives information relative to the collection and distribution of the tax in kind. We select the following items of interest:

The value of the aggregate tax collected thus far, estimated according to the rates established by Congress, is believed to be lower than in any other State, is $1,530,387 28. The value of tax collected in Virginia is $752,739 07; in North Carolina, $94,342 54; in South Carolina, $202,651 23; in Georgia, $200,209 76; in Alabama, $1,202,662 76; in Mississippi, $1,000,834 24; in Louisiana, $20,000; in Tennessee, $16,834 62. The range of the collection thus far in Virginia is 2-10 per cent. on the assessed value of property, and in the State at large is 7 2-3 per cent. deducting all expenses, including rent, repairs, &c. In bushels, irrespective of value, the tax collected is as follows: Corn, 1,000,000 bushels of corn; 73,410 bushels of wheat; 1,000,000 bushels of oats; 10,561 bushels of rye, 58,149 lbs. of rice, and 2,279 lbs. of sweet potatoes; 1,000,000 bushels of corn; 1,000,000 bushels of oats; 164,379 bushels of wheat, 56,834 bushels of oats, 2,793 bushels of rye, 1,000,000 lbs. of rice, and 20,000 lbs. of sugar.

The efficiency of the Wilmington blockade is now pretty generally admitted at the South. A gentleman direct from that city informs the Petersburgh *Express* that

The enemy now have 26 vessels blockading that port. These vessels are stationed in the mouth of the river, at the Cape Fear, and guard all the avenues of approach with the most effective vigilance. The enhanced value of cotton in the interior of the Confederate States has greatly lessened, and it is apprehended by some that this may be the result of a policy of the Government for a time, so as to get into that port without incurring a hazard almost equivalent to positive loss.

The spasmodical letter of the POPE to Mr. DAVIS, seems to have inspired the Rebel government with a new, though rather forlorn hope. It is proposed to send a commissioner to Rome, to see what he can do. The following is the whole to the way of reception! All Catholic countries, says the Richmond *Whig*, would take it as a mark of distinguished consideration for the venerable head of their church, and their sympathies would flow more freely under the influence of such a manifestation. The *Whig* says:

Our cause must be just, else it could not command the approval of his Holiness Pope Pius, and we may well predicate upon that fact what is but a reasonable inference, that it is wise and inevitable success." Our government should lose no time in sending a commission to Rome, as a testimonial of our high appreciation of the kindness and sympathy which the Pope manifests for us. It would be a befitting courtesy, which, we are sure, he will prize highly, which cannot fail to be advantageous to us. The well-informed Catholic bishops and priests in the Federal Army, in the event of a visit, might easily be procured to counterbalance the adverse position assumed by England with regard to us.

Earl RUSSELL will appreciate the high compliment conveyed in the concluding sentences of the above extract.

The Maryland rebels who have sought refuge in the Southern States, have been for the most part forced into Rebel army. When this suggestion was made in the Confederate Congress, Mr. D JOHNSTE, of Maryland, was highly indignant. He compared the conscripted refugees from that state to "prisoners of war," and declared that the bill, if passed, would add many thousands of recruits to the Union Army.

The Richmond correspondent of the London *Telegraph* writes on the 29th of December some interesting gossip from the rebel capital. He says that Mr. DAVIS was compelled by public opinion to remove BRAGG after the defeat at Lookout Mountain. In the choice of a successor, HARDEE, who declined, was first thought of. BEAUREGARD was not thought capable of commanding a large army, LONGSTREET was most valuable as a corps commander, and JOE JOHNSTON unpopular. The writer affirms that PEMBERTON is little thought of in Richmond. It is said there that he does nothing but retreat and assign plausible reasons for his failure to achieve success. He has had three large armies during the war and has had no victory except at Manassas. It was thought that HOOD would succeed BRAGG, but been taken by McCLELLAN, had JOHNSTON remained in command. The feelings of General JOHNSTON are understood to be very hostile to DAVIS, who, on the other hand, does not rate highly the capacity of the General. He was averse to assigning him to any important command after his lamentable experience of the Mississippi campaign last summer. On the other hand, General LEE, and many members of Congress, have confidence in JOHNSTON, and in deference to them DAVIS has yielded his own deliberate judgment in committing to him the command of the West.

A resolution has been introduced into the Virginia Legislature, in secret session, requesting the Confederate authorities to suspend the ban of outlawry against General BUTLER until an exchange of prisoners has been effected. The *Examiner* finds no language severe enough to express its indignation at what it calls a "deed without a name," which, it says, has brought disgrace upon the State of Virginia.

General ROBERT TOOMBS has been arrested at SAVANNAH, for attempting to travel in the cars without a passport, and for using seditious language when compelled by the guard to leave the train. The General finds it difficult to restrain his disloyal tendencies, even to the government of his own choice.

The sum of $167,500 has been appropriated by the County Court of Mecklenburgh, North Carolina, for the support of soldiers' families, with authority to borrow $25,000 more, if necessary.

The health of Vice-President STEPHENS is said to be improving.

The Richmond *Examiner* of January 26th says, that several thousand of the Union prisoners now in that city were to be sent immediately to Georgia. Nine hundred prisoners were in hospital in Richmond at the above date.

General LEE has issued the following address to his soldiers:—

HEADQUARTERS ARMY OF NORTHERN VIRGINIA, Jan. 22—Before the close of the campaign in Pennsylvania I considered it due to the army to state that the unexpected occurrence of events which led to the withdrawal of the troops from the field of three charged with his support. Its welfare and comfort are the objects of his constant and earnest solicitude; and no effort has been spared to promote it by the necessary but short exertion just before the battle. For the necessity but short exertion just before the battle. For the necessity but short exertion just before the battle. For the necessity

of violent and open rebels, most of whom were both smugglers and spies, as opportunity offered; robbery and murder were of daily occurrence. The advent of the military police soon produced a salutary change. Order was established, life and property became secure, and money a relied upon when brought to Corinth.

The narratives in this volume were compiled from the official records of the army police. Implicit faith in many of the officers, the compiler vouches for their truth, and states that they have been abbreviated rather than amplified for publication. The work is written in an easy style, and is replete with interest.

CORRESPONDENCE.

PORT HUDSON.

To the Editor of the Army and Navy Journal:

SIR—Previous to this rebellion probably few but plotting traitors and their military advocates foresaw that an insignificant railway station at a small junction of some dozen wooden buildings, forming an obscure village on the Mississippi, midst a long, dreary, flat, swampy region of the most pestilential character, would become the theatre of one of the most famous contests recorded in our military annals—a contest making its survivors rich in the respect of their countrymen. Yet the locality of this obscure village affected to the military engineer a wide field for the exercise of the defensive branch of his art in the construction of works which would prevent the passage of the Mississippi and defy attack from land or water. At Port Hudson, the river bends in a semicircle around the village of Bayou Sara, gradually rises, forming a high, level, wide-extended plateau, which again gradually declines to the water's edge at some distance south of the village. The river washes only the foot of this plateau has formed a high, steep and, in some places, a slippery bank, along whose crest the engineer placed his first line of defence. This line, as it rises at this point forms an elbow, the village being at the angle. This elbow batteries had command of the river in every direction.

The plateau is commonly level, except in those places at and near the bank where the action of the river, meeting sinking channels to the river, has worn the soft clay soil into fantastically irregular systems of deep and precipitous valleys, or natural ravines. It is with exception the term upon the plateau have been cut away back from the river bank, forming a cleared semicircle bounded by a forest in which one of the enemy's encampments was established. The river bank forms as it were the diameter of this semicircle. Almost at the left extremity of this diameter the village is situated. The plateau, with the exception of the irregular are concentric with, and at some distance from, the encircling forest. The ravines, with the exception of those in general direction of the forest boundary, and, like it, extended around the village from the river bank north to the river bank south. The ravines are of various depths, some in shape like a broad horse-shoe, between the earthworks and the forest. This open space constituted the debatable ground on which the battle of Port Hudson was fought, and like this space was perfectly level, and, except a few logs and stumps, offered no shelter from his fire. On the right and left of the main road, which runs from the river through a public completely swept by its fire from works constructed upon every commanding point of view. The extreme right was thickly strewn with fragments of our projectiles. Towards the close of the siege the efforts of our engineers to take this work seemed to be the chief object of attack, and the enemy's capitulation, however, averted the bloody solution of its problem. Considerably to the left of the enemy's centre are two detached redoubts or forts. On one stands General SHERMAN made an assault upon the place by one of those ruinous, and almost always unsuccessful, efforts to assault an attack by the other. Again General WEITZEL made an assault on the enemy's left amid what seems a labyrinthine arrangement of parapets and ravines, equally with undergrowth. These assaults failed, not from want of courage in our men or skill in their immediate commanders, but because, in the confusion of the battle, no single attack was made in sufficient force. But the starving besieged, seriously threatened in their citadel, compelled to submit to the hard and bitter terms of their conqueror, failed in their attempt to break through the enemy's lines to confer a capitulation, which was robbed of its manifold obnoxious features. Had we had a sufficient force to spare, it was an obstinate defence no one who has visited the place will feel inclined to deny. The position, offering so many natural means of defence, was improved to the greatest possible limit. The earthworks are of great extent. The writer was four hours in merely walking on the parapet from one end of the line to the other. The engineer has skillfully planned, and executed with precision at the cost of what must have been an enormous amount of labor. The enemy's force was constantly harassed by our riflemen. The fire of instant death prevented his people from leaving for a moment their cover. Our artillery dismounted many of their embrasures by holes and exemporized covered ways from the superior slope of the rebel parapet on the rebel side, the fragments of which were so thickly strewn about that the writer's hand could cover ten of them at any place for fifty feet. Again, Gardner's force was small to defend the vast line of works around it. It would appear that an assault at any one point at so early day by the entire available force of Banks's command, would have succeeded, and to have wisely confined the operations to close investment and gradual approaches—a legitimate method which deservedly brought about brilliant success, a success which justly extorts the tribute of genuine admiration from those who visit this place. The splendor and substantial importance of an achievement which won for our country a vast fortification, immense military spoil, and the freedom of the Father of Waters, is not to be underrated or disparaged. With the admirable strategy of General BANKS in planning the enemy and unexpectedly appearing before Port Hudson, the readers of the JOURNAL are doubtless familiar. The plan bears a marked resemblance to General BANKS' late unexpected arrival in Texas, while the baffled foe awaited him in New Orleans. In both operations are discovered the presence of those invaluable military virtues, invention, secrecy and celerity.

The works at Port Hudson are, with trifling exception, in a state of complete repair, and are greatly strengthened by additions. The Yanks and Negro" were promptly over this stronghold, once constructed by unhappy slaves to perpetuate their servitude, but now defended by freedom and they may be trusted.

PORT HUDSON, LA., January 20, 1864.

SENATOR HALE'S BILL—THE VOLUNTEER NAVY.

To the Editor of the Army and Navy Journal:

SIR:—I hope you will excuse the liberty I take in calling your attention to the bill lately brought before the Senate of the United States by Senator HALE, of New Hampshire, in relation to the appointments held by Volunteer officers in our Navy. In the latter portion of the bill it is thus worded: "That all such officers hereinbefore named shall cease and determine at the expiration of sixty days from the time of the passage of this act, unless in which time nothing then are respectively employed." Now, Sir, I desire to call your attention and that of your numerous readers to the injustice that would accrue to a large class of Volunteer officers now manning our Navy. Men who have always and everywhere upheld our flag with honor, are now to be thrown aside by this bill, as if they have no claim on their country's gratitude. Senator HALE is regarded throughout our country as one of those gentlemen who are opposed to the Volunteer System in the Navy; but I would respectfully desire to ask if the Volunteer System is abolished and the Navy left to the Regular Officers, Hatteras Inlet, and the other heroes of the Volunteer Navy dismissed, who will officer our Navy with equal honor and ability?

VERITAS.

U. S. STEAM FRIGATE "MINNESOTA,"
OFF NEWPORT NEWS, VA., Feb. 1, 1864.

GENERAL ROBERTS' PROJECTILES.

To the Editor of the Army and Navy Journal:

SIR:—In your issue of 23d ult., you do me the honor to criticise features of a little pamphlet published by me, intended to describe my recently patented projectiles for rifled cannon and not for use in smooth-bored small arms. I find myself embarrassed at so regarding the criticisms of "Inquirer" in several ways, but principally to answer with propriety the question, "Is the writer himself a master of this science, and implies by suggesting what "General Roberts should know," that his claims are groundless and of no merit.

Again, it is clear that "Inquirer" appears in two characters. First, as the advocate of HOTCHKISS, SAWYER and others, and secondly as the impartial critic and supporter of my new inventions. It is certain, however, that he is not without understanding of the science of gunnery, and it is not less certain that his understanding, like "a little o'learning, is a dangerous thing." He has certainly read misunderstood, and misapplied what he has read not if he more carefully studies the new ideas it suggests, that he will satisfy himself of their reality and practical application.

"Inquirer" asks, "Has the writer tested what the inventor "have been substantiated by experiments?" I will answer, that on 19th December, 1862, General Barry, Chief of Artillery, Headquarters Army of the Potomac, at the Washington Arsenal, with the same charges and under the same circumstances, fired my 3-inch projectile against one of his former to me of 22d December, he says—"The flight "of all (meaning my projectile) was comparatively "steadier. The shot of the 3-inch projectile, also of "solid shot were tried in comparison with yours, but as compared with HOTCHKISS' shell and SAWYER'S case shot, both of which were fired under similar circumstances, the drift was smaller and the range a trifle "greater."

At Gurnon, Western Virginia, in May, 1863, they were tried by Captain —— of Independent Ohio battery in competition with the HOTCHKISS shell, under exactly the same circumstances, the drift of my shot was less and the range materially greater than the dead shell.

At Hilton Head, in March, 1863, my shot were tried to test their range, with jackets of different degrees of hardness. The ordnance gun was used, and at elevations indicated for the ranges. The shot were designated projectiles of the same calibre, my shot were for in excess of other ranges.

Yesterday, at this place, 12 of my shot were tried, under the supervision of Major KINGSBURY, of the Ordnance Department, and the results were satisfactory. The range of the same similar shot, mine flew over and far beyond the targets. At 31 degrees, they flew over and several hundred yards beyond the target, which was at 2,212 yards. At an elevation of a little over 8 deg. my shot flew by measurement on the ice 3,212 yards, the gun itself being on the main bank. The distance across the Mississippi here is so much for range.

"Inquirer" has assumed that I have asserted that my shot flies without drift, and that I am ignorant of the fact that the grooving of guns with twist, necessarily causes drift to the right. That he has misread my pamphlet on this point, which was—that my shot leaves the gun with its long axis in exact coincidence with the axis of the piece, causing "*absolute* drift, and not the *angular* drift that you" cause drift or deviation from the plane of fire." It would have been more exact to have said, *angular drift is caused by the grooving of guns, &c.* I intended to say, and repeat here, that shot rotating round their long axis without nutation, have less drift than others that have length and hold in the grooves, and wabble more or less around some point along their long axis. And this, I am convinced, experiments and experience will show to be true, notwithstanding the opinion of "Inquirer," that "the more perfect "the fit in the bore of the gun, the more certain the horizontal deviation."

My claim to "greater economy" is disposed of by "Inquirer" by saying, "that is a matter of opinion unless it has other advantages." I had really supposed "Inquirer" to be an ordnance officer. His style having been toned to the ordnance pitch, was suggestive of the loss peculiar to that age, but this process or antisocration led me at once to the conclusion that he is attached to that outside department of the Army, subject to the rules and articles of war as "contractors": for with them economy is not policy. But, certainly with the Government carrying on a war that draws daily from its exchequer tens and a half millions, I had supposed economy in that—all other things being equal—was of some "consequence."

As to the "conical-cylindric-spherical bullet," "Inquirer" has so inaccurately described as a photograph of this bullet—in which, he says, "I claim what all "experience in use of smooth bore bullets." I will ask "Inquirer" what experience with such a *ball* in smoothbores, he have had himself, or heard of? If he will make himself known to me in proper name or person, I will send him 20 or more of these bullets, and by using them in one smooth-bore musket and 20 rifled calibre, he will satisfy himself by experiments, more convincingly than I can by reasoning, that I have established beyond peradventure a principle theoretically understood, but never before practically illustrated.

I did not claim, as asserted by "Inquirer," that my "cupped-bullet" fired from a smooth-bored, muzzle-loading musket, "results in greater range and precision of fire than "in a rifle." On the contrary, I know it will not range as far, because it requires more force and stronger compression of the gases to drive expanding bullets through the grooves of a rifle than of one of the same expanding cup through the smooth-bored musket. Intensifying in this manner the strength of the gases, by the increased resistance of the twisted grooves, the translation of the bullet from the rifle, will give the greater range, the charge of powder being the same in both.

My point was that my "cupped-bullet" fired from my patented smooth-bored breech-loading musket, so chambered that the base of the cup of the cylindric portion of the bullet should be greater than the diameter of the bore, requiring a greater force of gas to drive it through the bore than is required to drive the Minié bullet through the groove of the rifle, would *then*, and *there* from this chambered breech-loader, surpass it in range.

If this is claiming "what all experience in smooth-bores "falsifies," I can assure "Inquirer" that experience has not in a broad sense, yet been had with this bullet, although, or to exclude the hope that in its progress many new and novel ideas may yet be found practical, not dreamed of in his philosophy or experience. But I am willing to stand to be "enlightened hearts" of the antiquated and old fogies.

It is now or never with "Inquirer" his powder, carried into gas, must find an outlet, and that the more you resist its expansion, the more you multiply its power!

If "Inquirer" is incredulous to me as a person theoretically or practically versed in this science, I would ask him, where he finds authority for his unqualified assertion, that a bullet so constructed as to bring the centre of gravity forward of the long diameter, and having a cylindrical bearing in the bore of smooth-bored arms, as that it will preserve its point foremost with such velocity and certainty in the air as "is falsifying all the established rules, both theoretical or practical?" Such a bullet never has or tried and I, as yet, have not succeeded. But his failure has not, as I presume, changed his faith in the immutable laws of gravitation governing the flight of projectiles. Because he has not yet constructed such a bullet, with its proper portions, and used it in a gun to counteract the disturbance of the law of translation, by any end foremost, he probably will not be prepared to say it is an impossibility, simply because "it falsifies experience."

If it is ever true that the law of gravitation, that a cylinder projected with its heavy end foremost will continue its translation with that end foremost, until the force of translation is overcome, some disturbing cause obtains.

If "Inquirer" is in fact curious to know whether this principle, if "correct," can be applied to projectiles from guns to smooth-bored small-arms, he can be gratified in that curiosity; it at his leisure, he will make a projectile of sperm-oil or tallow, of the proportions I have given, take a casting of lead and antimony, with three part lead to one of antimony, long diameter 7 inches, shot diameter 3—the curve of the ogive to be struck with a radius of 6 inches—the cylindrical bearing in the chase will be about 5 inches—the rear to be cupped out 2 inches, and the diameter inside of the cup 2½ inches. Fire this projectile with charge of 10lb. of cannon powder from any smooth-bored 3-inch gun. The experiment will satisfy him that the projectile will fly point foremost without tumbling, and range very far beyond the spherical cast-iron ball of the same calibre. He will be surprised to learn that this range was when he announced that "General ROBERTS has made no invention in projectiles, nor stated a single fact in connection "with his bullet not well known before."

E. S. ROBERTS, Brig.-Gen. Vols.

DAVENPORT, IOWA, January 30, 1864.

THE PAWNEE AND THE MARBLEHEAD.

To the Editor of the Army and Navy Journal:

SIR:—I have observed an article emanating from the U. S. steamer *Pawnee*, in relation to the part taken by that vessel in the action on the Stono, Charleston Inlet. It is human nature, for every one who has been present, to claim from being first in anything, to imagine that he has achieved some great end in being second. Your correspondent of Feb. 6th endeavors to convey the idea (a false one) that the *Pawnee* opened fire with all her guns in 15 minutes after the action between the *Marblehead* and the rebels commenced. The *Pawnee*'s own log-book, which is thought by the officers of the *Marblehead* not to be strictly accurate, states that the 100-pounder rifled gun (the pivot gun) was the first gun fired at 6.35, but the log book does not state when the first *broadside* gun was fired. That fact, however, may be readily surmised by following the entry of the log-book, and a little calculation in arithmetic of how long it would take a vessel

whose greatest speed is about 7 knots (owing to leaky bottom and foul bottoms) to weigh but only 30 inches cable, turn around and steam from Stone Inlet, two miles to the position she assumed in the Rawah River, where she anchored, swung around, and for the first time opened fire with her broadside battery at a range of 1600 yards. Her position was a very fine one; and, had she arrived there half an hour sooner than she did, the whole rebel force would have been cut off from retreat, and forced to surrender. Lieutenant-Commander, of the *Wilcox*, cannot be too much praised for the commendable promptitude with which he brought his vessel down under sail from the Folly River—a distance of 20 miles—arriving under the guns of the fort. That the troops in Legareville fully appreciated the part taken by the different vessels in their defence, as above set forth, was manifested by the cheers which greeted the vessels as they passed down the river in the transport, on their way to Folly Island, they overflowing with joy that the *Wilcox* and *Pawnee* had arrived. The *Pawnee* is silence. Comment is unnecessary. With this remark your correspondent of January 9th finally dismisses the subject.

MARCELLUS, Feb. 8th, 1864.

REVIEW OF THE NINETEENTH ARMY CORPS.

To the Editor of the Army and Navy Journal:

SIR:—That portion of the Nineteenth Army Corps, encamped on Bayou Teche, near the village of Franklin, was reviewed on Tuesday, Jan'y. 26, by the temporary commander, Brigadier-General H. E. Emory. A clear morning never dawned. It was one of those bright winter days, so common in Louisiana, with which rather unkindly comply with the hoarse blasts and rotting stores of our Northern winters; and it seemed, rather that we were under the sun of July than that of January. The review took place on a large plain, about two miles down the town. At an early hour the troops were in motion, and on reaching the point took position, and were arrayed in the following order: The 1st division, commanded by Colonel C. C. Dwight, 160th N. Y. Vols.; 4th regiment, Connecticut Vols.; 114th, 116th, 174th N. Y., and 30th Massachusetts, commanded by Colonel Love, 116th N. Y. Vols. Third brigade, more generally known as "Grover's Old Brigade," 6th Maine, 26th and 75th New York, 8th Vermont, and 160th New York, commanded by Lieutenant-Colonel H. B. Moore, 114th N. Y. Vols. Of the 3rd brigade, two regiments, the 38th N. Y. Vols., 2nd sectiut, and 75th New York, having enlisted as "veterans," are now home on their respective States. This brigade has frequently been complimented as the best in the Department. The Second brigade, First division, was not present, being on detached duty. Major-General Emory, commanding, was also absent, being on like duty. Of the Third division, known as General Grover's, only a portion was present, under command of Brigadier-General Molineux, who follows: First brigade, composed of the 25th Massachusetts, commanded by Colonel Fiske; Second brigade, composed of the 110th N. York, 162d N. York, 165th N. York, 176th N. York, commanded by Colonel Bennett, of the 162d N. Y. Vols. The Fourth division, Major-General Weitzel, sectiut, and 75th New York, having enlisted as "veterans," are now home on their respective States. This brigade has frequently been complimented as the best in the Department. The Second brigade, First division, was not present, being on detached duty. Major-General Emory, commanding, was also absent, being on like duty. Of the Third division, known as General Grover's, only a portion was present, under command of Brigadier-General Molineux, who follows: First brigade, composed of the 25th Massachusetts, commanded by Colonel Fiske; Second brigade, composed of the 110th N. York, 162d N. York, 165th N. York, 176th N. York, commanded by Colonel Bennett, of the 162d N. Y. Vols. The Fourth division, Major-General Weitzel, commanding, which, during the Red River campaign, was assigned to garrison duty in New Orleans, was of a strength nearly or quite equal to any brigade on review. The cavalry force was composed of the Louisiana Colonel Harrison, and the artillery, of which Nim's famous battery found a prominent part, was commanded by Captain Clarke, Superior Commander of the Corps.

The troops presented a fine appearance, and the review was satisfactory and successful. As the reviewing officer rode down the line, he was greeted with "Hail to the Chief," from all the bands present. The review occupied about one hour, and although the number of troops present was not equal to those on like occasions in the Army of the Potomac, yet the manner in which it was conducted, showed equally well for discipline and military knowledge. It was the first review of the kind in which the Nineteenth Corps has participated in over one year. Perhaps I may here add, that since the 9th day of April, 1863, the corps, or a greater portion of it, has been on one unbroken campaign, and at times has occupied the whole of Western Louisiana, from Brashear City to, and even beyond Alexandria, on the Red River. And in all these various expeditions "Werner's Old Brigade" has played a conspicuous part. Its services, though valuable, now almost, is not forgotten, and both officers and men of his late command look eagerly for his return to new labors and honors.

FRANKLIN, LA., Jan. 27th, 1864.

THE FORBES RIG.

To the Editor of the Army and Navy Journal:

SIR:—I would say a word on the subject of the rig of our war steamers of the larger class; that is, *all that carry yards*. The old-fashioned rig, with the topmasts dialled before the lower mastheads, is the most objectionable one that I know of to hamper a blockading or even a cruising ship. It is undoubtedly suitable, as it is to ocean-going, but not to coasting. No steamer with courses, topsails, and topgallant sails, should have any other rig than that known as the Forbes rig, which was worked out on board the *Cuba* in the North Sea before he was born, but which was never fully adopted in the country of its inventor, *Brunswick* did it in 1846. In this rig, the topsail proper is of about the height of the usual double-reefed topsail; and its yard hoists on the lower mast, where it is sent down in a gale, or for a sail, to a topmast. It follows from these dimensions, that the lower masthead is considerably longer than usual. The spar called "topmast," on the lower mast, is used for some upper topsail, and by myself the topgallant sail, "Sir" Alsop the mainsail; and, if the vessel have separate upper masts for upper sails called topsails, sails called "royals." these separate masts also "fid" aloft; so that any mast can be "housed" without interfering with getting the sail next below it. But in no steam vessel of any size would I have more than a pole mast; and, on that, nothing but my topgallant sail and royal—called, by some, upper topsail and topgallant sail. The topmast of all steam vessels with squaw rig ought to be fitted with screw "fids," so that the "fid" may be "housed," or "housed" without "coming up" with the "lanyards."

In the ordinary rig, what the quote "fid" before, and

where they cannot be "hauled" without materially interfering with the sailing properties of the ship, when it becomes necessary to get under way in chase, or to get an offing in a gale, the ship must depend almost altogether on her steam.

But, in the Forbes rig, the topmasts may be "housed," and the ship still be quite ready to spread sail equal to courses and double-reefed topsails, jib and spanker. The Howes rig has attained a prominent place in our mercantile marine, and the Cunningham rig, or rolling topsail, also; and they are very good rigs for merchant-ships, and, being cheaper than my rig, they will always have a preference with those who look only to the first cost and economy of managing. But they do not attain the object obtained by my rig with the topmasts aloft; and as to the latter, which is very important, it is in no consequence compared to the utility. The proper proportions for a merchant-ship, rigged after my plan, should be to combine fair sailing qualities with moderate size of the sails on the foremast above the lower yard of a size to fit on the main, only on one stage higher up, and so to the mizzen and main. By this plan the fore-and-aft sails are of the same size as those on the main sh—two stages higher; but these proportions are not essential. The same holds good relative to the model of the ship and the speed of the rigger. The principal reasons, in a sailing-ship, in having so much more sail on the mainmast, are to continue to be dwelt upon: still, I may say, that large sails on the mainmast propel better, are better supported, and altogether more useful, than those nearer to the extremities of the ship.

In the little steamer *Nyphos*, designed to go to China, and to be navigated by a crew of twenty men, I have adopted what I regard her with square-sails on the main, and fore and aft on the fore and mizzen. The rig is unique, and so far as I have heard, perfectly successful. Her commander is much approved, and I think it well adopted to both sailing and steam vessels; and were I to build a three-masted vessel of more than five hundred tons, to-day, I would rig her as I have described.

R. E. FORBES.

RECRUITING.

To the Editor of the Army and Navy Journal:

SIR:—While the necessity of a draft, in case of failure to fill up the depleted ranks of our armies by volunteering, is being acknowledged throughout the country, it is certain that a new army of 50,000 willing recruits would exert a moral influence in the field, which would be worth, in a campaign, double the same extent, of conscripts. In view of this, is it not strange that the authorities fail to seize upon some of the most important elements of success in the present enlistments? The presence of several veteran regiments in our midst is a grand opportunity, which, to a great extent, has been thrown away. Each one of these veteran regiments would be only too glad to spend most of their furlough in getting recruits; yet without authority from the proper source they can do but little. The Adjutant-General's report states that at least fifty veterans had applied to him for authority to go home and recruit for their favorite regiment, and he was their friend, and they wished to join no other organization. But he had to tell them that he had no authority to enlist them, and that there was no recruiting station upon where they could enlist for that regiment. I have a similar statement from a colonel. If he had authority, he could be enlisted largely to his regiment while in the city. To be sure, a station is *going* to be opened, but strong regiments will not recruit for any regiment, and the fine, healthy appearance of the men, would afford, will soon be withdrawn.

Ought not this wrong to be speedily righted ? T.

NEW YORK, Feb., 1864.

THE CASE OF THE ATLANTA.

DISTRIBUTION OF PRIZE MONEY.

The prize case of the rebel ram *Atlanta*, which has been decided during the past week in the United States District Court at Boston, unfolds so many interesting points that we give the decision almost entire, as rendered by Hon. J. Sprague, the presiding Judge. The points to be decided were not unusual ones, but the manner in which Judge Sprague proceeded to go to the capters, under the act of 1862, which prescribes that where the prize is of equal or superior force to "the vessel or vessels making the capture" it goes wholly to the capters: if of inferior force, it is divided between them and the capters, and the decision of Judge Sprague is destined to share in the distribution of the prize money under the section of the act giving an equal portion to all within signal distance In considering these questions, Judge Sprague enters into a full and exceedingly interesting account of the capture of the rebel ram, and the subsequent fitting out of the ships, in its steadings on naval service, the most significant battle in modern "times, except that of the *Monitor* and *Merrimac*." The particulars of the action, and the decision of the questions involved in it, are thus given by the Judge, as reported in the Boston *Daily Advertiser*:

The *Atlanta*, originally a British steamer, powerful and fast, called the *Fingal*, had, early in the war, run the blockade of Savannah, and been converted by the rebels into an iron-clad vessel of the most formidable kind. She had a heavy deck, with a casemate or covered iron-plated house in the centre, with sloping sides and ends, in which was her battery. She had a strong iron prow or stem, attached to her bow and carried under water, a torpedo charged with about fifty pounds of powder. This steam vessel was built by Laird, of the type so novel and yet already so universally known as Monitors, were guarding the Wassaw Sound, to prevent the egress of the *Atlanta*. These were the *Weehawken*, commanded by Captain John Rodgers, and the *Nahant*, commanded by Captain John Downes. Captain Rodgers was the senior and commanding officer. Each Monitor had one revolving turret with two smooth-bore Dahlgren guns, one 9-inch and one 11-inch gun, in each turret. The rebels knew that these Monitors were there, and knew their size and force, and the *Atlanta*, when fully ready, was sent down the Sound for the purpose of capturing or destroying them. It would seem, too, that they had little doubt of their success. The *Atlanta* was accompanied by several steamers having passengers on board, to be spectators of the conflict. Two of these steamers were armed, and belonged to the rebel navy, but, being wooden vessels, they kept at a safe distance and took no part in the action. On our side, the there was the wooden gunboat *Cimarenon* which was directed by Admiral Dupont to keep out of the action unless signalled specially.

It was at early dawn of the 17th of June, 1863, a little after 4 o'clock, that the rebel ram *Atlanta* was seen coming down the Sound. The Monitors at once began to prepare for action. The *Weehawken* lay higher up than the *Nahant*, she slipped her cable, and dropped down to the latter. Captain Downes thinking he might need it in the action, in case of injury to his motive power and rudder, also cast preparations for getting under way. To give them more time to get fully ready, Captain Rodgers steamed slowly down to the mouth of the harbor, and then, as the *Atlanta* came in sight, the *Weehawken* having the pilot. Captain Downes followed in the wake of the *Weehawken* as soon as he got his anchor. Thus they steamed slowly down to meet the enemy than the *Weehawken*. When fully ready, the *Weehawken* turned toward the enemy. Just as she turned, the *Atlanta* grazed her fire on the *Nahant*. Her shot did not take effect.

The *Weehawken* rounded and steamed towards the *Atlanta*, the *Nahant* following in her wake. It was then seen that the *Atlanta* was stationary and lying partly across the channel. When within between three hundred and four hundred yards of the enemy she slowed and fired her 9-inch gun. Drifting with the tide, and under slow way, when within about three hundred yards, she fired her 11-inch gun, nearly together as possible. Captain Downes acted on a different plan. He thought his fire would be most effected close aboard the enemy, and directly for the centre at full speed, reserving his fire until he should be at close quarters. Captain Downes was never from the first more than a thousand yards distant from the *Atlanta*. When at the 11th second discharge, was about the same distance from the *Atlanta* that the *Weehawken* was. Immediately after the discharge from the guns of the *Weehawken*, the *Atlanta* hauled down her colors and ran up a small white flag, in token of surrender. The *Weehawken* fired a gun, which sent a shot astern of the *Atlanta* and blue flag, which was the rebel's battle flag, and the *Weehawken* fired both her guns again. By this time the *Nahant* was within 100 yards and got ready to fire, but had discovered that she had surrendered.

Captain Downes ranged alongside, in natural disappointment, and ordered a boat manned and armed soon. Captain Rodgers had dropped their boats overboard to clear for action. The *Nahant*'s boats were nearest, and the steamed off to the *Atlanta*, and Captain Downes and her executive officer boarded the *Atlanta* and took possession of her. In the meantime, however, the commander of the *Weehawken* had ordered his own boat and went on board the *Weehawken* and had surrendered his sword to Captain Rodgers before the *Atlanta* was taken in charge by the *Nahant*.

After the surrender, we learned the effect of our shot partly from observation and partly by statements of the rebel officers on board. The shot fired from the 11-inch, 16-ton inch ball, cored, as it is termed, that is, with a hollow sphere in the centre, in this case of six inches, weighing four hundred pounds. It struck the side of the *Atlanta* forward, at a distance of between three and four hundred yards, struck the *Atlanta* upon the side of her casemate, knocking a hole in it, and penetrating the iron and wood backing, and the enclosed decks great quantities of wood and iron splinters, some of large size, were scattered among the gunners, penetrating on deck, insensible, many others. The rebel officers told our officers that as many as forty persons were knocked down and disabled by splinters from this shot. Followed by the effects of this shot, and that it demoralized the entire crew. The next discharge, at about two hundred yards distance, was from the 9-inch gun, a shell weighing 72 lbs., and an eleven inch solid shot, the latter weighing one hundred and sixty-eight pounds. One of these, it is thought the latter struck, striking the iron plating forward, and driving down the bars on the top and sides, wounding both pilots and one helmsman, and shattering the steering apparatus as well as the wooden mask. These men fell on the floor of the pilot house, and the rebel officers said prevented any one from getting up into it. Also, the other shot struck the edge of the overhung knuckle, where the casement fits to the deck, doing little damage. In the words of Captain Rodgers, "these shots took away the ability to fight, but not the ability to get away." One of the two guns fired at the last discharge struck a port stopper, breaking it in two, and driving the fragments into the port. In statement is made as to the effect of the fifth shot fired.

The testimony of officers of both Monitors that the gunboat *Cimarenon* was all the while within signal distance and acting under the orders of the senior officer, and consequently entitled to share in the distribution, as being "within signal distance of the vessel or vessels making the "prize." The only question as to her is whether she is to be counted in the distribution. The question is, that is, whether she is to be deemed one of the vessels "making the "capture," within the meaning of the statute, when we are comparing the force of the capters with that of the prize, for the purpose of determining whether the proceeds belong wholly to the capters or are to be divided between them and the Government. Upon grounds already asserted in his former decision in the case of the *Chesabre*, the Judge considers that the rebel vessel should include the *Cimarenon*, in determining the relative force of the capters and the prize. "In like manner," he says, "if any of the "officers of the rebel vessel were within signal distance "of the *Atlanta*, but kept aloof."

It now becomes necessary to compare the force of the *Atlanta* with that of our Monitors.

Besides the depositions, complete drawings of the *Atlanta* have been presented in the case. Rodgers's evidence, and a report from the Bureau of Construction. The *Atlanta*'s dimensions were as follows:—

Length of keel for tonnage; extreme beam, 40 feet 6 inches; depth of hold to tp of beam, 13 feet and 1 inch. These dimensions make her measurement tonnage 307 2-10

ters, or if, as the agent of the captors contends, we must include the thickness of the deck, 2 1-2 to 3 feet. She was built with two layers of iron, one horizontal and one vertical, each two inches thick, making four inches of plating. At the knuckle, where the casemate was fastened to the hull, her sides were six feet in thickness, of solid wood. Her deck was two feet one inch in thickness of plank, beside the two covering. Her casemate was a little over one hundred feet in length, fastened to the hull, in about the middle of the length of the vessel, and covered its entire width, leaving an open deck of about forty-five feet forward. This casemate had sloping sides and ends, at an angle of twenty-nine degrees with the horizontal. It was pierced for ports on each side, with heavy port-stoppers. The sides of the casemate were four inches of iron and thirty-six inches of solid wood. She mounted four 15-inch guns, in solid wrought iron of seven inch, throwing balls of one hundred and fifty pounds, and two rifled guns, throwing balls of one hundred pounds. The six inch guns worked in broadside, the 15 inch guns, one at the forward and one at the after end of the casemate, working in broadside, and pointing, the one bow and stern gun, so that three of her four guns could be used on either broadside. She had a powerful ram of solid wood, shod with iron bands, which projected from the stempole at the end of a jointed crane, capable of being raised in the air or lowered under water, carried about twenty feet beyond the bow, and charged with a heavy bursting powder, expected to explode on concussion. Her crew were one hundred and forty-three, all told.

The two Monitors were as nearly equal, indeed, as nearly identical as it is easy to suppose war vessels to be. They were each 172 feet in length between perpendiculars, armed and armored alike, with the usual low deck of the Monitors, but little above the water line, with one revolving turret. Their guns were of the same calibre, and in the same number, and as to the 15 inch, smooth bore DAHLGRENS, the former throwing shots of 440 pounds solid, and 400 pounds cored, and the latter 168 pounds solid. The *Weehawken* had eighty-four men, and the *Nahant* eighty-five men.

In comparing the forces of these novel engines of war, the old rule of naval science are applicable, as much as to the vessels extraordinary and experimental, but the ordnance scarcely less so. The first shot from the *Weehawken* is said to have been the first shot ever fired in actual battle in naval warfare. I entertain no serious doubt that the force of the two Monitors combined was superior to that of the *Atlanta* (I do not forget the *Merrimac*). I believe it to be aware that a different course on either or both sides might have prevented the fight. Had the *Atlanta* passed the line at the Monitors with her full force, instead of lying still to take and give fire, and her torpedo had exploded under one of them successfully, or, if she had struck both or either of them with the full force of her ram; or, if a better aimed or more fortunate shot had injured the turret or steering or active power of the Monitor; or, if the fire of the guns from the *Weehawken* had been less skillfully directed or less fortunate, or the *Weehawken* had reserved her fire to the last, and then fired at the *Atlanta* as she lay in the water, usually still at close quarters —under any or all these suppositions, the battle might have had a different issue on each side, might have been very different, if the final result had been the same. I am to consider the means the vessels possessed, and not the result made out of them.

I am satisfied that for offence and defence, the two Monitors with their batteries, acting together, at the same time and under one command, made the most powerful and superior force to the *Atlanta*. They were each of 844 tons, and the *Atlanta* of about 1,000 tons. They had, one, eighty-four and the other eighty-five men, while the *Atlanta* was of one and forty-three men. The effective power of large ordinance against iron-clads has not yet been fully tested by experience, and as the present state of knowledge stands, the last effect of the shot of the *Weehawken* must have much influence in forming our opinion. I am constrained to think that two 15-inch and two 11-inch guns, with solid shot, concentrated on two vessels, capable of taking separate positions, are superior for offence to four 6-inch guns, and three rifled BROOKE'S, in one vessel. And in case of a fight on the decks, by boarding or otherwise, we had the superiority of men. As to defence, the *Atlanta* could not injure seriously either the Monitors, and could be more easily hit; and the result showed that the walls of her sides and pilot-house, however strong, were not to be considered impregnable to the shot of a Monitor at that range. We do not know by experiment how well our bolts and barrels would have resisted her shot, but a construction which yields the shot is preferable, as calculated, as well as one which resists shot. Indeed, neither the one nor the other, in the present argument, nor the two commanders, in their depositions, appear to contend or to give an opinion that the *Atlanta* was equal or superior to the two Monitors.

This point being settled, the next question for decision was whether the *Weehawken* was not solely entitled to share in the prize money, as she was the only vessel that fired at the vessel, and to her the *Atlanta* surrendered. But it was the *Nahant* that the *Atlanta* fired at. The *Nahant* thus drew the fire of the enemy, and relieved the *Weehawken* from that for aiding her consort. It was known on board the *Atlanta* that the *Nahant*, apparently uninjured by the fire, was coming down upon her, and that her fire, if effective, would be within easy range. This would have been enough, in the opinion of the judge, to create a doubtful question of surrender, if a doubt remained. One shot from the *Nahant* considered by the commander of the *Atlanta*, in determining whether to surrender, or to run the risk of the consequences of a state of his crew; and the knowledge that a second Monitor of the same force with that from which they had already suffered so severely was within equal distance, must have contributed to that demoralization. The *Nahant* was therefore included with the *Weehawken* as one of the vessels making the capture, as was also, by a strict construction of the law in the case, the gunboat *Commerous*. Though she took no part in the engagement she was acting under orders from the senior officers, and was all the while within signal distance of the Monitors. The result is that half the net proceeds of the prize will be paid to the officers and crew of the United States, and that the vessels entitled to participate in the distribution are the *Weehawken*, *Nahant* and *Commerous*.

CONGRESS ON MILITARY AFFAIRS.

SENATE.

On Friday and Saturday the Senate was not in session. On Monday, the 8th, Mr. TRUMBULL, of Illinois, presented a memorial, asking for the establishment of a mint and depot at Cairo. It was referred to the Committee on Naval Affairs.

Mr. SUMNER presented an important joint resolution to provide for submitting to the several States an amendment to the Constitution of the United States. It reads as follows:

Be it resolved, &c., That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of the said Legislatures, shall be valid to all intents and purposes, as a part of the said Constitution, namely:

Article—. Everywhere within the limits of the United States, and of each State or Territory thereof, all persons are equal before the law, so that no person can hold another as a slave.

After some debate, the resolution was referred to the Judiciary Committee.

On motion of Mr. GRIMES a resolution was adopted instructing the Committee on Naval Affairs to inquire into the expediency of providing by law for granting honorable discharges to coal-heavers and firemen in the naval service, as are now granted to seamen, ordinary seamen, landsmen, and boys.

A message was received from the House of Representatives, announcing the passage by the House, of a joint resolution declaring the thanks of Congress to Major-General W. T. SHERMAN, in which the concurrence of the Senate was requested. The resolution was the next day referred to the Military Committee.

A message was received from the PRESIDENT transmitting the correspondence with the Rebel authorities relative to the exchange of prisoners.

Mr. JOHNSON introduced a bill transferring Acting-Assistant Paymasters in the Navy to the Regular Naval Service, on their undergoing the regular examination. Referred to the Committee on Naval Affairs.

Mr. SAULSBURY introduced a resolution, which was adopted, calling for a record of the proceedings of the court-martial in the city of New York for the trial of Assistant-Surgeon WESTON for refusing to order the hospital steward of soldier to be removed from the hospital in a cold storm of rain without permission of the Medical Director of the Department.

A debate ensued on the amendment of Mr. HENDERSON to the bill for the increase of the Navy. The object of the amendment provides for setting free all seamen mustered into the Army, together with their mothers, wives and children.

Mr. WILSON reported a bill, which was passed, for the examination of certain Army officers. It directs that every quartermaster and assistant quartermaster, and every commissary and assistant commissary of subsistence, and every paymaster and additional paymaster, shall as soon as practicable, after the passage of this act, undergo examination before a board to be composed of three officers of the corps to which he belongs, of recognized merit and fitness, which board shall be detailed by the commanding officer of the qualifications of all officers who may appear before them in pursuance of the act, and shall also make a full and true record of the examination of each officer.

On Wednesday, the 10th, Mr. BROWN (Mo.) submitted amendments to the bill offered by Mr. HENDERSON relative to which confirm the Emancipation Proclamation, abolish slavery, and subject colored men to enrollments and drafts, and when so enrolled to become citizens of Missouri. Mr. GRIMES' bill, proposing a scale of reduction of military salaries when officers are in command, not in the field, and when not in the field, was also reported adversely and recently from the Military Committee. Mr. WILSON (Mass.) called up the joint resolution for equalizing the pay of soldiers, and providing emolument of Mr. HOWARD, to strike out the section giving colored troops equal pay prior to the passage of the act, being under consideration. After a long debate, in which M. FESSENDEN (Me.) opposed the retrospective character of the bill, the Senate adjourned without taking action on the amendments.

HOUSE.

On Friday, the 5th, the House debated and passed the Confiscation Bill, and then adjourned over Saturday. On Monday, the 15th, Mr. COBB (Wis.) introduced a resolution, which was adopted, to request the President to tender to General W. T. SHERMAN, and the officers and men under his command, the thanks of Congress. Mr. STEVENS offered a bill to reëlmist Bull, which was not adopted, making all able-bodied persons of African descent, between the ages of 18 and 45, liable to draft. Mr. THAYER introduced a bill providing that chaplains shall not suffer diminution or loss of pay or allowance when absent on leave, sick, or held as prisoners of war, and that they shall be entitled to be admitted to pensions. Mr. WALLEY introduced the following resolution, which was agreed to:—

Resolved, That the Committee on Military Affairs be requested to inquire into the expediency of increasing the pay of the cadets at the Military Academy at West Point, and report by bill or otherwise.

The Conscription Bill was taken up, and numerous amendments were offered, among them one by Mr. RICE, providing that able seamen now in the Army may enlist in the Navy, and receive credit for the time of his military service, and not for less than one year. Mr. SCHENCK proposed to amend by striking out the clause that money which a seaman may have received on entering the the Army shall, on his being transferred to the Navy, be deducted from any bounty coming to him. Pending the question the House adjourned. Mr. MALLORY proposed to exempt regularly licensed pilots from the draft. This amendment was rejected.

On Tuesday, among other amendments offered to the Conscription Bill, was one by Mr. FERNANDO WOOD, to exempt from draft all who, from conscientious disbelief in the humanity, necessity, or eventual success of the war, are opposed to its further prosecution, until an effort has been made and failed, to bring about negotiation. This amendment was rejected by a large majority.

On Wednesday, the 10th, the debate on the Enrollment Bill was continued.

To those asking information, upon the subject, we would say that General Orders No. 90, dated October 23d, 1863, established a plan for paying the families of officers or enlisted men, prisoners in the hands of the country, by which payment will be made to persons presenting a written authority from a prisoner to draw the pay; or without such authority, to his wife; or the guardian of his minor children; or his widowed mother—in the order named. Application for such pay must be made to the acting Paymaster of the district in which the regiment of the prisoner is serving, and must be accompanied by the certificate of a Judge of a Court of the United States, a Member of Congress of the United States, or of some other party, under the seal of the State, that the wife, &c., named, is the applicant is a resident, setting forth that said applicant is the wife of the prisoner, the guardian of his children, or his widowed mother, or the acting guardian of the last two nationalities toward him, that there is no one in existence who is more entitled, according to the above classification. Payment will be made to the party whose claim is duly certified on their receipt made out in the manner that would be required from a prisoner himself. In case no one is entitled being in all cases retained by the United States. The officer making the payment will see that it is entered on the last payment roll received for the payment of the prisoner's company; or will report it, if those rolls are not in his possession, to the senior Paymaster of the district, who will either attend to the entry, or give credit to the Paymaster General if the rolls have been forwarded to his office.

By order of the War Department, Major-General GILLMORE is authorized to enlist and organize all the colored troops that can be recruited within his Department; to appoint a board of three officers, one of whom shall be an officer the regiments and companies so raised by him, and to make the examinations and decide upon the persons passed by said board; to appoint a mustering officer, who shall muster all the officers and troops mustered in at such times as he may deem proper; that the troops shall be organized as infantry, cavalry and artillery, and in such proportion as General GILLMORE may deem most beneficial for the service; their pay and allowances shall be the same as those of the white troops and the rules and regulations of the service respecting colored troops shall be observed, so far as they are not to exceed the sum of $10, payable out of the fund for contingent expenditures. He is also authorized to procure recruits from Key West, Tortugas, Pensacola and Mobile, if in Alabama, not, however, so as to interfere with the engineer service at Key West. The colored troops to be called United States troops, and to be numbered by regiments, in consecutive order, as organized.

A CIRCULAR, issued by the Assistant Provost-Marshal-General of the Western Division of the State of New York, requires conscripts called for service in the draft to return to duty within the time fixed by their respective leaves. The measures taken for the arrest of deserters will certainly lead to their capture. To all who desire to avail this caution. In addition to the diligence attending the execution, the following reasons are urged upon soldiers to return at the expiration of their furloughs. The following reasons are urged for soldier to return promptly at the time fixed. 2d. Duty to the country requires that those men be in the field again at the expiration of their furloughs. 3d. Duty to their fellow-soldiers requires it, as all could not be spared at once, and those who remain would have to bear the extra duty now at home, in order that they too may enjoy the same pleasure, before the campaign opens in the spring.

By order of the War Department, the following is established as the ration for issue by the Subsistence Department to troops in the field, and to all colored troops, commonly called "Contrabands" when they are not employed at labor by the Government, and who may have no means of subsisting themselves: Per day, twelve ounces of pork or one pound of fresh beef; one pound of corn meal five times a week; and one pound of flour or soft bread, or twelve ounces of hard bread the other two days of the week; one hundred rations for pounds of beans, peas, or hominy; eight pounds of rice or hominy; two pounds of tallow or substance of adamantine or star candles; two pounds of soap; two pounds of salt; and fifteen pounds of potatoes, when practicable. To soldiers serving in the extreme parts, half rations will be issued; and to women and children, roasted rye coffee at the rate of ten pounds, or tea at the rate of fifteen ounces, to every one hundred rations.

The original building of CORT'S Pistol Factory at Hartford has fire on Wednesday morning, and it was destroyed, with all the machinery, and a large amount of other property. The building was 500 by 60 feet, with a wing 100 by 30 feet. There is a large insurance. Only one was also destroyed. The new building in which the Mint is now located is fireproof. Seventeen hundred persons are employed in all the shops, half of whom were thrown out of employment. The loss is over a million of dollars. The factory employed for 1863 for the New York and Enfland office. It is decided by the owners of the capital of the Colt Patent Arms Company to rebuild the factory at once as possible.

THE whole number of volunteers thus far sent to the war from Minnesota, is 12,574, and the number yet to be raised is 2,776. This is exclusive of all men raised for the old regiments who have veteranized, except forty-three men. Maine has already furnished 40,203 troops for the war. Connecticut has about 1,926 troops to be supplied before the 1st of March.

MAJ.-GEN. Banks has lately issued an order forbidding the practice of establishing stores and vending goods outside the guard lines of the commands to which they belong, pursued to some extent by sutlers within his Department, as the same is unauthorized by existing regulations or orders.

THE chief of the military detective force of the district of Washington, reports that during the month of January, sixty-two commissioned officers were arrested for various offences, and one hundred and seventy enlisted men.

OUR STEAM NAVY.

LETTER FROM DONALD McKAY.

THE following letter, addressed by Mr. DONALD McKAY to Hon. Mr. GUTHRIE, of the SENATE, was read by the latter to the course of a recent speech :—

DEAR SIR:—My attention has been called to the controversies now before the public in which our naval machinery has been severely criticised, and our naval steamers set forth as monstrous conceptions and ruinous failures. I have watched with deep interest the course pursued by the Navy Department, both regarding the models of hull, and the style and form of the steam machinery. I have also availed of my own on the subject of the proper requisites for a steam vessel-of-war, that I know but it is a difficult question to solve. Also, I know the fact that the present war has called for a class of steamers hitherto untried, and unknown to the great naval powers of Europe; that the requirements of the blockade and offensive operations on the southern coast, have brought forth a class of naval steamers admirably fitted for such work; but, in my opinion, ill adapted to the work for fast cruising ships. But I am surprised to see that there are people unpatriotic and selfish enough to use every effort, personal and through the press, to prejudice and poison the public mind with the belief that the recently constructed naval steamers are failures, and wholly unfitted for the work intended for them to do.

I have also taken pains to inquire into the merits of the steam machinery used in the naval service, and my conclusions are without prejudice, and entirely uninfluenced by any party or parties. I have fitted up many steamers, engaged in civil life—also with our naval engineers; and I here remark that, from observation and experience with the Navy engineers, I believe them as a body to be an honorary to their country; and that they combine theory with practice, and are doing, and have done, much to elevate the standing of mechanical engineering in our country. They are, as a body, superior to the English engineers, but I think not quite equal to the French; and I also hold a very high position in our service as the corps of engineers do in the French navy. We must educate these young men as we do our midshipmen—put them in the navy yards and on board ships, and send them to sea on practice-ships; and, after this experience, then thoroughly examine them, and if they pass, make them hold assistant engineer's rank, and change no organization of the imperial corps of French naval engineers to be complete. They rank first on the list of staff officers of the navy, are educated in the best scientific schools of Paris, and the highest in rank—inspector-general of naval engineers, corresponding with our chief of bureau. They receive, with a general of division (major-general); first-class engineers with captains of line-of-battle ships; and so down to engineer ensign, corresponding to our midshipmen: and in our honorable Secretary's report, that it is the intention of the Navy Department to educate this important class of officers at Annapolis, I most agree.

I find, from reliable sources, that a Mr. EDWARD N. DICKERSON, of New York, has been employed at much cost in the attacks on our steam navy, and has expended much time and money in spreading his newspaper articles and pamphlets all over the country; also that he has been in the employ of an, having ample means, and interested in an important pecuniary steam engine, known as the "valve gearing." From evidence derived from naval engineers now engaged in civil life, I do not find that he has any reputation as an engineer, and he is considered as a sort of enthusiast, or perhaps monomaniac, on the subject of steam machinery and vessels; his peculiar "cut-off," also that his engineering operations are far have been complete failures.

On the other hand, the representative of the Steam Bureau, Chief Engineer ISHERWOOD, although not a practical man in the strict sense of the word—that is, not having served his time—[and I do not think it necessary that a man must file and hammer iron for seven years to be a good engineer, for there are so many books now used in acquiring knowledge that it would be impossible to learn them all], but a man of extensive engineering experience—understanding the working of metals; has had long practice at sea (and, while in foreign ports, as the English well know, improved his time in thoroughly studying the machinery of the steamers of that), having a good education, is a mathematician, and a sound, clear-headed thinker. This is the opinion of engineers and manufacturers generally; also of the engineers of the navy corps. I know personally that his books have been read with interest by the English, and that English engineers have a very high opinion of his capacity as a mechanical engineer, and believe his experiments were faithfully made (and not frauds, as Mr. DICKERSON had been led to believe), and have made any American engineer proud to have heard the warm approval they gave of his systematic and thorough way of experimenting; and confidently assert that the world will here add that the experiments made with engines and boilers by the Navy Department exceed anything of the kind ever tried in Europe for they have been on a scale and, if any experiments can give us light on such subjects, those that have been made are now ready for the country at large, as well as the Navy. I have very little personal acquaintance with Mr. ISHERWOOD, and know him only from others, and by his deeds, and my opinion of him has not had fair play. He seems to be a hard-working man; while these sneaking hirs, so far as I know, are idlers, and have not much else to do. Understanding that there was to be an investigation regarding Mr. ISHERWOOD's machinery and his official course as an engineer, I commenced the following table of British war steamers, with their engines of the measured mile; and I know full well what the decision of a measured mile is, and I know how to make it show, and know all the jockeying) the steamer be perfectly smooth and no wind, the ship trimmed and made ready, boilers and fires clean, furnaces full of burning coal, and steam kept bottled up until they near the first "post;" then the valves are opened wide, and the mile is run. Understanding that there was our own naval ofiicers are taken from the ship's logs in a seaway, with sea-sick firemen, and in some cases burning inferior coal. I know that there are no engines in the British or French navies of the size of the *Sassacus* class, that, under the same circumstances, are so efficient in point of speed, economy, and destructive powers. I think they might call us beaten, but they will not compare with the *Merrimac* and *Dunlop* frigates—a class of vessels used in the British navy, which carry powerful batteries, have great steam power, and are unseaworthy. For instance, the *Warrior* frigate, tonnage 5,726, draught of water 27 feet 7 inches, horse-power 4,000 the length of the stoke hold, as before stated, in the steamer is over 68 feet, having 32 furnaces; speed at measured mile, Stoke's Bay, 13.29 knots. The *Monarch* class of frigates are their equals in armament, but not in speed.

Our iron-clad gunboats are constructed of anything of the kind could be desired, and with a light draught of water of eight feet of water maintain a speed hardly, if at all, equaled by any of the English or French steamers, and carry a very heavy battery. Also the screw gunboats are vastly superior to the English and French gunboats, both in speed, battery, and seaworthiness. For the blockade and coast, their very light draught of water makes them a valuable arm of defence.

Regarding the fast sloops of the *Sacramento* class, they combine high speed with powerful batteries, although their exceedingly light draught of water prevents their being put into heavy seas they will roll comfortably, and are not their equals in the above good points in the British or any other navy. And these sloops have been pronounced by the public as complete failures, having very slow speeds.

I will present a table of the fastest screw corvettes and sloops in the British navy, and those now building in Europe. This table is compiled from a list of forty-seven corvettes and sloops, and is the speed made at the measured mile, and not their full speed at sea, where the conditions are changed and speed much less :—

	Tons.	Speed per hour.
Racoon	1,707	12 knots.
Pearl	1,409	11.31
Pylades	1,313	12
Shannon	1,842	12.5

As I mention above, these are the fastest of a class that correspond with the *Sacramento* and other of our new sloops, and have an average draught of from twenty to twenty-two feet of water. These would be entirely unsuitable for operations on our coast, owing to their great draught of water. The fastest corvette, with a large propeller can be used, will be deeply immersed, and can be made more efficient than with a lighter draught. This is the opinion of engineers, and has been confirmed by experience.

The following table gives the speed of our new steam sloops of about 1,367 tons, and with very light average draught of about fourteen feet of water :—

	Tons.	Knots per hour.
Sacramento	1,378	12
Shamokin	1,387	12
Shenandoah	1,387	12.75
Tuscarora	1,387	12

The above speeds were made at sea, and, as their officers say, "under the usual condition of cruising ships." We can all see that at the measured mile trial (after the manner of our English friends) that nearly the maximum speeds) a much higher rate could be obtained.

Their machinery is much like the well-tried English plant, having the same "surface condenser," and not the "fresh-water condensers," and much higher steam can be carried by using fresh water in the boilers; also many other important advantages are gained by the use of "surface condenser." And it seems that the "SEWALL condenser" is now in use on several steamers, is all that can be desired; at least the best in use.

Mr. ISHERWOOD advocates the use of a smaller cylinder and higher steam, and the best modern practical machinery, made to expand the steam to its fullest extent, believing the best does not always mean best, and that it is safer and just as economical in the end to employ steam of a lower and reliable valve machinery. The success of the English machinery is attributed to their superior workmanship and strength. After the painful experiences with the complicated machinery of the *Penascola* and *Richmond*, it does seem that Mr. ISHERWOOD is right in his views. He is no "theorist," and does not want everything we have to do with to be fast. Our naval operations are fast, yet there must go faster, even if they break down in so doing. This is the opinion of the navy in this matter, and the performances of the *Alabama* and her consorts have proved it in all other parts of the world. It is one thing to see them at sea, then to overtake them, afterwards to capture them. I do not think any of these ships were steam fighters, and believe they will yet be captured by our new sloops.

I hope our Navy will be efficient, as it always has done in duty, and should the time arrive for the land shall be at the helm, but do not see that others can do any better than our present chiefs of bureaus have done; that our ships and machinery are fairly up to the day, and as much as competent because he does not agree in all points with those controlling him.

The *Nyack* gunboat came to the Navy Yard at Boston from Portsmouth, and her officers said "the made eleven knots under steam, and that was the best she could do on blockade. The *Pequot*, a gunboat of the same class, has just returned from a trial trip, which, from all that I can learn, has not been a success. Some say that she gave up the speed of the *Nyack*. Also, the *Sassa*, of the same class, now fitting at the Navy Yard, has, like the *Pequot*, new and peculiar machinery, in both cases, I am told, on the suggestion this to show that private establishments are engineering for Navy, and not the Navy Department.

In writing the above, I have been influenced by patriotic motives. I never have, neither do I expect to receive any favors from Mr. WELLES or the Navy Department. My birth he has been abused by men not his equals, and who cannot show equal success under equal circumstances. I have been a close observer of motive steam machinery, both at home and abroad, and look at this matter from a practical point of view, and desire to see fair play, and am confirmed in the above opinions after hearing the views of both sides.

I did intend to make my views known through the public press, but have concluded to adopt this method, of writing to influential persons, believing it to be more effectual.

The English are most happy to catch at the word failure when used in connection with our naval vessels, and only too glad when our officials are abused. I know the many experiments with them, and the failures of such wholesale abuse, and untruthful assertions concerning officials of business and others in authority in the Navy Department, should be punished and made an example of. Admitting the Department have made some mistakes, for what engineer, shipbuilder, or manufacturer has not? I say the whole they have turned out to the finest naval steamers in their class in the world; and it is with feelings of intense pride that I have seen our navy, in the face of assuming disproper position as a first-class Naval Power. I have repeatedly stated that we can only be respected abroad by having a powerful Army and Navy at home, and believe that were this fact before the public, the neutrality laws would have been better understood by England and France.

We are now in a position to build in our navy-yards a class of steam cruising ships that in my opinion, after a careful examination, will excel in speed and sea-going qualities any steamer ever produced by any nation. I would respectfully refer the above statement to be correct, and believe (having built over one hundred and fifty ships) that I know what I have constructed the fastest sailing ships ever built, and am prepared to say that the large cruising ships now building in our docks can lay to windward better, and be as tight at once to lay the heels of fifty such ships, from one thing and another, that have come to my notice. The machinery known as "ISHERWOOD's" ought to be used in these ships.

Excuse this long epistle. It is intended to do good, and if it will add any strength to the Navy Department, and to my earnest wishes will be gratified.

I have also written somewhat very unfriendly to its Navy Department, and in a professional point of view do not agree with all their plans, but at the same time do hope what nothing will be done to embarrass officials that have done and are doing much to make us respected abroad.

With great respect, your obedient servant,

DONALD McKAY.

HON. J. W. GUTHRIE, Member Senate Naval Committee, Washington, District of Columbia.

THE ARMY OF THE POTOMAC.

WE extract from GEN. MCCLELLAN's Report the following paragraphs from his concluding remarks:

This report would be incomplete without a brief allusion to some points connected with which I have been firmly impressed upon me by the events which have occurred.

To my mind the most glaring defect in our armies is the absence of system in the organization and promotion of general and other officers, and the want of means for the theoretical instruction of the mass of officers. The expansion of the army was so great as to cause the best practical experience of the existing war that it was perhaps impossible, in the great scarcity of instructed officers, to have adopted any other course than that which was pursued. The time has now arrived when measures may be initiated to remedy existing defects, and thereby avoid their recurrence. I think that the army should be regarded as a permanent one; that is to say, its officers should be administered precisely as if it was belonging to a power which made it their duty to find those rules for promotion, &c., which have been found necessary in the best foreign armies to secure homogeneousness, precision, and efficiency. The position of officers of their grade, and fitness to exercise those of a superior grade, will furnish a sufficient stimulus to their patriotism, and can alone secure it for them. Measures should be adopted to secure the theoretical instruction of staff-officers at best, who should, as a rule, be graduates of a military academy, having a military education, or who have seen actual service in the field. The number of cadets at the Military Academy should be at least doubled, and the education extended permitted by the capacity of the institution. The regular army should be increased and maintained complete in numbers and efficiency.

A well-organized system of recruiting and of depôts for instruction should be established, to supply, in the wants of the regiments full, and supply promptly the losses arising from battle or disease. This is especially necessary for infantry and artillery arms of the service. From the loss in the beginning of the war, have rendered great services, and which have never been fully appreciated by any but themselves. They have large bodies of well-instructed recruits.

In the arrangement and conduct of campaigns the direction should be left to professional soldiers. A statesman may, perhaps, be more competent than a soldier to determine the political objects of a campaign or campaigns, but those once decided upon, everything should be left to the responsible military head, without interference from civilians. I am fully convinced that the present system of the meddling of individual members of committees of Congress with subjects which, from lack of experience, they are ill qualified to understand, is productive of the greatest evil, and is apt to view through the distorted medium of partisan or personal interest. It is also in no good, and is certain to produce incalculable mischief.

I cannot omit the expression of my thanks to the Purveyor and Chief Commissary for the zeal with which they performed regular, and his desire to sustain the military plan which my judgment led me to urge for adoption and execution. I am also under the greatest obligations to some of those plans, and to give that support to others which was necessary in their success, to any want of confidence in me, and it only remains for me to record that other counsels came between the constitutional commander-in-chief and the general whom he had placed at the head of his armies —counsels which resulted in the failure of great campaigns.

If the Nation possesses no generals in service competent to direct its military affairs without the aid or suppression of politicians, the sooner it finds them and places them in position the better will it be for its fortunes.

In the GREEK REPUBLIC appeal to a plain narrative of such facts as are necessary for the purposes of history. Where it was possible, I have preferred to give these facts

as the language of dispatches, written at the time of their occurrence, and before the receipt of the official reports of the subordinate commanders, hereto annexed, proves what time and space would fail me to mention here: these individual instances of conspicuous bravery and skill by which every battle was marked. To them I must especially refer, for without them the narrative would be incomplete, and justice fail to be done. But I cannot omit to refer to my corps commanders, and to other general officers under their command, ample recognition of their cordial cooperation and their devoted services as those reports abundantly avouch.

I have not sought to defend the army which I had the honor to command, nor myself, against the hostile criticisms once rife. It has seemed to me that history would be required from me a plain and truthful narrative to enable those whose right it is to form a correct judgment on the important events of which this report is, in fact, the history of the army of the Potomac.

During the period occupied in the organization of that army, it was called to face no adversary more formidable than a vicious enemy, while the fortifications of the capital were in progress; and under the discipline which it there received it acquired a confidence in itself, and in the power of that experience which is necessary to ensure its active operations, and which enabled it afterwards to obtain those victories which contributed to bring to the most heroic men. Frequent skirmishes occurred along the lines, conducted with great gallantry, which trained our troops to habits of war.

The army grew into shape but slowly; and the delays which attended on the obtaining of arms, continuing late into the winter of 1861-2, were the cause of the first disasters that to the people of the country. Even at the time of the organization of the Peninsula campaign, and when the most exigent requests without stint; nor were the utmost exertions on the part of the military authorities adequate to overcome the difficulties encountered.

When, at length, the army was in condition to take the field, the Peninsula campaign was planned, and entered upon with confidence by the country. The history of that campaign been followed up as it was designed, I cannot doubt that it would have resulted in a glorious triumph to our arms, and the speedy capture of the city and power of the government in Virginia and North Carolina, if not throughout the revolting States. It was, however, otherwise ordained, and, instead of reporting a victorious campaign, it has been my duty to relate the heroism of a reduced army, sent upon an expedition which was abandoned when it was in its one and originate another and new plan of campaign, which might and would have been successful if supported with approximate to its base, but which failed from the want of the repeated failure of promised support, at the most critical, and, as it proved, the most fatal moments. That heroism surpasses all history description. Its illustration must be left for the pen of the historian in times of calm reflection, when the Nation shall be looking back to the past from the midst of peaceful days.

For me, now, it is sufficient to say that my comrades were sisters on my right and left, and that never was there but little more than a single corps accomplished the object of the fighting, and, by securing to the army its transit to the James, left to the enemy a ruinous and barren victory.

GUN-COTTON

MAJOR-GENERAL SABINE, in his opening address before the Royal Society of England, at its last anniversary meeting, made the following remarks in regard to gun-cotton:

The application of gun-cotton to warlike purposes and engineering operations, and the recent improvements in its manufacture, have been the subject of a report prepared by a Joint Committee of the Chemical and Mechanical Sections of the British Association, consisting chiefly of Fellows of the Royal Society. The report was presented to the meeting at Belfast in September last, and is now in the press. The Committee had the advantage of personal communication with Gun-cotton Works at Stowmarket in Suffolk, Faversham in Kent, and Hounslow in Middlesex, and with the very liberal permission of the Emperor of Austria, Leopold Austrian Colonel Englehart, of the Austrian Artillery, kindly explaining his system; and we have in the Report of the Committee, the information which has been obtained from the Austrian head, of the results of his experience in the course of trials extending over many years, together with additional investigations by the Committee themselves at Hounslow.

The advantages which are claimed for gun-cotton over gunpowder for ordinance purposes and mining operations are so many and so great, that the Committee regard it as a brilliant investigation. Such an inquiry, however, in its complete sense, is both beyond and beneath the scope and the powers of a purely scientific body; and the British Association have done well (whilst re-appointing the Committee to complete certain experiments which they have not had time to finish, of cleaning up some scientific points which are still more or less obscure) in pressing on the attention of her Majesty's Government the expediency of appointing a body of competent persons a full and searching inquiry into the possible applications of gun-cotton in the public service.

The advantages, briefly stated, are the freedom from the loading of the gun, are points of great moment in promoting the rapidity of fire, and the safety of the men employed in casemates or in the between decks of ships of war; to those we must add the innocuous character of the products of combustion in comparison with those of gunpowder, and the far inferior heat imparted to the gun itself by repeated and rapid discharges. With equal projectile effects, the weight of the charge of gun-cotton is but one-third of that of gunpowder; the recoil is stated to be reduced in the proportion of 2 to 3, and the length of the gun itself to admit of a diminution of nearly one-third. These conclusions are based on the evidence of long and apparently very carefully conducted series of experiment in the Imperial Factory in the neighborhood of Vienna. The results appear to be especially deserving the attention of those who are engaged in the important question of facilitating the employment of guns of large calibre and of great projectile force in the broadsides of our line-of-battle ships, and in regarding, as far as may be practicable, the dimensions of the ports.

In the varied applications of explosive force in military or civil engineering, the details of many experiments which bear on his branch of the inquiry are stated in the Report to the Committee, and appear to be highly worthy of consideration and of further experiment.

It cannot be said that the advantages now claimed for gun-cotton are altogether a novel and unexpected discovery in this country. When the material was first introduced by Schonbein in 1846, its distinctive qualities in comparison with gunpowder were specified, although at that period they were far less well ascertained by experiment than they are at present. To the comparison of its powers as then known there was, however, a fatal drawback in its liability to spontaneous combustion. The elaborate experiments of General Von Lenk, which led to this liability was due to imperfection in its preparation, and cause altogether when suitable processe are adopted in its manufacture. Gun-cotton can retain a sufficient quantity of compound; and certain processes for the removal of all extraneous matter and of every trace of acid are found practicable. But when thus prepared it appears to be no longer liable to spontaneous combustion, it can be transported from place to place with perfect safety, and may be stored for any length of time without danger of deterioration. It is not impaired by damp—and may be submerged without injury, its original qualities being restored by drying, and being stored in the open air and at ordinary temperatures.

A scarcely less important step towards the utilization of gun-cotton and its safety with which it may be employed in gunnery is the power of modifying and regulating its explosive energy at pleasure, by means of variations in the mechanical structure of the cartridge, and in the relative size of the chamber in which it is fired.

The experiments of the Austrian Artillery Commission, as well as those for blasting and mining, were conducted on a very large scale; with small arms the trials appear to have been comparatively few.

There can be no hesitation in assenting to and accepting the concluding sentence of the Committee's report. "The subject has neither chemically nor mechanically received at that thorough investigation that it deserves. There remain many points of interest to be cleared up, and important data to be obtained. The phenomena attending the explosion of both gun-cotton and gunpowder have to be investigated, both as to the products generated in the act of explosion and the nature of the compounds which result from them, under circumstances strictly analogous to those which occur in artillery practice."

ARMY AND NAVY PERSONAL.

MAJOR-General Keyes was in Boston on the 1st.

BRIGADIER-General Shackelford, who captured Morgan, has resigned.

BRIGADIER-General Krump and staff arrived in Louisville on the 4th.

MAJOR-General John A. McClernand was at St. Louis on the 3d.

MAJOR-General Burnside has been the recipient of a complimentary dinner at Boston.

BRIGADIER-General McNeil has been relieved at Fort Smith, Arkansas, by Brigadier-General Thayer.

MAJOR-General Fremont will not accept the foreign appointment which has been tendered him.

MAJOR-General Grant has returned to Nashville. While at Louisville, on the 3d, he was seconded by the band of 33d Massachusetts regiment.

MAJOR-General Stoneman and staff, and Brigadier-General Chetlain left Louisville on the 3d for Nashville, from which place they were to proceed to Memphis.

ADJUTANT-General L. Thomas and Major-General Schofield arrived in Nashville on the 2d, and left on the 3d, for the front.

MAJOR-General Caldwell, lately of the First Ohio heavy artillery, has been placed under arrest by order of Major Heintzelman, commanding the department.

MAJOR-General Granger has returned to Nashern, throwing up his leave of absence on account of the critical state of affairs in his command.

MAJOR-General Rosecrans arrived in Louisville on the 2d. He came for the purpose of giving his testimony before the McCook and Critchenden Court of Inquiry.

MAJOR-General Meade, who has been ill in Philadelphia, is much improved in health, and will soon return to the field.

AT a reception of re-united veterans in St. Louis, on Soldier's Day, last night, Generals McNeil, Fish, and others made speeches.

MAJOR-General Howard, while at his home in Augusta, Maine, on Monday evening, has received a splendid ovation from the Maine Legislature.

SURGEON-General Hammond has so far recovered from the effects of his fall at Nashville as to be able to walk freely.

CAPTAIN Francis M. Cooley has recently been appointed Captain of the Eleventh infantry, regular army, stationed at Alexandria, Va.

BRIGADIER-General T. J. Wood, of the Army of the Cumberland, was at Louisville on the 4th, and gave his testimony before the McCook and Critchenden Court of Inquiry.

BRIGADIER-General Stevenson arrived at Cairo on the 5th from the front. Brigadier-General Brayman arrived on the same day *en route* for the South.

MAJOR-General C. C. Washburne has been on a visit to his relatives in New England. The General is the youngest of the three brothers who were members of the 34th and 35th Congress.

COLONEL Gail, who had been in command of the Albany,

N. Y., barracks, was lately presented with an elegant sword, sash, and belt, a gold-mounted fancy navy revolver, and field glass, as a token of respect, by the men under his command.

MAJOR-General Blunt has left Washington for Major-General Curtis' Department. He is to have command of the district of the Indian Territory, with his headquarters at Fort Smith.

COLONEL Kryzanowski, of the Fifty-eighth regiment N. Y. S. V., but lately in command of the Second brigade, Third division, Eleventh Army Corps, was lately presented with a handsome sword, by the officers of the brigade.

MAJOR-General Pleasonton was in New York last week. He has reported for duty, though still suffering from the effects of being frozen while on the late raid in the South-western Virginia.

LIEUTENANT-Colonel William P. Brinton, of the 18th Pennsylvania Cavalry, has been presented with a sabre, sash, and belt by the officers of his old regiment, the 23d Pennsylvania Infantry.

BRIGADIER-General Hinks has received intimation from General Butler that, at the request of the latter, he will be ordered by the Secretary of War to report for duty at New Iorn.

THE remains of Brigadier-General Samuel Zook, who was killed at Gettysburgh, have been removed to Mount Moriah cemetery at Montgomery, Camden, Philadelphia. The father of the fallen hero, Major Zook, is seriously ill at his residence in Camden, Delaware.

COLONEL Clarence Buel, of the 109th New York regiment, has resigned, the state of his health and other circumstances of a personal character, inducing this determination. Colonel Clarence Buel was a captain in the Harris Light Cavalry, and later colonel of the 169th regiment.

MAJOR-General Hancock visited the capitol at Albany, New York, on the 3d, and was in private consultation with the recruiting of the New York State regiments belonging to the Army of the Potomac. The Governor and Legislature passed resolutions complimentary to the General, and invited him to visit their chambers.

A NEW Orleans letter says:—"The social world has of late been dying about in a whirlwind of cuirees, balls, and kindred festivities. The entertainments of General Banks and Colonel Kilby Smith, the latter assisted with the fair Miss Atocha, of Washington, D. C., to Captain Franklin, U. S. N., (brother to the Major-General of that name), have created quite a sensation.

MAJOR-General McDowell writes a letter to the press, denying an absurd and malicious charge that he, together with General Banks, belonged to the secret political order, known as the "Golden Circle," where members were instructed and sworn to support "the Constitution as it is and the Union as it was," and did not endorse or support the draft, and to discourage all efforts to raise men for the army.

THE Beaufort, S. C., *Free South* attempts to cast a slur upon a brave officer by complaining that Lieutenant Guy V. Henry, of the Regular Army, has been appointed to the command of the 40th Massachusetts regiment, and saying that he is "not a native of the State and a filibuster at that." On the contrary, we would commend the sagacity of the appointment. Colonel Henry's name is a tower of strength, but a true and loyal man, who refused to desert his flag in times treachery, and has won his eagle by gallant service.

THE military commission in the Department of the Cumberland has been re-organized by special orders from headquarters, and now consists of the following officers:—Colonel John E. Bloomfield, 24th Ill. Inf.; Lieutenant-Colonel W. L. Stoughton, 11th Mich. Inf.; Lieutenant-Colonel James I. Davidson, 73d Ill. Inf.; Captain Jasper Partridge, 64th Ill. Inf.; Captain Thomas Hamer, 24th Ill. Inf.; Captain Thomas Lewis, 59th Ohio Inf.; Second Lieutenant H. C. Hudsman, 8th Kan., Judge Advocate.

A Cincinnati correspondent of the Cincinnati Gazette gives particulars of the capture of Brigadier-General Scammon and staff and the burning of the steamer *Zeo* on the Kanawha River. We have already given the report of the affair. It appears that the steamer was lying at Winfield, on the west side of the river, when thirty-five guerrillas appeared at night on the opposite bank, thirteen of whom crossed in a skiff and took possession of the boat, capturing General Scammon and forty soldiers. The officers, all of whom escaped, were quickly paroled, and afterward burned the boat. All on board were paroled except General Scammon and three other officers. The prisoners were mounted and sent off into the interior.

IN giving permission to the proprietors of the hotel at Hilton Head to enlarge their establishment, Major-General GILLMORE has fixed the rates of accommodation. Officers' board will be one dollar per day, eleven dollars per week, and forty dollars per month; while in lieu of military fare the keepers are obliged to furnish a good table and charge a fifty cent dollar per day. The hotel is placed under the supervision of a board of officers, consisting of the commanding officer of the post at Hilton Head, the Chief Commissary and Inspector-General of the Department. Any of these officers may visit and inspect the hotel at any time. The commissary will visit and inspect all parts of the hotel at least once in two weeks, and see that the food is good and well cooked, that all parts of the house are kept clean, and that the rooms and bedding are kept in a condition suitable for officers to sleep in. By the same order the rates of charges on all Government transports in the department is fixed at one dollar a day, and fifty cents a meal for officers, and half these rates for enlisted men.

THE Adjutant-General of Maine has furnished the Legislature with the number of men mustered into the United States service from the several cities and towns in that State under the several calls, from which we learn that Maine has furnished to the Army 60,149 men (and at least 10,000 more than the Navy) 744 of them under call of April 15, 1861, for three months, 16,668 for two and three years, under call of May 4, 1861, 14,000 under call of May 25, 1862, for three years, 7,038 under call of August 4, 1862 for 9 months; 2,344 by draft, and 5,765 under the call of October. This does not include re-enlistments now going on in the field.

NOTICES TO CORRESPONDENTS.

The Editor of this JOURNAL will always be glad to receive from officers in the two services, scientific and personal communications of a character suited to its columns. It is necessary that the name of the writer should, in all cases, accompany his communication, not for publication, but as a guarantee of good faith.

Officers are especially requested to give an early notification of all personal matters of general interest; of the movements of vessels; of casualties among officers; and military and naval events.

The Editor will, at all times, be pleased to respond, in these columns, to enquiries in regard to internal and other matters.

From gentlemen in the medical service we shall be glad to receive communications on military hygiene, practical surgery, and reports of notable operations and novel forms of treatment.

The subscription price of THE ARMY AND NAVY JOURNAL is FIVE DOLLARS a year, or THREE DOLLARS for six months, invariably in advance. Remittances may be made by United States funds, or Quartermaster's, Paymaster's or other drafts, which should be made payable to the order of the Proprietor, W. C. Conner.

Subscribers who fail to receive their paper promptly, will please give immediate notice of the fact.

Subscribers will please state the address of their paper is to be changed, should be carefully to give their previous address.

The Editor does not hold himself responsible for fraudulent expectations of agents, in communications addressed to the Journal.

The postage on the JOURNAL is twenty cents a year, payable quarterly in advance, at the office where received.

All communications should be addressed to the ARMY AND NAVY JOURNAL, New York.

PUBLICATION OFFICE 192 BROADWAY, CORNER OF JOHN STREET.

U. S. ARMY AND NAVY JOURNAL.

NEW YORK, SATURDAY, FEBRUARY 13, 1864.

THE REBEL MILITARY BILLS.

IN our last issue, taking as a basis figures furnished to the Rebel Congress by Mr. SEDDON, the Secretary of War, we argued that the substantial military strength of the Confederacy was virtually exhausted, and that the conscription of all who were represented in the ranks by substitutes could not add more than 25,000 men to Mr. DAVIS' armies. Remarkable as this conclusion appeared, its accuracy has received unexpected verification in recent proceedings of the Confederate Congress. The Senate, now in session at Richmond, has just removed the injunction of secrecy from the military bill with which it has been laboring, and the House of Representatives now has the measures under consideration. We find this document printed at length in a recent issue of the Richmond *Enquirer*, and its provisions are in every respect so remarkable that a brief summary of them will, we are confident, be acceptable, especially as the abstract of the bill given by the Richmond *Examiner*, which has been widely copied by the daily journals, contained many glaring inaccuracies and important omissions.

In the first place, then, the Rebel Senate, defying experience, has extended the limit of the military age to fifty-five years, declaring "till white men, residents "of the Confederate States," between that age and eighteen years, in the service "for the war." Mr. DAVIS evidently does not mean to be annoyed or trammelled by the inconvenient three years' alternative; perhaps because of the manifest absurdity of making provision for the withdrawal of any men from his service when there will be none to supply their places. The draft, under this conscription act, it must be remembered, is the last which can ever be made in the Confederacy. These between forty-five and fifty-five years of age, with those younger, who are unfit for military service in the field by reason of physical disability, are to be detailed as provost and hospital guards for commissary, quartermaster and nitre bureau agents. Each individual who is not already enrolled is made his own provost-marshal by being compelled to report himself for duty within thirty days after the passage of the act, or to forfeit the privilege of performing department or bureau duty. At one stroke all laws granting exemptions are repealed, and in their place are substituted three or four provisions which are remarkable for their simplicity and comprehensiveness.

These exemptions are limited by the terms of this bill to the Vice-President of the Confederacy (the President is, of course, considered as in the service), the members of Congress and of the several State legislatures, with their respective officers, and such functionaries as the President or the Governors of the States may declare to be necessary to the proper administration of the Confederate or State Governments. Ministers of religion; one skilled apothecary in each store, superintendents of asylums for the deaf, dumb, blind, or insane, and one editor of each newspaper, with such journeymen printers as he may declare to be indispensable to the prosecution of his business, are also exempt; but one member of each one of these professions must prove that they have been engaged in them since April 10, 1862. All physicians over thirty-five years of age, who have been in practice during the last seven years, and teachers of schools, containing over twenty scholars, which have been in operation for two years past, are also relieved from military service. One overseer is exempted on each plantation which is the sole property of a minor, person of unsound mind, *femme sole*, or of a person absent in the military service, on which there are twenty or more efficient hands. These overseers, however, must have been acting in that capacity since April 10th, 1862, and the owners of the slaves whom they superintend must pay into the public treasury $500 *per annum*, during the period of the exemption. There can be no other white male adult on such plantation, and Mr. DAVIS has the option of detailing "the owner of the plantation to oversee it, upon the "terms and in the manner that he would have it." The right to claim the exemption of an overseer to "manage such plantation." Penalties sufficiently stringent, it would seem, to prevent any attempt to violate the provisions of this law are prescribed.

But the true significance of this extraordinary measure is to be found in its omissions; and we must therefore discover, if possible, how large a draft it will make upon the bone and sinew of the Southern States,—the active industrial elements. The statistics to which we alluded in our last, bear directly upon this important point. From them we learn that in the four States, Virginia, North Carolina, South Carolina, and Georgia—by far the most important members of the Confederacy—there were, before the recent draft was put in operation, 31,239 persons exempted from military service on account of their occupations, and these were divided as follows:

Shoemakers	2,338	Farmers	723
Tanners	1,007	Overseers	846
Blacksmiths	3,020	Postmasters and clerks	1,101
Wheelwrights	1,606	Civil officers	2,277
Millers	2,105	Railroad men	3,427
Mill engineers	16	Telegraph	71
Millwrights	80	Ferrymen	80
Druggists	145	Ministers of Gospel	833
Factory employees	168	Editors	31
Teachers	721	Details	1,912
Salt manufacturers	1,000	Department clerks	581
Physicians	1,464	Small & useful employments	5,232
Magistrates	1		

It certainly needs no argument to demonstrate the sore straits to which the Confederacy must be driven when its legislators can find no other resource to strengthen its armies than to make still further drafts upon this alarmingly feeble array of mechanics and artisans. The Rebel House of Representatives has apparently discovered the social disorganization and suffering which would be produced from the adoption of such a sweeping measure as this, and to which the Senate has given its sanction, and it has made a feeble attempt to counteract the evil by passing a bill amending the act by which representation in the army by substitution was prohibited. This measure relieves from the operations of that law farmers and planters engaged on January 5, 1864, in the production of grain and provisions, either by their own manual labor or in superintending the labor of others, provided that the person availing himself of this privilege shall devote himself, and the labor of which he has the control and superintendence, exclusively to the production of provisions and family supplies; that he shall contribute to the army, in addition to the tithe required by any tax law, an additional tenth of the pork or bacon he may produce; and that he will bind himself, if so required, to sell all his surplus provisions now on hand, or hereafter raised, for the use of soldiers' families, or for the use of the army, at prices no higher than those fixed, for the time being, by the commissioners appointed under the impressment act. This is a decided step backward from the fearful abyss of social anarchy into which these rebel legislators have taken a glance; and before the winter is over it would not be surprising if special exemptions bills in favor of shoemakers and blacksmiths should be proposed, notwithstanding the statements made by Richmond journals that the House is, in other respects than that named, actually reducing the meagre list of exemptions authorized in the Senate bill.

The last end perhaps the crowning proof of the exhaustion of the fighting element of the white population in the South is found in a bill which the Confederate House of Representatives passed on February 1, after a most instructive discussion, the object of which bill, as set forth in the title, is "to increase "the efficiency of the army by the employment of free "negroes and slaves in certain capacities." This measure which was reported by Mr. MILES, of South Carolina, as Chairman of the Military Committee declares all free negroes in the Confederacy between the ages of 18 and 50 years, except those made free by the treaty of Paris of 1803, or by the treaty with Spain of 1815, liable to perform "such duties with "the army, or in connection with the military de"partment "of the country, in the way of work upon fortifica"tions, or in government works for the production or "preparation of material of war, or in the military "hospitals, as the Secretary of War may, from time to "time, prescribe." The bill further authorizes the employment, for the discharge of similar duties of not more than twenty thousand male negro slaves, who are to be procured by impressment, if they are not volunteered by their owners. These auxiliaries are to receive the same pay as our own negro soldiers—seven dollars per month—and the government assumes the responsibility of making good to the owners the value of any slaves which may be killed or captured while in its service. It is an interesting and important question whether this formal recognition of the status of negroes, as a component part of the military forces f the Confederacy, does not remove one of the most prominent of the difficulties which have obstructed the exchange of prisoners. Certainly, if any of these black levies should fall into our hands, it would be impossible for the Confederacy to refuse to receive them as an equivalent for those of the same status whom Federal uniforms who are now in similar prisons. But this is not the appropriate place for the discussion of this topic.

All the measures which we have thus succinctly sketched show conclusively that the Confederate authorities are mustering all their strength for a supreme struggle in the campaign which is soon to open. Every man who can be forced into the ranks will be compelled to shoulder his musket, whatever his age or occupation.

There is but one way in which this desperate struggle of the rebels can be made their last—but one way in which victories which shall be overwhelming and decisive can be won by the Union. Our Congressmen know very well that the only hope of them prompt, manly, energetic action. Can they not forego a little present popularity to secure the eternal gratitude of the Nation? They may pass a Conscription Bill which shall be inadequate to recruit our armies, and by doing so they will bring disastrous defeats upon the nation. Are they willing to incur this fearful responsibility, even for the sake of achieving a reelection to the seats which they will then have proved themselves unworthy to fill?

RESPONSIBILITIES OF THE STAFF.

A CAREFUL review of all that has been said upon the battle of Chickamauga shows that its partially disastrous result arose principally from one cause. It was reported to General ROSECRANS, by an *aide-de-camp*, that a division was out of line which was not out of line. Under this impression, he issued orders for his whole line to close to the left, to fill up the supposed gap. General WOOD, the first to move, could only obey the order by doing the very thing its order was issued to prevent—making a gap where it was to have closed one. The enemy poured in, and our right was routed. Who was to blame? Evidently, first, the *aide-de-camp* who gave the incorrect information,—who stated that a brigade was out of line which was merely retired a little *en échelon*,—who, if the report of General ROSECRANS conveys a correct idea, must have been either too ignorant to know what an *échelon* position was, or too excited to observe accurately; secondly, and not less, the *aide-de-camp* who carried the order. Why is an order in battle carried by an officer, and not by an orderly! Clearly, because the officer is supposed to know sufficient of the intentions of his commanding General to give such information as cannot be conveyed upon the face of the order, and so see that the order is executed according to his design,—modifying it, if necessary, that its spirit shall be carried out, when the alteration of circumstances may render a strict adherence to the letter impossible or injudicious. The tide of battle alters in a moment. A report is brought to the commanding General; he issues an order; but the time necessary to convey the one and issue the other may have changed the fortunes of the day. Who is to determine whether the order is now judicious? Clearly, the only person who knows with what views and under what information the order was issued—the *aide-de-*

camp. It is no exaggeration to say that the duties of an *aide-de-camp* attached to the headquarters of an army are more responsible and require much more military knowledge than the command of a brigade of infantry. Yet, with what recklessness of consequence, with what supreme indifference to the welfare of our cause, are our staff officers appointed. No officer is fit to hold a position upon the staff of an officer in independent command who is not thoroughly pasted in the tactics of all three arms of the service, who has not a fair knowledge of military engineering, who cannot make a respectable topographical sketch, and, above all, who does not possess the rare gift of seeing no more and no less than what is really and distinctly before him.

There is no point in which the War Department could effect an easier reform than this. We have a Board of Examination to determine who shall be officers of negro troops; yet any boy fresh from college, whose idea of military duty is confined to wearing good clothes and riding a good horse, may be placed in a position to carry orders upon which the fate of a battle or the lives of thousands may depend.

THE most interesting military movement now under way is that under command of General SHERMAN, who at last accounts, was marching due east from Vicksburgh, with an army variously estimated at from twenty to thirty thousand men. A Rebel dispatch from Mobile, dated February 5th, says that two corps, under Generals MCPHERSON and HURLBUT, were across the Big Black River and were advancing, and that the Confederate General JACKSON was retarding their movements as much as possible. According to the very latest Rebel accounts the Union Army was encamped eight miles below Clinton. In connection with this reported movement of General SHERMAN east from Vicksburgh, another column is said to be on the march from Natchez, under the command of one of General BANKS' subordinate officers. A third column of cavalry and mounted infantry under General W. LOVELL, formerly General LEE'S Chief of Cavalry, is marching southward from Holly Springs. To supply troops for these movements, Corinth and the line of the Memphis and Charleston road as far east as General LOGAN'S outposts, have been abandoned, the fortifications blown up and the public property removed. As a matter of caution, however, it would be well to remark that the reported movement from Natchez is not confirmed by any positive news as yet. The advance of a cavalry force south under Generals SMITH and GRIERSON is well authenticated, while of the advance of General SHERMAN east, with the 16th and 17th corps, under the command respectively of Generals HURLBUT and MCPHERSON, there can be no doubt whatever.

The Western newspaper correspondents have so far propounded two theories: one is that General SHERMAN has been ordered to flank JOHNSTON at Atlanta—which is too absurd for consideration; the other, that he is on his way to Mobile. As for ourselves, we have not yet sufficient data on which to base a matured opinion. It would seem probable, however, that an important object of the movement was to cover the great cavalry raid, which is to be made through the States of Alabama and Mississippi—and perhaps ultimately to move to the rear of Mobile. This latter would be a difficult undertaking, especially in view of the scarcity of roads east of the Mississippi, and the long march through an enemy's country; but JOHNSTON was able to make the march from Mobile, and the movement is not impossible. We will not attempt, however, to speculate about a matter of which we have so little information.

THE Navy Department has discovered that the person who pulmed himself off upon the owners of the *Kita Kuang*, and upon the public, as "E. A. RUTHERFORD, special agent of the Navy Department," is some other than a Mr. PATRICK FORD, naval reporter of most of the New York daily newspapers, and an individual who seems to have a great love of notoriety and sensationalism than of truth or propriety. He had even gone so far, we are informed, as to have a card printed, whereon his assumed name and pretended office were emblazoned. The Navy Department are at a loss, as are we, to understand the arrest motive of the man in perpetrating such a piece of impudence, and, in spite of his championship of their cause, they do not perhaps feel as grateful to him as they ought. We are also informed on good authority that this same person is the one who furnished the New York daily papers some weeks ago with a sensation account of a "grand indignation mass-meeting," which he reported as having been held in the "Blue Anchor Tavern "in Cherry-street." Inasmuch as no such meeting took place, and no such hostelry is known to exist in Cherry-street, and the tendency of the fraud was to foment trouble among the seamen, the originator seems likely to get himself into trouble.

We deem this exposure to be due to the Navy and the public, that they may be on their guard against similar impostures.

THE recent active movements of Rebel armies and detachments in Central and Eastern Tennessee, Western Virginia, and on the North Carolina coast, are a somewhat puzzling commentary upon the stories of Southern despondency and military insubordination which have been published so widely at the North. There can be no question but that the South is suffering severely from a depreciated currency and inadequate supplies; but it is not safe in estimating the probabilities of the contest to judge, to count upon much smaller armies or a less determined spirit than the South has heretofore brought to bear in this great struggle. If the recent offensive movements of the Rebel forces will serve to give pause to the oversanguine expectations of the Northern people, the effect will be wholesome.

Yet, withal, these raids can scarcely be deemed indications of surplus military strength on the part of the Rebellion. The objects the Confederate generals seem to have had in view in authorizing them were, we should judge, threefold. (1) To prevent discontent by keeping a portion of their armies employed, and all of them interested. (2) To annoy and embarrass our forces, while the veteran regiments were away on furlough and the several armies were reorganizing with new recruits for the coming spring campaign. (3) To obtain needed supplies.

These considerations, especially the latter, will account for the activity of FORREST, LONGSTREET, EARLY and PICKETT, at a season when campaigning is alike difficult and unmilitary. Nothing but a most urgent necessity could have induced the Southern generals to sacrifice their men by forced marches in a broken country, at the most inclement season of the year. The report that EARLY had two-thirds of his men in Western Virginia from the severity of the weather, is not improbable, in view of the character of the country his forces were operating in. It will be remarked that in all these vicious raids the capture of mule-trains, droves of cattle, forage and other supplies, were the main objects kept in view.

THE censure cast in General MCCLELLAN'S recently published report of the military operations in front of Richmond, upon General MCCALL'S division, the Pennsylvania Reserves, for alleged misconduct at the battle of Nelson's Farm (or New Market Cross Roads), fought June 30th, 1862, has called forth an elaborate statement in their vindication. The reports of General MCCALL and his testimony before the Congressional Committee on the Conduct of the War, supported by the reports of the officers of his division, and also the testimony of the Rebel officers opposed to him on the field of battle, are given in evidence to show that the Pennsylvania Reserves fought on that day with the greatest gallantry. It is declared that it was LEE'S intention in making an attack upon MCCALL'S division, to break through the Union Army, and cut off HEINTZELMAN'S and FRANKLIN'S Corps, forming the right wing; but that his attempt was defeated by the admirable steadiness displayed by the Reserves. On this point, General MCCALL, in his testimony before the Committee, cited the following authorities:—

> WASHINGTON, October 29, 1862.
> To General MCCALL— * * * Your conduct held the place on New Market road, June 30th, that time of march of the [Federal] army would have been set by the enemy.
> E. J. FOSTER,
> "[Signed] Major-General Commanding Fifth Army Corps."

> CAMP NEAR WARRENTON, VA., Nov. 7, 1862.
> To General MCCALL— * * * It was only the stubborn resistance offered by our division (the Pennsylvania Reserves), prolonging the contest till after dark, and checking till that time the advance of the enemy, that enabled the concentration during the night of the whole army on James River, which saved it.
> "[Signed] GEORGE G. MEADE, Brigadier-General of Vols."

This and other evidence is brought to sustain the statement that, had General MCCALL'S division been routed, a rebel force of seventy thousand men, according to LONGSTREET'S own statement, would have been thrust in between the right and left wings of the Federal Army, with disastrous consequences. LONGSTREET himself, it is said, in a conversation with a Union successor, attributed the failure of the attempt to the stubborn resistance of the Reserves, and asserted that, but for the check he received at New Market Cross Roads, he would have "captured the whole Union "Army." Thus, so far from meriting censure, the Pennsylvania Reserves claim to be entitled to the highest praise for gallant behavior before the enemy, at a time when upon their steadiness depended the fate of the Army.

THE action of the House of Representatives in stripping the new conscription of all the few improvements introduced by the Senate, gives promise that we are after all to have the same old defective and inconsistent bill that the last Congress gave us. We could have wished it had been otherwise; that wiser counsels had prevailed. But we must now make the best use of what means we have for filling up the ranks of our armies. The PRESIDENT'S new call for troops comes in at a timely moment; and volunteering may by proper effort be made to do much towards supplying the deficiency. In a previous issue we showed how large is the still unexhausted reserve of the North; but we must not content ourselves with boasting of how much reserve. We must make it fruitful of recruits for actual service, and that speedily, else combination of forces, good generalship and desperation may do much to make up to the rebels their deficiency in men and resources. What the facts and figures in regard to the military strength of the South prove is this: if we are able to enter the spring campaign heavily reinforced, prepared to meet successfully the boldest combined movements of the enemy, the necessity of new conscriptions and new calls for troops will soon be over, and we may be able to proceed to the discussion of a peace establishment. But to reach this happy result we must use our resources.

THE speculations of the Richmond papers, touching the coming spring campaign, unwittingly betray the fact that the Confederates do not expect to largely increase their armies by raw conscripts. Thus the *Whig* of February 5th predicts that "Bull Run stampedes await the Yankees in most of the conflicts "likely to occur during the next campaign. They will "have to enter upon it with all the disadvantages of "raw levies, who will present but a poor bulwark "against the gallant veterans of LEE and JOHNSTON." This confirms the view we took last week, that the sweeping conscription act of the Confederate Congress, can add but few new men to the armies of the Rebellion. While admitting that our armies will be largely reinforced by recruits, the Richmond press tacitly acknowledge that all they have to depend upon are theveteran soldiers.

In accordance with the act of Congress, providing that where an armed vessel of the U. S. Navy destroys an enemy's vessel of equal force, the crew of the former vessel are entitled to a bounty of $100 for each person on board of the enemy's ship, Captain JOHN L. WORDEN of the *Montauk*, has sent in a list of the crew of that vessel and laid his claim to the bounty or head money due to them for the destruction of the *Nashville*. At the time of her destruction the *Nashville* had on board one 80-pounder Wurtzwortz rifle, four 32-pounders and one 24-pounder brass howitzer; and as the *Nashville* is entitled to a crew of the same number as the *James Adger* and vessels of her class which carry 180 men, the *Montauk* would be entitled to $18,000, which divided among her crew would give each a snug sum.

WE have received a handsomely printed pamphlet, containing a memorial to Congress, signed by all the Chief Engineers in the Navy, asking for an increase of pay, for the organization of a corps of fleet-engineer, for a school for the education of engineers, and that first assistant-engineers may be admitted to mess in the wardroom. They can obtain much greater pay than the law now allows them at private machine shops, and unless their compensation at private machine shops, and unless their compensation is made more commensurate with their services they are of opinion that the Navy will lose some of its most valuable engineer officers. The objects sought to be obtained by the memorial are endorsed by all the leading ship builders and machinists in this and other cities.

FOREIGN MILITARY AND NAVAL MATTERS.

THE Elswick Ordnance Company are executing, with all possible haste, two 152 lb. breech-loading ARMSTRONG guns for the Danish Government.

A COMPLETE return of the whole of the stores now available at the several departments of the Royal Arsenal at Woolwich, show that they are now fully equal to meet any sudden emergency.

THE death of Sir JAMES ROBERT GRANT, at the patriarchal age of 94, is announced. He was a medical officer of the British army, and was chief of the department at Waterloo.

M. DOMELIER, of the Imperial navy, is said to have resolved a problem of extreme importance in steam navigation—the substitution of fresh for salt water to the boilers. This invention will cause economy as far as the engines are concerned.

THE transport *Drôme* has sailed from Cherbourg for Mexico with 19 officers and 300 privates of the Algerian battalion called Zouaves. The contract of this regiment is light and airy; its conduct in a moral point of view is decidedly bad.

BROWN'S patent nitrous gas sheathing is proving very efficacious as a coating for the bottoms of iron-plated ships, and it is said that it will most probably supersede all pigment compositions for coating the bottoms of Her Majesty's ships.

THE population of the Danish kingdom and Schleswig is a trifle over two millions. In a short time four per cent. of these will be under arms. A larger number than any European nation has known in this century, with the exception, perhaps, of Prussia in 1813.

THE huge cauldrons and cylinders for the iron frigate *Achilles*, 35, 1,250-horse power, fitting at Chatham, England, have arrived at the dock-yard. The cylinders weigh between 22 and 23 tons. The two condensers weigh 23 tons 5 cwt. each, and the 10 boilers nearly 22 tons each.

THE French Minister of War has issued a circular address to the young soldiers of the second portion of the contingent, informing them that it will be useless to apply for admission to naval service, as the term of their service, as no such demands can be taken into consideration.

AN unfortunate Brahman, who had been dressed for the British army, became Sebastopol, and, accused of no Central Russia, was there arrested by the authorities, loaded with chains and sent to Siberia, where he was recently released by an Imperial ukase. His only offence was owing to his ignorance of the language.

ADMIRALTY instructions have been given for the "Hydrophobe" shop, at Chatham, England, to be used as an improving school for the junior engineers of the Navy, who will be required to devote a certain portion of their time to the theoretical study of machinery, in addition to their course of theoretical study at the dockyard school.

"FRANCE, MY England," says *La France*, "have come to an understanding for the establishment of a common system of night signals at sea. Captain RICHMOND GRIFFIN, of the Royal Navy, has been sent for London, being appointed by the Minister of Marine to regulate the details with the English Admiralty."

ADMIRAL RICHARD SAUMAREZ died on the 16th of January, at Clifton, England. The deceased was a midshipman on board the *Spartan* at the reduction of the Caribee Islands and Guadaloupe. He also took part in the action with a Neapolitan flotilla in the Bay of Naples. As lieutenant of the *Brechtonte* he was engaged in the siges of Tenedos and Alexandria.

THERE has been much outery in England of late against the use of the lash in the military service; and it has not been without its effect. The War Department authorizes a somewhat abolished substitute for punishment from the decision of courts-martial, have, it is stated, intimated that various terms of imprisonment and harbor may be substituted until further orders.

La Patrie says that the epaulette was first brought into use in the French army, and subsequently adopted by other nations. The date of its introduction was 1759, and its form was settled by orders issued in 1767 and 1779. The object for which it was introduced was to maintain the proper distances, existing by a foolish attempt to outshine each other, by making the grade of the officer known at a glance.

MR. JOSIAH VAVASSEUR, in a letter to the London *Times*, says that his firm in Gravel-lane, Southwark, has been making since 1862 quantities of spherical steel shot for 9 and 12-in. guns, the shot being respectively 256 lbs. and 193 lbs. He also says that he has reason to believe that during the first attack of the Monitors upon Charleston, the Confederates used steel shot and almost disabled the *Keokuk*.

THE *Oesterreichische Militärische Zeitschrift* publishes a comparative statement of the strength of the cavalry of the different powers of Europe. According to this calculation, Russia is strongest in this branch of the service, namely, 462 squadrons; France figures at 384 squadrons; Austria, 252 squadrons; Prussia, 240 squadrons; Spain, 132 squadrons; Sardinia (Sardinia), 104 squadrons; Bavaria, 48 squadrons; Hanover, 24 squadrons; Saxony, 20 squadrons; Wurtemburg, 16 squadrons; Baden, 12 squadrons; Hesse-Darmstadt, 8 squadrons; Electorate of Hesse, 10 squadrons; Mecklenburg, 4 squadrons; Oldenburg, 2 squadrons; Holstein-Lauenberg, 4 squadrons; Hamburg, 2 squadrons; the Netherlands, 24 squadrons; Belgium, 60 squadrons; Portugal, 36 squadrons; Denmark, 25 squadrons.

A FRENCH soldier, named CUP, has lately been tried and condemned to death at Lyons for desertion to the enemy. The following is given them information of the intended attack on the Malakoff, on the 18th June, and thus prepared the way for the repulse of the French. He quitted Paris on June, professedly unaware that he was entering French territory. He was arrested the same day, and immediately forwarded to Lyons. He declares his innocence, and has appealed from the sentence.

A SPECIAL commission has been taking a cruise in the French steam dispatch-boat the *Castor*, to test the system of communication between vessels afloat and the new electric semaphores. The most trying tests were made of the system, and it was found that it left little to be desired. It is hoped before long the whole of the coast will be supplied with them, and that vessels of all nations will be able to avail themselves of the advantageous posts offer.

COLONEL HUSSMANN, pensioned from the Austrian Army, is now living at Brussels. Born in 1751, he received on a pension in 1797 as Colonel of the Wallon regiment of that name. He gained the name of Iron Colonel. When he heard that his old corps was about to go to Holstein, the veteran, now in his 113th year, determined to proceed thither to see it on its march, however, was prevented by his infirmities, and he was obliged to content himself with writing a letter to the officers of the regiment.

THE authorities at Woolwich Arsenal have received orders from the War Department to prepare for the immediate manufacture of 50 guns, each to weigh 72 tons, with a bore of 7 inches. These weapons will be constructed with the improved steel tubes similar to those they are also to have solid ends, and the other recent improvements which were introduced into the construction of the 12-in. guns made in the Royal gun factories, with a view to enabling the Ordnance select committee to test the best known systems of rifling.

IT having been shewn that the system of proving the ARMSTRONG guns with a single charge of powder and a shot of double weight is in some instances more trying to the structure than the proper system of proof with a double charge and a single shot, the use of lubricators in proof is to be discontinued, and wooden blocks are to be placed behind and next to the proof cylinder, such blocks to be nearly of the diameter of the charge chamber, and of such length that when placed in position there will be no more space than will be filled by the service cartridge.

ANOTHER handsome square, to be called the Square of the King of Rome, is about to be opened in Paris. It will be situate on the Boulevard Prince de Marc, opposite the bridge of Jena. From this vast amphitheatre the population of Paris can command a full view of all that occurs on the Champ de Mars. An approach from it to the quays will be facilitated by means of an inclined esplanade, with a gradual descent. A new bridge will be built de Bonvenue de Marcel, is likewise to be opened. It will be a great military road, which will place the Hotel des Invalides in communication with the Faubourg Vaucanson.

NAPOLEON I. erected thirty-three princes or dukes. Eleven of these titles have now become extinct: the Prince of Eckmuhl (DAVOUST), Castiglione (AUGEREAU), Dalmatia (SOULT), Elchingen (NEY), Tarente (OUDOT), Gaeta (GAUDIN), Istria (BESSIERES), Otranto (FOUCHE), Reggio (MARMONT), Danzic (LEFEBVRE), Abrantes (JUNOT), Friuli (MORTIER), Dantzic, Valmy, and Rovigo, have only one representative without male issue. The title of Conegliane (MORTIER) has passed to his widow; the title Reboldon of Dalburg to the godson of the original holder of the title; that of Plaisance (LEBRUN) to a relative. NAPOLEON III. has given five titles, Bassano, Malakoff, Magenta, Morny, Persigny and Montmirail, the last having been borne by the eldest son of Queen CHRISTINA, and is already extinct.

THE hereditary post of Chancellor of the French Legion of Honor is vacant by the death of Admiral BAMELIN. It is said to have been offered to Marshal PELISSIER, who has already held it, but for a short time. PELISSIER declined, the office being worth only 100,000f., or thereabouts, whereas the Governorship of Algeria brings him in 250,000f. PELISSIER, though a Marshal of France, and the very pink of Gallic chivalry, knows the value of 150,000f. Besides his hands and dual coronet, the gains of this successful soldier of a usurper, who made the solid kind are most contemptible. 250,000f. as Governor-General, 30,000f. for the active performance of senatorial functions—at a distance, 100,000f. donation given by the nation, and, they say, a very large pension from the Sultan for "saving Turkey"—in all about $100,000 per annum—is a handsome provision.

SOME armor-plate experiments took place at Copenhagen, commencing on the 27th of December, 1863, and continuing several days. Five plates were experimented upon—one from LAIRD BROS. & CO., of Birkenhead; one from the Lancfield Company, Glasgow; one from the Thames Ironworks, London; one from Messrs. Ridge's works, Glasgow; and one from the Atlas Works of Bowers & Co., Sheffield. The plates were about the same size, 15 feet by 3½ feet; each was 4½ inches thick, and backed to resemble the Warrior target, upon 18 inches of teak timber. The guns used were the usual 95 cwt. 68-pounder naval ordnance, loaded with the full service charge of 16 lbs. After shots at each plate, the Danish Commission declared the order of merit to be—Messrs. JOHN BROWN & Co., Sheffield, first; Messrs. RIDGE & Co., Glasgow, second; and Messrs. CAMELL & Co., Sheffield, third.

THE strength of the Prussian Navy, when the vessels in hand are finished, which will be in the course of the next two years, will be—seven corvettes, carrying altogether 146 guns, and worked by steam engines of a nominal horse-power of 2,200; four screw-steamers of 1,000 horse-power, carrying 12 guns, and engines of 680 horse-power; fifteen gunboats of the second-class, carrying 30 guns, and engines of 1,000 horse-power; one 4-gun armored battery, and a steam transport of nine guns, and a nominal horse power of 280; four iron-plated gunboats, one of which was paid for by the national contributions in aid of the fleet, carrying 16 guns, and engines of a combined strength of 1,600 horse-power; one paddle-steamer, with 4 guns; three sailing frigates, carrying 114 guns, and three brigs carrying 40 guns. For the defence of her coast, she has 40 row-boats, carrying altogether 40 guns. She has also an iron-plated frigate building in England, which is expected to be ready for sea at the end of next year.

A RETURN has just been presented to the French Senate giving the number of guns in the navies of good and other weapons, and also the stores at the disposal of the government in the year 1860. The number of cannon of all kinds, including mortars, was 21,965, of these greater part of which were not mounted, but the means of mounting nearly the whole of them were in readiness. There was an enormous quantity of musketoons, pistols, and rifles, also an iron-plated frigate building in England, which is expected to be ready for sea at the end of next year.

A RETURN has just been presented to the French Senators giving the number of guns in the navies of good and other weapons, and also the stores at the disposal of the government in the year 1860. The number of cannon of all kinds, including mortars, was 21,965, of these greater part of which were not mounted, but the means of mounting nearly the whole of them were in readiness. There was an enormous quantity of musketoons, pistols, and rifles, also an iron-plated frigate building in England, which is expected to be ready for sea at the end of next year. The total number being 2,141,372 percussion weapons, and 980,035 flint weapons of various kinds. Of sabres there were 91,915; of lances, 5,135; of swords, 54,000; bayonets 58,719, and 34,577 cuirasses. The clothing stores were well filled, and forty-eight hours would have sufficed to equip and clothe the whole army of reserve for the 217,269 men forming the reserve; in fact, there was sufficient to clothe twice that number. On the 1st of January, 1860, the number of the number of animals at the disposal of the government, was 61,483 troop horses; 29,576 draught horses, 645 used in the artillery service, 1,915 artillery officers' horses, and 2,452 mules. Total 79,576. The estimated value of all this material of war, was 642,911,000 francs, or about $120,600,000, the clothing leaving for rather more than $15,000,000.

MR. H. BESSEMER says that two ships are being built in foreign waters entirely of Bessemer steel, and that two others, one of which is now being built in England, have been ordered. He thinks it would not be premature in the English Government to investigate this subject most fully, for if a ship can be cut in two by a single shot, as was done to the Warrior at Portland, they may rest assured that other nations will not be long without them. Thousands of Bessemer steel projectiles are now in store at Woolwich, and a large order for steel shots have been given to the extent of $600,000 in value. "Have we," he says, "a single gun in the world that can bear one single round steel shot fired from a common smooth-bored gun if ever directed against us? While our iron manufacturers have found some 3 or 4 barrels of Bessemer steel ordnance for foreign service, guns made of this material are still untried by our Government, although it is well known that armor plates of this metal is double that of ordinary iron, while such is the facility of production that a solid steel gun block of twenty tons' weight can be cast in one piece from the cast-iron in the short space of twenty minutes, the "homogeneous mass being entire and free from void or cone."

THE British soldier, on enlisting, now receives his outfit free, whereas he formerly had to pay for it out of his bounty money, and his situation in other respects has undergone a change. Short time instead of one pair of gloves in the year, he now has two pairs. Formerly he had only one pair of trousers in the year, now he has three pairs in two years. The exercises required in the artillery exercise are now made at the expense of the public, previously he had to pay for the alterations himself. The necessaries, such as caps, knapsacks, pouches, belts, and other articles, whose leather, which were bought of the regimental contractors, often at very exorbitant prices, are now supplied from the Government stores at the cost price. The old cast-iron, with, at the same time, a great improvement in the quality of the articles. The British soldier has now a better bed at a cheaper rate. The old stiff and heavy shako has been exchanged for a light and soft one; that instrument of torture, the old stiff high stock, has been abolished, and replaced by one made to fit the neck; and when serving in tropical climates he is supplied with a useful serge frock in lieu of the tight-fitting tunic. Many other changes of a similar nature might be mentioned. These, however, are sufficient to indicate the increased attention which has been given of late years to the material comforts and the preservation of the health of British troops.

ENGLISH AND FRENCH ARTILLERY TRAINING.

In an article entitled "*Les Marines de la France et de l'Angleterre*," M. Xavier Raymond institutes a comparison between the artillery of France and that of England, and obtains that practical experiments have proved the superiority of the former. The English, according to his view, have obstinately pursued a course which has led to this result. The artillery, he observes, is called a scientific department in their army; but up to the military reforms consequent upon the disasters of the Crimean campaign, officers received only the artillery officers of England were recruited exclusively from the Academy at Woolwich, to which admission was obtained by competitive examination. The pupils were sent to Woolwich between sixteen years of age, generally speaking, to learn the mathematics. At the age of twenty belonging to fourteen families, and the number of these passes rather than they were sent after their two years' course, they had neither a practising ground, nor workshops, nor even any guns wherewith to study the practical part of their profession—*as enamel* with the progress of their profession. Under this system, says M. Raymond, some officers passed their service without ever seeing a gun, or handling one. The inferiority of their knowledge to that of officers in other European armies should not be a matter of astonishment.

The artillery system of the French Army are trained in a very different manner. Competitors for admission to the *Ecole Polytechnique* are compelled to undergo a most rigid examination, and after the close of their course proceed to their admission to the special school of Metz. They are not apprenticed either to the field or the garrison charged with the manufacture of all the arms and the munitions of the army, or to one of the regiments for which all the great guns are subsequently cast. The instruction of these gunnisms in France, where the study of artillery both in theory and practice is carried to a degree of perfection at the Polygons of Toulon, of Gavres, of Brest, of Chalons-sur-Marne, in the workshops of Paris, of Metz, of La Fere, of Châtellerault, and of Tarbes, and in the practical schools of fire schools are often conducted on a scale of magnitude far surpassing all that has been done in other countries. At Metz, to the East of Saint-Julien, is to be found the fort of La Moselle, at Lyons, besieged in form, and the walls of Calais and Fort Grenoble breached, to test the effects of projectiles of various kinds. These and other investigations to determine the best form for artillery projectiles were spoken of, in carrying out which all the resources of the country are used. The French batteries never quit the centres of study and intelligence, except to be attached to camps of instruction, or to work against the fortresses of the frontier of the French artillery officers, as well as the indifferent fame of the English, not one of whom, says M. Raymond, figures among the inventors of the age. Whatever may be the merits of their artillery, is only the logical result of the different systems of training pursued in the two countries.

But, as M. Raymond observes, this mortifying state of affairs cannot long continue in England. She no longer permits the authorities to close their forces to the light which admission is now possible only on passing a thorough examination. The permanent camps which have been established at Aldershot and elsewhere will also offer the means of instruction to the officers, who, while their bravery and individual merit will not be greater than those of their predecessors, will certainly be far better informed in all that pertains to their department.

THE DANNEWERK.

Across the extreme Southern line of Schleswig lies a vast earthwork, celebrated in ancient times as the country, from the German Ocean to the Baltic. This border wall is said to have been erected in the ninth century by King Gottrik, and the accounts given of it in "Olaf Tryggvason's Saga," it was built of wood, stone, and earth. In the year 937 the wall, we are told, was strengthened by Queen Thyra, when the people, in their thankfulness for the national defence, christened Danawirki, which, literally translated, means the pride of the Danes. The wall is described as a perfect model of the structure, there exists at Flensburg a splendid collection of flint arrow-heads and axes, which have been found in the earth-works of the fourth century, or in the immediate neighborhood. There are spear points wrought out of splinters no thicker than a finger, and axes not much larger than the last steel. Here, too, are shown the knuckle-bone-like stones which had been used to separate the fine layers of siliceous earth from the chalk-beds, and which were found imbedded in these same barrows, with the very flint chips beside them that the people, thousands of years before, had broken from the chalk-beds for their implements. They say even the slabs of stone that the old Celts had used to grind their spear-heads on to the sharpest possible point, together with the tube of the drill-machine, and the stone as if they were destined to tell the present age how this wonderfully fine workmanship, in the darkest possible days of the world's history, was effected. The collection works from Schleswig, and the Danewerk itself, are to be found in the Museum of Northern Antiquities at Copenhagen.

The fortification consists at the present day of three enormous earthworks, stretching across the entire breadth of the land. Towards the north, or Baltic, they are known as "Wollen," or east rampart. It lies towards the "Eckernförde," and is sometimes called the Danish Great Wall. It is about two hundred miles long,—the earthworks being from four feet to five feet high, and sixteen yards broad, and to a with you, the depth of the ditch being about eight feet. Beyond this is the great ray formed by the river Schley, which is so wide that no troops could possibly attempt to pass it, extending from the head of this bay to the "Kurgraben," which is upwards of a mile in length—beginning at the end of the Selker Lake, it is from 40 to 12 feet broad, and from 8 feet to 6 feet deep. Behind this lies the great "Danewerk" itself, which consists of an earthwork not less than 14 miles long. In some parts it is from 20 feet to 35 feet high, and the ramparts are from 10 feet to 20 feet broad. The whole of these earthworks are immediately in connection from one side of the peninsula to the other, with the river Treene, which falls into the North-ern Ocean; so that the Danish forces have the double power to defend not less than 24 miles of land in front of the great bulwark of Schleswig at a moment's notice. The German soldiers who have occupied Holstein affect to regard this danger with very great contempt, under the impression that the cold weather has rendered the sluice ways impassable; but the Danish army, a short time ago flooded the entire country, and, after allowing a thin ice to form, let the water off again—this rendering it almost impossible for an army to march across. It has been estimated that, with the assistance of ice and flood, the Danewerk could be held by 40,000 men against the largest army which Germany could bring against it.

NAVAL INTELLIGENCE.—Under the title of *Le Guerre du Nord*, we find an able article in the Journal des Débats, and in the *Revue Contemporaine*, in which the results hitherto obtained in naval warfare are examined, and practical conclusions drawn. In the case of the question of forcing a passage into a well-defended port, the writer shows that for instance, at a distance of 100 *mètres* from a battery, a vessel in going 200 *mètres*, in a straight line, may receive two shots from each gun; and at a distance of 1,500 *mètres*, in going 3,000 *mètres*, the number of shots to be risked from each gun is ten. Now, supposing a fleet of 50 vessels to decide before a battery at a distance of 500 *mètres*, in a line of the extreme range of 1,500 *mètres*, each fleet will not receive more than 1,000 shots from a battery of 100 guns, many of which would not tell, since vessels may alter their course, and thus keep a cloud of smoke under otherwise favorable circumstances, therefore, a powerful fleet may effect the forcing of a port. As to the present powerful artillery brought into action for the first time in this country, Captain Cuvier, after a perusal of official American reports on the bombardment of Charleston, which leaves in the utmost practical limit for a gun in a covered battery. A rifled bore is preferable for distances beyond 1,200 *mètres*; but for short distances a smooth bore is better on account of iron-clads. The *Galerne*, exposed at 600 *mètres* to the repeated shocks of some model guns, found on board a prize, received no other trace of injury outside, but the whole of her hull was so shattered within, that she was quite disabled. The efficiency of the shell was shown by how ogive missile against stone walls, which he considers far inferior to earthworks. On the other hand the arming of ironclads with the cannon will be the strength of land batteries, and render sieges by sea extremely difficult. Enormous cubines may be employed with impunity against the strongest forts, and the 300 pounder, can only have monster guns on deck, protected by turrets. Small iron-clads, the writer thinks, will soon be called to assist in the operations of sieges effectually. In engagements at great distances he prefers Mr. Whitworth's perforating shot; but at short distances he considers that will remain with monster guns, which may sometimes decide the victory by a single shot. Hence there will probably be two types of iron-clads in future. The writer concludes with the rifled perforating gun on the Whitworth system, and casehardened iron-clads with turrets armed with guns of extraordinary power.

NAVY GAZETTE.

DESTRUCTION OF REBEL SALT-WORKS.

UNITED STATES FLAG-SHIP SAN JACINTO,
KEY WEST, January 21, 1864.

SIR:—It affords me pleasure to report to the Department that the promise made by Acting Master Willard, in command of the steamer Boston, in his communication of the 5th inst. report concerning the destruction of extensive salt-works in the vicinity of Indian Key, appears to have been fully realized. The work so fearlessly begun, appears to have been completed.

On the 6th inst. we went on board the stern-wheel steamer *Boston*, with Acting Master Willard, and proceeded to the *Matthews*, and after a short consultation on the bay, assisted our unfortunate circumstance of distress, which, and the steamer *Boston*, with Acting Master's Mate Sir Isaac was landed, and destroyed some ninety additional salt-works, and burned a large quantity of salt, buildings attached to them, whereupon the enemy commenced the destruction of some ten barrels of salt, which were in the vicinity of our party, and thus saved us from all further trouble, except skirting along the bay for the purpose of driving others to the scene of action, and the destruction had been well performed by them.

Deserters from the vicinity of Indian and Robinson's companies reported subsequently that both officers and men had broken up and dispersed, as the destruction of their salt-works, which they were obliged to guard had been so complete; and six of them have enlisted in the 2d Florida Cavalry, now at Key West.

Acting Master Browne again speaks in terms of commendation of the gallant conduct of Acting Master's Mate Sir Isaac Brown, Acting Ensign Gray and the five men composing the crew of the steamer *Bonnet*.

Respectfully, &c., DAVID BAILEY,
Acting Rear-Admiral.

Commanding E. S. Blockading Squadron.

HON. GIDEON WELLES, Secretary of the Navy.

REGULAR NAVAL SERVICE.

ORDERED.

Lieutenant-Commander Edward Lowry, to the *Mahaska*.

Commander A. J. Drake, to command the *Jason*.

Assistant Surgeon Wm. H. Wells, to the Gulf Squadron.

Assistant Surgeon John Rademacher, to the *Hartford*.

Assistant Surgeon Wm. H. Wells, to the *Jason*.

Lieutenant-Commander James Stillwell to special duty at New York.

Commander James H. Spotts, to report for duty in Rear-Admiral Dahlgren.

DETACHED.

Assistant Paymaster A. B. Cooper, from the *South Carolina* and ordered home.

Surgeon George Maudsley, from duty as a member of the Retiring Board at New York and ordered to the *Hendrick*.

Commander Charles Steedman, from the command of the *Mahaska* and ordered to command the *Modoc*.

Gunner George Hall, from the *Modoc* and ordered to the Sara-toga.

Midshipman E. T. Woodward, from the *Ogeee* and ordered home.

Lieutenant-Commander J. R. D. Hayden, from the *Sebago* and granted leave of absence for one month.

Lieutenant-Commander John S. Mitchell, from special duty at New York and ordered to the Gulf Squadron.

Gunner Joseph Smith, from the *Hendrick* and ordered to the Saratoga.

Gunner Thomas Hall, from the *Saratoga* and ordered to duty as member of the Retiring Board at New York, vice Maudsley.

Assistant Surgeon Charles Page, from the Mississippi Squadron and ordered to the Naval Laboratory, New York.

Assistant Surgeons George W. Rogers and H. O. McIlvain, from the *Augusta* and ordered to the *Pawnee*.

Commander John P. Parkhood, from the command of the *Jason* and ordered to the *Sioux*.

Second Assistant Engineer A. Morrig, from the *Hockinson* and ordered to the *Sebago*.

Second Assistant Engineer S. Wilkes Craig, from special duty at New York and ordered to the *Hendrick*.

Third Assistant Engineer D. M. Egbert, from the *Accabrey*, and ordered to the *Hendrick*.

Lieutenant-Commander H. T. Eastman, from the South Atlantic Blockading Squadron, and ordered to the Potomac Flotilla.

ORDERS RETURNED.

Assistant Surgeon N. H. Kendall ordered to the *Conemaugh* revoked and ordered to the *Conemaugh*.

Commander J. B. Creighton's orders to command the *Modoc* have been revoked.

LEAVE OF ABSENCE

has been granted Midshipman Horatio R. Bigelow, for four months, with permission to visit Europe.

VOLUNTEER NAVAL SERVICE.

ORDERED.

Acting Assistant Paymaster Archibald McVay, to the *Kingfisher*.

Acting Master's Mate Edward Lowery, to report at New York.

Acting Assistant Paymaster Samuel W. Tabeet, to the *South Carolina*.

Acting Assistant Paymaster H. S. Hopkins, to the *Marigold*.

Acting Master's Mate Augustus Sanborn, to the *Stars and Stripes*.

Acting Assistant Paymaster George B. Tripp, to the *Arizona*.

Acting Assistant Surgeon E. H. Carnell, to the *General Hall*.

Acting Assistant Surgeon S. W. Gaily, to the *Neshaminy*.

Acting Assistant Surgeon Alfred Hayes, to the *Saratoga*.

Acting Assistant Paymaster W. W. Wainwright, to the *Nereus*.

Acting Assistant Surgeon Thomas F. P. Lloyd, to the *Sassacus*.

Acting Master's Mate John H. Williams, to the *Wateree*.

Acting Master's Mate Charles H. Hall, to the *Wateree*.

Acting Assistant Paymaster Samuel T. Browne, to the *Gonsalvo*.

Acting Volunteer Lieutenant Thomas Gould, to the Mississippi Squadron.

DETACHED.

Acting Master Nicholas Kiery, from the South Atlantic Blockading Squadron, and ordered to the *Wateree*.

Acting Assistant Surgeon S. D. Kenny, from the *Marblehead*, and ordered to the South Atlantic Blockading Squadron.

Acting Second Assistant Engineer William W. Towle, from the *Pawnee*, and ordered to the *Sassacus*.

Acting Assistant Surgeon J. J. Somerby, from the *Gleaner*, and ordered to the *Pawnee*.

Acting Assistant Surgeon Daniel C. Ketleigh, from the *North Carolina*, and ordered to the *Pawnee*.

Acting Gunner John McCaffrey, from the *Muscatenet*, and ordered to the *Nereus*.

Acting Master H. J. Rogers, from the Potomac Flotilla, and ordered to report to Acting Rear-Admiral Lee, for duty as Chief of the Bureau of Navigation.

Acting Assistant Paymaster L. L. Sewell, from the *Muscatenet*, and ordered to the *Iroquois*.

Acting Master's Mate Alexander N. W. Blake, from the *Kingfisher*, and ordered North.

Acting Volunteer Lieutenant Amos E. Foster, from the command of the *Actress*-a, and ordered to command the *Kingfisher*.

Acting Master's Mate Edward Bennard, from the *Commodore Perry*, and waiting orders.

Acting Assistant Surgeon Theodore S. Kelly, from the *Pittsfield*, and ordered to the *Sassacus*.

Acting Third Assistant Engineer John F. Coyed, from the *Canonicus*, and ordered to the *Sassacus*.

Acting Master John J. Rogers, from the command of the *Bonita*, and ordered to the Potomac Flotilla.

Acting Assistant Surgeon J. F. A. *Adams*, from the *Ohio*, and ordered to the *Sassacus*.

Acting Assistant Surgeon P. H. Parrell, from the *Princeton*, and ordered to the *Ohio*.

Acting Assistant Paymaster John J. Pratt, from the *Stars and Stripes*, and ordered to the *Arizona*.

Acting Second Assistant Engineer Rodney Nichols, from the *Pawnee*, and ordered to the *Sassacus*.

Acting Master's Mate Henry Walters, from the Potomac Flotilla, and ordered to the *Commodore Perry*.

Acting Master's Mate George H. Dailey, from the *Ingersoll*, and ordered to the *Bonita*.

Acting Master's Mate Charles O'Neill, from the *Delaware*, and ordered to the *Stars and Stripes*.

Acting Master's Mate John Maddock, from the *Delaware*, and ordered to the *Stars and Stripes*.

Acting Assistant Surgeon Edward L. Bell, from the *Tyler*, and granted permission to report to Surgeon Gross, Philadelphia Navy Yard, for examination for promotion, and on the position of Assistant Surgeon in the Navy.

LEAVE OF ABSENCE.

Leave of absence has been granted the following officers:

Acting Third Assistant Engineer Daniel Gilmore, of the *Kent*, thirty days.

Acting Master's Mate Charles H. Brownell, of the *Roanoke*, two weeks.

Acting Master's Mate G. G. Batchelder, three weeks.

Acting Assistant Paymaster Samuel T. Shaw, of the *Wyandotte*, sixty days.

Acting Third Assistant Engineer J. C. Spalding, of the *Pinola*, thirty days.

Acting Master George F. Winslow, of the *Marblehead*, three weeks.

Acting Ensign Henry B. Fowle, of the *General Putnam*, twenty days.

Acting Ensign George R. Hartman, of the *Marblehead*, two weeks.

Acting Master Robert Barstow, of the *Minnesota*, fourteen days.

Acting Second Assistant Engineer George R. Dunlap, of the *Gonsalvo*, fifteen days.

Acting Ensign Alonzo Small, of the *St. Lawrence*, one week.

Acting Second Assistant Engineer Charles S. Padgett, of the *Hetzel*, twenty days.

Acting Third Assistant Surgeon Israel Barbour, of the *Valparaiso*, thirty days.

Acting Third Assistant Engineer John H Bottger, of the *Fah Kee*, one week.

Acting Master W. T. North, of the *Brandywine*, thirty days.

APPOINTED.

Albert Boyce, Acting Third Assistant Engineer, and ordered to the *Ohio*.

Charles Lucken, Acting Assistant Paymaster, and waiting orders.

Henry R. Ogg, Acting Assistant Paymaster, and waiting orders.

John M. Brown, Acting Assistant Surgeon, and ordered to the *Brandywine*.

William D. Lober, Acting Third Assistant Engineer, and ordered to the *Nereus*.

Arthur W. Rastelle, Acting Second Assistant Engineer, and ordered to the *Augusta*.

Richard B. Lathrop and William C. Goodwin, Acting Assistant Paymasters, and waiting orders.

Edward Cummings, Acting First Assistant Engineer, and ordered to the *Commodore Perry*.

Edward G. Lathrop, Acting Assistant Paymaster, and waiting orders.

CONFIRMED.

Acting Ensigns *Thomas Gross* of the *Wanderer*; *Otis A. Thayer*, of the South Atlantic Blockading Squadron; *James B. Barry*, of the Potomac Flotilla; *Edward Gross*, of the Gunnels gun-boat; *Edward W. Crocker*, of the New York Navy Yard.

Acting Master's Mate Charles H. Brownell, of the Hull, John Wilthide and Charles F. Purrington, of the New York Navy Yard.

Acting Master's Mate John Kenyon, of the Potomac Flotilla.

REVOKED.

Acting Master's Mate Jacob Bringhurst, of the Mississippi Squadron.

Acting Second Assistant Engineer William G. Smoot.

Acting Master Thomas Ackerson.

C. P. P. Hildreth, of the *Commodore Hull*.

Acting Volunteer Lieutenant H. M. Denny.

Acting Volunteer Lieutenant R. Brock, of the *Sonoma*.

Acting Assistant Surgeon W. Lawrence.

DISMISSED.

Acting Gunner James A. Compton, of the *Ohio*.

DEATHS

Reported to the Navy Department for the Week ending February 6, 1864.

Henry P. Edgar, seaman, Gloucester, Mass., Jan. 23, 1864. Naval Hospital, Chelsea, Mass., ordinary seaman, chronic diarrhœa, Aug. 1, 1863. Navy Yard, Boston, Mass., landsman, Jan. 31, 1864, of consumption. Navy Yard, Boston, Mass., mouth of Rio Grande, China. W. Warriner, landsman, drowned, Nov. 3, 1863. Steamer *Rhode Island*, off Rio Grande, Texas, gunner, lacerated wound of head, Jan. 16, 1864. Navy Yard, Boston, Mass.

Wm. M. Young, lieutenant, ankle pastern, Jan. 15, 1864, from Colorado; Wm. Davis, ordinary seaman drowned, Jan. 27, 1864, U. S. S. Monitor; John C. Reed, ordinary seaman drowned, Jan. 27, 1864, U. S. S. Sassacus; Ed. Robinson, musician, chronic diarrhœa, Jan. 31, 1864, Naval Hospital, Memphis; Thos. Smith, seaman, apoplexy, Jan. 31, U. S. S. North Carolina; Robert Williams, contraband, small-pox, Dec. 27, 1863, Naval Hospital, Memphis; Walter Wilburn, calm seaward, consumption, Jan. 28, 1864, U. S. S. Neptune; Robert M. McLean, landsman, inflammation of brain, Feb. 2, 1864, Naval Hospital, Chelsea; Christopher Graham, second-class fireman, drowned, Jan. 15, 1864, Jumpville Bluff.

ARMY GAZETTE

NOTICE TO DELINQUENTS.

The following named officers, having been reported at the headquarters of the Army as delinquents in rendering their returns, are hereby notified that they will stand discharged from the service of the United States unless within thirty days from the publication of this notice before the Military Commission, in session in Washington, of which Brigadier-General Thomas M. Vincent, United States Volunteers, is president, and make satisfactory defence to the charges against them:

Absence without proper authority.

Chaplain John Eastman, Fifth Maine Volunteers, Naval Hospital.
Captain C. G. Hughlin, 1st Connecticut Artillery.
First Lieutenant Gordon Wetmore, 4th New York Veteran Volunteers.

Absence without leave and disobedience of orders.

Captain Francis E. Tyler, 9th New York Volunteers.
First Lieutenant and Adjutant John Brouwer, 68th New York Volunteers.

Desertion.

Lieutenant William B. Johnson, 15th New York Engineers.

TO BE RECOMMENDED FOR DISMISSAL.

The following named officers, having been reported at the headquarters of the Army for the offences hereinafter specified, are hereby notified that they will be recommended for dismissal from the service of the United States unless within fifteen (15) days from Feb. 6, 1864, they forward to the Military Commission, in session at Washington, D. C., of which Brigadier-General Richetts is President, satisfactory evidence that no sufficient cause for dismissal exists in their case:

For failing to report at Annapolis, Md., as ordered.

Second Lieutenant A. B. Farnsworth, 18th United States Infantry.

For failing to report at Cincinnati, O., as ordered.

Captain Thomas Turnbull, United States Colored Troops.

EXEMPT FROM DISMISSAL.

The following named officers, having tendered resignations and therefore published, are exempt from being dismissed the service of the United States, by the Commission convened by Special Orders No. 65, current series, from the War Department having reported that satisfactory evidence has been made to appear in their cases, viz:

Assistant Surgeon John C. Carter, 4th Maryland Volunteers.
Colonel L. Allen, 5th Wisconsin Volunteers.
Major A. Field, 1st Michigan Cavalry.
Lieutenant S. C. Dorr, 1st Rhode Island Cavalry.
Lieutenant T. A. Rolfe, 8th New York Cavalry.
Lieutenant R. S. Mills, 15th Maine Volunteers.
Lieutenant R. B. Somers, 1st Virginia Cavalry.
Assistant Surgeon W. Gilman, 12th Maine Volunteers.
Chaplain M. E. Wilson, 16th New York Artillery.
Second Lieutenant C. Meere, 1st Connecticut Artillery.
Colonel J. F. Stanton, 6th Pennsylvania Volunteers.

RESIGNED.

During the week ending Saturday, February 6, 1864.

Captain William W. Eaton, 2d Iowa Cavalry, to date February 1, 1864, for reasons of family, disobedience of orders, cowardice, misbehavior in the face of the enemy, constant unbecoming an officer and gentleman, and general worthlessness.

Captain Michael Ryan, 4th Missouri State Militia, to date February 1, 1864, for neglect of all pay and other duties, allowing the plunder of private houses and destruction of property by his command, conduct to the prejudice of good order and military discipline, and selling plundered forage for the individual profit.

Assistant Surgeon Caroline Morrow, 43d Ohio Volunteers, to date November 3, 1863, for absence from her command without leave, and failed to appear before the commission.

First Lieutenant Wm. H. Hollenbeck, Quartermaster 31 Iowa Cavalry, to date February 1, 1864, for gross neglect of duty in repeatedly failing to promptly render his returns and property accounts.

Second Lieutenant Daniel Hall, 2d Iowa Cavalry, to date February 1, 1864, for drunkenness and general worthlessness.

The following officers, to date January 31, 1864, for the reasons mentioned, having failed to appear before the Board ordered to approve the commission:

Failing to report at Steuben Hospital, Georgetown, D. C., on expiration of leave of absence.

Lieutenant-Colonel James M. Stevens, 6th Ohio Volunteers.

Absence without leave, as officially reported on the rolls of their regiments, and otherwise.

Captain Peter Casey, 99th Illinois Volunteers.
Captain A. D. Wilson, 5th New Jersey Volunteers.
First Lieutenant F. Stocks, 42d New York Volunteers.
First Lieutenant S. Foster, 1st Louisiana Cavalry.

DISMISSAL REVOKED.

The orders of dismissal in the following cases have been revoked: Colonel Joseph Gerhardt, 45th New York Volunteers, he having been previously honorably discharged by acceptance of resignation.
Captain William D. Reiter, 3d Pennsylvania Reserves.
Captain W. H. Bowery, 1st Co. A, 1st Battalion Cavalry, and they have been honorably discharged as of the date of the orders of dismissal.

RESTORED TO COMMISSION.

The following officers, having been dismissed, are restored, with pay from the date at which they rejoin their regiments for duty, provided the vacancies have not been filled by the appointment of regular service States:

Captain Alexander H. McBerry, 13th Pennsylvania Cavalry.
Captain William R. Hays, 8th Illinois Cavalry.

DISMISSAL REVOKED.

The order dishonorably discharging Captain Ralph O. Poe has been revoked, and he is restored, with pay from the date of his order to rejoin his regiment for duty, provided the vacancy has not been filled by the General-in-Chief.

SENTENCES OF COURTS-MARTIAL.

Captain W. S. Granters, Co. H., 16th New York Volunteers, to be cashiered for making a false return of his company. Upon the recommendation of the Major-General Commanding the Department the sentence to forfeiture of pay proper for a period of six months remitted.

Private Philo D. Atkins, to be shot to death with musketry, for desertion. Upon the ultimate action of the Commander-in-Chief the commanding officer of the accused commanded the sentence to forfeiture of all pay and allowances due him, and to be confined to duty, except the necessary food and clothing, to make good the time lost by desertion, and to wear a ball and chain at the discretion of his superiors during the period for which his service is required.

Second Lieutenant Joseph Mende, 1st Arkansas Cavalry, to be dismissed the service, for conduct unbecoming an officer and a gentleman, and persistent tagged order and military disobedience.

Captains John H. Poynter and William H. Crockett, and Second Lieutenants E. J. Bowers and Luther D. Potter, 5th Missouri Cavalry, to be dismissed the service for mutiny; they having agreed together to resign their forces against the positive orders of Major-General Montgomery, same regiment (commanding the post at Bloomfield), for which they were arrested. Mutiny consisted in placing him in confinement.

First Lieutenant Robert Porter, Co. E, 9th Missouri Volunteers, to be dismissed the service, for conduct unbecoming an officer and a gentleman, and disobedience of orders.

The sentences in the above cases have been approved and confirmed by Major-General Schofield.

Private Thomas W. Babcock, 37th New York Volunteers, to be dismissed the service with ignominy, forfeiture of pay and allowances due and that may become due, upon the enlistment of his Brigade and guidesmen. Gunner, has remitted the sentence, and has ordered him to be returned to duty.

MEDICAL DEPARTMENT.

ORDERED.

Surgeon D. L. Magruder, Medical Purveyor at Louisville, Ky., has been relieved from that duty, and will report to Surgeon Henry Lee Hammond Court Martial, now in session in that city.

Private James T. Evans, Co. G, 11th Regiment Invalid Corps, has been discharged the service, with a view to his enlistment in Hospital Stewards, U. S. Army.

NAVY YARDS.

BROOKLYN NAVY YARD.

The steamer *Proteus*, *Neptune* and *Ocean* arrived at this Yard Feb. 6. The *Sand Digger*, when completed, Feb. 6, was re-coaled last week, was completed to put back, and returned to the Yard Feb. 5. Something is said to be wrong with her engines. The gunboat *Chenango*, Lieutenant-Commander commanding T. S. Fitchbrown, expected to go into commission Feb. 13. The following vessels are fitting for sea at Jersey City, 3,500 feet; breadth, 25 feet; depth, 15 feet; 314 tons burthen. Her engines are by the Morgan Iron Works; diameter of cylinder, 36 inches; stroke, 3 feet 6 inches. The *Gilmore* went last to quarantine Feb 9. The *Grand Gulf* is expected to sail shortly. Also the iron-clad *Onondaga*.

The vessel in progress at Messrs Mende, lately ordered to the *Jason*, has been ordered to the *Matsdonia*.

Captain Nicholson, late ordnance officer of this Yard, and who was for some time under arrest, has been relieved from sick-leave, and now assumed command of the iron-clad *Manhattan*, which is preparing for sea at Jersey City. The Ericsson iron-clad steamer *Puritan*, now in course of construction at Messrs Delamater, Works, Greenpoint, is very nearly finished, and can be launched in a few weeks if necessary.

Mr. Barney, Collector of this port, has conveyed a Board for the examination of officers in the Revenue Cutter Service, consisting of George W. Hunt, as President, with Captain H. B. Nones, of the Revenue Service, and Captain Charles H. Wyo, of the Merchant Marine, as members thereof. They are to meet forthwith. The previous board was composed of Captains Nones and McGowan, of the Revenue Service, and Captain Charles H. Marshall, of the Merchantile Marine.

WASHINGTON NAVY YARD.

Since our last report of affairs in the Yard, the U. S. gunboat *Eolus* has left for the blockading fleet off Wilmington, N. C. The U. S. gunboat *Resolute*, of the Potomac Flotilla, arrived at the Yard from Alexandria on the morning of the present day. The U. S. gunboat *Commodore Read* arrived here last Tuesday, from the Potomac Flotilla. Since she has been here she has taken in a supply of coal and provisions, and will leave to-morrow for Alexandria, where she is to give place to guns of a larger calibre, which she will receive some time this week.

The Coast Survey steamer *Bibb*, which has been lying at the Yard since June last, was put upon the ways on Monday. New bolters are now being built for her, which are in an advanced state of completion. The new bolters will be completed in a few days, when the vessel overhauling. Second Assistant Engineer William H. Mapes is in temporary command of the vessel, which is undergoing repairs, which will take at least two months to complete.

The tug-boat *King Philip* left the Yard on Wednesday with a supply of provisions and ammunition for the Potomac Flotilla. The gunboat *Dragon*, of the Potomac Flotilla, arrived on Wednesday for a supply of coal. The transport *Wyandotte*, lately used to carry provisions to the fleet off New Inlet, N. C., left the Yard, and will have her bolters taken out, and will receive a general overhauling ere she sails leaves for her station. Repairs to the gunboat *Penobscot* are at her wharf, and will soon be ready for her to hasten to sea. She will rejoin the Potomac Flotilla. The gunboat *Yorktown* hauled her new bolters this week, and very little yet remains to be done before she is ready for sea.

NORFOLK NAVY YARD.

On the 5th, pursuant to the orders of the Navy Department, and under the supervision of the commandant of the station, Commodore Livingston, there was sold at auction, at an immense quantity of material, taken from the river by the wrecking company, who have been working for several months past to remove the obstructions sunk by the Government to raise the vessels sunken in the Elizabeth River by our forces at the evacuation of the Navy Yard, on the 20th of April, 1861, and by the enemy at the time he took possession on the 9th of May, 1862. The sale was very largely attended, its importance having drawn together from all the Northern cities a great number of contractors, iron and metal dealers, shipwrights, and junk dealers. It has been the custom, at such sales as these, for the buyers to form combinations among themselves for the purpose of keeping down the prices, and enabling themselves to purchase the articles sold at a merely nominal value. But, with his usual vigilance and faithful care to the interest of the Government, Commodore Livingston took such precautions that the combinations in this instance would not have proved futile and they been attempted. The great amount received from the sales was $15,736, all of which is paid over by the purchasers, the remainder of the money to be paid when the articles are removed, which will be at the expiration of ten days.

The wrecking company, which contracted to remove the wrecks above spoken of, have accomplished but a small portion of the work their contract called for, and, we believe, have forfeited it. There were ten vessels-of-war sunk by our forces when we evacuated, and when the rebels left the place they scuttled and sank two gunboats and a large steam-ferry-boat, and the wrecking company pledged them to raise all these vessels, and also the sloop-of-war *Cumberland*, which was sunk by the *Merrimac*, near Hampton Roads. They have raised but three of the smaller vessels, and after laboring for months at the *Cumberland*, have given her up on a hopeless undertaking. They have, however, succeeded in raising all the vessels' great armament and anchors, chains, etc., which compound a portion of the articles sold on the 5th.

The work of re-building the Navy Yard progresses slowly—but with the very insufficient facilities now at command here—but a small quantity of work, in the line of repairing vessels, is accomplished. There are about six hundred men now employed in the Yard, and it is to be unusual slight to see ten or twelve war-steamers of the first class lying at the Yard, undergoing repairs or alterations. The following vessels are now in the Yard for repairs, viz.: *Delaware*, *Susquehanna*, *Keystone State*, *Fish Kee*, *Kinsac*, *Crusader*, *Kansas*, *Calypso*, *Fort Henry*, *Sassacus*, *Alert*.

As soon as the repairs on the dry-dock are completed, which will probably be about the middle of April, much more work can be done than now. The new caisson for the dry-dock, which is a massive piece of work, containing almost as much timber as there is in a schooner of 100 tons. It will be so strong as to dispense with the necessity of ballasting it down, and is so ingeniously constructed as to be easily moved and controlled.

About the year 1782 the government of Great Britain sent a naval expedition to this same navy yard with instructions to destroy entirely the entire Atlantic coast, from Maine to Georgia, and select the most site for a naval station and dock-yard. This commission, which proceeded to the execution of its instructions in the British Navy, performed that duty, and unanimously reported that the ground upon which the Norfolk Navy Yard now stands was unconquerably the best site for the purpose in view. In this report it is set forth, among the advantages which this site possessed over all others, that the river was open and in the year 1782 as shallow at the docks as it now is, and could be concealed here at any season; and that its proximity to Cape Hatteras, the worst cape on the coast, pointed it out as the most suitable place for a naval station on the whole coast. These considerations prevailed; the British government sent an agent here, who purchased the ground on which the Yard now stands, and built the docks and wharves, which remained in the hands of the British government until the Revolutionary War, when they evacuated it, as we did at the breaking out of the rebellion.

The great natural advantages, which this navy yard enjoys in the mind of the British cabinet one hundred years ago, still exists; and in addition to them, are works upon which our Government has expended about one and a half millions of money. If a new Navy Yard were to be commenced by the Government now, at any point, it would require ten years of labor and the expenditure of many millions of money to make it equal to this one. The Navy Yard is a real —and then the natural advantages of the point would be forever wanting.

The timber docks of this Yard are immense stocks of magnificent timber, in value amounting to perhaps $500,000, and some of which has been in the Yard for fifteen years. Some of this timber is being used in the construction of the caisson for the dock. Some of it consists of ship's knees, of the most excellent quality. A great number of the timbers were removed to the Northern Navy Yards.

The stone-ship *Brandywine* has recently been brought from Hampton Roads to this Yard, where she will remain for the future.

There have been several changes recently in the officers of this station, and the following is a correct list:

Commandant—Commodore John W. Livingston.
Commander of Yard—Captain J. J. Gilsson.
Surgeon-in-Chief—Solomon Sharp.
Surgeon—Albert D. Gorgas.
Fleet Accountant—Paymaster John J. Quann.
Assistant Surgeon—L. G. Burnett.
Naval Constructor—Isaiah Hanscom.
Engineer-in-Chief of Yard—Chief Engineer H. Thompson.
Paymaster in charge of Provisions and Clothing and Board Store—Samuel Washington Irving.
Paymaster in charge of Construction—Acting Paymaster Louis Smith.
Sailing Master—Samuel F. Holbrook.
Carpenter—John McFarlane.

Two vessels-of-war are discharged from the service at this station. I am sorry to say that very few of these each express a willingness, on being discharged, to re-ship. The universal reason which they assign is the inadequate pay of the gun-boat service. If that were restored they would, in almost all cases, re-enlist. E. S. S.

The REPORT OF THE ADJUTANT-GENERAL of the State of New York for the past year shows, that since January 1, 1863, 30,520 men have been examined for the field; 7,381 commissions had been issued. Three regiments of artillery, eight of cavalry, and twenty-five companies of infantry were recruiting. The number of commissioned officers sent home under direction of the United States Provost-Marshal General since September 22, and exclusively for regiments in the field, is 1,000. The total number of troops in the field October 31, 1863, will shortly be filled. The total number of troops which have been organized and sent from the State, commencing April 15, 1861, and ending December 31, 1863, is 292,982. Of these, 196,569 were organized and sent to the field by the Government at Washington. The number returned in the field as recruits; 11,000 were enlisted by provost marshals; 10,000 (an estimate) were re-enlistments; 9,126 were drafted and mustered into the service. The aggregate in the State December 31, 1863; and 29,893 were militia sent as "emergency" troops. There is a discrepancy in the accounts of the State and the United States between the War Department and the State authorities, the former admitting a surplus of 4,613, up to June 11, 1863, the latter claiming 12,826. An adjustment is now pending. The number of persons liable to military duty in the State, after deducting exempts, as ascertained by the enrollment preparatory to make the enrollment for the draft ordered in July, 1862, was 886,930.

The Secretary of War has informed the Governors of the several loyal States that all men enlisted into the regular army since September 3, 1862, will be credited upon the quotas of the States in which they were enlisted. The superintendents of regimental recruiting service have been directed to forward to the different State enlisting offices, as soon as possible, a list of all men enlisted in the regular army by recruiting officers under their commands from September 3, 1862, to January 1, 1864, giving the names of the men, and whenever they can do so, the districts in which they were enlisted. Hereafter, also, tri-monthly reports of men enlisted in the regular army will be made to the Governors, giving the names of the men, State, district of enrollment, town and county in which they were enlisted, such reports to commence from January 1, 1864.

A LETTER FROM CAPTAIN SEMMES.—A South-ern paper publishes a letter from Captain Semmes, of the *Alabama*, dated at Cape Town, August 8th, 1863, in the course of which he says:

"I had no idea when I left New Orleans in the Summer that the war would last over twelve months, and let we are in its third year, and as yet I see but little hopes of its conclusion. Since I left home I wrote you last from Bahia, in Brazil, by the way of Liverpool, and directed my letter to you at Cincinnati; since then, seeing that the Yankee brute, BUTLER, had warned you to quit, I have feared that my letter did not reach you. I hope that you are at length all safely reached our lines, where I doubt not you have had kind friends to welcome you. I have nothing to tell in respect to my cruise which you have not already seen, since the busy public politics keeps you pretty well informed of my whereabouts and doings. I am not at all surprised exactly what is meant by "times that try men's souls;" but we must not give way to weakness. We must school ourselves to these trials like Christian philosophers. We must be brave men and women for our country's sake, and all will be well for God. As for the internal arrangements of my ship—her inner life—it is satisfactory. We have had some good times with me as officers, and have had but little difficulty in the government of my crew. I have every reason to be thankful with my success against the enemy. Before I have rendered as good service to my country as I could wish, I must be content to lay my other direction, and the world is kind enough to talk of me and in a friendly spirit, but it is a matter of indifference to me, except that I think they deserve. If I estimate them by the abuse which the Yankees heap upon me, they are certainly very great."

LARGE ARMY SUPPLIES.—The vastness of the work of supplying rations, is shown in part by the following statement of stores issued to the Army of the Tennessee, during Sherman's Atlanta, in the single month of December:

Pork, bbls.....	8,284
Ham, pounds.....	49,824
Tongue, "	3,612
Lard, "	2,340
Hominy, gallons.....	1,176
Vinegar, "	1,176
Flour, bbls.....	12,617
Hard Bread, pounds.....	1,416,744
Cubes, "	102,792
Rice, "	8,304
Beans, "	65,520
Potatoes, "	1,202,400
Cabbage, in cans, gallons.....	1,176
Coffee, pounds.....	227,940
D. Apples, "	3,360
Tea, "	1,176
S. Sugar, "	276,474
R. Sugar, "	41,808
Candles, "	12,768
Soap, pounds.....	7,056
Salt, "	39,312
Vinegar, gallons.....	37,968

A REBEL officer gives the following statement of his destitute condition:

Servant's hire, $25; my own and servant's rations, 855; cabbage, potatoes and other vegetables, at least $20; 1 quire of paper, $3; envelopes and writing paper, $7; pair of boots, $125; pair of pants, $60; soda, black pepper, &c., $5; salt, $10; tea, $50; water bucket, $4. Making a total of $356.

GENERAL ORDERS from the War Department, dated February 10, 1864, direct Lieutenant E. P. ROSELOW, U. S. A., now under arrest, to proceed to Fort Leavenworth, Kansas, and report make examination to the Adjutant-General of the Army, in reference to his neglect of duty and misconduct in the recruiting service of the Army, in mustering boys and men unfitted for the military service into the Seventeenth New York Artillery. A precisely similar order has been issued in the case of First Lieutenant RICHARD S. FOSTER, Seventeenth United States Infantry. The pay of all regimental officers connected with the Sixteenth New York Heavy Artillery has been stopped until further orders, awaiting the explanation of the matter of these improper enlistments.

ACCORDING to the *Scientific American*, two mills, which supply our troops at Palos, Pemiscot county, Mo., under the superintendence of Captain W. H. HILL, Eighty-first Ohio, a practical miller and driving business man. In less than a month, during half of which time only one mill was running, he has furnished to Captain CARPENTER, Commissary of Subsistence, over 100,000 pounds of meal. This has been done, too, by grinding usually only at night—the rest of the time the mills have had a mere slight to go through these mills. How perfectly at home are our sturdy sergeants, corporals, and privates, all covered with dust and flour, as they walk about the mill on their various duties.

COLONEL M. S. LITTLEFIELD, 21st U. S. Colored Troops, has been appointed Presidential Elector, and Lieutenant Colonel, Assistant Provost, Recorder of the Board for the examination of white persons for officers of colored regiments, organized or to be organized, in the Department of the South. Major-General GILLMORE has also appointed Colonel LITTLEFIELD General Superintendent of the recruiting service for colored regiments in his department, and charges himself with the duty of paying all bounties to colored recruits.

CAPTAIN W. L. M. BURGER, Assistant Adjutant-General, has been relieved from duty with Major-General Sherman's command, and assigned to duty in charge of the Bureau for enlisting and organizing colored troops in the Department of the West, with Head Quarters, Corps of Engineers, U. S. A., has been announced by Major-General GILLMORE as his commander.

A WALL-STREET speculator made a bold attempt to influence the gold market on Monday, by procuring the printing of a bogus "Extra" purporting to contain the substance of a telegraph dispatch from General BANKS, announcing the capture of Mobile, with 8,000 prisoners, 150 cannon, and 400,000 of the cotton he had with-held from the market. The trick was soon exposed, and the newsboys who were selling the "Extras" were arrested. But the meantime gold had fallen one per cent.

BRIGADIER-GENERALS BARNARD, CULLUM, and WRIGHT, and Colonels ALEXANDER and ABERT, constitute a Board of Engineers, which, by order of the War Department, has been authorized to investigate the present condition of our sea-coast defences, and to report what is the best disposition to be made of or to be remodelled or construct-ed for our greater safety.

MAJOR-GENERAL BANKS has ordered Surgeons of regiments and detachments of troops in his department, to make an examination of the sanitary condition of the enlisted men in that department, and report all those who are subjects for transfer to the Invalid Corps.

The report of the present Committee on the Conduct of the War is a very different thing from predecessor in length. The Committee has been giving especial attention to the subject of ordnance, and has had before it the views of our ablest Army and Navy officers, whose opinions have been carefully sought and recorded.

The Italian iron-clad *Re d'Italia* is soon to go on a trial trip for the purpose of testing her speed; and as soon as this is fairly ascertained she will leave Italy. The engines for this vessel have been made and she has been working for several days at the dock.

MAJOR D. C. FITCH, of the Twenty-fifth Michigan, Provost-Marshal of Louisville, Ky., has been dismissed the service, having been relieved and ordered to report to the commanding officer of his regiment. Captain FITCH will officiate in the office until Major FITCH's successor is appointed.

By command of Major-General HURLBUT, the troops of the Sixteenth Army Corps have been reviewed in the vicinity of Memphis by their respectively by Brigadier-Generals J. M. TUTTLE, G. M. DODGE, A. J. SMITH, and J.C. VEATCH.

Two volumes of NAPOLEON III.'s "Life of Cæsar" are nearly ready. The first, according to the *Memorial Diplomatique*, not to appear so yet, since His Majesty is going to revise them. The second is said to contain the documents furnished by a learned Captain in the Genie Corps.

OBITUARY.

COMMODORE WM. J. MCLINEY, U. S. N.

COMMODORE WM. J. MCLINEY departed this life in Washington, on Wednesday, after an early hour. The Commodore had been unwell for some time past, and of late has been in a most pitiful state. His decay was slow and enlargement of the heart. He has been a faithful servant of the country over half a century, having entered the naval service Jan. 1, 1812. He saw considerable service both in the war of 1812, and in that with Mexico. He was on the *Wasp* in her brilliant engagement with the British sloop *Peake*, and at that time he was a Lieutenant. He commanded the *Falmouth* sloop, and then was ordered to the *Warren* sloop.

In 1832 he was again stationed at the Navy Yard, Boston, and was made a lieutenant on board of the Receiving Ship at that place.

On the 9th day of November, 1859, he was commissioned as a commander, and was employed on shore duty from that time until 1862, when he was ordered to command the *John Adams* sloop. He was in her over a year, participating in some of the hard naval work of the Mexican war. In 1859 he was placed in command of the Navy Rendezvous at New York, where he remained for a few months, until ordered to duty at the Navy Yard at Washington.

His commission as captain was dated October 1, 1862, and with it came his detachment from that station. He remained off duty until 1863, when he was ordered to command the Pensacola Navy Yard, where he remained until his death. He returned to the United States in February, 1863, and began his last tour of duty at New York as general superintendent of the construction of the war steamer Sacramento, Steven's Battery.

In 1858 he was placed in command of the Home Squadron, at that time the finest fleet of ships in the American Navy. His promotion to position he retained until early in May, 1860, when Captain G. J. Pendergrast relieved him. The remains of the gallant officer will be taken to Washington, and will be interred from the Navy Yard.

He was commissioned a Commodore on the 16th of July, 1862, and placed upon the retired list. Commodore McLINEY was born and appointed from Pennsylvania, he settled in Brooklyn where he quietly looked upon the rapid rise of the city and the birth of a profession to which he was so proud to belong. For over fifty-two years he has been enrolled in the books of the Navy Department; for over twenty-one years of that time he has been at sea; seven years he was on shore duty, and for the rest of duty, the remaining twenty-two years he was unemployed.

He leaves behind him an interesting home circle, and a host of warm personal friends, with whom his memory will be green. He was genuine, honest and benevolent.

Arrangements are being made for the funeral of which will be a large occasion, and offers to follow the remains of the beloved old Commodore to his last resting place. B.

MARRIED

[Announcements of marriages and deaths should be paid for in advance.]

CARTER—DAY.—In Middletown, Orange Co., N. Y., on Sunday morning, Feb. 7, by Rev. Thomas Chalmers, Captain WILLIAM CARTER, Assistant Quartermaster, to Miss ELIZA R. DAY, of Walkill Academy, Middletown.

HOPKINS—ALEXANDER.—On Sunday, Feb. 7, by Rev. J. A. Buchanan, Lieutenant CHARLES S. HOPKINS, 79th New York Highlanders, to Miss MARY ALEXANDER, daughter of Colonel S. RHIND, Esq., of Rhinds.

SWAIN—GARDNER.—In Boston, on the 4th inst. by Rev. Dr. Huntington, Lieutenant JOHN C. SWAIN, Fifth Regiment U. S. Artillery, to Miss ANNA CHANDLER WILLIAM S. WEST GARDNER, of Lewiston, Me.

SWAIN—GARDNER.—In Dalhousie, Feb. 9, by Rev. J. Bire Lindsay, Lieutenant WILLIAM M. SWAIN, Royal Artillery, to Miss ROSE J. GARDNER, of Lewiston, Me.

WHITE—MCCLELLAN.—In Philadelphia, on Thursday, the 4th inst., by Rev. Thomas G. Allen, Lieutenant ARTHUR C. WHITE, Fifth Regiment U. S. Infantry, to Miss KATE, second daughter of Major-General GEORGE B. MCCLELLAN, U. S. A.

ROBERTS—MAITLAND.—In New York, on Thursday, Feb. 4, by the Rev. Dr. Cooper, Lieutenant ROBERTS, U. S. A., formerly Lieutenant in Co. B, 1st Massachusetts Regiment, to Miss ELIZABETH M. MAITLAND, both of Charleston.

CHARTER—GALLAGHER.—In Jeffersonville, Miss., on the 28th ult., Lieutenant R. CHARTER, to Miss ANNIE E. GALLAGHER, daughter of J. G. Gallagher, Esq., of Jeffersonville.

BRADLEY—BRADLEY.—In Lewiston, on Thursday, the 4th inst., by Rev. Mr. Bradley, Lieutenant JOHN C. BRADLEY, U. S. A., to Miss ELIZABETH E. BRADLEY, of the late Maryland regiment, and Miss MARTHA C. BRADLEY, of Henry W. Bradley, Esq. No cards.

DIED.

BRESHAM.—Killed in battle, at Chickamauga, Sept. 19, 1863, while in the discharge of his duty, Lieut. Col. WM. H. BRESHAM, First Lieutenant HOWARD M., only son of BRIGADIER H. BRESHAM, aged 24 years and 4 months. Rochester papers please copy.

The funeral services of Lieutenant Bresham were held in the Second Presbyterian Church, on Sunday afternoon, Lieutenant Colonel MOSES B. LANE officiating. The church was crowded to overflowing. Appropriate remarks were made by Rev. Dr. Hosmer, Rev. Dr. Shedd, and Colonel LANE. The deceased was a soldier of the truest character—a young Christian. The following lines were written by Lieutenant Bresham, a few days before which a beautiful elegy was sung. The deceased was a member of the Second Presbyterian Church, and a beautiful and appropriate quartet were chosen for such occasion. The following lines were several notices of the young soldier's career, and were written by him a few days before he was killed on the field of battle. They were found on the body of the deceased, with its rude and simple inscription. A correspondent has furnished us the lines from memory:

WATSON.—In Hamilton, on Friday morning, Feb. 5, Major WILLIAM WATSON, U. S. Army.

KEYSER.—In Dover, Vt., on the 6th inst., ROBERT A. KEYSER, Esq., late Captain in the Quartermaster's Dept. U. S. Army, aged 52 years.

DUNCAN.—In Pensacola, Florida, Sept. 23, 1863, of yellow fever, Lieutenant JOHN H. DUNCAN, Battery B, 5th U. S. Artillery, Quartermaster, Acting Engineer of U. S. ship *Wisconsin*, aged 32 years.

WEIR.—On Wednesday, Feb. 10, ANNIE, wife of Lieutenant G. V. WEIR, U. S. A., and only daughter of Gurdon Coffin, Esq., aged 26 years.

ADVERTISEMENTS.

ADVERTISEMENTS of a character suited to the columns of the JOURNAL will be inserted, to a limited extent, at the rate of one dollar each insertion. Advertisements of a longer character must pay more than for an insertion.

MILITARY GOODS.
BAKER & MCKENNEY,
No. 25 Walker street, and 24 Beekman street, New York,
Manufacturers and Dealers in all kinds of Military Goods. Fatigue Caps, Forage Caps, Swords, Sashes, Belts, Shoulder Straps, and Officers' Haversacks constantly on hand.

THE DIARY OF THE ARMY AND NAVY.
REBELLION RECORD,
Edited by FRANK MOORE.

This work is a compendium of information, made up of special correspondence, official reports, and gleanings from the newspapers of both sections of the United States and of Europe. Of these latter, over five hundred are used in its preparation.

THE REBELLION RECORD will now become an army standard-work.

THE LIFE AND AUTHORITY OF THE WAR, that individuals in all departments of the Army, Navy and Government, will find it unwilling to be for publication, narratives of important events, and

OFFICIAL REPORTS UNPUBLISHED ELSEWHERE.

FROM COMMODORE CORNELIUS HERBERT, U. S. N. Having published for the past year the unofficial reports of the various proclamations promulgated by the European Governments, I find that the REBELLION RECORD is the only search for copies I could find them until I found the REBELLION RECORD. On examining the volumes of the REBELLION RECORD, I find them replete with information, especially as regards the naval affairs of the war. If, therefore, copies of your valuable work can be obtained at the present date, I am satisfied the subscription will be a profitable investment, and I cordially recommend it to a devotion to duty. To make historical compilation of acts of heroism and merit, by the commissioned officers, would be appreciated by the friends and relatives of a portion of the gallant men, and would have the effect to stimulate them to emulation.

FROM GENERAL HARNEY.

It gives me great pleasure to commend you that I consider the REBELLION RECORD a most valuable publication. It is the only repository of the documentary history of the rebellion, official and unofficial, arranged in a manner to be easily referred to and examined, and is not only of great present service, but must prove of great value hereafter to the student of history.

The RECORD has on more than one occasion supplied me with statistical information not otherwise to be procured.

The work is published in two editions, one of which contains the Army and Navy Register pages with two portraits; the other of semi-monthly parts, containing the same number of pages as the former seven monthly parts, with the index, make a volume. The size varies with the number of plates.

CONTENTS:

1. A Diary of Verified Occurrences.
2. Official Reports of Movements of Battles, Proclamations, General Orders, Speeches, etc., North and South.
3. Poetry, Incidents, Anecdotes, etc.
4. A full Analytical Index.

And are illustrated with

STEEL PORTRAITS

on steel, of prominent men, North and South.

Cloth, per vol.....	$4 50
Half Morocco, per vol.....	6 00
Half Calf, antique, or half morocco, per vol.	6 00
Full Morocco, per vol.....	7 50
Monthly Parts, each.....	0 75
Semi-Monthly Parts, each.....	0 50

Published by G. P. PUTNAM.

All orders, etc., should be addressed to "THE REBELLION RECORD," No. 44 Broadway.

Vols. I. to V. of the REBELLION RECORD, Nos. I. to XX. Parts in the work and works connected with it ceased on the 15th of each month.

CLARKSON & CO.,
